Subject: even more fees on solar households

Susan,

I'm writing to register my complete opposition to charging solar customers even more money in an attempt to preserve the dated APS business model.

Solar customers spend THOUSANDS of dollars to add capacity to the APS grid. Solar power reduces the need for more expensive, polluting AGW causing, power plants. Solar power reduces transmission losses (if the home that has the solar doesn't need it, it goes to the neighbors). It reduces line maintenance, and if done intelligently, increases the viability of the grid (just as the internet is hard to take out, multiple source of power strengthen the grid).

Charging these folks MORE money is an affront to common sense.

Now - rather than tack on meaningless charges to allow APS to preserve an outmoded business model, you might consider a 10% below true net-metering reduction in the amount that solar customers are reimbursed by APS for electricity purchased. That acknowledges the new role APS could play - that of a distribution system, with, perhaps, a role in backup power.

The alternative is you keep rubber stamping APS rate increases for solar customers, and those same forward thinking households invest in battery technology (as it continues it's amazing improvement trend over the next decade) and leave the APS grid and all the bogus fees. Then the non-solar rate payers will be stuck with the full brunt of adding capacity, line maintenance and other savings solar provides (providing power at the time of peak demand being one major benefit).

Continuing to double and triple charge the solar households is not sustainable, and will lead APS to a true crisis.

Thank you for considering my views on this.

Tom

PS - I note that Pinnacle West had another record setting profit year in 2014 - as a state sponsored monopoly, they are entitled to make a small profit - but increasing their profit on the backs of the solar homeowners who have spent thousands of their own dollars to build the capacity APS has available seems a violation of the public trust.

Solar Owners Are Givers, Not Takers

0 Helpful?

A new report shows that everyone benefits as solar-generated electricity gains traction

POSTED ON JUL 9 2015 BY ROB SARGENT

With the solstice behind us, summer has officially begun. Across the country, that means the sun is shining and the mercury is climbing, and our air conditioners and the electricity grids they rely upon are stretched to their limits.

In response, we've seen utilities urge customers to turn up their thermostats a notch or two to ease their burden. They've recommended the use of fans, energy-efficient bulbs, and double-paned windows — all good measures to reduce energy use.

What we haven't seen is much action by the utilities to encourage people to go solar. In fact, in state after state, by proposing to increase fees for owners of photovoltaic (PV) systems or to lower their reimbursement rates, utilities are doing the opposite.

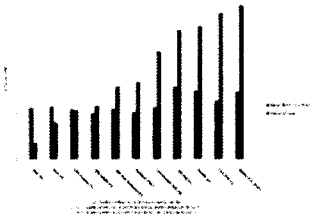

Image 1 of 2

In eight of 11 net metering studies, the value of solar-generated electricity was calculated to be higher than the average local residential retail rate, according to a report from the Environment American Research & Policy Center.

That's a shame, because a new Environment America Research & Policy Center report shows that when people put PV panels on their rooftops and in their neighborhoods through programs like net-metering, they reduce the strain on our electric grid, lower prices for all electric customers, and cut pollution to boot.

Net-metering programs credit solar panel owners at a fixed rate — often the retail price of electricity — for providing excess power to the grid, similar to rollover minutes on a cell phone plan. These programs are the law of the land in 44 states, and have helped solar energy skyrocket across the country; last year, every two and half minutes, another U.S. home or business went solar.

The report, *Shining Rewards: The Value of Rooftop Solar Power for Consumers and Society*, examines recent analyses of net-metering programs conducted by utilities, public utility commissions, and independent groups to assess the value of solar power.

As the chart at the top of this page details, of the 11 net-metering studies reviewed, eight found that the value of solar energy was higher than the average local residential retail electricity rate; the three that didn't were conducted by utilities.

The median value of solar power across all of the studies was nearly 17 cents per kWh, compared to the nation's average retail electricity rate of about 12 cents.

In other words, despite utility claims that solar costs too much, and that solar users are benefiting at the expense of other customers, the opposite is more likely true. Solar panel owners are givers, not takers.

Even utility studies see benefits

Every single one of the studies — even those conducted by the utilities — found that solar customers offer net benefits to the electric system, as the second chart shows (see Image #2, below).

Solar panels connected to the grid help bring down ongoing energy costs. They reduce the amount of electricity utilities must generate or purchase from fossil fuel-fired power plants. And they reduce the amount of energy lost in generation, long-distance transmission and distribution, losses that tend to cost ratepayers.

Solar also brings down new capital investment costs. By reducing overall demand, solar energy production helps ratepayers and utilities avoid investing in new power plants, transmission lines and other forms of electricity infrastructure.

What's more, solar power boosts the local economy, producing local jobs that can't be outsourced. And as everyone knows, solar helps cut our dependence on dirty sources of energy and the global warming and air pollution that comes with it.

This study has real implications right now for debates raging across the country over net metering and other rooftop solar programs. Nevada, for example, is considering a new fee for solar panel owners who sell excess power. Arizona Public Service is proposing to lower the reimbursement rates for solar power. The Wisconsin Public Utility Board has approved a similar plan to lower payments to solar customers, which advocates are appealing.

As these battles unfold across the country, decision makers should take into account the report's findings, which reinforce what advocates have long argued: solar power has far more rewards than costs. Instead of penalizing its use, we should be encouraging it, right alongside programmable thermostats and double-paned windows.

Rob Sargent is the energy program director for Environment America and oversees policy and strategy development for energy and global warming campaigns. This blog was originally published at Huffington Post.

But the value decreases with PV's grid share.
by Dana Dorsett

The value of PV on the grid will never be higher than it is RIGHT NOW, since at low penetration it is primarily lowering stress on distribution grid infrastructure and offsetting peak power, lowering the amount of low-efficiency spinning reserves

peakers. By the time PV is providing 25% of annual kwh going onto the grid it's value is much lower than the grid-retail price, and it begins to impart other costs for stabilizing the grid. It still has value, just not as much value.

The utility analyses tend to view it from the "after" picture of widely distributed PV at high penetration, the independent analyses tend to start with a snapshot of the value of the next 1k of PV going onto the grid, sometimes projecting forward, other times not. Net metering at retail forever is not a very good policy, but grandfathering in net-metering for 20-25 years for PV installed in the early years of the ramp up is a bargain for the average ratepayers, in most of the US. (But not Hawaii, where the penetration levels are large.)

Minnesota's Value of Solar Tarriff (VOST) methodology for compensating solar self-adjusts over the long term, as does Maine's recently enacted block-step "standard buyer" version. Just how fast the stuff goes up matters- it's accelerating, with an increasing exponent to the exponential growth rates in many markets, which is only making the stuff cheaper and more attractive under any compensation scheme.

New Yorks "Reforming Energy Vision" approach is much more nuanced, assessing the value based on geography & location within the grid infrastructure. eg: PV going into a congested point on the grid that has marginal throughput capacity has FAR more value than putting in on lightly loaded circuits, since it eliminates or reduces the size of the grid infrastructure investments necessary going forward. This approach to valuing solar (and grid batteries) is also being scrutinized in the CA-ISO region.

"Assessing the value of ..... "
by w d

Graph #1 shows in red "the value of solar". Proposals on "the value of solar" are prolific. They all have one thing in common: they tend to be the (PV) supplier's idea of what the buyer (local Utility) "should" pay. It's like a "supply and demand' graph with only a supply curve, no demand curve.

PV is beneficial and it's growing, with or without ever sweeter subsidies. I like that.

kWh Rates
by Peter L

Dana,

We are around .14 cents per kWh in my neck of the woods (Arizona). What do you think the price will be in the next 5-10 years with more people going to PV solar?

4.
JUL 10, 2015 9:15 AM ET

EDITED JUL 10, 2015 1:52 PM ET.

Response to Peter L
by Martin Holladay, GBA Advisor

Peter,
Like you, I'm interested in how Dana will answer your question. I'd like to point out, though, that those who can accurately predict future energy prices should create a new hedge fund. They will soon be rich.

It's almost impossible to predict future energy prices because there are so many variables, and because utilities are monopolies that set prices based on political considerations rather than market forces.

Dropping prices for wind-generated electricity and solar-generated electricity are putting downward pressure on electricity prices. A future carbon tax would put upward pressure on electricity prices. Political developments in other countries can also affect energy prices in unpredictable ways.

Make your predictions here... and in 10 years we'll come back and see whose predication was most accurate.

5.
JUL 10, 2015 11:40 AM ET

No simple answers. (response to PeterL)
by Dana Dorsett

The regulatory environment in AZ is in a huge state of flux (disarray?) with the major monopoly utilities fighting the expansion of PV on their grids with fees, and smaller utilities fighting it with demand charge rate structures for PV owners and high per-kw fixed charges, high connection fees, etc. It's not exactly clear how that is going to shake out in the next 5-10 years, but the utilties are under extreme pressure from solar to adapt their business models to stay in business.

What IS clear is that the levelized COST of small scale solar right now in AZ (even without subsidy) is below 14 cents/kwh, and in 5-10 years it's likely to be well

under 10 cents. Right now 20 year power purchase contracts from utility scale solar farms in Texas are now all coming in under 5 cents, and some under 4 cents. To finance those projects (even with the tax credits) the unsubsidize LCOE of those projects has to be under 5 cents. At the learning rate of solar, a small scale roof top project's LCOE in 2025 will be less than that of utility scale LCOE today.

If the AZ regulators & utilities adjust regulations & business models accordingly to allow the rapid deployment of small scale solar & storage the net per kwh cost to other ratepayers will likely be lower in 10 years than it is today. There are plenty of ways to screw that up, and the AZ utilities have been pretty creative on punitive stalling tactics to date. But the rising PV tsunami has reached the point of inevitability- if they keep screwing around grid-defection could become financially rational for those with the financial resources, which would lead to HIGHER prices for the remaining ratepayers.

This is currently a major food-fight in the AZ courts, primarily between third-party solar installers, who of course would prefer net-metering forever, or more favorable rates for paying for grid infrastructure, and the monopoly utilities who would of course prefer to live in a competition-free environment and not have to deal with creating a different business model, and in some instances would like to be able to leverage their monopoly position and access to cheap capital to compete directly against the solar company interlopers intent on eating what they presume to be THEIR rightful lunch.

http://www.azcentral.com/story/money/business/2015/06/24/srp-dismiss-sol...

http://www.greentechmedia.com/articles/read/tucson-electric-power-to-pro...

http://www.tucsonnewsnow.com/story/29503907/tep-seeks-to-expand-home-sol...

http://www.azcentral.com/story/money/business/2015/02/26/srp-board-oks-r...

http://www.seia.org/state-solar-policy/arizona

So, it's going to be a volatile ride, and it's not clear that the state regulators will be able to get ahead of it to prevent grid defection or utility bankruptcies. Penetration of roofop solar is currently on the order of 1% of all houses in AZ (compared to about 25% & rising in Australia, with similar amounts of sunshine.) But the rate at which it can (and eventually will) expand is astounding, and the existential threat perceived by the utility companies is real. If the utilities & regulators don't get it together, it could be really rough for ratepayers in the nearer term. There absolutely WILL have to be write-downs of some existing power generation in AZ. Even without outright grid-defection (unhooking from the grid), solar will be cheaper than the fixed-rate energy portion of the residential bill within 10 years- the net demand for grid-sourced electricity will continue to fall.

For privately owned roof top solar that doesn't produce a net excess (which is most rooftop arrays), PV's effect on grid load and kwh sales is pretty much the same as efficiency. Are those high performance AZ homes built with extremely low cooling & heating loads and high efficiency mechanical systems also deserving of high connection charges or demand charge rate structures? What makes solar different? Should a code min McMansion with a 10 ton air conditioner and multiple tankless electric hot water heaters be assessed demand charges? These are the sorts of things that need to be scrutinized in greater detail when adjusting utility regulations and rate structures, rather than simply playing to the desires of utilities or the third party solar companies. I personally can't understand how residential demand charges for only PV owners can pass a fairness test, especially for the early adopters that are lowering the cost of the grid infrastructure for everyone. Demand charges across the board for all ratepayers are arguably a fairer way of paying for the grid infrastructure than fixed multipliers based on the total energy use, which has been the predominant method of paying for the grid in rate structures of the past century.

It's now amply clear that there isn't sufficient economies of scale with solar to fully rationalize monopoly utilities going forward based on the 20th century model, especially in places as sunny as AZ. Managing the transition to Utility Rev.X may pretty rough at first, but it should be cheaper for everyone in the end.

Questions for Dana and others
by Steve Vigoren

I have noticed people using the statement that utilities will have to 'write down' assets. Could you elaborate on that. I have a vague idea what it means, but I am not sure.

I also read somewhere that fossil fuel companies have 'capitalized' their coal reserves. I assume that means if the coal company is worth half a trillion dollars, most of that value is in coal in the ground. If the market for coal dries up, the coal company all of a sudden has no assets. Is that correct?

And now PV is upsetting the business model that for profit utilities have had for a long time. It is easy to see why the alliance between the utilities and the fossil fuel

companies has developed to fight the scourge of PV. After all, they were mostly fat and happy until PV showed up with a new game plan.

7.
JUL 15, 2015
4:22 AM ET

Response to Steve Vigoren
by Martin Holladay, GBA Advisor

Steve,
A utility might borrow $100 million to build a new coal-fired power plant, hoping to profit from the sale of the electricity produced by the plant. It might take 20 years to pay off the loan. Once the loan is paid off, the investment makes money for the utility. But in Year 8, the utility still owes a lot of money, and isn't necessarily receiving enough revenue yet to justify the investment.

If the plant has to be moth-balled and disassembled in Year 10, the $100 million loan will prove to be a bad investment.

A financial analysis might set the value of the coal plant based on the assumption that it will last 40 years. If it has to be demolished after 10 years, the utility has to "write down" -- that is, reduce -- the assumed value of the asset. At that point it is transformed from an asset (a good investment) into a liability (money down the drain).

Dear Chairman Bitter Smith,

Three utilities are trying to levy charges on solar customers outside of established procedures.
Utilities shouldn't get special treatment to raise rates for solar.
The fair process for discussing solar rates is in a rate case.
All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.
The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

Sincerely,

Gerry Milliken

Arizona Corporation Commission
1200 W. Washington
Phoenix, AZ 85007

RE: Docket No. E-01933A-15-0100

Dear Commissioners:

As I write this, I have just come in with my mail for the day, which included my electricity bill from TEP. The temperature was 101º outside, and I was very glad to re-enter my air-conditioned home.

I opened the bill and saw, as I expected, that in the past month our rooftop solar array has generated more power than we have used—more than twice as much, in fact. That means that our rooftop solar not only has been supplying the needs of my house, but also has contributed (and continues to contribute) to the electric power available on the grid for others to use on days like this.

I submit to you that it is the rooftop solar on our house and on thousands of other homes in this area that helps TEP avoid brownouts; and it will continue to do so over the summer. But of course we still need to be connected to the grid, and are more than willing to pay our fair share for that privilege.

Energy conservation and maximizing the use of renewable resources, with overhead costs (such as construction and maintenance of distribution networks) spread out *transparently and equitably* among all those who benefit from them, should be paramount in your deliberations. Arizona's electric utilities and the Arizona Corporation Commission should be doing everything possible to *encourage* the continued expansion of rooftop solar (among other renewable sources of energy). Any proposal—such as gutting net metering, as advanced by our electric utility companies—that *discourages* further installation of rooftop solar is short-sighted in both the short and the long run.

Thank you for your attention.

Gerard L. Ervin

Subject: Utilities net metering

Good evening Chairman Smith, just a simple question, why are the utility's allowed to stop offering net metering presently. If what they presented was rescinded then the present net metering program that is now being stopped should give those still interested in installing solar the benefits of the net metering program of the past. Giving those opportunity's to benefit rate for rate and be able to roll over energy credits to offset usage. Would this be fair to our Arizona consumers, when I hear the utility say we're not trying to manage solar into the ground. But on one hand their building solar farms a quickly as they can, and now offering roof top solar programs themselves.

So it's good for the utilities to benefit from solar but consumers not so much. I'm just a simple man helping consumers become better stewards of the planet to which we all have a responsibility to protect. I thank you for your time and ear to my concerns. I'm hoping you and the others can agreed to re-instate the present net metering program and require the utility to re-open applications and accept any new consumers who want to install solar using net metering program and allow net metering until the utilities can present a reasonable utility plan.

Sincerely

Kevin Krause

Subject: Don't let them get away with this...

Dear Chairman Bitter Smith,

The utility companies are giving solar the shiitty end of the stick. They've constantly raised the rates for solar customers. Don't let them get away with this again.

Utilities shouldn't be able to raise rates on solar customers without bringing a rate case, and for sure, whatever rates they get should not be applied retroactively!

Distributed solar power generation is what we should be promoting in Arizona, with all the free sunshine we have. Utilities want to concentrate power - both power generation, and their economic power to set monopoly rates. It's your job to regulate them in the public interest, and to defend customers from being taken advantage of by corporate economic power.

You should be encouraging customers to install solar power panels, and demand that the electric utility companies change their business models to adapt to this greener way of generating electricity!

Sincerely,

Tom Adams

Subject: Do not raise solar customer's rates

Dear Chairman Bitter Smith,

I just want to reaffirm that, as a solar customer of APS, I think raising rates on one class of customers will prove to be unconstitutional because it unfairly singles out the customers whose solar panels compete with APS's power.
Please do not do this.
Thank you.

Sincerely,

Sue E. Dean

Subject: solar rates

Dear Chairman Bitter Smith,

I paid a lot of money a few years ago to add solar panels to my home. I did so for two reasons: to move to renewable energy from fossil fuels to help clean our environment and to cut my costs for energy. I knew when I made this decision that I might not live long enough (I am 83) to make it a good investment for me but thought I should do what was responsible for the future of my grandchildren (4) and great grandchildren (12) who live in AZ. I hoped the solar system on my house would enhance its value when my son come to sell the house once I die.
I have bills for electricity some months that are less than $10 a month. The last one I paid was $8.95. I will strongly oppose any actions that increase my APS bill. That would be breaking the deal that I, and many others, made when deciding to help improve our environment.

Sincerely,

Shirley McAllister

Subject: Concerned Arizona Citizen

Hello Ms. Smith

I recently added solar panels to my 23 year old home, my electricity provider is APS. In addition, I made about $5,000 in energy efficiency improvements. I am concerned about the potential extra taxes and/or fees that may be added to my bill just because I have solar. I have lived in AZ for 25 years and many years ago AZ was concerned as to how they were going to meet the power needs of our growing state. Now that solar technology is becoming affordable they (APS) seem to want to stop it. What gives here? It is our responsibility to make this state a better place to live for my children and grandchildren and suppressing solar growth to benefit APS is not the answer. APS needs to revisit it's business model and adjust. Let's continue to encourage solar growth for residential use as well as commercially. We don't need to give the farm away for solar but rather allow it to be a competitive alternative to APS. I am in favor of breaking out a grid charge for all but no extra fees just because I have solar. Half of my power still comes from APS.

We have so much sun here why not utilize it for the benefit of our citizens and future generation.

Regards,

Greg Thompson

Subject: Docket #E-01933A-15-0100--Please do a cost-benefit economic study before imposing a net-metering tariff on rooftop solar

Honorable Commissioners:

I am a TEP customer, account #8262744758. I do not have rooftop solar, but I am saving for a PV system. I am also an Arizona resident and am mindful of the many jobs and economic potential that the Sun brings to our state.

TEP's request to impose a net metering tariff on customers who have rooftop solar should not be granted unless an independent, comprehensive economic study of the costs and benefits of rooftop solar to consumers and to TEP shows that such a tariff is justified.

TEP argues that ratepayers who install solar are not paying their fair share of fixed infrastructure costs -- for example, construction of power plants, transmission lines, and associated infrastructure. However, the rooftop ratepayers point to the benefits that solar customers provide to the grid -- for example, a ready source of inexpensive energy at peak demand times, less water use, less pollution, and reduced need for additional power plants and other infrastructure.

In addition, I have read that TEP pays rooftop solar owners less than 6 cents per kilowatt-hour but resells it to other customers for about 13 cents per Kwh. Further, I note that SRP is imposing an average, additional $50 per month fee, while APS is asking for $21 fee per month. These very large discrepancies in both resale pricing and in infrastructure fees need to be evaluated. Can the economic realities between SRP and APS be that different?

Where lies the truth in these conflicting claims? Is rooftop solar a burden or a boon to other ratepayers? If a burden, is it a $21 or $50 a month burden? Or is rooftop solar no burden at all? If a boon, are Arizona utilities cheating rooftop solar folks out of a fair price by only paying less then half of what they reap by reselling rooftop solar power to others?

I therefore urge the Commission to do an independent, comprehensive study of the costs and benefits of rooftop solar to consumers and suppliers of electric energy before granting TEP's or any utility's request to impose special infrastructure fees on customers who have rooftop solar.

Without treating TEP's request for the imposition of an infrastructure fee as a "rate case", how can the amount of any such fee be correctly and fairly assessed?

Respectively submitted, Michael D. Morgan, Tucson

Subject: Email from Public for Utilities Division - Solar Power

Greetings It has come to my attention that APS would like to impose a rather significant fee\ surcharge \ service on customers who have solar power. I am opposed to such fees.

1) We (Solar Customers) already pay fees and taxes to connect to the grid.

2) This proposed extra fee is counter productive to "going green". I personally know of one family who decided against Solar Power because the additional APS fee would remove any financial benefit and make Solar Power more costly than having only APS.

3) Why should individuals who have chosen to help reduce the state's and nation's dependence on fossil fuels etc. and helping to improve the air quality of the valley by doing so; Have to pay extra? Solar Customers should instead be getting reduced fees and tax benefits.

4) As generators of Solar Power we bear the cost of operating and marinating the equipment. Yet the reimbursement rate for energy generated in excess of what Solar Customers use is determined by APS.
Seems rather one sided to me.

5) Is it a bad thing if Solar Customers are able to reduce their energy costs while benefiting the environment and possibly making more disposable income available to invest in goods and services which benefit the economy?

Simply put anything that makes it more difficult or costly for consumers to "Go Solar" is not in the best interest of the public.

Dear Commissionser,

For utilities to be able to raise their rates or impose fees on customers who have only tried to reduce their dependence on these legal monopolies outside of a "rate case" is non-sense. This is especially true after they have agreed not to and that the typical solar customer does not require any additional "grid support" once the installation is commissioned. AZ Corp. Commission, Please do your job and protect the people of this state from being convinced they have no alternatives but to pay for ever increasing electricity costs.

Sincerely,

Mike Conner

Dear Commissionser,

Dear ACC,

I am writing to you to express my concerns about the efforts of utility companies to unfairly tax solar companies, and to do so outside of the established rate case procedure.
Solar energy is good for our economy, it's good for our environment, and benefits Arizonans in several ways. But it is also beneficial to the very utility companies that are trying to impede its growth. Utility companies can sell homeowners' excess electricity for a sizable profit; and solar customers take pressure off of the grid and curb the need to build new billion-dollar energy plants.
The solar industry has created jobs here in Arizona, and has provided an alternative for Arizonans. The growth of solar customers has a positive impact even for non-solar customers. For these reasons, I urge that you support the solar industry here in Arizona, and do not allow the utility companies to unfairly tax solar simply as a means to discourage growth and make even more of a profit off of the backs of the citizens of this state. At the very least, I hope that you will stick to your word (and make APS stick to theirs) and hold a proper rate case before considering any taxes on solar.
This issue is very important to me and I vote.

Sincerely,

Robert Aloe

Dear Commissionser,

I think Arizona should be a leader in the Solar Industry with the abundance of sunshine we have been blessed with. I have invested in solar panels on my rooftop and to date I have produced more energy than I use. Each month SRP has benefited from my investment. In a fortunate timing situation I was able to be grandfathered in and will not have to pay the surcharge they have imposed on other solar providers. If I did have to pay that surcharge I would be paying more per month in the winter months than I was prior to my solar purchase since I rely on primarily gas 1/2 the year. Make the utility companies go through the established procedures to ensure a fair rate charge.

Sincerely,

Bridget Doherty

Dear Commissionser,

I want you to know that I oppose any public utility raising rates on ANY consumer without a request for a rate increase going before you.

This is illegal and unfair. In the past you have indicated that you would only discuss rate increases, solar or any other kind, in the established process of a rate case. Keep your word!!

Thank you for keeping your word.
Susan Wilson
AZ voter and taxpayer

Sincerely,

susan wilson

Dear Commissionser,

It is imperative that the ACC stick to their word regarding solar in Arizona. Arizona should be the solar capitol of the USA.

Please do NOT cave in to the three major utility companies. The majority of citizens DO NOT want the big utilities to receive special treatment to raise rates for solar.

This discussion should be held only in the venue of a rate case. The ACC needs to make sure that happens and to not allow the utilities to raise their rates without a fair hearing.

Sincerely,

Gomati Wilson

Dear Commissionser,

Since when have owners of solar panels become the enemy. Why is it that that our investments of tens of thousands of dollars to generate electricity for ourselves and the grid, not to mention a considerable contribution in lowering for my own and your grandchildren, makes us the bad guy? Funny how we, several years ago, were STRONGLY encouraged by your Commission and APS to make our solar investment. Could it be for greed, for the APS shareholder that they now wish to further tax us? Is there no consideration that the hundreds of millions of dollars invested by the solar homeowners has allowed APS the luxury of not having to add additional, expensive, polluting coal burning generators?

Please take a breath here and take a HARD look at how solar homeowners have really HELPED APS in the long-term. This is the kind of thing that all APS customers should be strongly encouraged to do. This is the right thing to do for our air, our health, our environment and our grandchildren.

Cordially,
Thomas Arni
Sedona

Dear Commissionser,

There should be open hearing and on a schedule that is not hidden. This sneaky behind closed doors hearing agenda is not correct. And will be spoken of many time by me, Your board is established to create a balance between reasonable profit and consumer protection. It is obvious that lobbyist and politics control your solar ideas. Solar cost utilities nothing and they do make profits because they already sell the solar in the summer for over 3 times more than we are netted. It sames them the need to increase production facilities and the cost of fuel. increase solar production not the price to consumers for the suns free source.

Sincerely,

Rodney Smith

Dear Commissionser,

I had solar installed on my home to help us from using so much electricity. The concept was to lower or eliminate our electric bill, with the added advantage that SRP would not have to build additional power plants if enough people installed solar on their home. Only to my surprise they turn and want to tax us solar customers for their lost revenue from solar customers. As soon as an efficient low cost storage battery is developed I will go off the grid and no longer be a utility customer. Then SRP will lose out on the extra power we are producing that they are selling from our solar panels.
Please don't let the utility companies destroy a good environmental business that is good for all. KEEP SOLAR AFFORDABLE FOR ALL.

Sincerely,

James Rawlins

Dear Commissionser,

Dear Chairman Smith,
When I retired six years ago, I moved to Scottsdale, a beautiful city in a beautiful state. I love the topography of the state, the climate, and the reasonable cost of living. Five years ago I purchased a rooftop array of solar panels to contribute to a cleaner environment and to preserve the air and water quality of my new home. At the time APS assisted me in the purchase and congratulated me on my initiative. I also saved money on my electric bill. I am alarmed that our local utilities have seemingly "turned sour" on rooftop solar and want to penalize us with unfair charges. Please stay with examining proposed increased solar rates in the context of established procedures. Thank you.

Sincerely,

Andre Dargis

Dear Commissionser,

Dear Commissioner,

I am very concerned about the Commission's deliberations of new taxes, in the guise of rates or outside the rate setting process, on citizens who opt to invest in clean, renewable, electrical grid easing Solar Power. Unlike most industrialized nations and other States, it seems that Arizonans are constantly disincented by the Utility Companies via the Arizona Corporation Commission.

I urge you to resist these attempts to "tax" solar installations in your proper role in protecting the citizens of Arizona from the large Utility Corporations, whose privilege to do business as a state sanctioned Monopoly is your responsibility to protect

There are many arguments in favor of solar energy I could make, which you have probably already heard, so I won't repeat them now. Please regard me as a staunch supporter of the public use of solar energy and will be expecting your protection of that public good.

I am also an eligible voter and I talk to people every day about solar energy in Arizona. I would prefer to speak about the progress we are making in utilizing our greatest resource, solar energy.

Sincerely,

Paul R Cooper
Phoenix, AZ

Sincerely,

Paul Cooper

Dear Commissionser,

I hope and expect that the Commission will stick to its assertion that the proper context to consider raising rates for solar generation is in a rate case.

Since you represent utility customers/rate payers, you are our sole protection from unfair practices of utility companies. Thank you for doing your job, and maintaining a fair process for determining rate increases.

Sincerely,

Sherry Sass

Dear Chairman Bitter Smith,

For utilities to be able to raise their rates or impose fees on customers who have only tried to reduce their dependence on these legal monopolies outside of a "rate case" is non-sense. This is especially true after they have agreed not to and that the typical solar customer does not require any additional "grid support" once the installation is commissioned. AZ Corp. Commission, Please do your job and protect the people of this state from being convinced they have no alternatives but to pay for ever increasing electricity costs.

Sincerely,

Mike Conner

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Dear ACC,

I am writing to you to express my concerns about the efforts of utility companies to unfairly tax solar companies, and to do so outside of the established rate case procedure.
Solar energy is good for our economy, it's good for our environment, and benefits Arizonans in several ways. But it is also beneficial to the very utility companies that are trying to impede its growth. Utility companies can sell homeowners' excess electricity for a sizable profit; and solar customers take pressure off of the grid and curb the need to build new billion-dollar energy plants.
The solar industry has created jobs here in Arizona, and has provided an alternative for Arizonans. The growth of solar customers has a positive impact even for non-solar customers. For these reasons, I urge that you support the solar industry here in Arizona, and do not allow the utility companies to unfairly tax solar simply as a means to discourage growth and make even more of a profit off of the backs of the citizens of this state. At the very least, I hope that you will stick to your word (and make APS stick to theirs) and hold a proper rate case before considering any taxes on solar.
This issue is very important to me and I vote.

Sincerely,

Robert Aloe

Dear Chairman Bitter Smith,

I think Arizona should be a leader in the Solar Industry with the abundance of sunshine we have been blessed with. I have invested in solar panels on my rooftop and to date I have produced more energy than I use. Each month SRP has benefited from my investment. In a fortunate timing situation I was able to be grandfathered in and will not have to pay the surcharge they have imposed on other solar providers. If I did have to pay that surcharge I would be paying more per month in the winter months than I was prior to my solar purchase since I rely on primarily gas 1/2 the year. Make the utility companies go through the established procedures to ensure a fair rate charge.

Sincerely,

Bridget Doherty

Dear Chairman Bitter Smith,

We seem to have forgotten that we are facing an energy crisis and that we have a relatively short period of time to sort out how we are going to survive longer term without an ample supply of relatively cheap energy. Just because oil prices have temporarily dropped doesn't mean that we trash renewable energy sources - we have only been given a brief reprieve to give us time to adjust our sources and uses appropriately.
Killing solar and other alternate energy sources is not only an ignorant decision leading us into a black hole, but such decisions add to our climate change problems. Our energies MUST be redoubled and collectively directed at solving our long term energy needs - and not at punishing those of us who are working towards finding and providing solutions

Sincerely,

James & Kathleen Pitre

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Since when have owners of solar panels become the enemy. Why is it that that our investments of tens of thousands of dollars to generate electricity for ourselves and the grid, not to mention a considerable contribution in lowering for my own and your grandchildren, makes us the bad guy? Funny how we, several years ago, were STRONGLY encouraged by your Commission and APS to make our solar investment. Could it be for greed, for the APS shareholder that they now wish to further tax us? Is there no consideration that the hundreds of millions of dollars invested by the solar homeowners has allowed APS the luxury of not having to add additional, expensive, polluting coal burning generators?

Please take a breath here and take a HARD look at how solar homeowners have really HELPED APS in the long-term. This is the kind of thing that all APS customers should be strongly encouraged to do. This is the right thing to do for our air, our health, our environment and our grandchildren.

Cordially,
Thomas Arni
Sedona

Sincerely,

Thomas Arni

Dear Chairman Bitter Smith,

There should be open hearing and on a schedule that is not hidden. This sneaky behind closed doors hearing agenda is not correct. And will be spoken of many time by me, Your board is established to create a balance between reasonable profit and consumer protection. It is obvious that lobbyist and politics control your solar ideas. Solar cost utilities nothing and they do make profits because they already sell the solar in the summer for over 3 times more than we are netted. It sames them the need to increase production facilities and the cost of fuel. increase solar production not the price to consumers for the suns free source.

Sincerely,

Rodney Smith

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

I had solar installed on my home to help us from using so much electricity. The concept was to lower or eliminate our electric bill, with the added advantage that SRP would not have to build additional power plants if enough people installed solar on their home. Only to my surprise they turn and want to tax us solar customers for their lost revenue from solar customers. As soon as an efficient low cost storage battery is developed I will go off the grid and no longer be a utility customer. Then SRP will lose out on the extra power we are producing that they are selling from our solar panels.
Please don't let the utility companies destroy a good environmental business that is good for all. KEEP SOLAR AFFORDABLE FOR ALL.

Sincerely,

James Rawlins

Dear Chairman Bitter Smith,

Dear Chairman Smith,
When I retired six years ago, I moved to Scottsdale, a beautiful city in a beautiful state. I love the topography of the state, the climate, and the reasonable cost of living. Five years ago I purchased a rooftop array of solar panels to contribute to a cleaner environment and to preserve the air and water quality of my new home. At the time APS assisted me in the purchase and congratulated me on my initiative. I also saved money on my electric bill. I am alarmed that our local utilities have seemingly "turned sour" on rooftop solar and want to penalize us with unfair charges. Please stay with examining proposed increased solar rates in the context of established procedures. Thank you.

Sincerely,

Andre Dargis

Dear Chairman Bitter Smith,

Dear Commissioner,

I am very concerned about the Commission's deliberations of new taxes, in the guise of rates or outside the rate setting process, on citizens who opt to invest in clean, renewable, electrical grid easing Solar Power. Unlike most industrialized nations and other States, it seems that Arizonans are constantly disincented by the Utility Companies via the Arizona Corporation Commission.

I urge you to resist these attempts to "tax" solar installations in your proper role in protecting the citizens of Arizona from the large Utility Corporations, whose privilege to do business as a state sanctioned Monopoly is your responsibility to protect

There are many arguments in favor of solar energy I could make, which you have probably already heard, so I won't repeat them now. Please regard me as a staunch supporter of the public use of solar energy and will be expecting your protection of that public good.

I am also an eligible voter and I talk to people every day about solar energy in Arizona. I would prefer to speak about the progress we are making in utilizing our greatest resource, solar energy.

Sincerely,

Paul R Cooper
Phoenix, AZ

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Please make the utilities stick to established procedures for raising rates on their customers. All Commissioners, and APS, my utility (as if I had a choice) have stated that solar rates should be looked at in a rate case. The Commission should stick to their word and not let utilities raise rates outside of the proper venue. You know that decentralized solar is the obvious and best way for Arizonans to harness energy. I have wished to harness the solar energy hitting my roof since the 1970s. Now that it's finally affordable for ordinary people like me, a retired teacher, please keep it that way.

Thank you.

Sincerely,

Joan Tomoff

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Please stick to your word about solar rates. Work for the people and not the utility companies who stand to make profits from solar. Also think about the environment. We want this earth to be in good shape for our grandchildren and the money hungry ways of today's corporation are not helping the environment!

Three utilities are trying to levy charges on solar customers outside of established procedures.
Utilities shouldn't get special treatment to raise rates for solar.
The fair process for discussing solar rates is in a rate case.
All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.
The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

Sincerely,

Daniella Hauptmann

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Commissionser,

Why would the commission allow the utilities to arbitrarily raise electrical rates to residential customers that have roof top solar, rather than levying a "windfall profits" tax on the utilities. The utilities TAKE our excess solar produced electricity during the day, sell it to our solar-less neighbors at a premium rate, then credit us on the off peak rate kwh for kwh. Those excess kwh's, for which the utilities charge a premium, cost the utilities nothing to produce and nothing to transport; yet the utilities complain that we are not paying our fair share to maintain the electrical grid.
At year end, for any excess produced electricity that the utility has TAKEN and not credited back for our use during the year, the utility credits us $0.029 per kwh. The utility sold those same excess kwh's for more than $0.25 per kwh. All year long the residential solar customer pays the utility to maintain an account and to meter electrical consumption and production. The roof top solar customers foot the production and accounting costs for the excess solar kwhs which the utilities sell at a premium. Given the profit margin of selling the residential solar customer's excess power, I feel the commission should tax the utilities for their excess profits; rather than allow the utilities to further abuse the residential solar customer with higher fees or rates.

Sincerely,

John Fodor

Dear Commissionser,

When we signed up and installed solar at our son's residence, we operated with the best intentions regarding reduction of conventional sources of energy production and the pollution and ultimate expense associated with it. Since that time our efforts have come under non-stop attack from energy producers seemingly to maintain not only their grip on production but more importantly to guarantee their bottom line at the expense of anyone who seeks to avoid the pitfalls of our current system.

To add rate increases because we no longer need to acquire energy in the conventional manner goes against the very reason that more clean energy is needed. Rather than penalizing people who took the government's request to reduce dependency we should encourage more participation in an open and truthful offering with no subsequent gotchas.

Sincerely,

Mitchell & Nancy Trainer

Dear Commissionser,

Solar rates must be discussed in a rate case. TEP has agreed to this legal and proper process. Now APS, Trico, and SSVEC should follow suit.

Solar is the future here in AZ and a forward looking utility company would jump on board and turn solar in to a long term energy source instead of using a short sighted policy of punishing any new solar.

Sincerely,

Mary Wellington

Teresa Tenbrink

Dear Commissionser,

You undoubtedly are receiving many, many letters of protest over APS plans to raise rates on solar customers in a move that falls outside of the venue of a rate case that would come before your commission.

This is outrageous! You commissioners have made it abundantly clear - to APS and in public statements - that solar rates should be looked at ONLY in a rate case that comes before your commission. APS may not stick to its word, but I do expect you, as my elected representatives, to protect our interests.

With faith in elected institutions at a current low these days, it will be refreshing to see at least one elected body stand by its word. Stick to your guns!

Don Meyer

Dear Commissionser,

As you are well aware, three Arizona utilities (APS, Trico, and SSVEC) are currently trying to tax solar customers like us. They are attempting to do this outside of the established proceeding, called a rate case.

Arizona Corporation Commissioners and Staff have gone on the record as stating that solar rates should be discussed in a rate case:

Commissioner Doug Little: "In my view, the best place for such analysis is within the context of the next APS rate case."

Commissioner Tom Forese: "You just have to make sure that you find the balance and that is done in a rate case."

Commission Chairman Susan Bitter Smith: "We agree with Staff's view that the issues presented herein will likely need to be addressed and considered as part of APS's next rate case filing."

Commissioner Bob Stump: "We recognize that a complete consideration of the many facets of these issues must await APS's next rate case."

Commissioner Bob Burns: "I'm now of the position that we ought to do this rate design within a rate case."

Corporation Commission Staff: "Staff believes that the Commission should dismiss Trico's application, without prejudice, and order Trico to file a general rate case."

Even APS agrees. In August, an APS spokesman said "We have consistently said we have no current plans to ask the commission for any change in the $5-per-month charge on residential rooftop solar installations prior to the next rate case because we are focused on the broader rate-design discussion."

We are demanding that Commissioners stick to their word, and only discuss solar rates in the proper venue - a rate case. This allows for due process and for the ACC to evaluate all rates together.

Sincerely,

Charles & Rebecca Goff

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Commissionser,

Since fairness is apparently the standard upon which to decide utility rates, lets be fair:
Let's include the unaccounted medical costs identified in the Harvard Medical School's study showing the debilitating health care costs due to burning coal in the United States to be between $300 - 500 Billion annually.
Let's include the rising costs of energy identified in the APS 5-year study that concludes that no matter what strategy is used to meet capacity growth, that rates will have to go up. Rising rates should not just be blamed on revenue loss due to homeowners installing their own generation.
It is entirely possible that solar generation has alleviated the need to install fuel based generation and thus is helping to keep rates down! Not to mention that if there was a level playing field which included all the costs of burning fuels - clean energy sources would definitely be the best value. Utilities are in effect receiving huge subsidies by not have to pay the societal costs of dirty generation sources. They are not paying for nuclear commissioning, acid rain, pulmonary disease, etc, etc. - not to mention the controversial potential of climate change.
Clean, renewable solar power is the way forward (especially here in sunny Arizona) and utilities need to get on with the process of reorganizing their business model to encourage it.

Sincerely,

Greg Collins

Dear Commissionser,

My husband and I want to install solar panels, but we are hesitant to do so until the above matter has been settled. People should be rewarded for going solar, NOT penalized for it. As I see it, we in Arizona have great problems with keeping up with demand for power and water for our homes. Those who choose a method such as solar should be encouraged with tax deductions and with rate REDUCTIONS from power companies.

Sincerely,

Mary Ogilvie-Goldstein

Dear Commissionser,

Commission members were elected by the arizona public to serve the best interest of the people, not what's in the best interest of the big corporations that continue to advance themselves excessively large salaries and bonuses at public expense. Has anyone from APS answered the question regarding APS funding college tution for APS employees children and young adults?

Regarding APS trying to charge extra fees to solar cutomers: individuals that have invested in solar panels on their personal homes have taken an big financial risk and the return on investment is close to 10-12 years.(minimum) For APS to promise rebates and discounts initially and later try to alter or eliminate those promises should be considered a punishable offense towards APS.

Oh but wait, APS will pay for fines by raising rates on all of its customers. Why not let APS pay for any fines by taking mandatory salary decreases with bonuses eliminated.

One last point: Why is APS allowed to charge APS solar customers a delivery service charge? Shouldn't this charge be a wash to all solar customers because of our delivery of electricity to them as well?

Sincerely,

Adrian Pulkrabek

Dear Chairman Bitter Smith,

You undoubtedly are receiving many, many letters of protest over APS plans to raise rates on solar customers in a move that falls outside of the venue of a rate case that would come before your commission.

This is outrageous! You commissioners have made it abundantly clear - to APS and in public statements - that solar rates should be looked at ONLY in a rate case that comes before your commission. APS may not stick to its word, but I do expect you, as my elected representatives, to protect our interests.

With faith in elected institutions at a current low these days, it will be refreshing to see at least one elected body stand by its word. Stick to your guns!

Don Meyer
27679 N Makena Place

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Solar rates must be discussed in a rate case. TEP has agreed to this legal and proper process. Now APS, Trico, and SSVEC should follow suit.

Solar is the future here in AZ and a forward looking utility company would jump on board and turn solar in to a long term energy source instead of using a short sighted policy of punishing any new solar.

Sincerely,

Mary Wellington

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

When we signed up and installed solar at our son's residence, we operated with the best intentions regarding reduction of conventional sources of energy production and the pollution and ultimate expense associated with it. Since that time our efforts have come under non-stop attack from energy producers seemingly to maintain not only their grip on production but more importantly to guarantee their bottom line at the expense of anyone who seeks to avoid the pitfalls of our current system.

To add rate increases because we no longer need to acquire energy in the conventional manner goes against the very reason that more clean energy is needed. Rather than penalizing people who took the government's request to reduce dependency we should encourage more participation in an open and truthful offering with no subsequent gotchas.

Sincerely,

Mitchell & Nancy Trainer

Dear Chairman Bitter Smith,

Please have some respect for your customers. Follow proper procedure and file a rate case !

Is APS not already yielding high profits for a utility company ?

Is it now plausible that APS is basically taxing the sun ?

So APS spends millions in covert black op companies trying to kill solar - now your approach - via radio - is your all for solar and being a greener company.

Why not truly stand up and lead down the right path for AZ's future maybe other utilities will follow.

Sincerely,

John Shopp

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

We in Arizona should be leading in solar energy in both commercial and private form, but constant attacks and mixed signals puts us lagging to "sunshine states" near the Canadian border! What the heck is that about. Well, those states know they are at disadvantage for solar radiation, but need relief from fossil fuel costs and don't see it threatening to established industries of electrical generation.

Which brings me towards a strategy that the traditional electric companies should be exploring: power transfer as a business in addition to power generation. Hidden in their complex as a cost burden power distribution is an expense of doing business. With introduction of dispersed small scale power generation there is need to view the characteristics of these feeds and routing of their energy. Concept: paid for a service rendered rather than a grant of a stifling "we were here first" tax on those desiring to invest in private generation whether from wind, solar, thermal or other form.

In a model of legacy power generation with their centralised large generators _and_ a second service of power distribution these companies would be in position to grow while advancing total alternative distributed power generation.

This model would also allow for standards of quality and safety to be established with set codes complying with standards like NEC and UBC guidelines.

Foster advancement while throwing a bone to both sides with a goal of moving Arizona ahead.

Sincerely,

Mark Toth

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

I am very concerned by the efforts of Arizona utilities to raise rates for solar customers. As a state we should be doing all we can to be the #1 state for solar development and not simply giving over control to utilities who want to stall and maximize profits on their existing infrastructure. This is a clear case where government needs to advocate for the best future for Arizona citizens and that will require moving away from fossil fuels and towards sustainable renewable energy.

All attempts by these utilities to apply regressive rate hikes on rooftop solar need to be channeled thru normal rate change proceedings and should inspire you to do your homework on what is best for the future of AZ, not simply rubber stamping utility requests.

There is an opportunity here to structure policy to advance the growth of solar in Arizona rather than retard it - on all levels. Increased commercial scale solar as well as residential rooftop solar and creating a solar friendly environment that brings more solar business into AZ. We should be manufacturing panels and components here, attracting solar corporation headquarters here and building the largest scale solar power plants. Arizona utilities need to be stepping up to the plate instead of trying to limit competition. Create the right environment for a big jump into the future.

Thank you for your consideration. Please be forward thinking and push the utilities in that direction as well.

Don W Jones

Utilities shouldn't get special treatment to raise rates for solar.
The fair process for discussing solar rates is in a rate case.
All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.
The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

This constant after the fact attempt of trying to get money out of those of us that previously invested in solar is ridiculous, unfair and quite. Please do what you can to stop it.

Sincerely,

James Hakeem

Dear Commissionser,

I am a resident of Phoenix and am appalled at the attempt by APS and SRP to monopolize the energy industry in this region. Unfortunately they want to provide all the power from their sources located way outside of Phoenix, which does not allow for intrinsic security for the entire system. By having rooftop solar we are one the one hand producing energy and securely while on the other hand reducing the need for energy by shading the rooves of the houses that have them. In my attic I have seen a 30 degree reduction of the temperature, which is without total coverage of my roof. Imagine the energy cost savings. If our leaders in this area were all knowledgeable of the effect of the heat bubble we have created in this Valley of the Sun and did something about it all of electrical cost would be reduced.
I am against this move to centralize energy production

Sincerely,

Henry Harding

Dear Commissionser,

Why is it so difficult for APS to just charge a $10-15 grid fee to all customers connected to the grid? All customers using the grid would pay this flat fee regardless of how much energy they use and whether or not they have solar. This is fair and simple and no one can complain that they are being discriminated against.

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Why is Arizona Public Service (APS) or any utility allowed to raise rates when they want or lobby Arizona Corporate Commission (AZCC) for a rate increase. Why is taxing the Sun an issue. The Sun is free and not produced by any utility, since solar harnesses the free sun why should solar be taxed? Since 2004 (2004 and 2005 in particular) APS has been raising rates by as much as 8%. I received a letter both years stating why, which doesn't happen anymore. Back in 2004 the stock was considered junk and APS could not get any loans against it, so here comes a rate increase. This has gone on year after year. There will never be any fairness when folks tax our rights of choice and savings. Local utilities use solar for various reasons. Are they taxing themselves for there solar consumption? Why is APS putting solar on customers roof tops? And of course keeping the savings. Hmm....This tax solar thing is crap. We do not live in a dictatorship. The AZCC seems to be spineless in all of
this
and APS especially is two faced and hypocritical. We need a very diversified means of energy

production. Solar plays a huge role in this and always seems to get stepped on by a bully with money and policy makers in their pockets. APS never should have gotten the $5.00 solar tax, and they wanted a great deal more. This has got to stop! Get with the program. Solar customers get sick of paying $200 or so every month for electricity so they end up paying $25.00 once they put solar panel on their roof. Purchasing the system out of their own pocket of course, not leasing. Purchasing is where we realize a savings and the American dream. The utilities and AZCC are crushing our dream. Why? It's their dream too, isn't it?

Respectfully,
Mark Vollmer

Sincerely,

Mark Vollmer

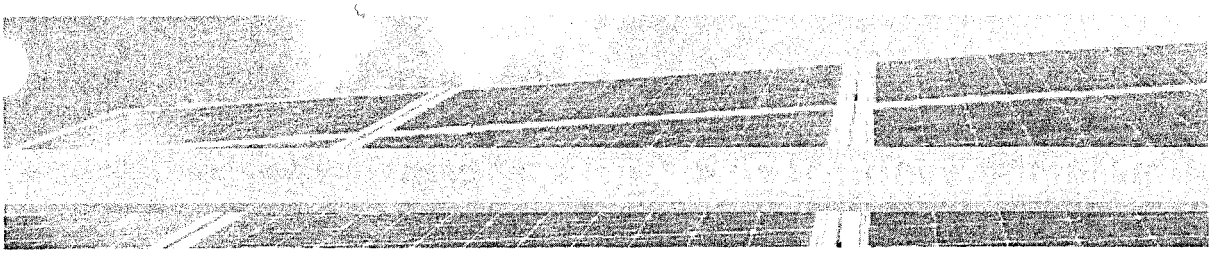
Subject: Join SEIA for a Discussion on Grid Reliability at NARUC: July 13, 2015



Dear Solar Colleague,

The Solar Energy Industry Association is convening a panel discussion the morning of Monday, July 13, 2015, in conjunction with NARUC Summer Committee Meetings. The breakfast event will be held on site at the New York Marriot Marquis. The panel will address timely questions about solar power generation's contributions to the reliability of the electrical grid as solar deployment increases in response to the Environmental Protection Agency's (EPA) pending rule on the control of carbon emissions from existing stationary sources under Sec. 111(d) of the Clean Air Act – also known as the "Clean Power Plan."

REGISTER

Topics will include:

- The role of utility regulators in responding to EPA's pending rule and ensuring the reliability of the grid.
- The role of renewable energy in state and regional compliance options.
- Market innovations and technologies that can ensure grid reliability and/or reduce costs associated with the anticipated increase in variable generation.

- The contribution that distributed generation assets can have on grid reliability.

Confirmed participants include:

- **Jon Wellinghoff**, Partner at Stoel Rives LLP; former Chairman of the Federal Energy Regulatory Commission
- **Katherine Hamilton**, principle at 38 North Solutions; former Policy Director for the Energy Storage Association; former President of the GridWise Alliance
- **Paul Suskie**, Executive Vice President and General Counsel, Southwest Power Pool; former Chairman of the Arkansas Public Service Commission
- **Steven Koerner**, Director, Government Affairs, Recurrent Energy (moderator)

Recurrent Energy (www.recurrentenergy.com) is sponsoring the event on behalf of SEIA.

Dear Commissionser,

Do you realize Germany has committed to Solar in an effort to eliminate nuclear power plants? It is because solar works. For America's sake, you should support solar over the corporate mentality of profiteering.

Sincerely,

Raymond Storla

Dear Commissionser,

The elected commissioners must stick to their words and only discuss solar rates in the proper venue - a rate case. This allows for due process and for the ACC to evaluate all rates together. For the future of our planet, we must maximize the potential of solar as an energy source. The utility companies must adjust to the reality of the market place. They cannot act in a way that will discourage the use of solar. The future rate structure must of course be fair to all parties, but this cannot be achieved without the full openess of a rate hearing.

Sincerely,

Jeffrey Kleiman

Dear Commissionser,

Solar is the future especially for AZ. Please keep your word and don't let the existing utilities impose their monopoly strength to slow the spread of solar power with taxes and charges.

Please keep your word and do the responsible thing for ALL of the people of AZ, not just for the utilities and their vested interested.

I'm and AZ resident who votes and I'll be watching what you do and how you vote.

Sincerely,

Beverly Cameron

ear Commissionser,

Arizona has a unique responsibility in leading the nation and world in offering affordable solar to its residents. Please Please don't embarrass our state in surcharging residents for solar use. Solar customers provide for job opportunity and increased corporate profits for companies involved in solar production. Making it less affordable by surcharging users will only hurt residents and corporations than help use the suns energy for electricity.

Sincerely,

Jonathan Grant

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Commissionser,

I am very concerned by the efforts of Arizona utilities to raise rates for solar customers. As a state we should be doing all we can to be the #1 state for solar development and not simply giving over control to utilities who want to stall and maximize profits on their existing infrastructure. This is a clear case where government needs to advocate for the best future for Arizona citizens and that will require moving away from fossil fuels and towards sustainable renewable energy.

All attempts by these utilities to apply regressive rate hikes on rooftop solar need to be channeled thru normal rate change proceedings and should inspire you to do your homework on what is best for the future of AZ, not simply rubber stamping utility requests.

There is an opportunity here to structure policy to advance the growth of solar in Arizona rather than retard it - on all levels. Increased commercial scale solar as well as residential rooftop solar and creating a solar friendly environment that brings more solar business into AZ. We should be manufacturing panels and components here, attracting solar corporation headquarters here and building the largest scale solar power plants. Arizona utilities need to be stepping up to the plate instead of trying to limit competition. Create the right environment for a big jump into the future.

Thank you for your consideration. Please be forward thinking and push the utilities in that direction as well.

Don W Jones
Tucson, AZ

Dear Commissionser,

Well, we had stage robbers at one point in our history. Nothing has really changed. Now they put on a coat and tie to do the same thing. More and better results that way. Paraphrasing Al Capone he said, "I never met so many thieves before in my life until I put on a coat and tie." And that's pretty much what we have today.

It appears the only way to tackle these high tech thieves (utility companies) is to force them to follow the proper venue.

I hope you stick to your word and not let utilities be raised outside the proper venue.

Wish you the best

nn Lander

Dear Commissionser,

We in Arizona should be leading in solar energy in both commercial and private form, but constant attacks and mixed signals puts us lagging to "sunshine states" near the Canadian border! What the heck is that about. Well, those states know they are at disadvantage for solar radiation, but need relief from fossil fuel costs and don't see it threatening to established industries of electrical generation.

Which brings me towards a strategy that the traditional electric companies should be exploring: power transfer as a business in addition to power generation. Hidden in their complex as a cost burden power distribution is an expense of ›ing business. With introduction of dispersed small scale power generation there is need to view the characteristics of ınese feeds and routing of their energy. Concept: paid for a service rendered rather than a grant of a stifling "we were here first" tax on those desiring to invest in private generation whether from wind, solar, thermal or other form.

In a model of legacy power generation with their centralised large generators _and_ a second service of power distribution these companies would be in position to grow while advancing total alternative distributed power generation.

This model would also allow for standards of quality and safety to be established with set codes complying with standards like NEC and UBC guidelines.

Foster advancement while throwing a bone to both sides with a goal of moving Arizona ahead.

Sincerely,

Mark Toth

Dear Chairman Bitter Smith,

All electric rate payers should be treated fairly and equally. If electric utilities want to break out their fixed costs for transmission, billing, etc., then fine. That cost should be equal for all residential ratepayers. But to unfairly charge just solar customers for these fixed costs is not only unfair but is also punishing solar while subsidizing non solar customers for the utilities fixed costs. Please treat all electric utility customers fairly and deny extra charges for customers that are trying to do the right thing by installing solar panels.

Sincerely,

James Lamb

Dear Chairman Bitter Smith,

The electric distribution system is highly vulnerable to attacks by terrorists. By its nature, centralized electric power generation requires a sprawling transmission and distribution system. Hardening this system will cost billions of dollars and will prove futile in protecting it against attack.
Who on the Commission is thinking about this critical issue? Are you depending on APS and SRP to tell you what their plan is for protecting the electric service to Arizonans?
One of the overlooked benefits of residential rooftop solar is that it is a distributed generation system. Electric power is generated at the point of use. This greatly reduces the need for a sprawling transmission/distribution system that will require a huge expenditure to protect.
It is my sincere hope that you are thinking outside the current centralized electric generation paradigm for answers to this security challenge.

Sincerely,

Mark Edgerton

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

Why is Arizona Public Service (APS) or any utility allowed to raise rates when they want or lobby Arizona Corporate Commission (AZCC) for a rate increase. Why is taxing the Sun an issue. The Sun is free and not produced by any utility, since solar harnesses the free sun why should solar be taxed? Since 2004 (2004 and 2005 in particular) APS has been raising rates by as much as 8%. I received a letter both years stating why, which doesn't happen anymore. Back in 2004 the stock was considered junk and APS could not get any loans against it, so here comes a rate increase. This has gone on year after year. There will never be any fairness when folks tax our rights of choice and savings. Local utilities use solar for various reasons. Are they taxing themselves for there solar consumption? Why is APS putting solar on customers roof tops? And of course keeping the savings. Hmm....This tax solar thing is crap. We do not live in a dictatorship. The AZCC seems to be spineless in all of
this
and APS especially is two faced and hypocritical. We need a very diversified means of energy production. Solar plays a huge role in this and always seems to get stepped on by a bully with money and policy makers in their pockets. APS never should have gotten the $5.00 solar tax, and they wanted a great deal more. This has got to stop! Get with the program. Solar customers get sick of paying $200 or so every month for electricity so they end up paying $25.00 once they put solar panel on their roof. Purchasing the system out of their own pocket of course, not leasing. Purchasing is where we realize a savings and the American dream. The utilities and AZCC are crushing our dream. Why? It's their dream too, isn't it?

Respectfully,
Mark Vollmer

Dear Chairman Bitter Smith,

Dear Commissioner,

You have been elected to protect the residents of Arizona from unfair fees and taxes levied on us by companies such as APS. Please keep this in mind when deliberating on unnecessary (unwarranted, unjust) solar fees. No decision should be made until APS submits for it's 2016 Rate Hearing Case. At that time it will be appropriate for ACC to consider if, in fact, any changes to the current solar fee is necessary.

This bits and pieces approach to taxing solar customers is unfair and without basis.

I respectfully request that the commissioners postpone any solar based decisions until the 2016 rate hearing.

Please remember you have been elected by the people as our voice of reason and protection.

Sincerely,

Thomas Bartsch

Dear Commissionser,

I cannot believe that Mr. Brandt is going back on his word to have solar fees go through a rate case.

I reject the argument that as a solar customer I am costing APS money. As a solar customer I take some of the pressure off the grid during peak times.

My husband and I are elderly and installed solar to help lower our monthly expenses because we are on a fixed income. Also, we have been registered Republicans since the 60's. I would hope that you would consider senior citizens when you make your decision.

APS is a virtual monopoly and as commissioners you should be looking out for what is best for the people of Arizona and not what is best for APS.

I urge you to not consider this potential increase outside of a rate case.

Sincerely,

Sincerely,

Nancy Wright

Dear Chairman Bitter Smith,

please leave solar customers alone, we pay for solar, so we should not have to pay electric companies

Sincerely,

Linda Morero

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248

Dear Chairman Bitter Smith,

I cannot believe that Mr. Brandt is going back on his word to have solar fees go through a rate case.

I reject the argument that as a solar customer I am costing APS money. As a solar customer I take some of the pressure off the grid during peak times.

My husband and I are elderly and installed solar to help lower our monthly expenses because we are on a fixed income. Also, we have been registered Republicans since the 60's. I would hope that you would consider senior citizens when you make your decision.

APS is a virtual monopoly and as commissioners you should be looking out for what is best for the people of Arizona and not what is best for APS.

I urge you to not consider this potential increase outside of a rate case.

Sincerely,

Sincerely,

Nancy Wright

Dear Commissionser,

Utilities shouldn't get special treatment to raise rates for solar.

The fair process for discussing solar rates is in a rate case.

The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

Sincerely,

Frank Pitts

Dear Commissionser,

I have recently learned that there are four utilities that are trying to levy additional charges for those of us who are solar customers. Further, they are attempting to do so outside of the accepted rate case procedure. Both APS and the Commission has stated that any changes of this kind should be considered within the rate case procedure.

I am especially concerned about this effort because any such additional taxes will discourage potential solar customers from going solar. The initial expense for a system (In our case, $22,000 after tax incentives and the APS rebate) is such that any additional costs to the resident or business will clearly discourage solar development in our state. In regard to solar energy users, we are only 5th in the country per capita. With our great sunny weather, we can be number one if solar customers are treated fairly by the utilities Let's work together to make Arizona the first state in solar!.

Sincerely,

Jayne Stake

Dear Commissionser,

I purchased a solar system because I wanted lower electric bills during our HOT summers. I know that what electricity I produce goes into the electric grid for Arizona and other states. Since I help furnish electricity I don't believe I should be taxed. My production with other home owners helps to keep SRP, APS and other companies from being forced to spend millions of dollars on new plants to meet the needs of their customers. PLEASE keep your promise not to tax homeowners with solar. Having coal fired production plants will only lead to worse air quality than we currently have.

Sincerely,

James Taylor

Dear Commissionser,

as we all know solar energy is our long term path to a sustainable future, there are no other options. The utilities are waging a war on solar with special discriminatory rates determined outside the proper venue, this needs to be discussed using established procedures; rate cases. All the while the important states like California & Hawaii are increasing the RPS, and have strong government support for solar - with the resulting increase in jobs and cleaner environment, as well as showing sustainable leadership. Sadly Arizona looks to the rest of the nation as the most unfriendly state for solar. This will impact jobs and new business development. Time to put the utilities on a leash and get them in line with the interests of the people. Change is hard, yet it is inevitable, time to embrace change and support solar.

Sincerely,

Randy Dunton

Dear Commissionser,

You have been elected to protect the residents of Arizona from unfair fees and taxes levied on us by companies such as APS. Please keep this in mind when deliberating on unnecessary (unwarranted, unjust) solar fees. No decision should be made until APS submits for it's 2016 Rate Hearing Case. At that time it will be appropriate for ACC to consider if, in fact, any changes to the current solar fee is necessary.

This bits and pieces approach to taxing solar customers is unfair and without basis.

I respectfully request that the commissioners postpone any solar based decisions until the 2016 rate hearing.

Please remember you have been elected by the people as our voice of reason and protection,.

Sincerely,

Dear Commissionser,

Gentlemen / Ladies,

You have been elected to protect the residents of Arizona from unfair fees and taxes levied on us by companies such as APS. Please keep this in mind when deliberating on unnecessary (unwarranted, unjust) solar fees. No decision should be made until APS submits for it's 2016 Rate Hearing Case. At that time it will be appropriate for ACC to consider if, in fact, any changes to the current solar fee is necessary.

This bits and pieces approach to taxing solar customers is unfair and without basis.

I respectfully request that the commissioners postpone any solar based decisions until the 2016 rate hearing.

Please remember you have been elected by the people as our voice of reason and protection.

Frank Karsai Jr

Subject: Solar

Honorable Commissioners,

Power utilities are requesting a reduction of the rate that utilities pay owners of rooftop solar installations for excess power produced. My understanding is that your staff has recommended against these increases. My hope is that you will follow your staffs recommendations.

The effect of the proposed increases could be devastating to one of the fastest growing industries in our state. Hundreds or even thousands of jobs could be lost and a budding industry could be seriously crippled.

Because solar power is only produced during daylight hours, utilities still provide power to every business and homeowner who has solar panels so they are not altogether losing ratepayers. In addition, the number of people who have solar panels is still a small fraction of their customer base.

I am considering having solar panels installed on my home but as a senior citizen I am concerned that this change would put solar power beyond my reach.

I have read many times how the demand for power is stressing the grid. We have even been warned of possible "brownouts" during peak summer demand. Solar panels reduce that demand and would allow utilities to cope with the demand increases.

Arizona could become a national leader in an industry of the future. We have had too many negative headlines. This could help to generate a positive image of our state and produce thousands of much needed jobs. Please do the right thing for Arizona.

Respectfully,
George Hnilo

Dear Chairman Bitter Smith,

Dear Commissioners:
We have had solar panels for the past few years after our friends invested. We made a significant out of pocket investment (with personal 8 year financial breakeven). Had we known that we would be additionally taxed, expanding (or perhaps making impossible) a reasonable breakeven period, we would not have "gone solar". Please be fair and relegate all discussion for a change in solar rates to a rate case, as you have all previously said you would. Please consider the Tucson model, in which any power that we need (since we don't have a sufficient battery to store our excess) would be purchased by us at retail rates, and any excess we produce would be purchased by APS at wholesale rates. This seems like a fair compromise.

Subject: Stop the TEP-proposed solar penalties along with those of the thre other AZ utilities

Dear Chairman Bitter Smith,

Please deny the request from TEP, and the other three utilities that are proposing to penalize solar. I am a TEP customer. TEP reps say they are trying to not cost the non-solar customers more money, by having solar customers reduce their bills and hence total pay-in. However, solar customers are adding value to grid stability. They are also reducing electric costs.
It costs far more to non-solar homes and businesses to finance the utilities' solar and non-solar added capacity, than it does when homeowners and business-owners buy their own systems.
Who do TEP PR hacks and executives think they are kidding? Anyone with basic business and math skills can tell that the utilities' installations cost the non-solar users much more. In fact, because rooftop solar investors pay for all the costs themselves and because their systems displace a substantial amount of purchased peak and intermediate load electricity, non-solar users get a positive cash flow from the rooftop systems.

Sincerely,

Russell Lowes

Subject: Residential Solar is Good for Arizona

Dear Chairman Bitter Smith,

Consideration of rate changes for residential solar should be made during APS's next rate case filing and not at another time.
This should sound familiar since Corporation Commissioners made similar statements.
The Corporation Commission dshould stick with this. To do otherwise would betray themselves and constituents and would favor SRP, APS and the like..

Please note that residential solar makes a significant contribution to Arizona. Do not undermine this growing industry. Our state needs it.
So do the cities, the power companies and the residents. Residential rooftop solar is an important ingredient in Arizona's energy profile, economic profile and our ability to control the quality of our air and water.
Support this industry that can makes our state's economy and environment more resilient.
Thank you for considering this note.

Sincerely,

Deb Sparrow

Subject: Bias Against Solar

Dear Chairman Bitter Smith,

As an Arizona resident. I am writing to voice my concern regarding the blatant bias and deviance from procedure which has been shown by Arizona's four utility companies, concerning rates for solar.
I urge the Commission to follow promised standard procedure and discuss any change in solar rates in the proper venue- a rate case.
Please stick to your word and do not let utilities independently raise rates outside of the proper venue.

Sincerely,

Barbara Como

Sent: Saturday, June 06, 2015 6:45 AM
To: BitterSmith-Web
Subject: unfair process for raising residential solar generators' rates

Dear Chairman Bitter Smith,

The utilities are monopolies which are only restrained from exploiting customers by the ACC. Many power utilities across the country are currently attempting to squash residential solar generation, as it does not contribute to their bottom line profits given their current financial and power distribution arrangements.
However, utilities are supposed to first serve their customers, not their shareholders. Your body is our only way to keep the utilities from a wholesale switch of these priorities.
Rate change rules should be followed in the four instances where utilities are (once again) trying to levy charges on solar customers.
Please don't let these corporations run roughshod on the due process that your Commission oversees.
Thank you for protecting the interests of all utility customers, which includes solar (generating) customers as well.

Sincerely,

Sherry Sass

Subject: Please

Dear Chairman Bitter Smith,

I know I am one of many who opposes this, why does this idea seem to make so much sense. Cheaper CLEANER power. Adding fees discourages people from going solar, that's basically telling people you would prefer them to use dirty power. Things come and go just because utility was the only way to get power it doesn't mean we can't find better ways. The land line telephone was a great invention, however the cell phone pretty much took that industry down. There was no one fighting to save land lines. What is the reason to penalize people for going solar? We encourage people to carpool and use mass transit? Yet we don't want people to go solar? Doesn't that seem like speaking from both sides of your mouth? Please think this through and remove the greed factor.

Sincerely,

Ryan Jacques

Subject: Solar: Alternative energy power source!

Dear Chairman Bitter Smith,

I am a solar power user. I paid my dues or price to have solar to help myself along with helping the Power Monopolies from Brown outs they are notoriously claiming they need help with???? Now when they stirred up the pot by plotting people against each other ,ones that do not have solar and the ones who do have solar that we do not pay our share for the grid. The hell we don't,we still pay for those services! We just happen to use less electricity. People can do just like I did and pay for solar or lease the solar. Maybe those other people just happen to spend their money on a nicer car than what I have. Do I complain they drive a nicer car than I do, hell no. It just amounts to how they prioritize their spending habits. As far as the power companies, how do they justify charging people more money because we get energy from something the power company DOES NOT OWN? Or do they own the Sun also. Also in reality we are helping the power co.'s as well by producing energy from t he sun and putting it back on the grid. let's put the political bullshit aside I really think our country is tired of it after seven years! The power co's are pissed off cause they are greedy and not reaping the benefits or money from people using solar and saving themselves some money. For years these power monopolies have been screwing the people with increases in their bills. So the CEO can put bigger salaries and bonuses in their personal wallets. let the little people who are struggling have a break from them for once. Besides the people who have solar paid for it themselves out of their own pocket. If other people are mad about this they can get one for themselves just like I did. They might have to give up something else just like I did to achieve this. But do not punish us solar users for doing !!!!

Subject: Solar Benefits Arizona & Utilities

Dear Chairman Bitter Smith,

I have learned that the utilities are attempting to defy all economic common sense and sneak in rate increases for their solar customers. They claim that customers with solar aren't paying their fair share for grid maintenance. That is completely false. Not only do solar customers continue to pay grid fees to the utilities, but they provide energy during peak demands to the grid - FREE. The utilities can then sell that energy at peak rates to their time-of-use customers, making a very handsome profit. The solar customers also provide enormous avoided cost benefits to utilities. However, all this needs to be discussed at open rate hearings. Utilities, as your have stated, should not be permitted to raise rates outside of the legally mandated venues. Please honor your pledge as a public servant and help utilities behave in the interest of the economy of Arizona first before rewarding their executives with 8-figure bonuses and penalizing Arizona citizens doing the right thing fo r their communities by going solar.

Sincerely,

John Neville

Dear Chairman Bitter Smith,

Please stick to the ACC's previous word that no changes to current solar plans should be considered unless it is part of a rate case.

This bits an pieces approach to the regulations if not in the best interest of the people you were elected by to protect their rights.

Dear Susan BitterSmith,

Please, *please* do not allow Tucson Electric Power to undermine the solar industry in Tucson. This is not only bad for the environment, it is very bad for the economy in Tucson. Tucson could and should become the solar capital of America!

Solar customers do pay their fair share for infrastructure, and if this legislation is passed then more and more will leave the grid totally. Solar will not be stopped because it is good for people and good for the planet.

Sincerely,

Gomati Wilson

Subject: taxing solar

Dear Chairman Bitter Smith,

No taxes for solar customers! Why do we allow billion dollar corporations to influence politicians who are elected to represent the American people? These utility companies are required to purchase a percentage of their power from renewable energy sources , which in turn is their own customers. Now they want to tax the person they are making a purchase from? The people who sell solar back to the utility companies, should be taxing them. When will common sense politics prevail??

Sincerely,

josh wallace

Dear Chairman Bitter Smith,

Chairman & Commissioners,

I'm writing to you today to support residential solar in AZ. i owe my lively hood, which I use to support my family, on the solar industry. I work for an AZ based and owned (Veteran owned BTW) solar company that continues to grow as people choose the benefits of solar. I am writing you today to stick to public rate reviews and stop allowing Utilities to add taxes to solar customers. The vast majority people (Yes Even Conservatives Like Me) in AZ support solar.I will watch this closely and vote accordingly in the next election as my families security depends on it. Thanks for your time.

Sincerely,
Robert J Kuhar

Dear Commissionser,

I've always known that Arizona was/is a backwards state, run by a bunch of Neanderthals that are the products of a chronically underfunded education system but to tax solar at all is simply ridiculous in this state. You should be encouraging development of solar energy, but you appear more interested in filling the pockets of the monopolistic utilities that contribute heavily to your campaigns and consistently overcharge all customers with your help. As long as people like you are in charge I don't expect anything will change, but you are not fooling anyone by pretending and lying about why solar has to be taxed so you can put more money into the utilities pockets.

Sincerely,

Donald Charest

Dear Commissionser,

Please follow your staff's advice and only allow changes to utility net metering rates for rooftop solar to be considered within a full rate proceeding.

Your constituents would love to see the ACC stand up to these utility monopolies and stop letting them kill solar. Arizona should be a leader in solar power and the only reason we are not is because we are beholden to these powerful utility companies. Make no mistake their intention isn't "fairness". They are afraid for their bottom line if they allow rooftop solar growth to continue. All one has to do to know their true intent is to look at the data from SRP on how many rooftop solar applications have been installed since they enacted their draconian rules without any real oversight in December.

Sincerely,

Steve Fanning

Dear Commissionser,

You have been entrusted to represent the interests of utility customers in AZ, including customers who have engaged in PV or rooftop solar power.

As such, I expect that you will insist on a formal rate case and review in any legislation or decision that would implement tax or increased charges on customers generating power via rooftop PV. Further, I would hope that you make sure that you have heard and understand the issue as presented by solar advocates, rather than just the corporate utilities.

I would be extremely disappointed in anything less, and I will be sure to watch your decisions, which will certainly influence my vote for ACC commissioners.

Sincerely,

Scott Wiedeman

Dear Commissionser,

Roof top solar should be encouraged and not discouraged as APS is constantly proposing.

The existing roof top solar installations are helping APS meet its mandate to provide energy from renewable sources. Any surplus is sold back to them at wholesale prices. Their own solar installations provide electricity at a higher cost than the wholesale prices they pay privately owned systems.

I know APS tries to come up with creative accounting to try to justify their actions. But let's be realistic and stop this tax/power grab.

Richard Arnold

Dear Commissionser,

To raise rates on a natural energy source is unconstitutional! How can we as human beings want to change the world for better if there are no incentives to do the right thing for that change. Big corporations don't own the sun or the energy is giving back to their plant.

Sincerely,

D'Ante' Woodard

Dear Commissionser,

I entreat the ACC to stop being the lapdog and puppet of APS and the other utilities. Your job is to protect the public from exploitation by these utilities. Instead all of you seem to collude with APS and the others to increase their profit margins at the expense of ratepayers. Since APS couldn't get the opt-out fees for smart meters, it is now going after solar rates. I encourage all of you, who have probably received campaign contributions from APS et al, to have some backbone, stand up to these utilities, and serve the greater good. Thank you.

Sincerely,

Henry Twombly

Dear Commissionser,

I'm concerned about the possibility of a change in process that is currently being considered at the ACC.

APS is attempting to assess charges to solar customers outside of the traditional process. I'm trying to understand as a solar customer that entered into an agreement with APS that was bound by the protection of the ACC why such special treatment would be afforded them?

I believe that the ACC should continue to follow the process they already have established for rate increases regardless if it applies to a special segment to rate paying customers.

John Kalinich

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-0 1933A-15-0100 UNS:

Dear Commissionser,

Arizona is one off just a few states that can really take advantage of power from the Sun. Solar generated electricity, which was encouraged and subsidized, is very beneficial to all except for those that SELL electricity.

The Commission has already determined that rates set for solar power should NOT be treated in isolation. They should be treated in a rate case. Do now allow ANY UTILITY TO TREAT SOLAR DIFFERENTLY. If you fail to follow through on you promise, you can not be considered believable ever again.

Fred Chalfin

Sincerely,

Fred Chalfin

Dear Commissionser,

I HAVE READ THAT FOUR ARIZONA UTILITIES ARE TRYING TO RAISE NEW TAXES ON SOLAR CUSTOMERS. ONE OF THOSE UTILITIES IS APS WHICH SERVICES MY AREA. THE LAST GOVERNOR (BREWER) PUT OUT A CALL TO ARIZONA RESIDENTS TO HELP GENERATE ELECTRICITY. THAT WAS BECAUSE ARIZONA'S UTILITIES COULDN'T KEEP UP WITH THE DEMAND. NOW THAT MORE ELECTRICITY IS BEING GENERATED BY THOSE ARIZONA SOLAR PANELS, THE UTILITIES WANT MORE MONEY ALSO. I ANSWERED THE CALL AND INSTALLED SOLAR PANELS. I DID A CIVIC DUTY. NOW IT SEEMS THAT THE VERY UTILITY THAT I AM HELPING PRODUCE ELECTRICITY FOR WANTS TO PENALIZE ME? THAT NOT ONLY IS DISHONEST BUT NOT FAIR. IF THE UTILITIES WERE SO AFRAID OF OVER PRODUCING ELECTRICITY WHY DID THEY INSTALL SOLAR PANELS AT MOST OF THE PUBLIC SCHOOLS IN THIS AREA?
THE FAIR PROCESS FOR DISCUSSING SOLAR RATES IS IN A RATE CASE (WITHIN ESTABLISHED PROCEDURES). I WOULD HOPE THAT EACH COMMISSIONER WOULD STICK TO THEIR WORD AND NOT LET THE UTILITIES RAISE RATES OUTSIDE OF THE PROPER VENUE.

Sincerely,

Randy Brumund

Dear Commissionser,

It is time for the utility monopolies to rethink their business model. No longer should users be forced to put up with rate increases because of the failure of management to adopt new technologies for generating power. It is time for the stockholders to bite the bullet on their tax-qualified interest and dividends. Rather than looking for ways to squeeze every dollar out of their current investment in dirty power generation, utilities should be investing in low cost alternatives such as wind and solar. These technologies are practical NOW.
Germany has committed to 50% solar power by 2030. Why can't we do the same?

Sincerely,

L Goldberg

Dear Chairman Bitter Smith,

Please follow your staff's advice and only allow changes to utility net metering rates for rooftop solar to be considered within a full rate proceeding.

Your constituents would love to see the ACC stand up to these utility monopolies and stop letting them kill solar. Arizona should be a leader in solar power and the only reason we are not is because we are beholden to these powerful utility companies. Make no mistake their intention isn't "fairness". They are afraid for their bottom line if they allow rooftop solar growth to continue. All one has to do to know their true intent is to look at the data from SRP on how many rooftop solar applications have been installed since they enacted their draconian rules without any real oversight in December.

Sincerely,

Steve Fanning

Dear Chairman Bitter Smith,

Roof top solar should be encouraged and not discouraged as APS is constantly proposing.

The existing roof top solar installations are helping APS meet its mandate to provide energy from renewable sources. Any surplus is sold back to them at wholesale prices. Their own solar installations provide electricity at a higher cost than the wholesale prices they pay privately owned systems.

I know APS tries to come up with creative accounting to try to justify their actions. But let's be realistic and stop this tax/power grab.

Richard Arnold

Sincerely,

richard arnold

Dear Chairman Bitter Smith,

As a long time solar customer I am distressed to hear that Arizona utilities are attempting to levy charges on solar customers without going through rate change procedures. Any changes in fees or charges related to solar energy should be treated as a rate case. As an APS customer I expect APS to keep their promise to not raise utility rates without going through a full rate change review process and this should apply to any solar levy or fee too.

Sincerely,

Sybil Malinowski Melody

Dear Chairman Bitter Smith,

Arizona is one off just a few states that can really take advantage of power from the Sun. Solar generated electricity, which was encouraged and subsidized, is very beneficial to all except for those that SELL electricity.

The Commission has already determined that rates set for solar power should NOT be treated in isolation. They should be treated in a rate case. Do now allow ANY UTILITY TO TREAT SOLAR DIFFERENTLY. If you fail to follow through on you promise, you can not be considered believable ever again.

Fred Chalfin

Dear Chairman Bitter Smith,

I HAVE READ THAT FOUR ARIZONA UTILITIES ARE TRYING TO RAISE NEW TAXES ON SOLAR CUSTOMERS. ONE OF THOSE UTILITIES IS APS WHICH SERVICES MY AREA. THE LAST GOVERNOR (BREWER) PUT OUT A CALL TO ARIZONA RESIDENTS TO HELP GENERATE ELECTRICITY. THAT WAS BECAUSE ARIZONA'S UTILITIES COULDN'T KEEP UP WITH THE DEMAND. NOW THAT MORE ELECTRICITY IS BEING GENERATED BY THOSE ARIZONA SOLAR PANELS, THE UTILITIES WANT MORE MONEY ALSO. I ANSWERED THE CALL AND INSTALLED SOLAR PANELS. I DID A CIVIC DUTY. NOW IT SEEMS THAT THE VERY UTILITY THAT I AM HELPING PRODUCE ELECTRICITY FOR WANTS TO PENALIZE ME? THAT NOT ONLY IS DISHONEST BUT NOT FAIR. IF THE UTILITIES WERE SO AFRAID OF OVER PRODUCING ELECTRICITY WHY DID THEY INSTALL SOLAR PANELS AT MOST OF THE PUBLIC SCHOOLS IN THIS AREA?
THE FAIR PROCESS FOR DISCUSSING SOLAR RATES IS IN A RATE CASE (WITHIN ESTABLISHED PROCEDURES). I WOULD HOPE THAT EACH COMMISSIONER WOULD STICK TO THEIR WORD AND NOT LET THE UTILITIES RAISE RATES OUTSIDE OF THE PROPER VENUE.

Dear Commissionser,

Four utilities are trying to levy charges on solar customers outside of established procedures.
Utilities shouldn't get special treatment to raise rates for solar.
The fair process for discussing solar rates is in a rate case.
All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.
The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

Sincerely,

s Gillatt

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-0 1933A-15-0100 UNS:

Dear Commissionser,

SRP is undermining both future economic prosperity and National Security with their current short sighted pursuit of short term profit and their fear of any competition - even from homeowners.

The Grid, built mostly on public lands with huge infusions of TaxPayer dollars and extensive TaxPayer funded R&D, should provide for reliable power distribution avoiding massive single points of failure.

SRP treats the Grid as something they should own and use as a tool to prevent competition and drive price increases. This is anti - capitalism, and downright anti - American.

As homeowners bring Solar on line, this will lighten peak loading for SRP enabling current peak load only power generation facilities to be re-purposed to supply industrial power, boosting Arizona's position as a location for industrial - driven economic growth. and will increase the reliability and ruggedness of the Grid, if the Grid can be used as intended and not simply as SRP's tool to suppress competition and drive price increases.

SRP is clearly not the only utility following this anti- prosperity strategy, but they are my supplier and so are the one I am most familiar with.

When SRP installed remotely controlled and read meters, they saved big on sending employees to read the meter at each home. But they quickly INCREASED the "service fee" as if they had increased the cost of service instead of decreasing it significantly.

Their current strategy is one of Taxation by Corporation, and should be illegal since it is likely un-Constitutional as well.

Please treat all customer price increases as rate increases and do not allow this to continue.

Sincerely,

Robert Passano

Dear Commissionser,

I'm a solar customer in Tucson. I installed enough PV cells to power my house in order to not be a party to utility scale solar development on sensitive public lands. I do not mind paying my fair share in any circumstance, but utilities must not be given a free pass to raise rates for solar energy. The proper venue for this type of procedure is the rate case, and all of the commissioners (and APS) have agreed that rates should be dealt with in a rate case. Please stick to your word and do not let utilities raise their rates outside of proper procedure.

Sincerely,

Eva Sargent

Dear Commissionser,

Why is this even a discussion? Is this not a free market? Why are solar customers penalized for being economically and environmentally responsible, when there are hundreds of thousands of other APS customers that are being subsidized through low income payment options? I am not only writing to ask that rates not be raised this year, but I'm asking they not be raised in any year! There is no justification for any solar fees. I pay my monthly servicing fees (including the current solar fees), that is sufficient. How will we as a nation ever build a smarter grid that is environmentally responsible, when your fees are dissuading people from going solar? I am sorry that APS has not kept up with technology, that's not my fault. I have concerns for our future, I just wish more people at the ACC and APS did. Instead, they worry about satisfying lobbyists and lining their pockets.

Sincerely,

Dan VanderVen

Dear Commissionser,

It is DISCRIMINATORY for the electric companies to charge one customer a certain rate and not the remainder of the customers!!!

The best way to solve this problem is for all customers to pay a transmission charge on their bills to facilitate the use of the grid. This charge could either be a flat fee of say $10 or $15 per month or based on kilowatt hour usage ($.01 per kilowatt hour). Kilowatt hours used would also include the stored portion for solar customers.

Sincerely,

Ken Stencel

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-01933A-15-0100 UNS:

Dear Chairman Bitter Smith,

SRP is undermining both future economic prosperity and National Security with their current short sighted pursuit of short term profit and their fear of any competition - even from homeowners.

The Grid, built mostly on public lands with huge infusions of TaxPayer dollars and extensive TaxPayer funded R&D, should provide for reliable power distribution avoiding massive single points of failure.

SRP treats the Grid as something they should own and use as a tool to prevent competition and drive price increases. This is anti - capitalism, and downright anti - American.

As homeowners bring Solar on line, this will lighten peak loading for SRP enabling current peak load only power generation facilities to be re-purposed to supply industrial power, boosting Arizona's position as a location for industrial - driven economic growth. and will increase the reliability and ruggedness of the Grid, if the Grid can be used as intended and not simply as SRP's tool to suppress competition and drive price increases.

SRP is clearly not the only utility following this anti- prosperity strategy, but they are my supplier and so are the one I am most familiar with.

When SRP installed remotely controlled and read meters, they saved big on sending employees to read the meter at each home. But they quickly INCREASED the "service fee" as if they had increased the cost of service instead of decreasing it significantly.

Their current strategy is one of Taxation by Corporation, and should be illegal since it is likely un-Constitutional as well.

Please treat all customer price increases as rate increases and do not allow this to continue.

Sincerely,

Robert Passano

Dear Chairman Bitter Smith,

Dear Commissioners, I wanted to take a moment to let you know if my continued disapproval of specific utility companies attempting to add additional taxes to residential solar customers. Their argument has always been that solar customers are not doing there part to "support the grid" as APS has always stated. That is a bold face lie as I continue to pay the same amounts of taxes outside of the actual cost of electricity that I paid before I went solar. The utility companies have a greedy monopoly on our electricity and have continued to take "our way or the highway" approach to electricity. APS and SRP have even had the audacity to put together commercials touting their "we are the solar giants and wanna go green..." statements. That is all a complete lie. They want solar energy for themselves, not their existing customers. A true lie all the way through! I hope you are all morally compelled to stop these monopolies and allow average joe customers to take advantage
of the
same cost effective electricity and the utility giants.

Dear Commissionser,

I have previously written to inform you that the imposition of any fees exclusively on customers who choose to 'go solar'; is vastly unfair. If there is ANY movement to impose fees on utility customers in order to cover so-called 'grid maintenance' costs - then those fees should ONLY be uniformly imposed across the board on ALL customers within a utility service area. EVERYONE must share in such new fees, since EVERYONE benefits from grid maintenance. In fact, all 'grid maintenance' costs should be a separate item on everyone's bill, clearly marked and NOT included in any electricity usage charges. Customers should pay separately for electricity usage and grid maintenance charges - period.

Now, there is a new and likewise egregious problem - the potential imposition of 'solar fees' OUTSIDE of any rate case process and debate. That would also be unfair - and undemocratic, and probably illegal to boot. Utilities shouldn't get special treatment to raise rates for solar. It even goes against your own public record on the topic, since all commissioners, and APS, have stated that solar rates should be looked at in a rate case. Don't let this new egregious possibility become established practice!!!

Sincerely,

Doug Ziebell

Customers should pay separately for electricity usage and grid maintenance charges - period.

Now, there is a new and likewise egregious problem - the potential imposition of 'solar fees' OUTSIDE of any rate case process and debate. That would also be unfair - and undemocratic, and probably illegal to boot. Utilities shouldn't get special treatment to raise rates for solar. It even goes against your own public record on the topic, since all commissioners, and APS, have stated that solar rates should be looked at in a rate case. Don't let this new egregious possibility become established practice!!!

Sincerely,

Doug Ziebell

Dear Chairman Bitter Smith,

I understand that there is another attempt to charge or change the already established taxes to the solar customer. I understand that this next attempt may be outside of the proper venue i.e. instead of going through the rate case process. I ask that the commission does not go outside of the established procedures and that all of this type requests i.e. increase taxes, go through the proper channels rather than what could be perceived as under the table. Please continue to stand by your previous statements of agreeing to this standard procedure. Thank you, Cindi Mayo

Sincerely,

Cindi Mayo

Dear Commissionser,

Four utilities are trying to levy charges on solar customers outside of established procedures.

Utilities shouldn't get special treatment to raise rates for solar.

The fair process for discussing solar rates is in a rate case.

All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.

The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

Sincerely,

Brooks Maschmeier

From: Phil Bradley [mailto:awca@cox.net]
ent: Friday, June 12, 2015 11:22 AM
o: Utilities Div - Mailbox
Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-0 1933A-15-0100 UNS:

Dear Commissionser,

My name is Phil Bradley, and I have been a solar customer only since Feb 2014. Arizona should be leading the way in solar development and use, not stifling it.

Almost all governing bodies proclaim that they approve of green technology, that the world needs wind, solar, etc., technology to be developed and put into place. Yet here we are again with another issue that can stifle that development and make it so expensive or non-usable for the average consumer that it will degrade the very reason "of" solar development.

In the end, the issue is clear: When someone says they care about the future of their families, do they, or don't they?

How can additional taxes without due process indicate any intention other than deceit? When did it become acceptable for a governing body to even consider an action such as this?

Allowing this or any other measure like it to move forward is a clear signal that our representatives do not care. They may say they do. They may even proclaim whatever figures to show a different opinion; however, it is still wrong. And no matter how they try to justify differently, they KNOW it is wrong.

rizona has the opportunity to show the world what solar, wind, and other green technologies can do for our planet, communities, our families. And because we have that opportunity, we have the RESPONSIBILITY.

We were blessed to be in this day and age where we can make a real difference, a POSITIVE difference. Arizona is right up front in developing a technology that can positively impact the entire world.

But instead of caring about others, the greed of utility companies and others like them continue attempting to suppress those opportunities, such as imposing taxes on solar customers without due process.

The funny thing is that we hear these companies proclaiming the negative impacts that solar companies have on profits, environment, etc... until they try to sell you "their" solar system. Then suddenly, solar is a great choice, isn't it? As long as it's "their" system, they have no problem with it.

I urge you to consider the positive impact that solar has on Arizona, the U.S., and even the world, but also what this tax increase without due process will do to our state.

Arizona should be the THE solar capital of the world, yet here we are again, encountering road blocks from those who care only about themselves rather than the greater good of our state, our communities, and our families.

This measure is yet another attempt to put greed over the betterment of our state.

Many will say they care about Arizona. They said they wanted positive changes in the development of green technology, and solar in particular.

In the end, it's a simple question: Do they? Or don't they?

Sincerely,

Phil Bradley

Dear Commissionser,

Commissioners:

Whatever ever actions you are taking regarding solar energy is hurting the customers of the utilities involved.
Why are you giving APS, for example, special treatment?
They consistently are filing rates and changes to gain more revenue and this is so absurd it is creating much conflict.
That is, stirring the pot and creating conflict in customer's budgets, while they should be looking within their own organization and do "cutbacks and downsizing" to accommodate their revenue needs.

No more rate increases because customers want to use alternate energy. That is the customers right to do so without penalty from any electric utility.

Please, as Commissioners, stay with in the proper review processes you have enjoyed and practiced in the past and don't allow special treatment.

Sincerely,

Dennis Lensegrav

Dear Commissionser,

Commissioners, I want to express some deep distain for your current treatment of the solar industry. Everyone of you have said stated at one time or another that solar rates should be discussed in a rate case. So presumed you would stick to your word! Of course what am I thinking, you are all politicians working for the large corporations not the consumer and have no desire to do the right thing. Its all about kick backs under the table for the likes of your bank accounts. I am embarrassed to say I live in Arizona because of the out of control corruption in State Government. And your commission is a perfect example of that. Dark money provided by the APS coffers got two commissioners elected, Forse and Little. No its all over but the shouting. Your credibility is gone You all said you wouldn't let utilities raise rates outside of the proper venue. Please. What a waste of time to listen to what ever you have to say.

Do the right thing and not raise rates on solar without having a rate case.

Sincerely,

jeff hartig

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-0 1933A-15-0100 UNS:

Dear Commissionser,

One by one the utilities are trying to levy unfair unwarranted charges on to the bills of customers wanting to adopt solar and save money. ED3 recently announced changes to there program and currently APS, TEP, Trico and SSVEC are attempting to do the same with out following the proper procedures. The changes all need to be part of a Rate Case according to established procedures. Utilities shouldn't get special treatment to raise rates for solar. Furthermore I would ask you put these solar related extra fees on hold. The voters of Arizona voted for Net Metering in Arizona and made it the law so solar can develop and thrive.
Arizona rate payers and tax payers have spent millions to develop solar into a viable home energy efficiency tool. Now that solar is mature and has come down in costs and is able to make a home extremely energy efficient the utilities are putting in place special discriminatory rate plans designed to undermine the Arizona voter established Net Metering law. Please put a stop to these discriminatory rate plans and allow solar to reach it's full potential in Arizona. Do not allow utilities to stop people from using solar to make their homes energy efficient and lower electrical costs. Do not allow utilities to undermine the Net Metering laws that voters approved. Do not allow utilities to stop fair competition with discriminatory rate plans designed specifically to undermine our state laws.
Do not allow utilities to cause years of investment and millions of dollars in financial support for the development of solar in Arizona to be wasted money.

Sincerely,

Dave Haycock

Dear Commissionser,

I am writing to express my concern over proposed taxes by four Arizona utilities (APS, Trico, TEP and SSVEC) to solar costumers. They are attempting to do this outside of the established proceeding called a rate case.

Utilities should not receive special treatment to raise rates for solar and the fair process for discussing solar rates is in a rate case. All Commissioners, and APS, have stated that solar rates should be looked at in a rate case. You should stick to your word and not let utilities raise rates outside of the proper venue.

Sincerely,

Rosanne Couston

Dear Commissionser,

Dear Commissioner,

You currently have several Arizona utility companies proposing higher rates (penalties)for solar customers in their utility district. Before any decisions are made, these requests should go to a rate case.
The utility companies have made claims that solar customers do not pay their fair share of grid costs, but have not been required to offer any hard evidence of such claims. Taking these proposals to a rate case will allow all parties to fairly present their case.
Please do as you had promised and hold any decisions until after the next rate case.

Sincerely,

Dutch Hollaender

Dear Commissionser,

Stick to your words. Discuss solar rates in the proper venue - a rate case. This allows for due process. Do not let utilities raise rates outside of the proper venue.

And why this war on Solar anyway? You are making it appear that you are merely puppets of the utility companies, which may or may not be true. None-the-less, it is what your actions are saying.

Sincerely,

Juanita Colucci

o: Utilities Div - Mailbox
Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-0 1933A-15-0100 UNS:

Dear Commissionser,

The only thing the utility companies care about is making money for their shareholders. They care nothing about their customers. Look at the salaries, benefits and perks they get. Every time you turn around they have their hand out crying poor me. They act like the people at the corner of Wal-Mart. I am sick and tired of it. If I could I would take my Solar and go off the Grid.

- Four utilities are trying to levy charges on solar customers outside of established procedures.
- Utilities shouldn't get special treatment to raise rates for solar.
- The fair process for discussing solar rates is in a rate case.
- All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.
- The Commission should stick to their word and not let utilities raise rates outside of the proper venue.

Thoroughly fed up

Sincerely,

Paul Robinson

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-0 1933A-15-0100 UNS:

Dear Commissionser,

These Utilities are overstepping their boundaries and acting as if there is no oversight.
Their public communications would have people belive that the proposed rate hikes are already in place.
These actions are destroying business in Arizona and scaring consumers into thinking that the Utilities can do whatever they choose when it comes to solar customers.
Please she'd light on this issue by enforcing the rules and haveven a rate case for all of the utilities individually. The misinformation they are spreading is astounding... and it is damaging. New Jersey has friendlier solar policy than Arizona and this needs to change. The sun is the greatest resource in THIS state.
Thank You.

Sincerely,

CRAIG MURPHY

Dear Commissionser,

As a solar customer I'm doing my part to use natural and renewable resources that are clean and safe for the environment. Currently, the power company is already making a profit off the power I don't use by selling it to my non solar neighbours which they reimburse me at a fraction of that cost. In addition the power I still use from the grid is sold to me at going grid rates. They are reaping profits in both resale of the power generated by my solar, the power they sell back to me at a higher cost, all while not having the burden of maintaining the solar panels or the land to house the panels while still reaping the benefits of the panels. Ongoing and unnecessary rate increases will stunt the growth of solar and continue our dependence on non-renewable resources.

Sincerely,

Dace Tapley

Dear Chairman Bitter Smith,

Four utilities are trying to levy charges on solar customers outside of established procedures. Utilities should not get special treatment to raise rates for solar.

All Commissioners, and APS, have stated that solar rates should be looked at in a rate case, which is the fair and accepted protocol for discussing rates. The Commission should keep their word and not let utilities raise rates outside of the proper venue.

Sincerely,

Sue Shimer

Subject: Trico: Docket No. E-01461A-15-0057 SSVEC: E-01575A-15-0127 APS: 13-0248 TEP: E-01933A-15-0100 UNS:

Dear Chairman Bitter Smith,

My name is Phil Bradley, and I have been a solar customer only since Feb 2014. Arizona should be leading the way in solar development and use, not stifling it.

Almost all governing bodies proclaim that they approve of green technology, that the world needs wind, solar, etc., technology to be developed and put into place. Yet here we are again with another issue that can stifle that development and make it so expensive or non-usable for the average consumer that it will degrade the very reason "of" solar development.

In the end, the issue is clear: When someone says they care about the future of their families, do they, or don't they?

How can additional taxes without due process indicate any intention other than deceit? When did it become acceptable for a governing body to even consider an action such as this?

Allowing this or any other measure like it to move forward is a clear signal that our representatives do not care. They may say they do. They may even proclaim whatever figures to show a different opinion; however, it is still wrong. And no matter how they try to justify differently, they KNOW it is wrong.

Arizona has the opportunity to show the world what solar, wind, and other green technologies can do for our planet, our communities, our families. And because we have that opportunity, we have the RESPONSIBILITY.

We were blessed to be in this day and age where we can make a real difference, a POSITIVE difference. Arizona is right up front in developing a technology that can positively impact the entire world.

But instead of caring about others, the greed of utility companies and others like them continue attempting to suppress those opportunities, such as imposing taxes on solar customers without due process.

The funny thing is that we hear these companies proclaiming the negative impacts that solar companies have on profits, environment, etc... until they try to sell you "their" solar system. Then suddenly, solar is a great choice, isn't it? As long as it's "their" system, they have no problem with it.

I urge you to consider the positive impact that solar has on Arizona, the U.S., and even the world, but also what this tax increase without due process will do to our state.

Arizona should be the THE solar capital of the world, yet here we are again, encountering road blocks from those who care only about themselves rather than the greater good of our state, our communities, and our families.

This measure is yet another attempt to put greed over the betterment of our state.

Many will say they care about Arizona. They said they wanted positive changes in the development of green technology, and solar in particular.

In the end, it's a simple question: Do they? Or don't they?

Sincerely,

Phil Bradley

Dear Chairman Bitter Smith,

Commissioners:

Whatever ever actions you are taking regarding solar energy is hurting the customers of the utilities involved.
Why are you giving APS, for example, special treatment?
They consistently are filing rates and changes to gain more revenue and this is so absurd it is creating much conflict.
That is, stirring the pot and creating conflict in customer's budgets, while they should be looking within their own organization and do "cutbacks and downsizing" to accommodate their revenue needs.

No more rate increases because customers want to use alternate energy. That is the customers right to do so without penalty from any electric utility.

Please, as Commissioners, stay with in the proper review processes you have enjoyed and practiced in the past and don't allow special treatment.

·ncerely,

Dear Chairman Bitter Smith,

One by one the utilities are trying to levy unfair unwarranted charges on to the bills of customers wanting to adopt solar and save money. ED3 recently announced changes to there program and currently APS, TEP, Trico and SSVEC are attempting to do the same with out following the proper procedures. The changes all need to be part of a Rate Case according to established procedures. Utilities shouldn't get special treatment to raise rates for solar. Furthermore I would ask you put these solar related extra fees on hold. The voters of Arizona voted for Net Metering in Arizona and made it the law so solar can develop and thrive.
Arizona rate payers and tax payers have spent millions to develop solar into a viable home energy efficiency tool. Now that solar is mature and has come down in costs and is able to make a home extremely energy efficient the utilities are putting in place special discriminatory rate plans designed to undermine the Arizona voter established Net Metering law. Please put a stop to these discriminatory rate plans and allow solar to reach it's full potential in Arizona. Do not allow utilities to stop people from using solar to make their homes energy efficient and lower electrical costs. Do not allow utilities to undermine the Net Metering laws that voters approved. Do not allow utilities to stop fair competition with discriminatory rate plans designed specifically to undermine our state laws.
Do not allow utilities to cause years of investment and millions of dollars in financial support for the development of ›lar in Arizona to be wasted money.

Sincerely,

Dave Haycock

Dear Chairman Bitter Smith,

I meet a lot of people in my work and the subject of solar, the utilities and the ACC come up quite often.
So far, I have not met anyone who believes what the utilities are trying to do is fair or justified.
I hope you will take the high ground to protect the solar industry from this dastardly money grab effort by the utilities.

Sincerely,
Mark Walters

Dear Chairman Bitter Smith,

Dear Commissioner,

You currently have several Arizona utility companies proposing higher rates (penalties)for solar customers in their utility district. Before any decisions are made, these requests should go to a rate case.
The utility companies have made claims that solar customers do not pay their fair share of grid costs, but have not been required to offer any hard evidence of such claims. Taking these proposals to a rate case will allow all parties to fairly present their case.
Please do as you had promised and hold any decisions until after the next rate case.

Sincerely,

Dutch Hollaender

Dear Chairman Bitter Smith,

To whom it may concern:

Utilities shouldn't get special treatment to raise rates for solar.
The fair process for discussing solar rates is in a rate case.
All Commissioners, and APS, have stated that solar rates should be looked at in a rate case.
The Commission should stick to their word and not let utilities raise rates outside of the proper venue

Thank you.

Sincerely,

Steve Abbott

Dear Chairman Bitter Smith,

Please do not allow the utility companies to raise solar customer rates without there being a fair rate case discussion. These companies are obviously concerned about their bottom line, however solar should is a natural in Arizona and should not be penalized. Thank you. Sincerely, Joe Stevens

Sincerely,

Joe Stevens

Dear Chairman Bitter Smith,

The only proper place to discuss Solar customers is in a all-encompassing rate change hearing.

Sincerely,

Dan Williamson

Dear Chairman Bitter Smith,

Please think of the long term. We need to transition to sustainable power sources and SOLAR is huge in AZ.
Be smart, be kind, be thoughtful and considerate of the future of the planet, not just your pressure groups and their pocket books.
thanks.

Sincerely,

Juanita Hull-Carlson

Dear Chairman Bitter Smith,

Solar rates should only be addressed in the proper setting of a rate case! Do not act only in the various utility interests!

Sincerely,

Patrice Welsh-Benjamin

Dear Chairman Bitter Smith,

As a solar customer I'm doing my part to use natural and renewable resources that are clean and safe for the environment. Currently, the power company is already making a profit off the power I don't use by selling it to my non solar neighbours which they reimburse me at a fraction of that cost. In addition the power I still use from the grid is sold to me at going grid rates. They are reaping profits in both resale of the power generated by my solar, the power they sell back to me at a higher cost, all while not having the burden of maintaining the solar panels or the land to house the panels while still reaping the benefits of the panels. Ongoing and unnecessary rate increases will stunt the growth of solar and continue our dependence on non-renewable resources.

Sincerely,

Dace Tapley
