ORIGINAL

I am a constituent considering the installment of rooftop solar power. As a senior citizen I view solar power as a way to manage the impact of energy costs on my fixed income and relatedly allow me to maintain a comfortable and less stressful temperature in my home. Also, the economy benefits from economical solar energy by the local jobs generated by the industry, and by making the state competitive with neighboring states in attracting new residents and businesses. And last but not least are the direct health benefits of solar power vs coal and other sources and the long term benefits of reducing carbon emission through limiting climate change.

For these reasons I strongly oppose the APS proposals both of which would increase the costs of residential solar power and strongly limit its attractiveness as a power alternative. Therefore, I urge you to support net metering docket # E01345A-13-0248.

Sincerely
Paul Rosenthal, Ph.D.
