Citizens Communication Company - NAGD

Sales and Demand Model

This program has been developed for Citizens Communication Company - NAGD to compute class specific data for:

Weather Normalized Sales
Calendar Month Sales
Design Day Demand

This program has been developed specifically for Citizens Communication Company - NAGD by Management Applications Consulting (MAC) Inc.

The program contains trade secrets and other confidential information of MAC and may not be distributed to any third parties. It remains the proprietary product of MAC, but is provided to the Company for its use in the normal conduct of its business.

Revision History

Current Revision Level = 2.14

Date	Rev.	Description of Changes
9/5/2001	1.00	Preliminary Release.
11/15/2001	1.01	Correct bug in lookup of actual and normal HDD's.
11/19/2001	1.02	Correct bug in computing calendar month adjustment.
11/27/2001	1.03	Added lookup tables in input tab to gather normal and actual HDD data from Weather tab.
12/2/2001	1.04	Eliminated DSUM's in PR calculation on Misc tab.
		Added base rates and gas supply charges to input tab, added lookups to Sales and Misc tabs.
3/15/2002	2.00	Initial version for Fitchburg
		Added class PR allocation factor
4/3/2002	2.01	Linked to weather file to develop billing to calendar month percentages.
4/3/2002	2.02	link months on Sales and Misc to Input. Initial Version for CU NAGD
4/5/2002	2.03	Address RJS questions on Notes tab.
		Expand model to address 13 months, revise all lookups to use month and year.
		Added tab to compute calendar month percentages
4/16/2002	2.04	Revised base use calculation on sales tab to use a minimum, computed Z statistic for design daydegree days on Weather Input tab, correct design day demand calc on Misc tab to use January customers in column C (not E)
4/18/2002	2.05	Revised annualization adjustment to apply to weather adjusted revenue.
4/23/2002	2.06	Added PGA gas adjustment to Sales tab.
4/24/2002	2.07	??
4/26/2002	2.08	Updated the input section of the sales and demand model to link to Cogan's estimated sales demand, modified the formulae in the Misc tab, to make pro rata adjustments to tie to this figure
5/20/2002	2.09	SCGD Model
5/20/2002	2.10	Correction of T1 input headblock rates
5/20/2002	2.11	Correct revenue calculations, add sanity check
5/20/2002	2.12	
		Revamp layout of program, add Per Book, Weather Norm, Calendar tabs, Transpose PR calculation, eliminate most calculations on Misc tab, revise Worksheet tab to compute Normal Year percentages
5/28/2002	2.13	Correct base use on sales tab when no hdd's, added Billing Mo YEC adjustment in YEC tab, manually overode some summer month heating use per HDD in Sales tab to avoid unduly large adjustments in summer months (added comments to all changed cells)
6/20/2002	2.14	Use YEC Sales data for Design day and PR allocator

Citizens Communication Company - SCGD

Sales and Demand Model

This program has been developed for Citizens Communication Company - SCGD to compute class specific data for:

Weather Normalized Sales
Calendar Month Sales
Design Day Demand

This program has been developed specifically for Citizens Communication Company - SCGD by Management Applications Consulting (MAC) Inc.

The program contains trade secrets and other confidential information of MAC and may not be distributed to any third parties. It remains the proprietary product of MAC, but is provided to the Company for its use in the normal conduct of its business.

Revision History

Current Revision Level = 2.14

Date	Rev.	Description of Changes
9/5/2001	1.00	Preliminary Release.
11/15/2001	1.01	Correct bug in lookup of actual and normal HDD's.
11/19/2001	1.02	Correct bug in computing calendar month adjustment.
11/27/2001	1.03	Added lookup tables in Input tab to gather normal and actual HDD data from Weather tab.
12/2/2001	1.04	Eliminated DSUM's in PR calculation on Misc tab.
		Added base rates and gas supply charges to input tab, added lookups to Sales and Misc tabs.
3/15/2002	2.00	Initial version for Fitchburg
		Added class PR allocation factor
4/3/2002	2.01	Linked to weather file to develop billing to calendar month percentages.
4/3/2002	2.02	link months on Sales and Misc to Input. Initial Version for CU NAGD
4/5/2002	2.03	Address RJS questions on Notes tab.
		Expand model to address 13 months, revise all lookups to use month and year.
		Added tab to compute calendar month percentages
4/16/2002	2.04	Revised base use calculation on sales tab to use a minimum, computed Z statistic for design daydegree days on Weather Input tab, correct design day demand calc on Misc tab to use January customers in column C (not E)
4/18/2002	2.05	Revised annualization adjustment to apply to weather adjusted revenue.
4/23/2002	2.06	Added PGA gas adjustment to Sales tab.
4/24/2002	2.07	??
4/26/2002	2.08	Updated the input section of the sales and demand model to link to Cogan's estimated sales demand, modified the formulae in the Misc tab, to make pro rata adjustments to tie to this figure
5/20/2002	2.09	SCGD Model
5/20/2002	2.10	Correction of T1 input headblock rates
5/20/2002	2.11	Correct revenue calculations, add sanity check
5/20/2002	2.12	
		Revamp layout of program, add Per Book, Weather Norm, Calendar tabs, Transpose PR calculation, eliminate most calculations on Misc tab, revise Worksheet tab to compute Normal Year percentages
5/27/2002	2.13	Correct base use on sales tab when no HDD's, enter appropriate block prices to sales tab wna

Proportional Responsibility
Mains Investment Allocator

The Proportional Responsibility Method is a capacity allocation procedure which considers the monthly variation in sales by customer class. Months with higher total usage are given more weight than lower usage months. The method was first developed by Gary H. Grainger of Wisconsin Public Service Corporation and published November 9, 1972 in *Public Utilities Fortnightly*.

The Proportional Responsibility ("PR") Method is often used to allocate distribution plant to gas utility customers. Each customer class is assigned capacity-related costs based upon the variation of usage across all twelve months of the test year In this manner, the PR method recognizes that capacity on the distribution system has some value each month throughout the year, though that value is greatly diminished in the summer months when system loads are much lower. By observation, the PR method is generally consistent with the market price for inter-state pipeline capacity as evidenced by the prices commanded for capacity release.

In contrast, the Design Day Allocation Method relates all costs to a single day, a hypothetical day where temperature extremes create the greatest load for which the utility can provide firm delivery service. The Design Day Demand Method is susceptible to errors due to the mis-estimation of class loads under extreme weather conditions. This method assumes that all costs are attributable to a single day, so by inference, there is no value to capacity at any other time. Summer-only users and interruptible customers would have no capacity cost responsibility at any time. In essence, these customers would receive the benefit of free use of the transmission and distribution system. This anomaly is one of the reasons why the FERC has migrated to capacity allocation methods that recognize customer loads throughout the year, such as the Modified Fixed Variable Method.

The principles underlying the Proportional Responsibility Method can be demonstrated graphically. Table 1 shows the calendar month sales by class and month for each for the sample utility's rate classes. Total volumes flowing through the gas delivery system are shown on the total, Line 21. Referring to Figure 1 of this schedule, total sales data are presented in a slightly different format. Months are listed sequentially on the horizontal axis. Rather than using actual sales, the vertical axis shows sales normalized to the peak month (each month's sales divided by the sales in the peak month, in this case January). Figure 2 presents these monthly percentages of peak in the form of a conventional load duration curve; the months are shown in ranked order beginning with the peak month.

Table 2 begins with the same total monthly sales data and systematically derives monthly PR weighting factors. Column 2 ranks the months from highest to lowest. Note that July is the lowest load month and is ranked 12th. Since it represents the minimum, sales in every month meet or exceed the load in this month. The Proportional Responsibility method recognizes that the level of cost responsibility to be assigned to this load level must be shared with every month. In this instance the load level is slightly over 25% of the peak. The PR method assigns this level of load evenly to all twelve months. Thus, each month is assigned one twelfth of the minimum sales month's percentage of peak month sales, or 2.11% as shown in column 7. Now consider the next lowest load month, August. This point represents a small increment over the lead at Point 12. All but one month of the year exhibit sales at this level or greater. Consequently, the Proportional Responsibility Method assigns this increment of 0.35%, shown in column 6, equally to each of the eleven months with this load increment, resulting in an incremental allocation to those 11 months of 0.03%. The same procedure is employed for each remaining month. In the last increment between December and January, only one month, the peak month, exhibits this level of load and, therefore, is assigned the entire increment. The monthly PR factors are then computed by accumulating the individual weighting factors. The minimum load month receives only the 12th ranked individual weighting factor from column 7. Consequently, column 8 shows that July's cumulative weighting factor is 2.11%, the same as its individual weighting factor. For the 11th ranked month, August,

the cumulative weighting is the sum of the 12th ranked month in column 8 plus the individual weighting for the 11th month from column 7. This same calculation is made for each month to derive the remaining figures for column 8.

Figure 3 presents the monthly PR weighting factors and compares them with the load duration curve from Figure 2. As the graph clearly points out, the PR weighting factors provide less weight to the low load months.

The final step is to apply the monthly weighting factors to the monthly class sales. This calculation is shown on Table 3. Monthly sales from Table 1 are multiplied by the PR monthly weighting factors. The resulting weighted sales become the basis for class allocations. PR percentage allocation factors are shown in the rightmost column of Table 3.

The following procedure describes the step-by-step calculation of the allocation factor for mains:

1. List all firm sales by month by rate class.
2. Normalize monthly sales data by computing the ratio of each rate class's monthly sales to the total monthly sales.
3. Rank the monthly sales, using the rank of 1 for the peak sales month and the rank of 12 for the lowest sales month.
4. Calculate the "% of peak month" defined as the ratio of sales in each month relative to the sales in the peak month. The % of peak factor for the month ranked #1 would equal 100% and the ratio for each subsequent month ranked would be less than unity.
5. Develop individual weighting factors for the twelve months. For each month starting with the 12th ranked month, calculate the difference in the nth ranked month's peak factor, as determined in step 4 above, and the n+1 ranked month's factor. Divide this difference by n and obtain the individual month's weighting factor. For n+1 = 13, use 0 percent as the month's peak factor.

Thus, the individual monthly weighting factor for the 12th month is simply the peak factor for that month divided by 12.

6. Develop cumulative weighting factors for the twelve months starting with the 12th ranked month and continuing to the first ranked month. The cumulative weighting factor is computed by adding the month's individual weighting factor to the n-1 month's cumulative weighting factor. Following this process, the sum of the cumulative weighting factor for all 12 months should equal 100%.
7. For each customer class, multiply the normalized sales factor for the customer class developed in step 2 by the respective monthly cumulative weighting factor developed in step 6.
8. For each customer class, sum the twelve monthly proportionality factors, as determined in step 7 and use these percentages as the mains allocation factor.

The Proportional Responsibility Method of Capacity Cost Allocation

"Proportional responsibility," a new capacity cost allocation method, is designed to give a realistic and reasonable distribution of imbedded capacity costs, making it ideal for rate design purposes, rate of return determination, and support in rate cases. Other methods of capacity allocation, including their inherent fallacies, are also discussed.

By GARY H. GRAINGER

THE importance of cost-of-service studies has long been recognized in the electric utility industry. This importance is evident when you consider the numerous uses that are made of these studies, as illustrated by the following list:

Uses of Cost-of-service Studies

1. Determination of rate of return by customer group.
2. Rate design.
3. Sales promotion policy.
4. Support in rate cases before regulatory authorities.
5. Cost trends.
6. Engineering policy.

In the preparation of these studies, the allocation of capacity costs is the most significant part of the study for two reasons. First, capacity costs are generally the largest individual segment of costs, and, second, there is no universally accepted method for allocating these costs.

The remainder of this article is devoted to reviewing some of the common methods of capacity allocation, including a discussion of their inherent fallacies and then the development of a new method of capacity cost allocation that I have chosen to call the proportional responsibility method.

To illustrate some of the more common methods of capacity allocation, assume the customer group load curves and the system load curve shown in Figure 1 (page 26). Table 1 (page 27) describes the characteristics of each of these customer group loads, and Table 2 (page 27) shows the results of the capacity allocations under various commonly used methods.

Before analyzing the results shown in Table 2, I would like to state briefly the principal criteria of capacity costs. Capacity costs are those created as a result of providing capacity for the customer's maximum demand. In other words, costs associated with property and plant having a specific design or size because of the maximum quantity of power used are considered capacity costs. They are not in any manner related to load factor.

Analyzing the results contained in Table 2 reveals the fallacies of the various methods:

I. *Peak Responsibility*—Allocates all capacity costs on the basis of the loads as they occur at the time of the system peak. This implies that no capacity is required to serve loads A, B, and C since they were not taking service at the time of the system peak. This is incorrect because even without loads D, E, F, and G, there would still be a need for 300 kilowatts of capacity for loads A, B, and C.

II. *Noncoincident Peak*—Allocates all capacity costs on the basis of the individual customer peaks irrespective of the time of occurrence. Table 2 shows that all loads receive an equal share of capacity costs. Referring to the total system curve shown in Figure I, more capacity is needed to meet the six peak hours of 9 to 12 A.M. and 4 to 7 P.M. than any other hours of the day. Therefore, a larger portion of the demand costs should be assigned to the loads

FIGURE I

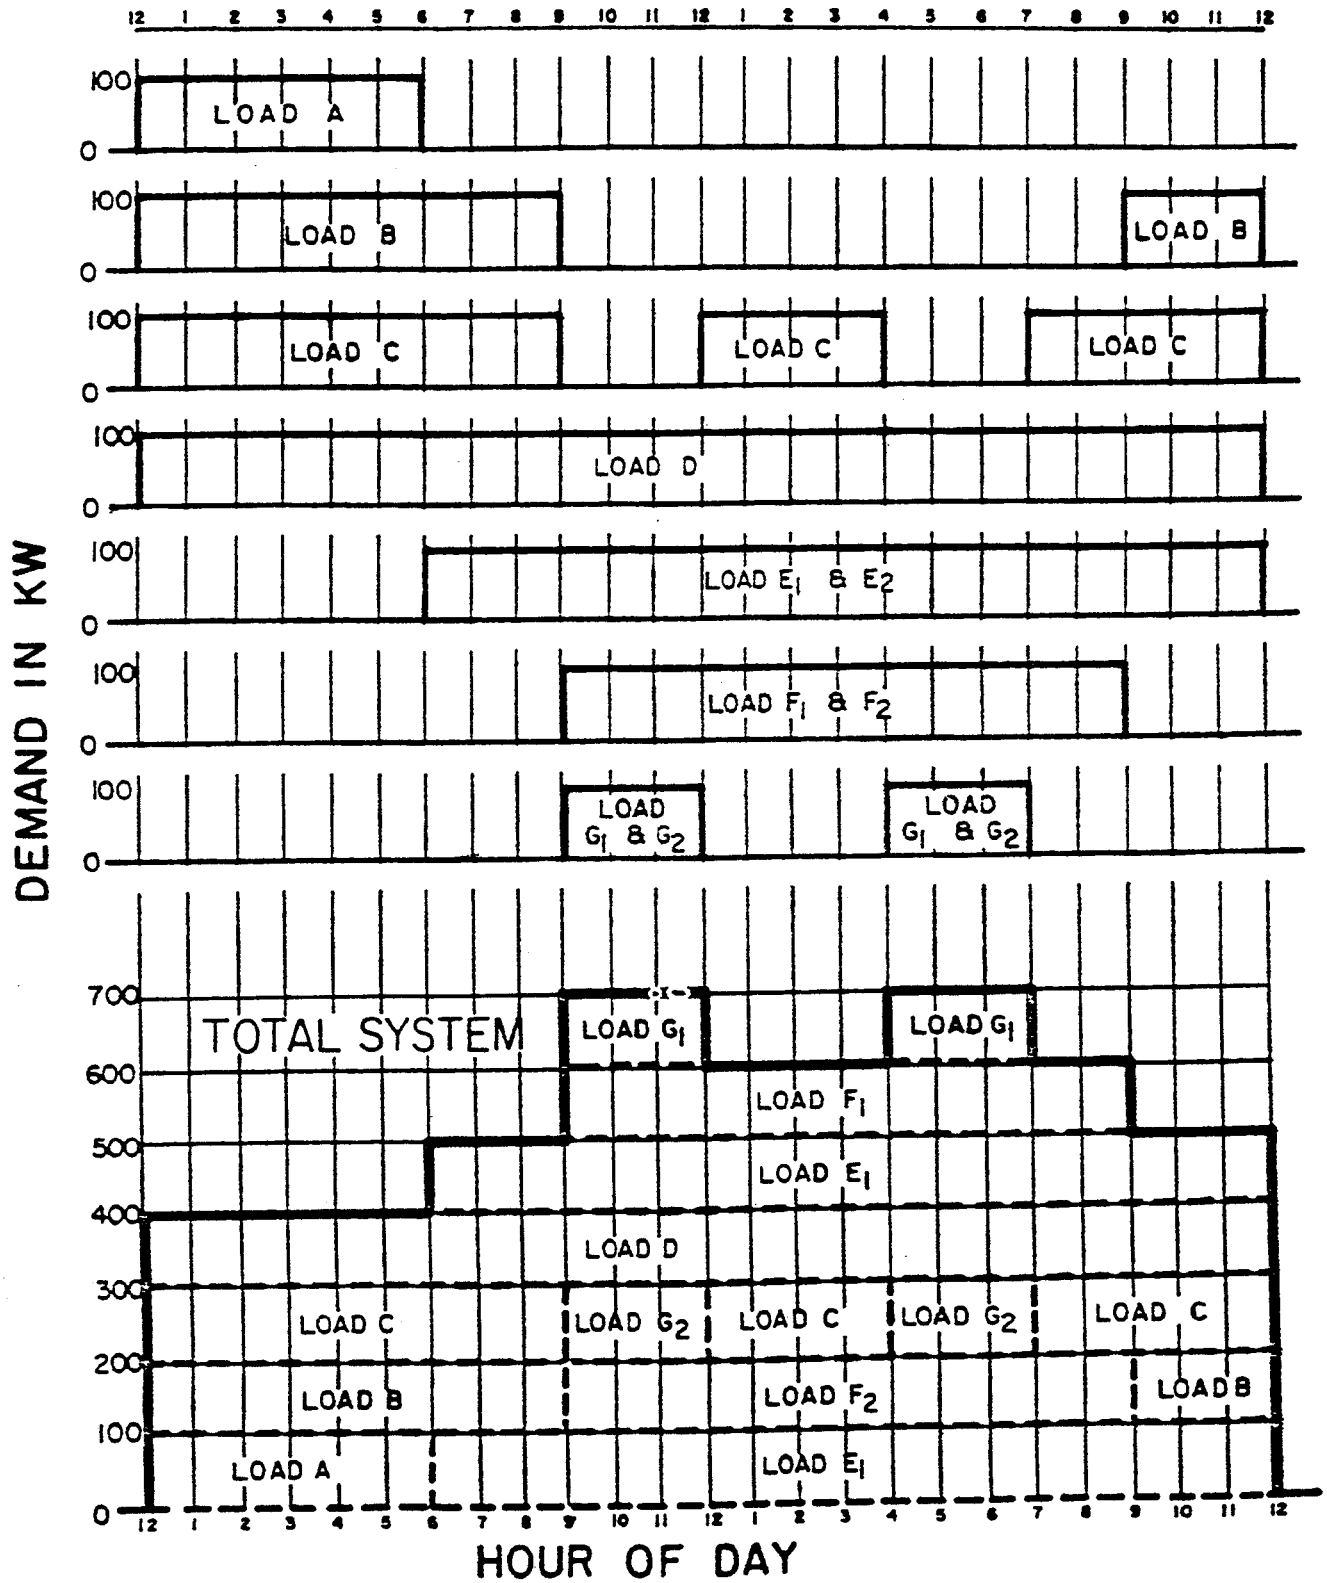

Exhibit JLH-11
Page 263 of 657

TABLE 1

Load	Kwh.	Diversified Peak Kw.	Coincident Peak Kw.	Load Factor	Load Characteristics
A	600	100	0	25%	Nothing on System Peak
B	1,200	100	0	50%	Nothing on System Peak
C	1,800	100	0	75%	Nothing on System Peak
D	2,400	100	100	100%	Entirely on System Peak
E_1 & E_2	1,800	100	100	75%	Entirely on System Peak
F_1 & F_2	1,200	100	100	50%	Entirely on System Peak
G_1 & G_2	600	100	100	25%	Entirely on System Peak

creating the system peak; this is not being done.

III. *Average and Excess*—The portion of facilities required to serve the average load is allocated on the basis of the average demands and the difference between the average loads and the maximum load, being the excess demand, is allocated on the basis of the noncoincident peak. The results are partially dependent on load factor, which, as stated earlier, has no bearing on demand costs.

IV. *Complete Peak*—Manner of capacity cost allocation differs from other methods by putting onus on classes that exceed average demand during periods when system peaks go above average system load. This method is also partially dependent on load factor.

To the best of my knowledge, all currently published methods have somewhat similar fallacies. Recognizing that these fallacies must be overcome, the following method was developed:

Figure II (page 28) shows the same system load curve as in Figure I; the left-hand scale indicates the demand and the bottom scale indicates the hours of the day. On the right-hand scale, percentages are added. Looking at the demand of 400 kilowatts presenting 57.14 per cent of the peak, it is observed that this demand exists for the entire 24-hour period. Since 400 kilowatts represent 57.14 per cent of the peak, it similarly accounts for 57.14 per cent of the capacity costs. Dividing these capacity costs of 57.14 per cent equally to each of these hours (57.14%/24 Hrs.) results in each hour being responsible for 2.38 per cent of the capacity costs. The next break in the load curve (500 kilowatts) is responsible for 14.29 per cent (71.43% - 57.14%) of the capacity costs; this demand is used eighteen hours a day, 6 A.M. to 12 P.M. By similar calculation, each hour is responsible for .79 per cent (14.29%/18 Hrs.) of the capacity costs. Moving up to the 600-kilowatt break, each hour from 9 A.M. to 9 P.M. is responsible for 1.19 per cent of the capacity costs. Finally, at 700 kilowatts, each of the hours from 9 A.M. to 12 A.M. and 4 P.M. to 7 P.M. is responsible for 2.38 per cent of the capacity costs.

By combining these hourly percentages, the six hours from 12 P.M. to 6 A.M. are each responsible for 2.38 per cent, the six hours, 6 A.M. to 9 A.M. and 9 P.M. to 12 P.M. are each responsible for 3.17 per cent (2.38% + .79%), the six hours 12 A.M. to 4 P.M. and 7 P.M. to 9 P.M. for 4.36 per cent (2.38% + .79% + 1.19%) and the six hours 9 A.M. to 12 A.M. and 4 P.M. to 6 P.M. for 6.74 per cent (2.38% + .79% + 1.19% + 2.38%).

These hourly percentages, representing the distribution of the total capacity costs over the twenty-four hours of the day, establish a weighting system that will be used to distribute capacity costs to the various loads.

Figure III (page 28), showing the hourly weighting factors on the bottom scale, reveals that some loads have more than one weighting factor. For example, load D falls in all four weighting areas. It is appropriate that an individual load should be responsible for the maximum weighted demand. Applying this principle to Figure III, the weighted demands shown

		5,709	100	700

in Table 3 above were determined. In the next to the last column, the percentage distribution of the total weighted demand is shown. These percentages represent the proportional distribution of the capacity costs. Applying these percentages to the total system demand of 700 kilowatts gives the demand allocation shown in the last column.

The end result of this method is to assign all capacity costs to the individual loads proportional to what they individually would cost.

Table 4 (page 30) again shows the results of some of the more common methods of capacity allocation, as well as the proportional responsibility method. The inequities of the common methods described earlier are eliminated under the proportional responsibility method. Each and every load is assigned a proportionate share of the capacity costs. It is not dependent on load factors and it considers the time when the demand was established.

An additional major advantage of the proportional responsibility method is that it can be used to determine the costs associated with successively smaller components of the total load. A logical sequence of studies, each using the results of the earlier study in the listing, would be:

1. Cost of service by jurisdictional area.
2. Cost of service by class of service.
3. Cost of service by rate schedule.
4. Cost of service by homogeneous groups within the rate schedule (could be by annual consumption or connected appliances).
5. Cost of service by individual appliance or specific load.

None of the common methods described earlier in this article will give reasonable answers if applied to the above series of studies.

The actual application of the proportional responsibility method is more complex than described above as each hour of the year has a specific weighting factor, and complete day-by-day load curves are required both for the system and for the various customer groups. However, with modern computer technology, this is not an insurmountable problem.

If desired, the proportional responsibility method can be simplified by reducing the number of load curves resulting in fewer weighting factors. For example, instead of using the daily load curves, average monthly load curves or monthly peak-day load curves could be used. As might be expected, this simplification will alter the proportional allocation and limit the scope of application because it does not fully consider the daily, monthly, and seasonal shifts of the load curves of the system or the customer groups.

However, compared to the known fallacies of the results of commonly used methods, this altera-

Gary H. Grainger is electric rates and research supervisor for the Wisconsin Public Service Corporation. After receiving his BA degree in electrical engineering from the University of Wisconsin in 1960, he joined the utility and, in 1972, was appointed to his present position. Currently, a member of the Rate Research Committee of the Edison Electric Institute, he has testified in regulatory matters before the Federal Power Commission and the Wisconsin and Michigan Public Service commissions.

TABLE 4

	Method I Peak Responsibility		Method II Noncoincident Peak		Method III Average & Excess		Method IV Complete Peak (Oram & Robison)		Method V Prop. Resp. Method	
Load	Kw.	%	Kw.	%	Kw.	%	Kw.	%	Kw.	%
A	0		70	10	50	7	25	4	28	4
B	0		70	10	67	10	50	7	38	5
C	0		70	10	83	12	79	11	53	7
D	100	14	70	10	100	13	100	14	83	12

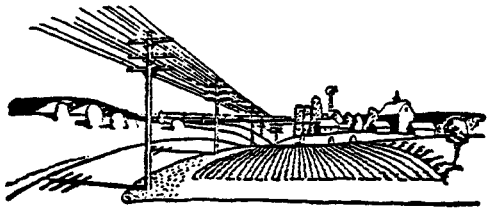
	700	100	700	100	700	100	700	100	700	100

tion of the proportional allocation and limitation of scope is minor.

Finally, I want to point out that the proportional responsibility method is designed to give a realistic and reasonable distribution of imbedded capacity costs. This makes it ideal for purposes of rate design, determination of rate of return, and support in rate cases. It does not evaluate the incremental added costs of new loads or the long-range future costs of existing or added loads. These types of evaluations require separate special studies utilizing appropriate capacity allocation methods.



Outline of General Environmental Impact of Utility Operations

	Air Quality	Water Quality	Land Use	Noise
Electric	Stack emissions Nuclear radiation Transport and storage of nuclear materials	Thermal effect of coolant uses Secondary effect of fossil fuel used (coal-oil)	Lines and structures Dams and reservoirs Cooling towers Strip mining	Negligible

BUSINESS: AGL Resources, Inc. is a holding company. Its principal subsidiary is Atlanta Gas Light Co., a regulated distributor of natural gas to more than 1.8 million customers in Georgia, primarily Atlanta, and in southern Tennessee. Also engaged in nonregulated natural gas marketing and other, allied services. Also wholesales and retails propane. Nonregulated subsidiaries: Georgia Natural Gas Services markets natural gas at retail. Acquired Virginia Natural Gas, 10/00. Sold Ulilipro, 3/01. Has about 1,936 employees. Officers/directors own less than 1.0% of outstanding common shares. (12/01 Proxy). President & CEO: Paula Rospot. Incorporated: Georgia. Address: 303 Peachtree St., N.E., Atlanta, GA 30308. Telephone: 404-584-9470. Internet: www.aglresources.com.

AGL Resources appears to be making the most of a difficult environment for natural gas. Temperatures this heating season were well above normal, economic conditions have been sluggish, and storage levels remain high, all of which have pressured spot prices and weakened gas demand. But, we believe that the company can still carve out year-on-year earnings growth throughout 2002, as it did in the December quarter with a share net of $0.45. (Note: December 2001 Quarterly Revenues and Earnings Per Share do not appear on the page because of the fiscal year change.) In the December stub period, earnings from AGL's core distribution companies were flat against 2000 despite a much weaker operating environment. Warm weather hurt its Virginia Natural Gas utility, but this was mitigated by aggressive cost-efficiency measures implemented throughout 2001. Meanwhile, the company's Georgia and Tennessee utilities were protected by temperature-adjustment clauses. Elsewhere, AGL got a $0.04-a-share boost from Sequent, its newly formed wholesale-services segment.

The company is counting on Sequent to be a growth contributor in 2002 and 2003. The nonregulated unit generated an operating income of $3.4 million in the December period, compared to none in the prior year. Also, it reported that natural-gas trading volumes grew more than 25%, to more than 2.5 billion cubic feet (Bcf), from 2 Bcf in December. The Houston-based energy trading arm believes that it can continue to increase volumes as a result of the void left by the former largest energy trader, Enron.

The Georgia rate dispute should be resolved during the second quarter. The Georgia Public Service Commission is reviewing AGL's Georgia utility for a potential $33 million reduction, but AGL is actually seeking a $50 million rate increase. A decision date is set for April 17th, and the implementation date is scheduled for May 1st.

These shares are currently a decent selection for income. AGL still has a good dividend yield, and earnings continue to come largely from regulated businesses. A pickup in interest rates, however, would reduce this issue's appeal.

Michael P. Maloney *March 22, 2002*

(A) Fiscal year ends September 30, 2001. Ends December 31st, thereafter.
(B) Diluted earnings per share. Next earnings report due late Apr. Excl. nonrecurring gains: '88, $0.15; '95, d$0.63; '99, $0.39; '00, $0.13; '01, $0.13. (C) Next dividend meeting in early May. Goes ex mid-May. Approx. div'd payment dates: March 1, June 1, Sept. 1, Dec. 1. ■ Div'd reinvest. plan available. (D) In millions, adjusted for stock split. (E) December stub period EPS of $0.45 included in P/E calculation.

Atmos Energy's history dates back to 1906 in the Texas Panhandle. Over the years, through various mergers, it became part of Pioneer Corporation, and, in 1981, Pioneer named its gas distribution division Energas. In 1983, Pioneer organized Energas as a separate subsidiary and distributed the outstanding shares of Energas to Pioneer shareholders. Energas changed its name to Atmos in 1988. Atmos acquired Trans Louisiana Gas in 1986, Western Kentucky Gas Utility in 1987, Greeley Gas in 1993, United Cities Gas in 1997, and others.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas through five regulated natural gas utility divisions: Energas Co. in West Texas (316,000 customers), Western Kentucky Gas Co. (180,000), Atmos Energy Louisiana (350,000), Greeley Gas (204,000), and United Cities Gas (300,000). Combined 2001 sales volumes: 157 MMcf. Breakdown: 50%, residential; 24%, commercial; 26%, industrial and other. '01 depreciation rate 3.2%. Has 2,361 employees. Officers and directors own approx. 3.8% of common stock; ESOP, 5.5% (12/01 Proxy). Chairman, CEO, & President: Robert Best. Incorporated: Texas. Address: P.O. Box 650205, Dallas, TX 75265. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

Atmos Energy's share net plunged by nearly 30% for the first quarter of fiscal 2002 (ends September 30th) compared to the year-ago figure. This can be attributed, in part, to a higher share count and decreased natural gas sales volumes (reflecting temperatures that were 29% warmer than the first quarter of fiscal 2001, adjusted for weather-normalized rates in certain service areas). Results were dampened further by increased operating expenses, stemming from the Louisiana Gas Service acquisition last July, plus higher pension costs. On a positive note, results for the non-utility operations were much improved, made possible largely by Woodward Marketing, which provides natural gas services for local distribution companies (LDCs) and municipalities, primarily in the Southwest and Midwest. At this juncture, we believe that Atmos' bottom line will be by-and-large flat for fiscal 2002.

But Atmos stands to generate much better annual earnings advances out to mid-decade. The company's utility operations are well diversified geographically, which means that it is not dependent solely on the weather, the economy, or rate commissions in any one region of the country. Also, Atmos derives additional earnings from non-regulated businesses. They have historically generated between 15% and 25% of annual net income, but present expansionary initiatives (such as entering new non-utility segments like distributed electrical power generation) could cause this figure to rise even higher going forward. Another strength is the company's ability to successfully integrate acquired firms, though future purchases haven't been factored into our presentation due to timing issues and many other uncertainties. In the current configuration, we look for the bottom line to grow roughly 10% annually over the 3- to 5-year horizon.

The equity offers a healthy amount of current dividend income. And given our favorable earnings projections for Atmos Energy, future increases in the payout seem likely. But these shares don't stand out for relative price performance in the year ahead or during the 2005-2007 period.

Frederick L. Harris, III *March 22, 2002*

BUSINESS: Cascade Natural Gas Corporation distributes natural gas to over 130,000 customers in Washington and Oregon. In 2001, total throughput was 160.7 billion cu. ft. Core customers: residential, commercial, firm industrial, interruptible (64% of oper. margin, 15% of gas deliveries); non-core: industrial, transportation service (36%, 85%). Serves pulp & paper, plywood, chem. fertilizers, oil refining, & food process. inds. Main connecting pipeline: Northwest Pipeline Corp. '01 deprec. rate: 2.8%. Est'd plant age: 12 yrs. Has around 440 employees. Officers and directors own 1.8% of com. (12/01 proxy). Chairman, President, and CEO: W. Brian Matsuyama. Inc.: WA. Address: 222 Fairview Ave. North, Seattle, WA 98109. Tel.: 206-624-3900. Internet: www.cngc.com.

Cascade Natural Gas Corporation got off to a poor start in fiscal 2002 (ends September 30th), as share net plummeted more than 25% for the first quarter compared to the year-ago figure. This partly reflects decreased per-customer gas usage from the residential and commercial segments, due to warmer temperatures, conservation initiatives following last year's energy crisis in the western United States, and a slowing domestic economy. To make matters worse, operating costs were 16% higher year over year, stemming, in part, from increased employee-related expenses. On a positive note, the industrial segment performed well, overall, driven by the new gas management services unit (which performs such functions as scheduling customer pipeline capacity needs and acting as agent in purchasing gas supplies). Although quarterly comparisons may improve during the balance of this year, as the sharp decline in natural gas prices has been spurring increased industrial consumption, the weak first-quarter results will likely cause full-year share net to be about in line with fiscal 2001. In spite of this . . .

Cascade could well generate annual bottom-line gains in the mid- to upper-single digits over the 2005-2007 horizon. We anticipate generally favorable economic conditions in Washington and Oregon going forward, as the lower cost of conducting business there should continue to attract companies. Furthermore, given the environmental advantages of natural gas and assuming that prices are at reasonable levels, a large portion of new customers could come from conversions (including win-backs) from alternative fuel sources. That said, annual account hookups ought to grow at a healthy 5% to 6% rate out to mid-decade.

The unfavorably ranked stock offers a decent current dividend yield. But those looking for growth in the payout are advised to search elsewhere, as the company utilizes cash flow to expand the gas distribution system to meet rising customer demand. Another factor to be considered is the absence of weather-normalization adjustment mechanisms in utility rate structures, which makes earnings vulnerable to swings in service-area temperatures.

BUSINESS: Laclede Group, Inc., is a holding company for Laclede Gas, which distributes natural gas in eastern Missouri (population, 2 million), including the city of St. Louis, St. Louis County, and parts of 8 other counties. Had 633,000 customers at 9/01. Therms sold and transported in fisc. '01: 1.119 mill. Revenue mix: residential, 67%; commercial and industrial, 27%; transportation, 2%; other, 4%. Purchased gas obtained from various suppliers accounts for 59% of revenues. Operates underground gas storage fields. Has about 2,000 empls.; 9,715 common stockholders. Off. & dir. own less than 1% of common shs. (12/01 Proxy). Chmn., CEO, and Pres.: D.H. Yaeger. Inc.: MO. Address: 720 Olive Street, St. Louis, MO 63101. Tel.: 314-342-0500. Internet: www.ladledegas.com.

Laclede Group is off to a slow start in fiscal 2002 (year ends September 30th). More than 90% of the company's top and bottom lines are derived from the activities of its subsidiary, Laclede Gas Company, Missouri's largest natural gas distributor. The utility's earnings are heavily impacted by temperatures in the company's coverage regions. And while this attribute may boost profits in periods of colder-than-normal temperatures, as was the case during the first quarter of fiscal 2001 (the second-coldest period on record), it can work against the company in warmer times. That said, temperatures were 21% warmer than normal in Laclede Gas' service area during this year's first quarter, representing the third-warmest period in history. And, as a result, year-over-year share earnings decreased by approximately 58% in this year's first quarter.

We have reduced our fiscal 2002 share-earnings estimate to $1.25, assuming a return to normal temperatures for the remainder of this year. The company should benefit from a $15 million rate increase authorized by the Missouri Public Service Commission (MPSC) this year. In addition, Laclede's acquisition of SM&P, one of the nation's largest underground locating and marketing services, should augment share earnings by roughly $0.05 in fiscal 2002. These developments, however, will likely be more than offset by the company's weak first-quarter results and the MPSC's decision to eliminate the company's Gas Supply Incentive Program late last year. Under terms of the prior arrangement, the company had been able to sell excess pipeline capacity at the unregulated-market-going-rate and keep 22% of the profits. The remaining proceeds were then used to help lower the bills of customers in Missouri. We estimate this agreement contributed almost $0.29 to the company's bottom line in fiscal 2001.

This issue's Timeliness ranking has slipped one notch to 5 (Lowest). That said, the stock's well-above-industry-average dividend yield may appeal to income-oriented investors. We think the dividend will be maintained in view of the earnings recovery we expect as temperatures return to normal.

Daniel L. Marks *March 22, 2002*

(A) Fiscal year ends Sept. 30th.
(B) Based on average shares outstanding thru. '97, then diluted. Next earnings report due late April.
(C) Next div'd meeting in late May. Goes ex in early June. Dividend payment dates: about the 1st of January, April, July, October.■ Dividend reinvestment plan available.
(D) Incl. deferred charges. In '01: $182.8 mill., $9.68/sh.
(E) In millions, adjusted for stock split.

BUSINESS: Nicor Inc. is a holding company for Nicor Gas. Serves about 2 million customers in northern and western Illinois. '00 gas delivered: 525.9 bcf, incl. 262.3 bcf from transportation. '00 gas sales (263.6 bcf): residential, 83.1%; commercial, 14.6%; industrial, 2.3%. Principal supplying pipelines: Natural Gas Pipeline, Midwestern Gas, and Northern Natural. Current operations incl. Tropical Shipping subsidiary. Divested inland barging, 7/96; contract drilling, 9/98; oil and gas E&P, 6/93. Has about 3,300 employees, 28,000 stockholders. Off. and dir. own about 1.6% of common (3/01 Proxy). Chmn., Pres. & CEO: Thomas L. Fisher. Inc.: IL. Address: 1844 Ferry Road, Naperville, IL 60563-9600. Telephone: 630-305-9500. Internet: www.nicor.com.

We expect Nicor's operating results to advance at a moderate pace in 2002. The company ended 2001 on a strong note due to better performance in the gas distribution business and lower interest expense. The stock buyback program also aided per-share results. We note that the improvements in gas distribution were primarily the result of increased operating efficiencies and weather protection benefits, as warm temperatures took their toll on gas deliveries. All told, Nicor finished the year more or less in line with our estimates, excluding a per-share gain of $0.16 on credits to lower the company's mercury-related reserve. Incidentally, Nicor has essentially resolved its mercury-related issues, which seems to be renewing investor confidence in the stock. We expect the company to earn about $3.20 a share this year, based largely on growth in its non-core energy ventures. Assuming normal weather patterns, we believe gas distribution will remain relatively static as compared to last year. Meanwhile, **Nicor's tropical shipping division remains the laggard of the group.** Volumes fell 10% in 2001 as a result of economic slowdown in the Caribbean region, inexorably worsened by the September 11th tragedies. However, Nicor recently upgraded two vessels and, through the acquisition of Kent Line International's container division, can now offer Canadian customers shipping to the Caribbean. These moves should eventually help revive the tropical business when the economy picks up.

The Horizon pipeline should be operational by September. Recall that this joint venture with Natural Gas Pipeline (NGPL) will connect Joliet, Illinois with Nicor's gas system and an existing NGPL pipeline. We expect the project to modestly contribute to earnings beginning next year.

This equity will be most appealing to yield-oriented investors. Nicor has raised its dividend considerably in each of the past three years and has one of the lowest payout ratios of the companies we follow. Furthermore, free cash flow remains ample enough to adequately cover future dividend increases. These shares are also ranked 1 (Highest) for safety.

BUSINESS: WGL Holdings, Inc. is the parent of Washington Gas Light, a natural gas distributor in Washington, D.C. and adjacent areas of Va. and Md. to resident'l and comm'l users (875,000 meters). Columbia Gas is WGL's chief gas transporter. Hampshire Gas, a federally regulated sub., operates an underground gas-storage facility in W. Va. Non-regulated subs.: Wash. Gas Energy Svcs. installs gas in the D.C. metro area; Wash. Gas Energy Sys. designs/installs comm'l heating, ventilating, and air cond. systems. Est'd. labor costs, 17% of revs. Employs 2,050, has 20,050 shareholders. Off./dir. own less than 1% of the com. Chmn.: J.H. DeGraffenreidt, Inc.: D.C. and VA. Addr.: 1100 H St., N.W., Washington, D.C. 20080. Tel.: 202-624-6410. Web: www.washgas.com.

WGL Holdings is sharing the problems of other gas utilities. The company generates nearly all of its profits through distributing natural gas, which is primarily used for space heating, to residential customers in the Washington D.C. market and surrounding areas. As such, earnings are heavily impacted by temperatures in the utility's coverage region. Winter temperatures in the first quarter of fiscal 2002 (year ends September 30th) were 18% warmer than normal in the company's service areas and, thus, the number of heating days in the December period decreased by roughly 36%, year over year. Since management obtained a weather insurance policy last year, WGL was able to recover $8.7 million, equivalent to about $0.08 a share, of the profits it lost as a result of the unseasonably warm weather. Still, we estimate this development reduced the company's bottom line by roughly $0.21 so far this year.

We have reduced our fiscal 2002 share-earnings estimate for WGL by $0.40. The company will likely benefit from increased contributions from non utility operations, owing to ongoing efforts to turn around its commercial heating, ventilating, and air-conditioning investment. Profits, in addition, should get a boost from WGL's customer base expanding at a well-above-industry average rate, due, largely, to the under-penetration of its coverage area, as well as from a return to normal temperatures. These occurrences, however, will likely be unable to make up for the company's weak first-quarter results. In addition, we expect operating and maintenance expenses to rise, as a result of increased bad debt expense and higher pension costs going forward. What's more, profits this year will likely be allocated over a larger share base.

This top-quality stock, though ranked 5 (Lowest) for Timeliness, offers a good dividend yield. Also, we expect the dividend will continue to grow by about 1.5%-2.0% annually for the foreseeable future. At the current quotation, however, these shares have limited price-appreciation potential out to 2005–2007. All told, the stock is suitable for conservative investors seeking a steady stream of income, with some modest upside potential.

Daniel L. Marks *March 22, 2002*

(A) Beginning 1989, fiscal years end Sept. 30th. Revenues are for regulated utility system only. (B) Based on diluted shares. Excludes nonrecurring gain (losses): '02 Q1, ($0.04); '01, ($0.13). Next earnings report due late April. (C) Next dividend meeting in early June. Goes ex in early July. BUSINESS: Southwest Gas Corporation is a regulated gas distributor serving approx. 1.3 million customers in sections of Arizona, Nevada, and California. '00 margin mix: resid. and small commercial, 83%; large commercial and industrial, 4%; transportation, 13%. Annual volume: 2.2 billion therms. Principal suppliers: El Paso Natural Gas Co. and Northwest Pipeline Corp. Acquired gas utility assets from Arizona Public Service in 1984. Sold PriMerit Bank (acq. in '96) in 7/96. Has about 2,430 employees, 22,900 shareholders. Officers & Directors own 1.0% of common (6/01 Proxy). Chmn.: Thomas Y. Hartley. Pres. & CEO: Michael O. Maffie. Inc.: CA. Address: 5241 Spring Mountain Rd., P.O. Box 98510, Las Vegas, NV 89193-8510. Tel.: 702-876-7237. Internet: www.swgas.com.

This year should prove better than last for Southwest Gas. After posting three consecutive quarters of lower year-over-year earnings, the utility seems positioned for a rebound. The decisive factor in our assumption is the $41 million in annualized rate relief Southwest will begin receiving this year. In November of 2001, SWX was granted $21.6 million in Arizona, and in December the company was granted $19.4 million in Nevada. Neither of these increases were as high as the company requested, but, assuming normal weather, as we do, this should translate into stronger earnings for 2002. In all, we are calling for Southwest to earn $1.45 a share this year, and $1.55 in 2003.

Strong customer growth continues to be a double-edged sword. While growing the customer base by about 5% annually is a remarkable feat, the operating and maintenance costs associated with such expansion has tended to drag on Southwest's earnings. Indeed, cash flow only covered about 55% of capital spending in 2001, which partly explains why the company remains so highly leveraged as compared to its peers.

Potential liability to Southwest's failed merger is essentially negligible. In a recent ruling, the courts deemed that Southwest Gas is merely liable for Southern Union's out-of-pocket expenses, which are estimated to be $1 million (as opposed to the $500 million to $750 million SUG was seeking), and any punitive damages that can be proved.

Southwest shares are not particularly appealing. Earnings and return on equity have been on the decline since 1998, and have not adequately reflected the company's impressive growth rate. Though many factors affect profits, it concerns us that Southwest has not been able to establish any upwards earnings momentum to match its customer growth. Moreover, as an income vehicle, the stock is unexciting, since dividend payments have not changed in over six years. But, with litigation risk subsiding and rate relief in place, Southwest is poised for a much better year in 2002. As such, the stock merits watching, though for the time being, there are better choices in the LDC group. The shares are neutrally-ranked for Timeliness.

BUSINESS: Piedmont Natural Gas Company is primarily a regulated natural gas distributor, serving over 675,000 customers in North Carolina, South Carolina, and Tennessee. 2001 revenue mix: residential (30%), commercial (22%), industrial (45%), other (3%). Principal suppliers: Transco and Tennessee Pipeline. Gas costs: 53.3% of revenues. '01 depreciation rate: 3.2%. Estimated plant age: 8.7 years. Non-regulated operations: sale of gas-powered heating equipment; natural gas brokering; propane sales. Has about 1,657 employees, 18,665 shareholders of record. Chmn: John H. Maxheim. CEO & Pres.: Ware F. Schiefer. Inc: North Carolina. Address: 1915 Rexford Road, P.O. Box 33068 Charlotte, NC 28233. Telephone: 704-364-3120. Internet: www.piedmontng.com.

Warm weather and a weak economy are tempering Piedmont Natural Gas' results. Temperatures that ran 23% warmer than normal, and 39% warmer than last year substantially crimped fiscal first-quarter 2002 (ends October 31st) earnings. And though the utility continues to experience good customer growth, economic conditions served to lower consumer demand for natural gas. Combined, these factors reduced system throughput by 11.7 million dekatherms, or 22%, as compared to the prior-year quarter, and have created a challenging scenario for Piedmont in fiscal 2002. What's more, SouthStar Energy's (Piedmont's retail gas and electricity marketing joint-venture in Georgia) earnings contribution was less than half of what it was a year ago, due largely to regulatory issues. All things considered, we have lowered our 2002 earnings estimate by $0.25. Assuming a return to more normal weather patterns, share-earnings should experience a healthy resurgence in fiscal 2003.

Long-term customer growth should return to historical averages. Though economic pressure is expected to reduce annual customer growth to 3.5% to 4.0% this year (which is still above industry average), management believes it can boost that rate back up to 5% as the economy improves. The markets in North Carolina, South Carolina, and Tennessee remain attractive for growth.

Piedmont is filing for rate relief in North Carolina. And the company is pondering doing the same in South Carolina and Tennessee. In addition to increasing rates, the company plans to alter the pricing structure in order to stabilize revenue streams and make rates less dependent on volumes. Management is also seeking methods of compensating for customer conservation.

This good-quality issue is ranked to lag the market in the year ahead. The stock's current valuation leaves little room for upside, in our view. Moreover, diminishing returns and no consistent earnings trend will likely keep PNY shares at bay, as has been the case over the last few years. But income-oriented investors may find appeal in the stock's continually increasing dividend payments.

BUSINESS: Peoples Energy Corporation distributes natural gas via its utility subsidiaries, Peoples Gas Light & Coke Co. (approx. 847,000 customers at 9/30/01) and North Shore Gas Co. (153,000), in Chicago and northeastern Illinois. Fiscal 2001 volume: 240 bil. cu. ft.: residential, 49%; commercial, 8%; industrial, 2%; transport, 41%. Main supplier is Natural Gas Pipeline Co. of America. Purchased gas costs and revenue taxes accounted for 63% of gas revs. in fiscal '01. 2001 deprec. rate: 3.5%. Est'd plant age: 10 yrs. Has 2,994 employees, 25,040 stkhldrs. Directors own 1% of common (1/02 Proxy). Chairman and CEO: Richard E. Terry. Pres.: Thomas M. Patrick. Inc.: Illinois. Address: 130 East Randolph Drive, Chicago, IL 60601. Tel.: 312-240-4000. Internet: www.pecorp.com.

Fiscal 2002 looks to be a challenging year for Peoples Energy. Mild temperatures, weak commodity pricing and Enron's bankruptcy have gotten the company off to a rough start. As a result, management reduced earnings guidance to $2.75 to $2.90 a share, significantly below previous assessments of $3.30 a share. Weather that was 18% warmer than normal and 29% warmer than last year apparently disrupted Peoples' stride the most. And the company's weather insurance policy only offset about $0.07 a share of the first quarter decline, so it will be difficult to make up the entire loss. Exacerbating this was a reduction in income from the "enovate" partnership with Enron, following that company's financial debacle. Peoples plans to restructure the enovate partnership, which should smooth out results for the Midstream segment over the year. Overall, we are reducing our fiscal 2002 earnings estimate to $2.80 per share, predicated on the fact that warm weather continued into most of February, which makes us less confident about the remainder of the heating season.

Peoples' financial exposure to Enron is limited. About $4 million of PGL's expected midstream trading income will be impacted by Enron's bankruptcy. Peoples' has recorded a receivable of $2.5 million related to the value of hedges for future oil and gas production that were deemed ineffective as of last October. The company also determined other Enron receivables to be about $4 million. Though payment is by no means guaranteed, Peoples believes it will be able to collect these receivables, plus any increase on the value of the aforementioned hedges. Even assuming a worst case scenario, however, we do not believe Enron exposure will have a negative long-term effect on Peoples' business.

Though untimely, this issue is currently a good income stock. The quarterly dividend was recently raised one cent, to $0.52 a share, and the yield remains above the average of the group. Peoples' strong cash flow should support future dividend increases, as well. Too, the stock's Price Stability and Safety ratings should continue to hold strong, given that the company's profits still come largely from its regulated businesses.

Edward Plank *March 22, 2002*

(A) Fiscal year ends Sept. 30th.
(B) Basic earnings per share. Excludes acct'g gains/(losses): '89, $0.30; '99, $0.22; '00, ($0.27). Next earnings report due late April.
(C) Next dividend meeting mid-May. Goes ex mid-June. Dividend payment dates: about 15th of Jan., Apr., July, Oct. ■ Dividend reinvestment plan available.
(D) Includes deferred charges. In '01: $45.9, $1.29/sh.
(E) In millions.

Table 2 **Key Variables in Estimating the Cost of Capital**

(As of Year-end 2001)

	Value
Yields (Riskless Rates)[3]	
Long-Term (20-year) U.S. Treasury Coupon Bond Yield	5.8%
Intermediate-term (5-year) U.S. Treasury Coupon Note Yield	4.4
Short-term (30-day) U.S. Treasury Bill Yield	1.6
Fixed Income Risk Premia[4]	
Expected default premium: long-term corporate bond total returns minus long-term government bond total returns	0.1
Expected long-term horizon premium: long-term government bond income returns minus U.S. Treasury bill total returns*	1.4
Expected intermediate-term horizon premium: intermediate-term government bond income returns minus U.S. Treasury bill total returns*	1.0
Equity Risk Premia[5]	
Long-horizon expected equity risk premium: large company stock total returns minus long-term government bond income returns	7.4
Intermediate-horizon expected equity risk premium: large company stock total returns minus intermediate-term government bond income returns	7.8
Short-horizon expected equity risk premium: large company stock total returns minus U.S. Treasury bill total returns*	8.8
Size Premia[6]	
Expected mid-capitalization equity size premium: Capitalization between $1,115 and $5,252 million	0.7
Expected low-capitalization equity size premium: Capitalization between $269 and $1,115 million	1.4
Expected micro-capitalization equity size premium: Capitalization below $269 million	3.3

[3] As of December 31, 2001. Maturities are approximate.
[4] Expected risk premia for fixed income are based on the differences of historical arithmetic mean returns from 1970-2001.
[5] Expected risk premia for equities are based on the differences of historical arithmetic mean returns from 1926-2001.
[6] Expected return in excess of those predicted by the Capital Asset Pricing Model, or the beta-adjusted size premium.
*For U.S. Treasury bills, the income return and total return are the same.

BUSINESS: Citizens Communications (formerly Citizens Utilities) provides telecommunications services to more than 2.5 million rural and suburban customers in 24 states. It also provides competitive local exchange carrier (CLEC) services to retail business customers and to other communications carriers through its 85%-owned subsidiary, Electric Lightwave, Inc. (NDQ: ELIX). It's currently divesting its public services businesses, including its water, gas, and electric operations. Has about 10,121 empl. and 34,264 common shareholders. All Officers/Directors as a group own 4.5% of common stock (3/01 proxy). Chmn. & CEO: Dr. Leonard Tow (owns 3.5%). Pres.: Rudy Graf. Inc.: DE. Addr.: 3 High Ridge Park, Stamford, CT 06905-1390. Tel.: 203-614-5600. Internet: www.czn.net.

Citizens Communications' ILEC (incumbent local exchange carrier) business continues to make good progress. This business has grown dramatically over the past few years (1 million access lines were in service in 1999, versus 2.5 million today), as the company has looked to divest its public utility assets and acquire unwanted rural telecom properties. And it's only now beginning to realize its potential as a cash-flow generator, in our view.

In 2002 and in the years beyond, we think Citizens' ILEC business will be able to drive solid revenue growth, as the company steps up its efforts to sell data, long-distance, and vertical services to customers in its long-neglected markets. A modest but steady rise in the total number of access lines in service should also support the top line. True, many of the Baby Bells are seeing their access-line bases shrink, as customers increasingly forego second lines in favor of wireless and broadband alternatives. But Citizens' focus on rural areas, where there is little competition and where penetration levels of second lines and value-added services remain quite low, is what separates it from the larger, urban-based carriers.

Margins should also improve in the years to come, as the company sells more value-added services and continues to integrate its recently acquired telecom properties, particularly the 1.1 million access lines it purchased from Global Crossing in mid-2001. The integration of these lines, most of which are located in markets where Citizens already has a strong presence, ought to allow the company to achieve significant economies of scale.

We think untimely Citizens shares have attractive 3- to 5-year appreciation potential. Yet, these shares are not for the faint of heart. Indeed, the company's highly leveraged balance sheet, and the disappointing results coming from its 85%-owned CLEC subsidiary, Electric Lightwave, make this issue a somewhat risky investment vehicle. Moreover, there is still some execution risk associated with Citizens' divestiture of its public utility assets. While the company recently agreed to sell its Kauai Electric business for $215 million, it must still find adequate buyers for a few remaining properties.

The Telecommunications Services Industry has made a partial recovery during the past three months, rising from a position in the bottom tenth of the *Value Line* ranking system to a higher place inside the middle third. No doubt, the relative stability offered by local phone operations (i.e., the Regional Bell Operating Companies, or RBOCs) was a lure to investors in these uncertain times. Too, we believe that an apparent bottoming of the beleaguered long-distance sector lent some support. Further, growth prospects from new broadband, Internet, data, and wireless services, albeit now more tempered, still look comparatively good. Redoubled efforts, on managements' part, to reduce operating costs and rein-in capital outlays probably gained investors' favor, as well. Talk of a looming consolidation in the sector may have also played a role in supporting the stock valuations.

Below, we provide an update on each market segment in the telecom sector and investment advice on some of the companies that lie therein. Generally, the stocks, though not now timely, offer tempting 3- to 5-year appreciation potential, even after factoring in market risks.

Long-Distance Assets Up for Grabs?

Last October, speculation surfaced that the reduced share prices of the long-distance majors would prompt well-heeled companies, particularly the RBOCs, to submit buyout offers. It was rumored that *BellSouth* held takeover talks with *Sprint FON*, and had targeted *AT&T Corp.'s* consumer and business operations. Other RBOCs (*SBC Comm.* and *Verizon Comm.*) were said to have considered purchasing those same companies, as well as *WorldCom* and *Qwest Comm.* Such activity, though, has yet to happen, and we don't expect the scenario to unfold anytime soon. Indeed, *Verizon* has stated that it won't now consider any of the long-distance operators.

A weak domestic economy and falling consumer and business demand have hurt pricing in the long-distance voice sector, and revenues continue to fall on a year-to-year and sequential-quarter basis. True, the long-distance majors would bring in sizable customer bases, but a big drawback is razor-thin margins, exacerbated by the amount of debt these companies have amassed over the years, not to mention the considerable task of integrating assets.

INDUSTRY TIMELINESS: 59 (of 97)

Despite a few miscues, the RBOCs are making progress in winning regulatory approvals to offer long-distance service within their home territories. The Federal Communications Commission (FCC) is more closely examining competitive issues in the wake of the demise of several start-up competitive local exchange carriers (e.g., PSINet, Teligent, Winstar Comm.). And in recent news headlines, *BellSouth* withdrew federal applications in Georgia and Louisiana. Still, the Atlanta-based telco plans to resubmit more detailed plans to regulators shortly. At press time, the RBOC was also fairly close to securing market entry in North Carolina, South Carolina, and Mississippi. Elsewhere, *SBC* is already able to serve long-distance customers in Arkansas, Kansas, Oklahoma, and Texas, and *Verizon* is offering service in Connecticut, New York, Massachusetts, and Pennsylvania. Further, the RBOCs hope to soon win permission to offer long-distance data services. So far, *AT&T Corp.* has been largely unsuccessful in its campaign to lobby state regulators to restrain RBOC entry into the long-distance markets and even functionally break up each of the Bells into separate retail and wholesale businesses.

We don't expect the long-distance companies to become serious takeover candidates until the RBOCs begin to run out of growth options, a situation which is likely a few years away.

In sum, though trading at modest valuations, the long-distance majors are not particularly attractive investments at this time. *Worldcom-MCI Group* (a new addition to the Value Line Investment Survey), however, does stand out as a tempting income vehicle. Its yield is exceptionally high, reflecting the market segment's competitive risks. *MCI Group's* strong cash flow helps to offset some of the uncertainty here.

Cracks in the Local Foundation

The Local business has held up much better than the long-distance segment during the past few years. Rural carriers, most notably *ALLTEL Corp.*, have been able to realize strong results in the local sector. One of the biggest threats to local voice revenues and operating earnings (as with long-distance), however, is technology substitution, particularly with respect to second phone lines. An increasing number of consumers and business customers are taking advantage of inexpensive broadband instant messaging and e-mail offerings and wireless services. We note that in Europe, where the telecom market is further developed than that of the U.S.,
