DOCKET NO. E-00000C-11-0328 SMART METERS

Dear Commissioners:

In your October 23, 2012 draft letter about smart meters, it does not clearly eliminate the PLC system from being considered a valid opt-out.
The only valid opt for those customers who already electro-sensitive or who are concerned about the negative health effects of digital meters, whether the wireless OR the PLC type, is the option of retaining our existing non-communicating eletro-mechanical (analog) meters.

It should be specifically stated in guideline #8 that customers can opt out of the smart meter program by keeping their original non-communicating electro mechanical meter or have them reinstated if the power company have already removed these meters, whether the power company is using the wireless or PLC smart meter type of system.

In addition, Gurdeline #1 refer to FCC gurdelines for radio frequency interference. These gurdelines are grossly outdated and almost unenforceable. But, most importantly, they must not be confused as safety limits for human exposure. They refer to, in these, times, the interference of emergency radio communications for fire, ambulance and law enforcement, including ham radio operators. Individual homeowner radio frequency interference exposure is essentially unenforceable.

Thankyou for your careful attention to this issue. You have the wellbeing and true value of human rights in your hands. I pray that you will chose to error on the side of the precautionary principle.

Sincerely,

Dorothy Halvorsen

I have a wise physician that reminds his patients and colleagues that what we know of medicine at this time is phenomenal compared to what we knew a 100 years ago and is paltry compared to what we will know 100 years in the future.
