AZ CORP COMMISSION
DOCKET CONTROL

Arizona Corporation Commission
Utilities Division
1200 West Washington
Phoenix, AZ 85007-2996

Dear Commissioners and Director Olea,

Am grateful to Jerry Day for beautifully stating what I would like to have said myself! Jerry captures the essence of a situation in just a few words:

"With regard to the preposterous concept of Opt-Out fees: it is absurd to contemplate a fee to be paid to the criminal by the victim in order to escape the harm and damage and loss of the criminal activity."

Shame on the ACC for letting things get out of hand this way!

If "lawsuits will come at you like locusts" it won't help this generation of APS customers! It will not help babies born with genetic damage, innocent children being damaged by childhood leukemia and autism, while you continue to allow APS to lie about the multiple harmful effects of 'smart' meters! Have you people calculated the social burden from all the 'smart' meter damage? Have you figured out why there hasn't been an environmental impact study on 'smart' meters???

Your job is to protect those of us who are here now!

The greatest sanity in this situation is to **BAN 'Smart' Meters**.

Respectfully submitted,

Patricia Ferre

SMART METER OPT-OUT: E-01345A-13-0069

EXTORTION

Position Statement on Digital Utility Metering

"The 'Smart' Meter program is a horrible mistake!"

Jerry Day

(marker 0:28 to marker 5:31)

How did power companies and utility regulators come to the notion that when a radiation emitting surveillance device is unlawfully installed on someone's home, without their knowledge and consent, that the homeowner may be charged a fee for its removal? This is pure, blind and insulting arrogance!

Electronic surveillance is a crime under Federal Title 18, Chapter 119, Section 2510: **WIRETAPPING**. Radiation of private property, which is know and proven to cause cancer, neurological injury and immune system damage, is a crime, under United States Title 18, Part 1, Chapter 7, Section 113: **ASSAULT**. Persons who are complicit in these crimes, can be held to account through both criminal and civil actions.

So with regard to the preposterous concept of Opt-Out fees: it is absurd to contemplate a fee to be paid to the criminal by the victim in order to escape the harm and damage and loss of the criminal activity.

Allegations of **EXTORTION** have been made against power companies many times and no credible rebuttals have been offered back! The legal and moral compass has spun completely off its pin here!

If the power company has no consent from property owners and occupants, for installation of unsafe and unlawful radiation emitting surveillance devices, it has no claim for cost of removal and replacement. This is Law 101!

The dirty electricity in the home is not reduced when the transmitters are removed! The switching mode power supply causes electromagnetic radiation pollution, regardless of any intentionally transmitted radiation or data.

Contrary to power company propaganda, property easements do not comprise consent for digital meter installation and operation for several reasons.

- There is generally no proper disclosure of the features and functions of the meter.
- There is no "informed consent" granted by the property owners and occupants
- **The installations are violations of law, and therefore cannot be enforced by any easement contract, whether written, verbal or implied.**

The secrecy and deception perpetrated by power companies and regulators in the digital metering and surveillance, is clear evidence that utility industry stakeholders are not acting in the interests of the end users of the meters!

If the equipment and system were not dangerous and repugnant, the utility companies would have no trouble with disclosure and with gaining informed consent for the installations.

Installers, who should know better, are sneaking on to properties, rushing installations, and even *swapping the meters under full load*, which as you must know, has caused more than 1,000 house fires in California alone!

Some meter manufacturers, have even removed meter specifications from their websites, to assure that homeowners can not be fully informed! **With so much premeditated fraud, deceit and malice: it is astonishing that anyone would consider passing the cost of remedy to the innocent victims of this ill-conceived fiasco!**

The "Smart" Meter program is a horrible mistake! Digital meters are violations wherever and whenever they are installed. **You can not put a switching mode power supply at the head end of a wiring grid of someone's home without:**

- **Wasting electricity,**
- **Radiating the occupants,**
- **Creating negative consequences to health** and
- **Damaging electronic equipment and appliances!**

Warning of that is in every textbook on electrical engineering! The designers of digital household meters had to have been told to simply ignore their education and design devices they know to be harmful and defective. **This is deliberate and intentional wrongdoing!**

Those who cause this problem, must not only pay for the remedy, they must be penalized, to prevent such things in the future!

We know, that the obligated parties do not include any homeowner, who only wishes to protect his or her family's health, safety and rights!

We know that 13% of the population is electromagnetic sensitive in varying degrees.

We know that even when occupants don't feel symptoms from the exposures, they will often suffer serious and major illnesses and injuries down the line.

We know the recorded data from the meters will be hacked and misused.

The lawsuits will come at you (to utility company) like locusts and that has already started.

Radiation and surveillance of private property has no place whatsoever in a free society and can not survive legal challenges that will obviously materialize.

THIS RECKLESS & ILL-CONCEIVED PROGRAM MUST BE STOPPED NOW.
