Community Water Company of Green Valley ("Community Water" or the "Company") submits its Application for an increase to its rates by approximately $708,244, or approximately 20.10% for the proposed revenue requirement of $4,231,930, to be effective no later than July 15, 2016. In support of its Application, Community Water states the following:

1. Community Water is a non-profit public service corporation with members engaged in providing water service in Pima County, Arizona. It has been a non-profit corporation since 1977. The Commission approved Community Water's initial Certificate of Convenience and Necessity ("CCN") to provide water service in Decision No. 47912 (May 1, 1977), when it received assets from Arizona Water Company – formerly known as the Green Valley Water System. Community Water received an extension to its CCN in Decision No. 57549 (September 9, 1991). Community Water acquired the CCN of New Pueblo Water in Decision No. 60082 (February 20, 1997); it has since received subsequent CCN extensions in Decision Nos. 63310 (January 11, 2001), 70164 (February 27, 2008), and 70551 (October 23, 2008). Community

Water serves approximately 12,500 customers – over 90 percent of whom are residential customers.

2. Community Water's office is located in Green Valley, Arizona and its mailing address is: 1501 South La Canada, Green Valley, Arizona 85614-1600, and its telephone number is (520) 625-8409. Community Water's President is Arturo R. Gabaldon. The person authorized to receive notices and communications regarding this application is:

Arturo R. Gabaldon
President
Community Water Company of Green Valley
1501 South La Canada
Green Valley, AZ 85614-1600
Phone: 520-625-8409
Email: arturo@communitywater.com

Community Water's attorney is:

Jason D. Gellman
Snell & Wilmer, LLP
One Arizona Center
400 East Van Buren Street, Suite 1900
Phoenix, Arizona 85004
Phone: (602) 382-6349
Email: jgellman@swlaw.com

All data requests and discovery, as well as related communications and pleadings, filed by other parties regarding this Application should be directed to Community Water's attorney, with a copy to Mr. Gabaldon.

3. Community Water is currently authorized to charge rates for water service per Decision No. 71478 (February 3, 2010). The test year used in that proceeding was the 12-month period ending on December 31, 2007. Revenues from Community Water's utility operations are inadequate to allow the Company to recover its operating costs and provide a just and reasonable return on the fair value of its utility plant and property used to provide service to its customers. Since its last rate case, Community Water continues to make improvements and additions to its water system designed to ensure safe, adequate and reliable service. Community Water is mindful that the majority of its customers are retirees who depend on such service. The Company maintains an extremely high satisfaction rating of over 80% from its customers, who recognize

Phoenix, Arizona 85004-2202
602.382.6000

the need for periodic increases to their rates.

4. Community Water utilized a 12-month test year ending on December 31, 2014 for the preparation of this Application and the supporting schedules. The Company seeks a 16.50% operating margin, so that it has sufficient revenues to address ongoing expenses, as well as fund expected capital requirements and partially fund cash reserves for items of major maintenance and plant replacements. A 16.50% operating margin also enables the Company to service its long-term debt as well as have revenue sufficient to avoid incurring operating losses over the next three-to-five years.

5. The Company is also proposing to raise the monthly usage charges in a gradual manner, but in a way that results in the Company being less dependent on volumetric charges to cover fixed costs. This will improve revenue stability and lessens dependence on water usage to cover fixed costs. Gradually raising the customer fixed fee aligns the Company rates with its cost structure. Under present rates, the Company recovered approximately 53.7 percent of revenues from the availability charge and 46.3 percent from the commodity rates. Under the proposed rates, the Company will recover approximately 57.2 percent of revenues from the availability charge and 42.8 percent from the commodity rates.

6. The Commission has jurisdiction to conduct public hearings to determine the fair value of Community Water's property, to fix a just and reasonable rate of return thereon, and thereafter, to approve just and reasonable rates designed to give it a reasonable opportunity to earn such return. Further, the Commission has jurisdiction to establish the practices and procedures to govern the conduct of hearing, including notice, intervention, filing, service, exhibits, discover, and other prehearing and hearing matters.

7. Accompanying this Application are the standard filing requirements and rate design schedules described in A.A.C. R14-2-103. The Company also provides pre-filed direct testimonies and related exhibits from three witnesses for Community Water supporting the Company's Application:

- Arturo Gabaldon, who will discuss the overall condition of the Company, and the primary proposals within Community Water's rate application;

Snell & Wilmer
L.L.P.
LAW OFFICES
One Arizona Center, 400 E. Van Buren, Suite 1900
Phoenix, Arizona 85004-2202
602.382.6000

- Ray Jones, who will provide an overview of Community Water's water system and operations, support the proposed post-test year plant addition of Reservoir No. 5, discuss the Company's water conservation program and provide support for the Company's proposed cash reserves (including identifying an appropriate target level of reserves); and
- Thomas J. Bourassa, who will support the Company's revenue requirement request (including rate base, income and expense adjustments), depreciation, operating margin, rate of return, and proposed rate design.

8. Community Water will establish that: (1) a rate increase is necessary for it to continue to provide safe and reliable service to its customers; (2) that a 16.50% operating margin does allow the Company the cash flow necessary to cover operating expenses as well as fund needed capital improvements and reserves; (3) that its proposed increase will provide for a reasonable rate of return on the fair value rate of the Company's utility property; (4) that its proposed rates are just and reasonable and will provide the Company the necessary revenues to continue to provide adequate, safe and reliable water service to its customers as required by law, and is in the public interest.

9. Community Water is in compliance with all requirements of the Commission, Arizona Department of Environmental Quality, Arizona Department of Water Resources and Arizona Department of Revenue.

10. Community Water requests that this Commission set a date for a hearing on this Application such that new rates for the Company will become effective no later than July 15, 2016.

11. Community Water further requests that it be allowed to serve all discovery requests, answers and objections electronically.

IN THE MATTER OF THE APPLICATION OF COMMUNITY WATER COMPANY OF GREEN VALLEY, AN ARIZONA CORPORATION, FOR A DETERMINATION OF THE CURRENT FAIR VALUE OF ITS UTILITY PLANT AND PROPERTY AND FOR INCREASES IN ITS RATES AND CHARGES FOR UTILITY SERVICE.	DOCKET NO. W-02304-15-_____

DIRECT TESTIMONY OF

ARTURO GABALDON

ON BEHALF OF

COMMUNITY WATER COMPANY OF GREEN VALLEY

July 15, 2015

TABLE OF CONTENTS

I. Introduction 1
II. Company Overview 2
III. Water Supply, Quantity, and Quality Issues 4
IV. Purpose for the Rate Filing 9
V. Low Income Assistance 16

I. INTRODUCTION.

Q. Please state your name and address.

A. My name is Arturo Raul Gabaldon. My work and mailing address is Community Water Company of Green Valley, 1501 South La Canada Drive, Green Valley, Arizona 85622.

Q. With whom are you employed and in what capacity?

A. I have been an employee of the Company since 1990. Currently, I serve as Company President. I served as Controller from 1990 to 2003, General Manager from 2003 to 2006, and was elected to the Board of Directors and appointed President in April 2006.

Q. Please describe your professional background.

A. I am a Certified Public Accountant, and earned my undergraduate degree at the University of Arizona and a Master in Business Administration from the University of Phoenix. I represent the Company as a board member of the Water Utility Association of Arizona ("WUAA"), Southern Arizona Water Utilities Association ("SAWUA") and the Water Conservation Alliance of Southern Arizona ("WaterCASA"). Through the Company, I am a member of the American Water Works Association ("AWWA") and AZ Water Association ("AZWater"). I serve on the AZWater finance committee and the utility council committee. I have served two three-year terms on the Board of Directors of the Green Valley Chamber of Commerce from April 2008 to 2013. I served as an Officer at the Green Valley Elks Lodge from 2005 to 2012.

Q. On whose behalf are you testifying in the proceeding?

A. Community Water Company of Green Valley that I will refer to in my direct testimony as "Community Water" or the "Company".

II. COMPANY OVERVIEW.

Q. Please describe the Company.

A. Community Water was incorporated in 1975 as an Arizona non-profit corporation with members. The Company purchased the Arizona Water Company's Green Valley Division and began operating the water utility in June 1977. The Company delivers potable water to residential and commercial customers in southern Arizona, in a mostly active adult retirement community. The Company files with the Internal Revenue Service as a 501C (12) non-profit Arizona Cooperative. Our service area includes areas within the incorporated Town of Sahuarita and unincorporated Pima County, and we are within the Tucson Active Management Area (TAMA).

Q. Please describe the Company mission.

A. Our mission is to reliably deliver drinking water that meets all regulatory standards to our customers, and to maintain a sustainable water supply for our customers. A set of guiding values was adopted that recognizes the needs of our members, our customers, our employees, and applicable business and regulatory environments.

Q. How many customers does the Company serve?

A. The Company serves approximately 12,500 customers. The majority of our customers (96%) are residential.

Q. Please describe growth in the Green Valley / Sahuarita area.

A. The Company's service area is near full capacity, and the Company has estimated that growth is limited to less than 500 customers. In 2014, there were 36 new meter sets.

Q. What is the general opinion of the Company in the community?

A. The Company performs annual customer satisfaction surveys and evaluates the results for possible issues and for improving our service. The latest surveys were mailed to 360 customers in December 2014. 154 customers responded and only six expressed overall dissatisfaction with the Company. The Company scored high (over 80%) in satisfaction for water service and customer service. The Company also scored high for water quality (over 80% satisfaction). These results are consistent with the survey results over the past four years.

Q. How many employees does the Company have?

A. There are 20 employees with the Company. Of these, 13 are field service employees, which is approximately one field service employee per 1,000 customers. Of the 13 field service employees, we have five senior utility operators with an average age of 59, with an average of 31 years of service with the Company. The remaining eight field service employees have an average age of 30, and an average of three years of service with the Company. Recruitment and retention of skilled employees is a goal of the utility as our senior utility operators approach retirement. The Company practices weekly one-on-one communication throughout the utility, weekly safety and operating meetings, and bi-monthly employee meetings.

Q. Please describe the condition of the Company's system.

A. The Company's system is maintained in excellent condition. The Company has never had a customer without access to water for more than 12 hours. Capital improvements have been identified and have been incorporated into the Company capital budgets. Based on internal reviews the Company noted no major system deficiencies that would deem the Company to be out of regulatory compliance. All system deficiencies were evaluated and have either been corrected or are under evaluation for possible corrections.

III. WATER SUPPLY, QUANTITY, AND QUALITY ISSUES.

Q. Where does the Company's water supply come from?

A. The Company obtains water from the Upper Santa Cruz River aquifer, and relies exclusively on groundwater. The Company has four groundwater wells in its service area. Company personnel and members of the Board of Directors work to develop plans in support of our mission. These plans include utilization of our Central Arizona Project ("CAP") water allocation, and evaluation of risks to our water supply, financial planning, and long-range water system improvements.

Q. What is the current status of the water quality?

A. The water delivered to our customers meets or surpasses all health and safety measures required by the United States Environmental Protection Agency ("EPA"), Arizona Department of Environmental Quality ("ADEQ"), and Pima County Department of Environmental Quality ("PCDEQ"). Our annual water quality report is published on our web page, and is available at our office and at various locations in the Green Valley / Sahuarita area.

Q. Please describe the long-term threats to the area related to the Company's water supply.

A. ADEQ has determined that over 50% of our service area has been impacted by a sulfate plume from Freeport-McMoRan, Inc.'s ("Freeport") tailing ponds to the west of the Company's service territory. Freeport accepted a mitigation plan from ADEQ to address the issue. Arizona Department of Water Resources ("ADWR") has also informed us that the aquifer is depleting at a rate of two-to-four feet per year. From our own measurements we have documented about a 100-foot drop in the water table over 50 years at Well 6; over the past 10 years we have documented a 23 to 39 foot drop in the water table. In addition,

ADWR has provided us with information that indicates that there has been subsidence recorded in parts of Sahuarita that may be the result of pumping in the area.

Q. Is there a group of entities working together to examine and address these issues with the aquifer?

A. Yes, the Company has teamed up with other water providers and users as part of the Upper Santa Cruz Providers and Users Group.

Q. What is the Upper Santa Cruz Providers and Users Group?

A. The Upper Santa Cruz Providers and Users Group ("USCPUG") was formed in 2007 in response to the decline in the Upper Santa Cruz River aquifer and public concern for the sustainability of our water supply. The USCPUG consists of six local water companies, the local agricultural company, the local mining companies, and representatives from Pima County and the Town of Sahuarita. The USCPUG's area of concern is the portion of the Santa Cruz River valley north of the Santa Cruz County Line and south of Pima Mine Road. Early work of the group centered on defining the extent of the existing groundwater over-pumping problem and achieving community consensus on the applicable statistics. That work is completed, after having received a thorough review by Pima County Staff.

Q. Please describe the water situation in the Green Valley / Sahuarita area.

A. The southern portion of TAMA – including the Town of Sahuarita and unincorporated Green Valley, area developments, farms, and mines – traditionally rely exclusively on the use of groundwater to meet water demands. Historic and current major area water users consist of agricultural use for pecan orchard irrigation, metal mining, residential users, commercial uses, and golf course irrigation. New residential development and expansion of existing water uses in the area are projected to increase water consumption. This could

potentially increase the rate of aquifer overdrafts and associated water table declines and subsidence.

In January 2013 the USCPUG reported a water deficit of 36,020 acre-feet (AF) for 2010, and projected a deficit of 36,595 AF for 2015. As the following table (from USCPUG's report) demonstrates, continued overdrafts from the aquifer are significant through 2035:

USCPUG ESTIMATED WATER USAGE AND RECHARGE

Major Providers & Users	*Acre-Feet* **2010**	*Acre-Feet* **2015**	*Acre-Feet* **2025**	*Acre-Feet* **2035**
FICO	25,465	25,000	20,500	17,500
Freeport	25,875	25,875	25,875	25,875
Asarco - Aquifer	5,280	6,000	6,000	6,000
Asarco - Cap	7,920	9,000	9,000	9,000

Rosemont Mine			*6000*	*6000*
Total Usage	76,640	78,575	82,390	80,950
Total Recharge	40,620	41,980	47,985	47,905
Overdraft	36,020	36,595	34,405	33,045

Q. Please describe the regulatory environment that the Company exists within.

A. The Company is under the jurisdiction of the Arizona Corporation Commission ("Commission") as well as ADEQ, PCDEQ, and ADWR. Regarding ADWR, the Company is subject to the 1980 Arizona Groundwater Management Act that established a

statutory goal of achieving safe yield within TAMA by 2025. ADWR is responsible for administering water resource management within the TAMA to achieve this goal. The Company believes that surface water from the CAP can play an important role in attaining safe yield.

Q. Is it possible to get CAP water to the Green Valley area?

A. Yes, we believe so. The CAP terminus is located near Pima Mine Road and Interstate 19, nine miles north of the Company's service area. Feasibility studies have been performed to explore the augmenting of existing groundwater supplies with the CAP water in the Green Valley area. In 1996, the Company worked in collaboration with State and Federal agencies and other water entities toward the goal of bringing surface water supplies to the area. A feasibility report dated September 1998 was prepared by the consulting firm Malcolm Pirnie. This report has been helpful in our planning, as it presented preliminary investigations, conceptual and preliminary design of alternatives for optimal routes, and evaluation of the financial feasibility.

Q. Please describe the Company's participation in the CAP.

A. The Company acquired its first CAP subcontract for 1,337 AF of Colorado River water in 1993. The Company acquired its second CAP subcontract for 1,521 AF of Colorado River Water in 2007, for a total CAP entitlement of 2,858 AF of Colorado River Water. The Company has met all required annual CAP capital charge payments to date.

Q. Is the Company asking for recovery of its CAP capital charges?

A. No, only because Community Water is not currently using its CAP allocation to provide water service to its customers. The Company will ask for cost recovery when the CAP water is being used to provide service or delivered to its customers. Because of the risks to

Community Water's current water supplies, the CAP allocation is a key component to its strategy for ensuring a reliable supply in the future.

Q. What other risks are there to the water supplies?

A. In addition to mining contamination, depletion, and subsidence, there are other risks to the existing ground water supplies. First, the ground water flows from south to north. It flows through the Nogales area where treated waste water is discharged to the aquifer. Nogales, Sonora, Mexico has begun using this treated water, thus reducing a major inflow to the aquifer. Second, development along the Santa Cruz River is increasing, notably in Rio Rico and Tubac. As more groundwater is pumped upstream of the Upper Santa Cruz River aquifer, there is less inflow to the aquifer, contributing to the overdraft identified by USCPUG. Third, agricultural activities along the Santa Cruz River from Nogales north to Pima Mine Road may be contributing additional nitrates and salts to the aquifer inflows from the south. Nitrate contamination from the adjacent agri-business and numerous golf courses in the community have historically contributed to high nitrate levels over the action level of 5 mg/L (MCL is 10 mg/L) and required us to shut down our old Well #5. The Company works to protect the interest of its customers by maintaining possible alternatives to our current water source. In short, due to the risks posed to our aquifer, it is prudent and necessary for the Company to maintain its CAP allocation.

Q. Can you provide an example of the risk to the water supply Community Water has faced?

A. Yes. In August 2005, 15,000 gallons of sulfuric acid contaminated the Santa Cruz River in Nogales, Sonora. While it did not affect our wells, this example highlights the risks associated with reliance on a single source for water. Also, while sulfates are not a regulated contaminant, it does present an esthetic and maintenance problem by increasing mineral salt deposits on equipment and piping.

IV. PURPOSE FOR THE RATE FILING.

Q. Please describe the Company's rate request in its Application.

A. The Company is seeking a rate increase of approximately $708,244, or approximately 20.10% for a proposed revenue requirement of $4,231,930, to be effective no later than July 15, 2016. The Company is employing a test year that ends on December 31, 2014. The Company seeks a 16.50% operating margin, so that it has sufficient cash flow to cover its operations and to fund future necessary plant replacements and improvements. A 16.50% operating margin also enables the Company to pay its debt service as well as have revenue sufficient to avoid incurring operating losses over the next three-to-five years. The Company is also proposing to raise the monthly customer fixed charges in a gradual manner, but in a way that results in the Company being less dependent on volumetric charges to cover fixed costs. This will improve revenue stability and lessens dependence on water usage to cover fixed costs. Gradually raising the customer "availability charge" will align the Company rates with its cost structure.

Q. Why is the Company requesting a rate increase?

A. The Company is requesting a rate increase to meet increasing operating costs. Also, necessary infrastructure additions will require additional debt, resulting in increased interest charges and principal payments, and additional operating and maintenance expenses. Past infrastructure additions, such as meeting the EPA's arsenic standard are contributing to our higher operating and maintenance costs; those were not addressed in prior rate cases.

Q. Please describe projected capital expenditures over the next seven years.

A. The Company projected capital improvements of $10.5 million for the years 2015-2021, for a new reservoir, a replacement well, and other plant facilities.

Q. What has contributed to the projected capital expenditure needs?

A. In 2014, the EPA changed the lead and copper rules that impacted the types of brass meters that the Company could install and maintain within its system. Our vendors expect an increase in cost between 25% and 50%. The Company has been able to mitigate this increase by switching to polymer for small meters to keep the cost down. However, large meters are expected to have a significant impact as the Company will be required to change the whole meter – rather than changing the chamber as we would have done in the past.

The Company has also changed its program to replace meters with radio-read capacity to better communicate with the customers on their consumption. This will require the Company to replace its small meters every 20 years rather than 30 years, as the life of the radio component is expected to be only 20 years. Moreover, it would not be cost effective to replace only a portion of the meter at that moment.

Q. What cost savings has the Company been able to implement?

A. In 2014, the Company installed arsenic sludge drying beds at three of its water treatment facilities. As part of the treatment process, a partially dewatered arsenic sludge is produced, which periodically needs to be disposed of at a non-hazardous waste facility. The annual cost of having an outside contractor collect and haul this non-hazardous waste was approximately $42,000. The Company benefits from a 98% reduction in weight and volume through the evaporation of water with the arsenic sludge drying beds. This weight reduction reduced the total waste removed from over 500 tons per year to about 10 tons per year for a savings of about $40,000 annually. The capital cost of these facilities is approximately $23,600.

Q. Regarding usage, has the Company observed a decline in per-customer water use over the past few years?

A. Yes. The following table shows how the number of customers has increased since the last rate case test year of 2007, yet the total water consumption has decreased.

Company Customer Data			
Description	**2007**	**2014**	**Change**
Residential Units at Year End *(YE Units)*	11,385	12,459	1.074 (+10.0%)
Commercial & Other Units *(YE Units)*	469	480	11 (+2.0%)
Water Pumped; 12 Months *(Acre-Feet)*	2,795.0	2,367.4	-427.6 (-15.0%)
Water Sold & Accounted for; 12 Months *(Acre-Feet)*	2,620.7	2,239.3	-381.4 (-15.5%)
Unaccounted for Water for; 12 Months *(Acre-Feet)*	174.3 (6.2%)	116.1 (4.9%)	

Q. Do you believe the decrease in consumption is a temporary or permanent change?

A. We believe this is a permanent change. In 2014, the Company participated with other stakeholders in a 2014 study performed by Montgomery and Associates, Water Resource Consultants, on Residential Water Demands. An analysis of annual change demand shows that the Company's customer declining water demands are consistent with declining national, state, and area trends. The study concludes that decreases in consumption are permanent because they have been led by technological and infrastructure improvements; low-flow fixtures and appliances, and no pools or swamp coolers being added. The demand is no longer tightly tied to population, economic output, conservation efforts, or quality of life. The downward trends in per-household demand are expected to continue through 2020 and into the next decade.

Q. Please describe the Company's water conservation efforts.

A. The Company is in compliance with the ADWR Best Management Practices ("BMP") Program. As part of that program we continue to work on educating homeowners, by presenting 13 months of water usage and conservation messages on the monthly water bills, and include conservation reminders in any communication with our members. New customers are provided with welcome packages that include water conservation information. We display conservation material prominently in our lobby, participate in community events, and distribute conservation information. The Company regularly sponsors free programs to the local community related to water conservation.

Our web site has a dynamic feature that allows customers to view their individual consumption in comparison to their neighborhood averages, and a customized conservation messages based on the type of home and level of consumption. We are an active charter member of WaterCASA, a nonprofit organization comprised of water utilities organized for the purpose of developing effective water conservation programs. However, as noted in the prior question, it appears that technological changes are the major contributor to water conservation and our customers are participating in the use of these technologically improved devices.

Q. What is the Company's view regarding rate structure and moving towards a more cost-based rate design?

A. The Company believes that the rate structure should more closely reflect actual costs to provide service. This is more equitable to the Company's members and customers. Excluding sales tax, we estimate that 91% of our expenses are fixed, and only 9% would be deemed variable (mostly treatment and energy costs). But only 54% of the Company's fixed costs are recovered through the monthly customer charge. This makes the Company more dependent on customer usage to cover its operations and fund

necessary capital improvements. Unlike an investor-owned utility, the Company cannot raise funds by issuing outside equity; and its financial institutions will not accept exclusive reliance on debt financing.

Q. Does the Company's proposed rate design move toward a more cost-based rate structure?

A. Yes, but it does so in a gradual manner. Even with the adoption of our proposed rates, the Company will only recover approximately 57.2% through the monthly service charge, leaving 42.8% to be recovered through the commodity charge. The Company recommends that the percentage of its fixed costs recovered through the monthly customer charge be gradually increased over the next three rate cases in order to send better price signals to customers about the true costs of providing water service.

Q. Are the proposed rates designed to provide the Company a sufficient amount of reserves to address future capital requirements?

A. The proposed rates will start funding of the capital reserves. Ray L. Jones, in his direct testimony, details the analysis regarding Community Water's need to maintain an appropriate level of reserves to address future requirements without the need for unacceptably large rate increases or adverse impacts to the Company's financial condition. Even so, the rates proposed in our Application are not intended to entirely fund the future reserve needs as determined in Mr. Jones's analysis.

Q. Does the Company need to prepare for additional capital expenditures to continue to provide safe and reliable service?

A. Yes. Having an adequate operating margin is important to assuring the Company has sufficient cash flows to fund operations and be able to fund capital improvements required to maintain the performance life of existing plant equipment.

Q. The cash balance of the Company seems to be healthy. Why it the Company concerned about its ability to fund capital replacement through its rates?

A. The Company has experienced the benefits of having a fairly new system, experienced significant system growth up to 2006, and received an $11,845,200 contribution from Freeport to mitigate water quality impacts on the local supply. As a result, the Company has experienced moderate capital replacement expenses, and a significant portion of those projects were financed through funds received from members via developer contributions.

The contribution from Freeport was used to replace two wells and supporting infrastructure that are providing benefits to its existing customers. As a contribution, the Company does not have rates that reflect these used and useful plant facilities. Consequently, the Company's rates are significantly lower than what they could be had this plant been included. The Company's rates are among the lowest in the region. Likewise, this results in a lower operating margin being generated from rates. The Company will need sufficient funds for its operations to provide continuous, safe, and reliable service to existing customers.

Simply put, the Company needs to prepare for additional maintenance and replacement of its aging infrastructure. As a non-profit corporation, the Company has only two options to pay for its capital projects: cash (through rates) and debt. As a result, the Company needs to build adequate cash reserves to meet expected and unplanned capital replacements in a financially-responsible manner to keep costs down for its customers.

Q. Is a 16.50% operating margin sufficient to fully fund all of its anticipated capital replacement and maintenance reserves?

A. No. Based on the cash flow requirement identified on Mr. Jones's study (described in his direct testimony) the Company believes it would need an operating margin around 21.60%

to fully fund the reserves within five years. The Company understands that some of the reserves include capital expenses which may happen later than projected. As such the reserves do not need to be entirely funded with cash today. Rather the Company is planning for the right balance of cash reserves and access to debt. The Company proposes to gradually increase the operating margin over the next three rate cases to fully fund these reserves.

Q. What is the Company's philosophy on the balance of cash and debt?

A. The Company is looking for a debt ratio between 20% and 35%. This leaves plenty of borrowing capacity to address the need for additional capital due to unexpected events that happen from time to time. A 16.50% operating margin enables the Company to be building its cash position for unfunded reserves in the event that the company needs to borrow additional funds to maintain a fully functioning plant. A 16.50% operating margin also accounts for the Company's expectation that it will file periodic rate applications every three to five years.

Q. How does the Company feel about the terminology of 'Monthly Customer Charge' on its tariffs?

A. The Company would like Monthly Customer Charge to be referred to as 'Availability Charge.' This terminology would emphasize to our customers that this charge is the cost the customer must pay to have access to our water whenever they need or want it, and that they should not expect to have any water included in that charge.

V. LOW-INCOME ASSISTANCE.

Q. What provisions has the Company made for customers who cannot afford to pay their water bills?

A. In April 2015, the Company announced the kick-off of the Round-Up program at the Annual Meeting of Members. The Round-Up program is a voluntary pass-through program that collects donations and provides financial support to individuals within the Green Valley / Sahuarita area and is administered by the Salvation Army. Round-Up was designed to provide financial assistance to the Company's customers in need. In this program, participating customers agree to have their utility bill rounded up to the next whole dollar amount; or rounded up plus a few dollars more. The money from the Round-Up program will help the less fortunate pay their utility bills.

Q. Why did the Company choose to have the Salvation Army administer the program?

A. The charitable organization is within the Green Valley / Sahuarita area and has agreed to segregate the various forms of charitable support. The Salvation Army has agreed to support needy individuals with their utility bills, while other entities focus on housing, or medical and mental health. The Company has observed that the Salvation Army already provides utility payment support to some of our customers; we have estimated that in 2014 about $3,000 in payments were made directly by the Salvation Army to the Company. An expanded media announcement effort is planned before year-end.

Q. Do you have any other comments?

A. Special recognition and thanks are due to our staff that represents the Company in our community. Their skills are highly valued and their participation in the success of our Company is appreciated. Special recognition and thanks are also extended to our unpaid board members who volunteer their time and technical skills in support of our Company.

The board members have contributed countless hours in research and evaluation in technical areas of this highly-regulated industry. Their concerted efforts have successfully guided our Company since it was first organized in 1975. As we look into the future, we see continuing challenges to our water supply, rate pressures, and higher regulatory standards. However, we also see opportunities to make a positive difference in our community.

Q. Does that conclude your direct testimony?

A. Yes, it does.

Direct Testimony of Ray L. Jones

BEFORE THE ARIZONA CORPORATION COMMISSION

COMMISSIONERS
SUSAN BITTER SMITH – CHAIRMAN
BOB STUMP
BOB BURNS
DOUG LITTLE
TOM FORESE

IN THE MATTER OF THE APPLICATION OF COMMUNITY WATER COMPANY OF GREEN VALLEY, AN ARIZONA CORPORATION, FOR A DETERMINATION OF THE CURRENT FAIR VALUE OF ITS UTILITY PLANT AND PROPERTY AND FOR INCREASES IN ITS RATES AND CHARGES FOR UTILITY SERVICE.	DOCKET NO. W-02304-15-_____

DIRECT TESTIMONY OF

RAY L. JONES

ON BEHALF OF

COMMUNITY WATER COMPANY OF GREEN VALLEY

July 15, 2015

TABLE OF CONTENTS

I. Introduction 1
II. Community Water's Water System and Operations 2
III. Water Conservation Program 9
IV. Cash Reserves 11

I. INTRODUCTION.

Q. Please state your name and address.

A. My name is Ray L. Jones. My business address is 18835 North Thompson Peak Parkway, Suite 215, Scottsdale, AZ 85255.

Q. On whose behalf are you testifying in the proceeding?

A. I am testifying on behalf of the Applicant, Community Water Company of Green Valley ("Community Water" or "Company").

Q. With whom are you employed and in what capacity?

A. I am the owner and principal of ARICOR Water Solutions LC ("ARICOR"), a consulting firm providing services to the water and wastewater utility industry.

Q. Please describe your professional background.

A. I began my working career with Citizens Utilities Company ("Citizens") in 1985 as a Staff Engineer for the Maricopa County water and wastewater division. I was employed at Citizens for 17 years, ascending to Vice President and General Manager for the Arizona water and wastewater operations. In 2002, American Water ("American") purchased the water and wastewater assets of Citizens, and I joined American as the President of Arizona-American Company. I left American in 2004 to start ARICOR.

I received a Bachelor of Science in Civil Engineering in 1985 from the University of Kansas, and a Master of Business Administration in 1991 from Arizona State University. I am a Registered Professional Engineer in Arizona and California and a Grade 3 Certified Operator in Arizona for all four water and wastewater classifications. I specialize in water resource issues, regulatory strategies, rate case filings and water and wastewater utility management and operations.

In addition to my consulting practice, I am the Executive Director of the Water Utilities Association of Arizona ("WUAA"). Founded in 1961, WUAA is a non-profit association representing Arizona's private, regulated water and wastewater utilities. My resume is attached as Exhibit 1 to my direct testimony.

Q. Have you previously testified before the commission?

A. In my time with Citizens and American, I prepared or assisted in the preparation of multiple filings before the Arizona Corporation Commission ("Commission"), including rate applications and filings for a certificate of convenience and necessity ("CC&N") . Since starting ARICOR, I have prepared several filings and assisted in the preparation of several more filings before the Commission, including rate applications and CC&N filings. I have also provided testimony in all of these cases before the Commission. A summary of my regulatory work experience is included in my resume.

Q. What is the purpose of your direct testimony?

A. To support Community Water's application for rate relief. Specifically, I will provide an overview of Community Water's water system and operations, including providing support for the proposed post-test year plant addition of Reservoir No. 5. I also discuss the Company's water conservation program and provide support for the Company's proposed cash reserves.

II. <u>COMPANY'S WATER SYSTEM AND OPERATIONS</u>.

Q. What is your relationship to Community Water?

A. I have been retained by Community Water to provide consulting services to Community Water in support of its application for rate relief.

Q. Would you describe Community Water's water system?

A. Community Water's water system is a groundwater-based system serving portions of the Town of Sahuarita and the unincorporated community of Green Valley, both located in southern Pima County, Arizona. Community Water serves approximately 12,500 customers with about 96% of the customers being residential customers.

Community Water's water system consists of a looped distribution system with multiple pressure zones, four wells, four arsenic treatment facilities, five water storage tanks and four booster stations. The system is designed to provide a 1,500-gallon per minute fire flow.

Each of Company's four wells is equipped with a coagulation filtration process arsenic treatment facility. Treated water from Well No. 6 and Well No. 9 is pumped directly to the Zone 2 distribution system with water produced in excess of current demand being released into Reservoir No 1 (1,000,000 gallons). Treated water from Well No. 10 and Well No. 11 is pumped into Reservoir No. 3 (1,000,000 gallons) and Reservoir No. 4 (2,000,000 gallons), which serve as elevated storage to the distribution system. Treated water from Well No. 10 and Well No. 11 is transferred to the elevated storage tanks via transfer booster stations. The Well No. 10 Transfer Station consists of a 300,000-gallon forebay tank and a booster station with five booster pumps. Similarly, the Well No. 11 Transfer Station consists of a 300,000-gallon forebay tank and a booster station with five booster pumps. The Company utilizes two additional booster stations. The Reservoir No. 1 Booster Station utilizes one electric booster pump and one gas booster pump to supply water to Zone 2 from Reservoir No. 1. Lastly, the single pump at the La Canada Transfer Station allows water to be transferred from Zone 2 to the elevated storage tanks.

In addition to the existing facilities, the Company is currently constructing Reservoir No. 5 (2,000,000 gallons) to replace Reservoir No. 2 (1,000,000 gallons) that was taken out of service during the test year. Community Water removed Reservoir No. 2 from service based on its vulnerability to contamination, increasing maintenance costs,

operational challenges, safety and security considerations. Reservoir No. 5 is being constructed on the former Reservoir No. 2 site at the same elevation as Reservoir No. 3 and Reservoir No. 4. Since it is being constructed at the same elevation as Reservoir No. 3 and Reservoir No. 4, Reservoir No. 5 will provide additional elevated storage for the system and eliminate one of the existing pressure zones. With the addition of Reservoir No. 5, the Community Water system will meet the Company's target of 48 hours of average day demand being available in storage to meet emergency requirements.

A detailed description of Community Water's major water system components is attached as Exhibit 2 to my direct testimony.

Q. What is your opinion of Community Water's water facilities and operations?

A. My observations indicate that Community Water's water facilities are well designed and well maintained. The system is designed to provide reliable service to the community and to provide operational resiliency during time of emergency or natural disaster. Community Water's operations staff is highly knowledgeable regarding water system operations and operates the systems in an effective and efficient manner.

Q. Is the Company requesting that the cost of Reservoir No. 5 be included in rates?

A. Yes. As more fully explained in the direct testimony of Thomas J. Bourassa, the Company proposes to include the cost of Reservoir No. 5 in rate base as post-test year plant.

Q. When will Reservoir No. 5 be placed into service?

A. The Company projects that the facility will be completed and placed into service in August of 2015.

Q. How did the Company decide what capacity to construct for Reservoir No. 5?

A. The Company conducted a thorough review of its operations, facilities, and service standards and ultimately adopted a target for emergency water supply of 48 hours of average day demand for its water system. Reservoir No. 5 was sized so that its emergency supply volume in combination with the Company's other storage facilities' emergency supply volumes exceeds the 2013 48-hour average demand of 4,453,037 gallons. Table 1 details the Company's emergency supply volume for the system including Reservoir No. 5.

Table 1

Storage Site	Nominal Storage Capacity	Emergency Supply Volume[1]
Reservoir No. 1	1,000,000	793,000
Reservoir No. 3	1,000,000	792,000
Reservoir No. 4	2,000,000	1,333,000
Reservoir No. 5	2,000,000	1,333,000
Well No. 10 Forebay	300,000	143,750
Well No. 11 Forebay	300,000	121,875
Total	6,600,000	4,516,625
Hrs. of storage (Avg. Day)		48.7

[1] Emergency Storage + Equalization Storage + ½ Operational Storage.

Q. Can you explain the process used by the Company to establish the emergency water supply target of 48 hours?

A. Community Water is an Arizona non-profit company with members and a volunteer board of directors who are also customers of Community Water. The board sets the direction of how Community Water provides service and management works to carry out the mission of the Company as established by the board. In this context, management adopted a customer-focused approach in determining the emergency water supply target.

Customers have communicated to the Company's board and management their strong desire to have a robust water system that goes above the minimum standards to best maintain safe and reliable service to them. Taking into account its customers and its water system, the Community Water board determined that it was in their collective interest that a 48-hour supply of water be available in case of a major emergency – such as a power outage or natural disaster.

In reaching this decision, the Company considered publications from the U.S. Environmental Protection Agency ("EPA") and other agencies. The Company took specific note of a publication by the EPA and six national water and wastewater Associations[1] that, as part of evaluating operational resiliency under emergency conditions, recommends that consideration be given to treatment operations resiliency, or the percent of minimum daily demand met with primary production or treatment offline for 24, 48, and 72 hours - with minimum daily demand meaning the average daily demand for the lowest production month of the year.[2]

The Company also engaged CPE Consultants, LLC ("CPE"), a professional engineering firm, to evaluate the option of fitting wells with emergency generators as an alternative to constructing additional storage capacity[3]. CPE concluded that there were many advantages to constructing additional storage capacity as compared to emergency generators. Consistent with the CPE Report, the Company concluded that constructing storage was the safest, most reliable means to assure an appropriate emergency water supply and preserve the integrity of Community Water's water system. Furthermore, the benefits of the storage option outweigh the costs and meet Community Water's customers'

[2] See EPA et. al. Publication, *Effective Utility Management – a Primer for Water and Wastewater Utilities,* June 2008, pp. 38-39.

[3] CPE Consultants, LLC retained in response to ACC Staff's recommendation to use emergency generators for its well pumps in Docket No. W-02304A-14-0041.

high expectations that the water system provide safe and reliable water service without exorbitant or unnecessary expense.

Community Water also carefully considered its financial condition and rate structure. Community Water determined that it could afford a system capable of storing a 48 hours supply of water for emergencies without unjust or unreasonable rates.

Q. Was meeting the Company's target for emergency water supply the only reason that Reservoir No. 5 was constructed?

A. No. The Company believes that the new tank will benefit the water system by reducing pumping costs, eliminating the need for a pressure pump associated with Reservoir No. 2, eliminating the maintenance costs associated with Reservoir No. 2, providing better protection from contamination and vandalism at the reservoir site, and improving system reliability.

Q. Has the Commission previously considered Reservoir No. 5 and reached any conclusions?

A. In Decision No. 74809 dated November 13, 2014, the Commission approved the Company's request for financing to construct Reservoir No. 5, noting "...the Company has performed extensive research and demonstrated the benefits of the New Storage Tank..."

Q. Have you reviewed the financing case related to Reservoir No. 5 (Docket No. W-02304A-14-0041)?

A. Yes, I have reviewed the Docket generally and read all of the documents relevant to Reservoir No. 5 filed by the Company and Staff.

Q. What was Commission Staff's position in the financing case regarding Reservoir No. 5?

A. Staff opposed authorizing financing for Reservoir No. 5, citing ADEQ regulations establishing minimum storage capacities required and recommending that the use of emergency generators be investigated to power well pumps in times of emergency.

Q. Did the Commission adopt Staff's recommendations?

A. No. As previously noted the Commission approved the Company's financing request. The Commission also did not adopt Staff's recommendation to have the Company engage a professional engineering firm to evaluate the option of acquiring a standby generator to power the well pumps in case of emergency. This is because the Company had already engaged CPE during the financing case to evaluate the option of acquiring a standby generator to power well pumps in case of emergency.

Q. After reviewing the financing case and discussing the matter with Company management have you reached any conclusions regarding Reservoir No. 5?

A. It is my professional opinion that Community Water has appropriately considered and adopted a target for emergency water supply of 48 hours of average day demand for its water system and that the target results in a reasonable level of water storage for the Community Water system. Furthermore, I have reviewed the Company's calculation of its emergency water supply and agree with that calculation. I consider the approach used by the Company as presented in Table 1 to be a reasonable approach to determining the volume of water likely to be available in storage during an emergency situation. Lastly, I recommend against using regulatory minimum storage requirements to evaluate the appropriateness of Community Water's level of storage. Minimum requirements are just that – minimum requirements. They are not intended to nor do they provide meaningful

guidance for determining the appropriate amount of storage capacity that an individual water utility should have given its particular circumstances and customer profile.

Q. Upon being placed into service by the Company, will Reservoir No. 5 be used and useful in the provision of water service to Community Water's customers?

A. Yes. Reservoir No. 5 will provide immediate benefits to Community Water existing customers, including reduced pumping costs, reduced maintenance costs and improved system reliability. Additionally, Reservoir No. 5 will bring the Company's emergency water supply to its target of 48 hours of average day demand, providing a level of service desired by the customers as set forth by the customer-elected Board of Directors.

III. WATER CONSERVATION PROGRAM.

Q. Would you summarize Community Water's water conservation program?

A. Community Water is located in the Tucson Active Management Area and is enrolled as a regulated tier 2 municipal provider in ADWR's Modified Non-Per Capita Conservation Program ("NPCCP"). As a part of the program, Community Water reviewed its water system and proposed five Best Management Practices ("BMPs") for implementation in the Community Water service area. ADWR has approved the following BMPs for Community Water:

- Meter Repair and/or Replacement Program
- Customer High Water Use Inquiry Resolution
- Customer High Water Use Notification
- Residential Interior Retrofit Program
- Special events/programs and community presentation

In addition to the five BMPs, Community Water has implemented a Public Education Program as required by the NPCCP.

Q. What are the components of Community Water's Public Education Program?

A. Community Water provides water conservation education through several communication channels. Community Water provides water conservation tips to each of its customers through a note on the water bill on a bi-monthly basis. Community Water also provides water conservation messages to everyone that logs onto the Company's website. Community Water makes various water conservation brochures available at the Company's office or, when requested, by mail.

Q. Has Community Water's water conservation program been effective?

A. The Company believes that it has been effective. As noted in the Arturo Gabaldon's direct testimony, the Company has been experiencing decreasing water consumption over the past several years. As noted by Mr. Gabaldon, based on data from a study that Community Water participated in, most water conservation is occurring as a result of technology improvements and Community Water's customers' water use reductions appear to be tracking national trends.

Q. Does Community Water have a program to address water losses?

A. Yes. All water providers in the Tucson Active Management Area are required to track and report water losses to ADWR. Community Water closely monitors this data and implements corrective action as warranted.

Q. Has Community Water done a good job controlling water loss?

A. Yes, Community Water's water loss remains well below 10 percent as the Company reported the following lost and unaccounted for water to ADWR for the past three years.

- 2012 – 6.88%
- 2013 – 8.21%
- 2014 – 4.54%

IV. CASH RESERVES.

Q. As part of your work on this case, did you evaluate Community Water's need for cash reserves?

A. Yes, at the direction of Company management I investigated the issue of reserves generally with a specific focus on capital reserves that would be used to fund replacement of specific categories of long-lived assets. Based on my investigation, I recommended an initial target level of capital reserves for the Company.

Q. Why is it appropriate for Community Water to maintain reserves?

A. In my experience as a water and wastewater utility manager and consultant, I have observed that investor-owned water utilities do not rely exclusively on new debt and operating cash flow to fund major system maintenance and capital requirements. Rather, from time to time, investor-owned water utilities must ask the shareholders to infuse new equity into the company to provide funds, typically for investment in capital assets.

As an Arizona non-profit company with members, Community Water does not have shareholders and therefore does not have an outside source of equity capital. As such they can only rely on new debt and operating cash flow to fund major system maintenance and capital requirements. Due to the uneven nature of major maintenance and capital expenditures, over the long-term, reliance exclusively on new debt and operating cash flow is likely to cause adverse impacts to the Company's financial condition and drive unplanned and unacceptable rate increases.

Through the use of a capital reserve established from enhanced levels of operating cash flow, the Company can better provide adequate funding to meet its needs, better avoid negative financial impacts, mitigate rate increases and provide more financial stability over the long-term.

Q. Are capital reserves for non-profit water utilities common and appropriate?

A. My investigation showed that many municipal districts maintain cash reserves for a number of purposes including major maintenance and capital expenditures. Although, Community Water is not a municipal district, due to their structure as a non-profit corporation with memebers, its financial situation is more similar to a municipal district than a typical investor-owned utility.

In addition, my investigation showed the topic of reserves to be an industry-wide issue. In its 2014 State of the Water Industry Report, AWWA states:

> Water and wastewater utilities should strive to be self-sustaining enterprises that are adequately financed with rates and charges based on sound accounting, engineering, financial, and economic principles. Revenues from service charges, user rates, and capital charges (e.g., impact fees and system development charges) should be sufficient to enable utilities to provide for the full cost of service including:
>
> ■Annual operation and maintenance expenses
> ■Capital costs (e.g., debt service and other capital outlays)
> ■Adequate working capital and **required reserves**
>
> Full-cost pricing, i.e., charging rates and fees that reflect the full cost of providing water, must include renewal or replacement costs of treatment, storage, distribution, and collection systems. Some utilities have previously kept their rates low by minimizing or ignoring these costs, but as the useful life of their systems draws near, current managers and the communities they serve are forced to address these costs, often through painful and unexpected rate increases. [Emphasis Added]

In summary, capital reserves are both common and appropriate for a non-profit water utility like Community Water.

Q. Did you find evidence of standardized recommended levels for reserves?

A. No. My investigation showed that both the level of reserves and the items for which reserves were maintained varied from utility to utility based on the needs and circumstances affecting the particular utility.

Q. Does Community Water currently maintain cash reserves?

A. Community Water has an approximately $2.5 million cash and investment balance. However Community Water has not specifically adopted reserve fund policies or designated this cash balance to be retained for specific purposes. In conjunction with the preparation of this case and in coordination with my work on capital reserves, Community Water has identified reservoir and forebay maintenance and replacement of media at arsenic treatment plants as appropriate uses of current cash balances. On a going forward basis, Community Water proposes to formally establish reserve fund policies and designate cash balances for four future commitments of the Company. The four proposed reserve funds are for (i) reservoir and forebay maintenance, (ii) replacement of media at arsenic treatment plants, (iii) renewal of an Arizona State Land Department lease, and (iv) capital expenditures.

Q. How did you formulate your recommendation for a capital reserve for Community Water?

A. Working with Company management, I reviewed a database listing the original cost of capital assets and selected specific categories of long-lived assets to include in the capital reserve calculation. The selected assets were:

- Pumping Equipment (including structures)
- Water Treatment Equipment (including structures)
- Reservoirs
- Mains and Hydrants
- Fire Line Services

Once the categories of reserve assets had been identified, they were organized by vintage year and a replacement year was assigned based on the expected life to the asset class. Next, based on the replacement year assigned, a schedule was prepared showing the original cost of plant that is projected to be replaced in each year from 2015 forward.

Next, for each year beginning with 2015, the total original cost of plant projected to be replaced over the next ten-year period was calculated (e.g. for 2015 the total original cost of plant projected to be replaced between 2016 and 2025 was calculated) ("Rolling 10-Yr Replacements"). Lastly, the target capital reserve was determined by taking a five-year average of the Rolling 10-Yr Replacements.

Using this method, the target capital reserve for each year is the average over a forward-looking five-year period of the total original cost of projected retirements over a forward-looking ten-year period. Effectively, the target capital reserve is the original cost of replacements projected for the next ten years with averaging included to smooth the target from year to year. The resulting target capital reserve is $2.9 million in 2015. Over the next five years the target capital reserve increases to $3.8 million in 2020.

Q. Why is this an appropriate amount of capital reserves?

A. I believe this level of capital reserves establishes a modest initial capital reserve target that will provide sufficient cash reserves to avoid adverse impacts to the Company's financial condition and unplanned and unacceptable rate increases to its customers over the near-term. It will also provide some flexibility in regard to the amount and timing of debt issuances. Lastly, the cash flow requirements related to the recommended capital reserve, combined with the other reserves maintained by the Company, represent a reasonable percentage of the Company's overall revenue and operating cash flow.

The capital reserve target is modest in that it is based on original cost of the asset being replaced and is likely to represent a minimum level of capital reserves needed by Community Water. Due to inflation and other factors, the replacement cost of an asset will be significantly greater, often by many multiples, of the original cost of the asset. The potential magnitude of the difference between the replacement cost and the original cost of utility assets is evident when comparing the Company test year original cost of gross utility plant in service of approximately $41.45 million to the replacement cost of $144.6 million

estimated by Stantec.[4] This 350 percent increase in replacement cost over original cost represents a significant potential cash flow requirement that could negatively impact capital reserves and increase capital reserve requirements over time.

The levels of replacement of long-lived assets and the impact of the difference between the replacement cost of assets and their original cost on capital reserves should be monitored closely by Community Water over the next several years. Capital reserve targets should be updated periodically based on actual experience and in consideration of actual and projected financial ratios and rates, with consideration given to shifting the reserve target calculation to a replacement cost basis in the future.

Q. Does that conclude your direct testimony?

A. Yes, it does.

Exhibit RLJ-1

ARICOR
Water Solutions
Ray L. Jones P.E.
Principal

18835 North Thompson Peak Parkway, Suite 215
Scottsdale, Arizona 85255

EXPERTISE

Mr. Jones founded ARICOR Water Solutions in 2004. Through ARICOR Water Solutions, Mr. Jones offers a wide range of engineering and financial analysis services to the private and public sectors. Projects include development of regulatory strategies and preparing rate cases, including preparation of rate studies, cost of service studies, financial schedules and testimony for filings before the Arizona Corporation Commission. Services also include consultation on water and wastewater utility formation, management and operations, and valuation, including due diligence analysis, water resources strategy development and water rights valuation. ARICOR Water Solutions provides water, wastewater and water resource master planning, water and wastewater facilities design, and owner representation; including value engineering, program management and construction oversight. Lastly, ARICOR Water Solutions supports water solutions with contract operations and expert witness testimony and litigation support.

EMPLOYMENT HISTORY

2002 to 2004

Arizona-American Water Company
President
Responsible for leadership of the Arizona business activities of Arizona-American Water Company. Key responsibilities include developing and evaluation new business opportunities, developing strategic plans, establishing effective government and community relations, insuring compliance with all regulatory requirements, and providing management and guidance to key operations and support personnel.

1998 to 2002

Citizens Water Resources, Arizona Operations
Vice President and General Manager
Responsible for leadership of the Arizona regulated and unregulated business activities of Citizens Water Resources. Key responsibilities included developing and evaluation new business opportunities, developing strategic plans, establishing effective government and community relations, insuring compliance with all regulatory requirements, and providing management and guidance to key operations and support personnel.

1990 to 1998

Citizens Water Resources, Arizona Operations
Engineering and Development Services Manager
Responsible for management of a diverse group of business growth related activities. Responsibilities include: marketing of operation and maintenance services (unregulated business growth), management of new development activity (regulated business growth), management of engineering functions (infrastructure planning and construction), management of water resources planning and compliance, management of growth-related regulatory functions (CC&N's and Franchises), and management of capital budgeting functions and capital accounting functions.

1985 to 1990

Citizens Water Resources, Arizona Operations
Civil Engineer
Responsible for the planning, coordination and supervision of capital expansion and major maintenance and rehabilitation projects as assigned. Responsible for development of capital program for Maricopa County Operations.

EDUCATION

Arizona State University – Master of Business Administration (1991)
University of Kansas – Bachelor of Science in Civil Engineering (1985)

ARICOR Water Solutions

PROFESSIONAL CERTIFICATION

Registered Professional Engineer – Civil Engineering – Arizona
Professional Engineer – Civil Engineering – California
Certified Operator – Wastewater Treatment, Wastewater Collection, Water Treatment, Water Distribution – Arizona

PROFESSIONAL AFFILIATIONS

- Executive Director – Water Utilities Association of Arizona
- Member - American Society of Professional Engineers
- Member – American Society of Civil Engineers
- Member - American Water Works Association
- Member - Arizona Water Association
- Member - Water Environment Federation

CIVIC AND COMMUNITY INVOLVEMENT

- Board of Directors – Greater Maricopa Foreign Trade Zone (2009 – Present)
- Advisory Member - Water Resources Development Commission (2010 – 2012)
- Chairman WESTMARC (2008)
- Director and Member of the Executive Committee- WESTMARC (1998 – 2010)
- Co-Chairman, WESTMARC Water Committee (2006 – 2007)
- Chairman-Elect WESTMARC (2007)
- Member – Corporate Contributions Committee, West Valley Fine Arts Council Diamond Ball (Chairman 2005)
- Member – Technical Advisory Committee – Governor's Water Management Commission (2001)
- Board Member, Manager & Past Chairman – North Valley Little League Softball

REGULATORY EXPERIENCE

Testimony has been provided before the Arizona Corporation Commission in the dockets listed below. Unless otherwise indicated testimony was provided on behalf of the utility.

COMMUNITY WATER COMPANY OF GREEN VALLEY

Major Water System Components

July 13, 2015

General

Community Water Company of Green Valley's ("Community Water") water system is a groundwater-based system serving portions of the Town of Sahuarita and the unincorporated community of Green Valley, both located in southern Pima County, Arizona. Community Water serves approximately 12,500 customers with about 96% of the customers being residential customers.

Water System

Community Water's water system consists of a looped distribution system with multiple pressure zones, four wells, four arsenic treatment facilities, five water storage tanks and four booster stations. The system is designed to provide a 1,500-gallon per minute fire flow. Each of Company's four wells is equipped with a coagulation filtration process arsenic treatment facility. In addition to the existing facilities, the Company is currently constructing an additional water storage tank.

Community Water's system facilities are summarized below:

Wells:

Well 6 – ADWR #55-627485 – 304 N. Abrego Dr.
Equipped with line shaft turbine pump and 250 hp motor and related piping and electrical gear. Pumps to arsenic treatment facility and then to distribution system.

Well 9 – ADWR #55-588121 – 1526 N. La Canoa
Equipped with line shaft turbine pump and 250 hp motor and related piping and electrical gear. Pumps to arsenic treatment facility and then to distribution system.

Well 10 – ADWR #55-207982 – 1667 S. Abrego Dr.
Equipped with line shaft turbine pump and 400 hp motor and related piping and electrical gear. Pumps to arsenic treatment and then to forebay storage.

Well 11 – ADWR #55-608518 – 18460 S. Calle Valle Verde
Equipped with line shaft turbine pump and 350 hp motor and related piping and electrical gear. Pumps to arsenic treatment and then to forebay storage.

Arsenic Treatment Facilities:

Well 6 – 304 N. Abrego Dr.
1,200 gpm, 8 pressure filtration vessel coagulation filtration process arsenic treatment facility with chlorination of finished water.

Well 9 – 1526 N. La Canoa
1,200 gpm, 8 pressure filtration vessel coagulation filtration process arsenic treatment facility with chlorination of finished water.

Well 10 – 1667 S. Abrego Dr.
2,500 gpm, 6 pressure filtration vessel coagulation filtration process arsenic treatment facility with chlorination of finished water.

Well 11 – 18460 S. Calle Valle Verde
2,500 gpm, 6 pressure filtration vessel coagulation filtration process arsenic treatment facility with chlorination of finished water.

Booster Stations:

Well 10 – 1667 S. Abrego Dr.
1 – 300,000 gallon storage tank (forebay/ground storage)
5 – 100 hp booster pumps
1 – 5,000 gallon Hydropneumatic tank
1 – Diesel driven backup generator
Associated piping and electrical gear

Well 11 – 18460 S. Calle Valle Verde
1 – 300,000 gallon storage tank (forebay/ground storage)
5 – 125 hp booster pumps
1 – 5,000 gallon Hydropneumatic tank
1 – Diesel driven backup generator
Associated piping and electrical gear

Reservoir 1 Booster Station – 630 W. Camino Bondadoso
1 – 1,000,000 gallon storage tank (forebay/ground storage)
1 – 40 hp booster pump
1 – 152 hp booster pump (natural gas)
1 – 7,500 gallon Hydropneumatic tank

La Canada Transfer Station – 960 S. La Canada Dr.
1 – 30 hp booster pump

Storage Facilities:

Forebay/Ground Storage:

Well 10	– 300,000 gallon storage tank	- 1667 S. Abrego Dr.
Well 11	– 300,000 gallon storage tank	- 18460 S. Calle Valle Verde
Reservoir 1	– 1,000,000 gallon storage tank	- 630 W. Camino Bondadoso

Elevated Storage:

Reservoir 3	– 1,000,000 gallon storage tank	- 1901 W. Duval Mine Rd.
Reservoir 4	– 2,000,000 gallon storage tank	- 1901 W. Duval Mine Rd.
Reservoir 5	– 2,000,000 gallon storage tank (under construction)	- 1951 W. Continental Rd.

Direct Testimony of Thomas J. Bourassa

BEFORE THE ARIZONA CORPORATION COMMISSION

COMMISSIONERS
SUSAN BITTER SMITH – CHAIRMAN
BOB STUMP
BOB BURNS
DOUG LITTLE
TOM FORESE

IN THE MATTER OF THE APPLICATION OF COMMUNITY WATER COMPANY OF GREEN VALLEY, AN ARIZONA CORPORATION, FOR A DETERMINATION OF THE CURRENT FAIR VALUE OF ITS UTILITY PLANT AND PROPERTY AND FOR INCREASES IN ITS RATES AND CHARGES FOR UTILITY SERVICE.	DOCKET NO. W-02304-15-_____

DIRECT TESTIMONY OF

THOMAS J. BOURASSA

ON BEHALF OF

COMMUNITY WATER COMPANY OF GREEN VALLEY

July 15, 2015

TABLE OF CONTENTS

I. Introduction and Qualifications 1

II. Overview of the Company's Application 2

III. Summary of "A", "E" and "F" Schedules 4

IV. Rate Base ("B" Schedules) 6

V. Income Statement ("C" Schedules) 9

VI. "D" Schedules 12

VII. Rate Design 12

I. INTRODUCTION AND QUALIFICATIONS.

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Thomas J. Bourassa. My business address is 139 W. Wood Drive, Phoenix, Arizona 85029.

Q. WHAT IS YOUR PROFESSION AND BACKGROUND?

A. I am a Certified Public Accountant and am self-employed, providing consulting services to utility companies as well as general accounting services. I have a B.S. in Chemistry and Accounting from Northern Arizona University (1980) and an M.B.A. with an emphasis in Finance from the University of Phoenix (1991).

Q. COULD YOU BRIEFLY SUMMARIZE YOUR PRIOR WORK AND REGULATORY EXPERIENCE?

A. Yes. Prior to becoming a private consultant, I was employed by High-Tech Institute, Inc., and served as controller and chief financial officer. Prior to working for High-Tech Institute, I worked as a division controller for the Apollo Group, Inc. Before joining the Apollo Group, I was employed at Kozoman & Kermode, CPAs. In that position, I prepared compilations and other write-up work for water and wastewater utilities, as well as tax returns.

In my private practice, I have prepared and/or assisted in the preparation of several water and wastewater utility rate applications before the Arizona Corporation Commission ("Commission"). A summary of my regulatory work experience is attached as Exhibit TJB- 1.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying in this proceeding on behalf of the applicant, Community Water Company of Green Valley ("Community Water" or "the Company"). Community Water is seeking increases in its rates and charges for water utility service in its certificated service area in Pima County.

II. OVERVIEW OF THE COMPANY'S APPLICATION.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. I will testify in support of the Company's proposed rates. I am sponsoring Schedules "A" through "H" (excluding the "G" Schedules), which are also being filed in support of the Company's application. I was responsible for and/or supervised the preparation of these schedules based on my investigation and review of the Company's relevant books and records. The Company has not prepared a cost of service study ("G" schedules). Consequently, the "G" Schedules are omitted.

Q. WHY DIDN'T THE COMPANY PREPARE A COST OF SERVICE STUDY?

A. Because the Commission does not typically set rates for water utility service based on cost of service, and because the changes to the rate design the Company is proposing does not necessitate a cost of service study, the substantial expense of doing a cost of service study could not be justified. I have taken a similar approach in other cases without complaint.

Q. PLEASE SUMMARIZE THE COMPANY'S APPLICATION.

A. The test year used by Community Water is the 12-month period that ended December 31, 2014. Since the Company is a non-profit, a cost of capital analysis has not been performed. Instead, the revenue requirement is determined based on an operating margin approach.

The Company proposes a 16.5 percent operating margin which will provide revenues sufficient to service long-term debt as well as provide sufficient funds for on-going expense, fund expected capital requirements, and partially fund cash reserves for items of major maintenance and plant replacements (which Ray L. Jones describes in his direct testimony). The 16.5 percent operating margin results in a 9.09 percent return on fair value rate base ("FVRB").

Community Water has also proposed certain pro forma adjustments to take into account known and measurable changes to rate base, expenses and revenues. These pro forma adjustments are consistent with normal ratemaking principles and with the Commission's rules and regulations. They are also necessary to obtain a normal or realistic relationship between revenues, expenses and rate base.

The Company's FVRB is approximately $7,678,586. The increase in revenues to provide a 16.5 percent operating margin is approximately $708,244, an increase of approximately 20.10 percent over the adjusted and annualized test year revenues.

Q. WHY IS THE COMPANY FILING FOR RATE INCREASES AT THIS TIME?

A. The Company's last rate increase was approved on February 3, 2010 (in Decision No. 71478) using a test year ending December 31, 2007. Since that time, the Company has made significant investments in plant, and various operating expenses have increased. Consequently, rate increases are necessary to ensure that the Company has the ability to cover its operating expenses, service debt, fund expected capital requirements, and partially fund cash reserves for major maintenance items and plant replacements.

III. SUMMARY OF "A", "E" AND "F" SCHEDULES.

Q. MR. BOURASSA, LET'S TURN TO THE COMPANY'S SCHEDULES. PLEASE DESCRIBE THE SCHEDULES LABELED AS "A", "E", AND "F".

A. I will describe each of the schedules individually, starting with the "A" Schedules. First is the A-1 Schedule, which is a summary of the rate base, operating income, current operating margin, required operating margin, operating income deficiency, and the increase in gross revenue. A 16.5 percent operating margin is requested. Revenues at present and proposed and customer classifications are also shown on this schedule.

Q. WHY ARE YOU RECOMMENDING A 16.5 PERCENT OPERATING MARGIN?

A. The higher percent operating margin is warranted for Community Water in this instance based on the Company's cash flow requirements for debt service and capital improvements, as well as for the Company's need to fund operations and maintenance, and to address contingencies. The Company is also requesting 16.5 percent in this application in order to help minimize the rate increase to customers in the future. Mr. Gabaldon also discusses the need for at least a 16.5 percent operating margin in his direct testimony.

Q. IS A 16.5 PERCENT OPERATING MARGIN HIGHER THAN THE COMPANY HAS RECEIVED IN ITS PRIOR TWO CASES?

A. Yes, but the requested operating margin is only slightly higher than what the Commission has approved for Community Water in the past. The Commission approved an operating margin of 15 percent for Community Water in Decision No. 71748, but approved a 16 percent operating margin in the Company's previous rate case that concluded on December 21, 2006 (in Decision No. 69205). Given the facts and circumstances existing here, a slightly higher operating margin is appropriate.

Q. PLEASE DESCRIBE THE OTHER "A" SCHEDULES.

A. Schedule A-2 is a summary of results of operations for the test year, prior years, and a projected year at present rates and proposed rates.

Schedule A-3 contains the Company's capital structure for the test year and the two prior years.

Schedule A-4 contains the plant construction, and plant in service for the test year and prior years. The projected plant additions are also shown on this schedule.

Schedule A-5 is the summary of the Company's changes in financial position (cash flow) for the prior two years, the test year at present rates, and a projected year at present and proposed rates.

Q. WHAT ABOUT THE "E" SCHEDULES FOR THE COMPANY?

A. The "E" Schedules are based on the Company's actual operating results, as reported by the Company in annual reports filed with the Commission. Schedule E-1 contains the comparative balance sheet data the years 2012, 2013, and 2014.

Schedule E-2, page 1, contains the income statement for the years 2012, 2013, and 2014.

Schedule E-3 contains the statements of changes in the Company's financial position for the test year and the two prior years.

Schedule E-4 provides the changes in membership equity.

Schedule E-5 contains the Company's plant in service at the end of the test year, and one year prior to the end of the test year.

Schedule E-7 contains operating statistics for the years 2012, 2013, and 2014.

Schedule E-8 contains the taxes charged to operations for the years 2012, 2013, and 2014.

The accountant's notes to the financial statements and the financial assumptions used in preparing the rate filing schedules are shown on Schedules E-9 and F-4,

respectively, in accordance with the Commission's standard filing requirements. The Company does prepare audited financial statements. A copy of the latest audit report is attached to my Testimony as Exhibit TJB-2.

Q. PLEASE DESCRIBE THE "F" SCHEDULES.

A. Schedule F-1 contains the results of operations at the present rates (actual and adjusted), and at proposed rates.

Schedule F-2 contains the summary of changes in financial position (cash flow) for the prior two years, the test year at present rates, and a projected year at present and proposed rates.

Schedule F-3 shows the Company's projected construction requirements for 2013, 2014, and 2015.

Schedule F-4 contains the assumptions used in developing the adjustments and projections contained in the rate filing.

IV. RATE BASE ("B" SCHEDULES).

Q. WOULD YOU EXPLAIN THE RATE BASE SCHEDULES, WHICH ARE LABELED AS THE "B" SCHEDULES?

A. Yes. I will start with Schedule B-5, which is the working capital allowance. The results produced by the "formula method" of computing the working capital allowance are shown on each. This Company is not requesting a working capital component in rate base.

Q. DID YOU PREPARE SCHEDULES B-3 AND B-4 FOR COMMUNITY WATER?

A. No, I did not prepare these schedules because the Company is requesting that its original cost rate base ("OCRB") be used as its FVRB. Thus, these schedules are unnecessary.

Q. HAVE YOU PREPARED SCHEDULES SHOWING ADJUSTMENTS TO OCRB?

A. Yes. Schedule B-2 shows adjustments to OCRB proposed by the Company. Schedule B-2, pages 2 through 4, provides the supporting information. There are four adjustments shown in Schedule B-2.

Q. PLEASE DESCRIBE ADJUSTMENT NUMBER 1.

A. Adjustment number 1, as shown on Schedule B-2, page 2, adjusts plant-in-service ("PIS"). There are two PIS adjustments included in Adjustment 1. These are shown on Schedule B-2, page 3, and are labeled as adjustments "1 – A" and "1 – B".

Q. DO ANY OF THESE "A" OR "B" ADJUSTMENTS REFLECT INCLUSION OF POST-TEST YEAR PLANT?

A. Yes. Adjustment "1 – A" in Schedule B-2 (as detailed on page 3.1) increases PIS to reflect post-test year plant. Post-test year plant consists of water storage plant and transportation equipment, both of which are scheduled to be placed into service after the end of the test year. All of the post-test year plant adjustment, which will be used to serve existing customers, is known and measurable. They are revenue neutral and are necessary to serve existing Company customers as of the end of the test year.

Q. WHAT CRITERIA FOR INCLUSION OF POST-TEST YEAR PLANT CAN BE FOUND, IF ANY, IN RECENT COMMISSION DECISIONS?

A. The Commission approved the inclusion of post-test year plant in rate base in several cases when (i) the plant is revenue neutral (i.e., providing service to those customers who were customers of the Company as of the end of the test year); and (ii) it has been completed and placed into service at a reasonable time before the hearing, so that it could be inspected and audited.

Q. PLEASE DESCRIBE THE "B" ADJUSTMENT TO ADJUSTMENT NUMBER 1 ON SCHEDULE B-2.

A. Adjustment "1 – B" of Schedule B-2 (as detailed on page 3.2) adjusts PIS to reflect the reconciliation of the Company's PIS detail to recorded general ledger amounts as reflected on Schedule E-1.

Q. WHAT IS THE PURPOSE OF ADJUSTMENT NUMBER 2 ON SCHEDULE B-2 REGARDING ACCUMULATED DEPRECIATION?

A. Adjustment 2, shown on Schedule B-2 at page 2, adjusts accumulated depreciation ("A/D"). The details of the A/D adjustments are shown on Schedule B-2, page 4. There are two A/D adjustments included in Adjustment 2. These are shown on Schedule B-2, page 4, and are labeled as adjustments "2 – A", and "2 – B".

Adjustment "A" adjusts A/D for the proposed retirements related to PTY plant and is shown on page 4.1 of Schedule B-2.

Adjustment "B" adjusts A/D to reflect the re-computed amounts of reconciling A/D to A/D reconstruction per the Company's B-2 plant detail schedule, pages 3.3 to 3.9, and is shown on page 4.2 of Schedule B-2.

Q. DO THE PLANT IN SERVICE AND ACCUMULATED DEPRECIATION BALANCES SHOWN ON SCHEDULE B-2 REFLECT THE LAST COMMISSION RATE ORDER FOR THE COMPANY?

A. Yes. The Company's reconstruction of the PIS balance started with the PIS balance approved in the last rate case. Reconciliation to the starting balances for PIS and accumulated depreciation are shown on Schedule B-2, page 3.3. Plant additions and retirements since the end of the last test year have been added to and deducted from total plant shown on Schedule B-2, pages 3.4 to 3.9. Those pages also show the details for the

accumulated depreciation, from the end of the last test year through the end of the test year, using the half-year convention for depreciation.

Q. HOW WAS THE PROPOSED "FAIR VALUE" RATE BASE SHOWN ON A-1 DETERMINED?

A. The FVRB shown on Schedule A-1 is based on OCRB.

V. INCOME STATEMENT ("C" SCHEDULES).

Q. LET'S MOVE ON TO THE "C" SCHEDULES. PLEASE EXPLAIN THE ADJUSTMENTS YOU ARE PROPOSING TO THE INCOME STATEMENT AS SHOWN ON SCHEDULES C-1 AND C-2.

A. The following is a summary of adjustments shown on Schedule C-1:

Adjustment 1 annualizes depreciation expense. The proposed depreciation rate for each component of utility plant is shown on Schedule C-2, page 2. The depreciation rates approved in the Company's last rate case were account-specific rates. The Company proposes to continue to use these rates.

Adjustment 2 increases the property taxes based on proposed revenues. The details of the computation are shown on Schedule C-2, page 3.

Q. HOW DID YOU COMPUTE THE PROPERTY TAXES AT PROPOSED RATES?

A. To determine full cash value, I used the method employed by the Arizona Department of Revenue - Centrally Valued Properties ("ADOR" or "the Department"). This method determines full cash value by using twice the average of three years of revenue, plus an addition for construction-work in progress ("CWIP") and a deduction for the book value of transportation equipment. In the instant case, I used two times the adjusted revenues for the year ending December 31, 2014, and one year of revenues at proposed rates. The

assessed value (18 percent of full cash value) was then multiplied by the property tax rate to determine adjusted property tax expense.

Q. IS THIS CONSISTENT WITH PRIOR COMMISSION DECISIONS?

A. Yes. The Commission approved this method for ascertaining property tax expense in cases including in *Chaparral City Water Company*, Decision No. 68176 (September 30, 2005) and in *Litchfield Park Service Company*, Decision No. 67279 (October 5, 2004).

Q. IS THIS SYNCHRONIZATION OF PROPERTY TAX EXPENSE WITH REVENUES PROPER RATE MAKING?

A. Yes. Like income taxes, property taxes must be adjusted to ensure that the new rates are sufficient to produce the revenue requirement. For this reason, the Commission has repeatedly approved the use of proposed revenues to determine an appropriate level of property tax expense to be recovered through rates.

Q. PLEASE CONTINUE WITH YOUR DISCUSSION OF THE INCOME STATEMENT ADJUSTMENTS.

A. Adjustment 3 shows the rate case expense estimated by the Company. The Company estimates rate case expense of $150,000. The Company proposes that rate case expense be recovered over five years because it believes a five-year cycle for future rate cases is reasonable given this utility's circumstances.

Q. HOW DID YOU ARRIVE AT THIS AMOUNT?

A. Based on my experience with rate cases before the Commission, and that of the Company's counsel. Given Community Water's size and the anticipated nature, length and complexity of the proceedings, I estimate this rate case to cost a total of $150,000.

Q. PLEASE EXPLAIN WHY YOU REFER TO THIS AMOUNT AS AN "ESTIMATE"?

A. Because ultimately several different factors contribute to what the final actual rate case expense will be for a particular case. Thus, I can only make an educated guess based on my experience. The specifics of who may intervene, what unique issues may come into dispute, and what kind of procedural issues will arise, are just some of the factors that determine the final total expense to process a rate case through the Commission. Thus, it is necessary to propose a reasonable estimate reflective of past experience with similar sized utilities.

Q. PLEASE DESCRIBE THE OTHER INCOME STATEMENT ADJUSTMENTS DETAILED IN THE "C" SCHEDULES.

A. Adjustment 4 annualizes revenues to the year-end number of customers. The annualization was based on the number of customers at the end of the test year, compared to the actual number of customers during each month of the test year. Average revenues by month were computed for the test year. The average revenues were then multiplied by the increase (or decrease) in number of customers for each month of the test year. Adjustment number 4 also increases purchased power expense and chemicals expense based upon the expected additional gallons to be sold from the revenue annualization.

Adjustment 5 reduces revenues based upon water usage normalization. Usage normalization reflects the expected reduction in gallons sold primarily due to conservation and is based upon an analysis of trends in customer usage from 2010 through 2014. Adjustment 5 also reduces purchased power expense and chemicals expense based upon the expected reduction in gallons to be sold from the usage normalization.

Adjustment 6 increases Salaries and Wages expense and reflects the additional expense related to the filling of two vacant positions as well as expected wage increases over the next year (approximately the time new rates will be approved).

Adjustment 7 increases Insurance – Health and Life for expected increases in this expense.

Adjustment 8 reduces sludge removal expense by annualizing the expected savings in the removal of arsenic water treatment sludge. As discussed by Mr. Gabaldon, the Company recently installed arsenic sludge drying beds at three of its water treatment facilities. As part of the treatment process, a partially dewatered arsenic sludge is produced which results in lower disposal costs.

Adjustments 9 through 12 are intentionally left blank.

Q. ARE THERE ANY OTHER REVENUE AND/OR EXPENSE ADJUSTMENTS?

A. No.

VI. "D" SCHEDULES.

Q. WOULD YOU PLEASE DISCUSS THE "D" SCHEDULES?

A. Schedule D-1 shows the summary membership equity and long-term debt. Since the Company is a non-profit corporation with members, a cost of capital analysis has not been performed. Schedule D-2 reflects the current and projected balances of long-term debt.

VII. RATE DESIGN.

Q. WHAT ARE THE COMPANY'S PRESENT AND PROPOSED RATES FOR WATER SERVICE?

A. The Company's present and proposed rates are shown on Schedule H-3.

Q. WHAT IS THE IMPACT OF THE COMPANY'S PROPOSED RATES ON A 5/8-X-3/4-INCH METERED RESIDENTIAL CUSTOMER WITH AN AVERAGE BILL?

A. As shown on Schedule H-2, page 1, the present monthly bill for a 5/8-x-3/4 inch metered residential customer using an average of 3,897 gallons is $19.14. The proposed monthly bill for a 5/8-x-3/4-inch metered residential customer using an average of 3,897 gallons would be $23.46, an increase of $4.32, or 22.55 percent above the present rates.

Q. HAS THE COMPANY PROPOSED A CHANGE IN THE OVERALL RATE DESIGN STRUCTURE AS PART OF ITS PROPOSAL?

A. No. The Company's rate design reflects the inverted-tier design adopted in the last case, including the respective break-over points. The monthly minimums and commodity charges were increased slightly more than the commodity rates to improve the revenue recovery from the monthly minimums and provide more revenue stability. In other words, under present rates, the Company recovered approximately 53.7 percent of revenues from the monthly minimums and 46.3 percent from the commodity rates – while under the proposed rates, the Company will recover approximately 57.2 percent of revenues from the monthly minimums and 42.8 percent from the commodity rates. Schedule H-3, pages 3 and 4, show the revenue recovery from the monthly minimums and commodity rates under present and proposed rates.

Q. ARE THERE ANY CHANGES TO THE MISCELLANEOUS SERVICE CHARGES?

A. No.

Q. ARE THERE ANY CHANGES TO THE METER AND SERVICE LINE INSTALLATION CHARGES?

A. No.

Q. DOES THAT CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Exhibit TJB-1

RESUME OF THOMAS J. BOURASSA, CPA

EDUCATIONAL BACKGROUND

B.S. Northern Arizona University Chemistry/Accounting (1980)
M.B.A. University of Phoenix with Emphasis in Finance (1991)
C.P.A. State of Arizona (1995)
Continuing Professional Education – In areas of tax, accounting, management, economics, finance, business valuation, consulting, and ethics (80 hrs every two years)

MEMBERSHIPS

Arizona Society of CPAs
Water Utilities Association of Arizona
American Water Works Association
Society of Regulatory Financial Analysts

EMPLOYMENT EXPERIENCE

1995 – Present	CPA - Self Employed Consultant to utilities on regulatory matters including all aspects of rate applications (rate base, income statement, cost of capital, cost of service, and rate design), rate reviews, certificates of convenience and necessity (CC&N), CC&N extensions, financing applications, accounting order applications, and off-site facilities hook-up fee applications. Provide expert testimony as required. Consult on various aspects of business, financial and accounting matters including best business practices, generally accepted accounting principles, generally accepted ratemaking principles, project analysis, cash flow analysis, regulatory treatment of certain expenditures and investments, business valuations, and rate reviews. Litigation support services.
1992-1995	Employed by High-Tech Institute, Phoenix, Arizona as Controller and C.F.O.
1989-1992	Employed by Alta Technical School, a division of University of Phoenix as Division Controller.
1985-1989	Employed by M.L.R. Builders, Tampa and Pensacola, Florida as Operations/Accounting Manager
1982-1985	Employed by and part owner in Area Sand and Clay Company, Pensacola, Florida.

1981-1982	Employed by Purdue University, West Lafayette, Indiana as Teaching Assistant.

SUMMARY OF REGULATORY WORK EXPERIENCE AS SELF EMPLOYED CONSULTANT

COMPANY/CLIENT	FUNCTION
Tierra Buena Water Company ACC Docket No. W-02076A-15-013	Permanent Rate Application – Water. Assisted in preparation of short-form schedules.
Red Rock Utilities, LLC ACC Docket No. W-04245A-14-0295	Permanent Rate Application – Water and Wastewater. Prepared schedules and testified on Rate Base, Plant, Income Statement, Revenue Requirement, Rate Design, and Cost of Capital.
Quail Creek Water Company ACC Docket No. W-02514A-14-0370	Permanent Rate Application – Water. Prepared schedules and testified on Rate Base, Plant, Income Statement, Revenue Requirement, Rate Design, and Cost of Capital.
Tonto Basin Water Company ACC Docket No. W-03515A-14-0310	Permanent Rate Application – Water. Prepared short-form schedules for Rate Base, Income Statement, Plant, Bill Counts, and Rate Design.
Navajo Water ACC Docket No. W-03511A-14-304	Permanent Rate Application – Water. Prepared short-form schedules for Rate Base, Income Statement, Plant, Bill Counts, and Rate Design.

Our Mission . . .

Is to reliably deliver drinking water
to our customers
(that meets all regulated standards),
and to maintain a sustainable water supply
for our customers.

Our Guiding Values

To be good stewards of our members'
trust and economic values;
To provide responsible, professional
service to our customers;
To promote a safe work environment and
to encourage the continued development
of a highly skilled staff;
To advocate for responsible local and regional
development and management of
water resources;
To seek prudent acquisition opportunities
for the benefit of our members and
community; and
To be civic minded.

As of March 23, 2015

To the Members of
Community Water Company of Green Valley,
(An Arizona non-profit corporation)

It has been nine years since we installed treatment facilities to meet the tighter arsenic standards that were enacted by the EPA. And it's been eight years since we made major upgrades to your water delivery system; moving two of our operating wells east to avoid increasing sulfate levels. These system enhancements share two common characteristics—higher operating costs and increased complexity.

Coming forward to the present our application for debt to replace an obsolete reservoir with a larger—more secure—reservoir was approved in November by the Arizona Corporation Commission. As a result your reservoirs will store enough water for about two days of water deliveries under normal demand conditions and improve operating efficiencies.

Your company continues to work on reducing operating and maintenance costs. This year was no exception with excellent results obtained from the startup of company-developed arsenic drying beds. These drying beds dramatically reduce the cost associated with handling the waste from our arsenic treatment facilities. Other cost savings continue as we find better ways to manage the billing and work order systems using our recently upgraded computer system. These efforts are increasingly important, as our total water deliveries are continuing a long term downward trend, as is occurring in other Arizona areas.

While 2014 financial results are acceptable, the trend for the future is poor. We are delighted with the major system enhancements made to our system and our ability to cut costs in our operations. However, complicated financial guidelines that are in place to ensure that we only pay for assets that are necessary for reliable and safe operation of your system can, in certain situations, make it nearly impossible to recover the full cost of an asset. Your management team has been working diligently to overcome this basic cost recovery problem for many years, and yet our operating margin continues to decline.

It is important to maintain the financial sustainability of your company, and to continue generating sufficient revenues to fully meet our expenses, and develop reserves for dealing with unexpected system breakage and capital investments required to maintain aging infrastructure in good working order. Rate increases are necessary to meet these increased costs and maintain financial sustainability.

Looking forward, we continue delivery of water that meets or surpasses

all health and safety measures that we are subject to. We conduct all of the required tests to check delivered water quality, and publish our report in June of each year. Our Water Quality Report is available on our website at http://www.communitywater.com/wqr.pdf. Please visit our office if you would like a paper copy.

Project Renews was started in 2007 to bring renewable water supplies to the Green Valley-Sahuarita area. It has the approval of the Bureau of Reclamation and continues to be developed at no cost to our members. All necessary rights-of-way have been acquired, and a segment of pipeline has been installed in Sahuarita. The final Sahuarita bridge cost sharing payment was made to the town; and pipeline construction is expected to resume in 2016.

Our December 2014 survey shows that customer satisfaction remains high. Overall, 84% of respondents were satisfied or very satisfied with your company. Please congratulate our employees for their exemplary service. They are the heart of your company, and their good stewardship has resulted in a reliable and robust water delivery system. We are proud of our safety record and training programs. In 2014, Marc Levesque, an employee of 29 years, was recognized by AZWater Association as the Small System Operator of the Year.

Thanks also to our volunteer directors who represent our members' interests. Their knowledge of the community and our local water issues are valuable and we continue to be delighted with the expertise of the directors serving your company. We extend our best wishes to Mr. Tom Six who will complete his term as a director in 2015. We thank him for sharing his time and judgment with us during his dedicated service to your Company.

Our annual meeting of members is on Thursday, April 30, 2015 9:30 a.m., at the Joyner-Green Valley Branch Library, located at 601 N La Canada Drive, Green Valley, AZ. Registration begins at 9:00 a.m.

We invite you to attend and are looking forward to seeing you there.

Sincerely,
Community Water Company of Green Valley

Virgil W Davis
Chair of the Board

REPORT OF INDEPENDENT AUDITORS

To the Board of Directors and Members of
Community Water Company of Green Valley
(An Arizona non-profit corporation):

We have audited the accompanying consolidated financial statements of Community Water Company of Green Valley, which comprise the consolidated balance sheets as of December 31, 2014 and 2013, and the related consolidated statements of revenues and expenses, membership interest, and cash flows for the years then ended, and the related notes to the financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion.

An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Community Water Company of Green Valley as of December 31, 2014 and 2013, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Our audit was conducted for the purpose of forming an opinion on the consolidated basic financial statements as a whole. The Management and Volunteer Consultants listing, Directors & Officers listing, Letter to the Members, and Mission Statement, are presented for purposes of additional analysis and are not a required part of the consolidated basic financial statements. Such information has not been subjected to the auditing procedures applied in the audit of the consolidated basic financial statements, and accordingly, we do not express an opinion or provide any assurance on it.

Cash and cash equivalents at end of year	$ 889	$ 694
Non cash investing activities		
A/P purchases of utility plant	$ 65	$ 5
Non cash financing activities		
Repayment of long-term debt	$ 2,119	$ 0

The accompanying notes are an integral part of the consolidated financial statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. NATURE OF OPERATIONS:

Community Water Company of Green Valley ("CWC") was incorporated in 1975 as an Arizona non-profit corporation with members. It purchased an existing water utility business from Arizona Water Company and began operation of the water utility in 1977. The water utility is a regulated public service corporation that delivers water to residential and commercial customers in a southern Arizona active adult community.

These consolidated financial statements include the accounts of all entities in which CWC has a controlling financial interest. In 2011, CWC established a wholly-owned subsidiary corporation named SICAN, Inc. ("SICAN") for the purpose of business investments. In 2012, CWC created a variable interest entity named Community Water Company of Green Valley ROW Trust ("TRUST") in which CWC is the Trustor and the beneficiary, and SICAN is the Trustee. The entity is to hold and manage right-of-ways required for Project Renews construction. CWC has incorporated TRUST's financial results into the consolidated financial statements.

The accompanying consolidated financial statements present the results of consolidating CWC, SICAN, and TRUST (collectively referred to as "CWC Consolidated").

All significant intercompany accounts and transactions have been eliminated in consolidation.

2. SIGNIFICANT ACCOUNTING POLICIES:

Maintenance of Accounting Records – CWC Consolidated maintains its accounting records on the accrual basis of accounting in which revenue is recognized when earned and expenses are recognized when the obligation has been incurred. CWC maintains its records in accordance with the Uniform System of Accounts prescribed for Class A water utilities by the National Association of Regulatory Utility Commissioners.

Utility Plant - Utility plant is stated at original cost and consists of contract costs, labor, material and allowances for indirect costs. The cost of maintenance, repairs, and minor renewals is charged to expense in the year incurred. Depreciation and amortization expense is provided for on the straight-line basis utilizing the following annual rates based on the estimated useful lives of the asset. The depreciation rates and plant in service balances by major classes of depreciable assets are as follows:

	Depreciation Rate (in Percent)	Balance At December 31, 2014 (In Thousands)	Balance At December 31, 2013 (In Thousands)
Utility Plant	**2.00 to 12.50**	**$ 41,046**	$ 40,435
Computer Equipment	**20.00**	**609**	571
Backhoe	**5.00**	**107**	107
Vehicles	**20.00**	**442**	416
Land	**N/A**	**171**	171
Total		**$ 42,375**	$ 41,700

Cash and Cash Equivalents - CWC Consolidated considers cash in banks and all highly liquid investments purchased with a maturity of three months or less to be cash equivalents for purposes of reporting cash flows.

Investment Securities - CWC Consolidated accounts for its investment securities in accordance with FASB ASC 320-10-45 which provides that CWC Consolidated classify investments in securities as either trading securities, securities to be held to maturity or securities available-for-sale. CWC Consolidated has classified all investments as securities available-for-sale. Securities available-for-sale consists of U.S. Government investments, mortgage-backed securities, and certificates of deposits. These securities are recorded at fair value with any unrealized gains and losses being reflected as a separate component of membership interest. Gains (losses) on the sale of securities available-for-sale are determined using the specific identification method.

2. SIGNIFICANT ACCOUNTING POLICIES (continued):

Utility Customer Accounts Receivable - Regulated utility customer accounts receivable represent amounts billed customers on a cycle basis. Credit is extended based on the guidelines of the applicable regulators and generally, collateral is not required.

Allowance for Uncollectible Accounts - Allowances for uncollectible accounts are maintained for estimated probable losses resulting from CWC's inability to collect receivables from customers. Accounts that are outstanding longer than the payment terms are considered past due, and the allowance for doubtful accounts is computed based on an analysis of collectability of accounts receivable at the balance sheet date. For 2014 and 2013, there was an allowance of $3,000 and $4,000 respectively. SICAN and TRUST did not have allowances for uncollectible accounts for 2014 and 2013.

Materials and Supply Inventory - Inventory is stated at the lower of cost or market. Cost is determined on a weighted average basis.

TRUST's Intangible Assets – At December 31, 2014, TRUST holds intangible assets that are reviewed for impairment when circumstances indicate the carrying amount of an asset may not be recoverable. Impairment is recognized if the sum of undiscounted estimated future cash flows expected to result from the use of the asset is less than the carrying value. When an impairment loss is recognized, the asset's carrying value is reduced to its estimated fair value. Right of ways are initially measured based on their fair values and are being amortized on a straight-line basis over the life of the right of way and are stated at cost net of accumulated amortization.

Refundable Advances and Contributions for Construction - The cost of constructing certain expansions to utility plant has been advanced or contributed to CWC by the owners of the property served by the expansions. CWC repays advances by refunding to the owners specified percentages of the annual water revenue which CWC derives from the expansions. These repayments continue until the advances are fully repaid or until the expiration of an agreed-upon repayment term. Contributions for construction are not repaid. Further, if the repayment term of an advance expires before an advance is fully repaid the unpaid balance is reclassified as contributions in-aid-of construction. Amounts classified as contributions in-aid-of construction are amortized on a straight-line basis utilizing the plant composite rate set by the Arizona Corporation Commission. The amortization rate in effect for 2014 and 2013 was 3.98%.

2. SIGNIFICANT ACCOUNTING POLICIES (continued):

Refundable advances for construction are non-interest bearing. As of December 31, 2014 and 2013 CWC's refundable advances for construction specify repayment rates up to 20% of applicable annual water revenues and the majority of these contracts contain remaining repayment terms up to 15 years.

Revenue Recognition - CWC's operating revenues are generated through sales of water to residential and commercial customers in the Green Valley area. Revenue consists of monthly cycle customer billings for water service at rates authorized by the Arizona Corporation Commission. Revenue from metered accounts includes unbilled amounts based on the estimated usage from the latest meter reading to the end of the accounting period.

Comprehensive Income - Other comprehensive income consists of securities available-for-sale net unrealized holding gains and losses, and the initial recognition of the value of the interest rate swap.

Income Taxes - CWC is an Internal Revenue Code ("IRC") Section 501(a) organization, exempt from taxes by application of IRC Section 501(c)(12) for CWC's operations.

SICAN and TRUST are not exempt from income taxes. Income taxes are recognized for the tax effects of transactions reported in the financial statements and consist of taxes currently due plus deferred taxes related primarily to differences between the bases of certain assets and liabilities for financial and tax reporting. The deferred taxes represent the future tax return consequences of those differences, which will either be deductible or taxable when the assets and liabilities are recovered or settled.

Accounting for Uncertainty in Income Taxes - CWC, SICAN, and TRUST have adopted the provisions of FASB ASC 740, Income Taxes, related to accounting for uncertainty in income taxes on any unrelated business income. CWC files an informational return in the U.S. federal jurisdiction and also in Arizona. SICAN and TRUST each file income tax returns in the U.S. federal jurisdiction and also in Arizona.

Tax returns for all years after 2009 are subject to future examinations by tax authorities. The implementation of FASB ASC 740 had no effect on CWC Consolidated's financial statements for the years ended December 31, 2014 and 2013.

2. SIGNIFICANT ACCOUNTING POLICIES (continued):

No penalties were recognized for CWC, SICAN and TRUST in 2013 and 2014.

Use of Estimates - The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions. The estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements. They also affect the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Concentration of Credit Risk - Financial instruments that potentially subject CWC Consolidated to concentrations of credit risk consist principally of temporary cash investments and cash equivalents. CWC Consolidated places its temporary cash investments with financial institutions and limits the amount of credit exposure to any one financial institution since they are insured by the Federal Deposit Insurance Corporation or Securities Investor Protection Corporation. Concentrations of credit risk with respect to cash equivalents are limited due to the diversification of the investments. As of December 31, 2014 and 2013, CWC Consolidated had no significant concentrations of risk.

3. SICAN's INVESTMENT IN LLC:

SICAN has an investment in a Limited Liability Company ("LLC"), a development company that was established in November 2011 to manage Project Renews. This investment is recognized at book value. It was funded from non-member non-utility income. The following data reflects the book value items related to SICAN's investment in LLC. SICAN's cumulative interest in LLC's book value is as follows:

SICAN's cumulative interest in LLC	**Balance At December 31, 2014 (In Thousands)**	Balance At December 31, 2013 (In Thousands)
SICAN Capital Contribution in LLC	**$ 340**	$340
Cumulative Share of Net Loss	**$(111)**	$ (77)
Book Value	**$ 229**	$263

3. SICAN's INVESTMENT IN LLC (continued):

Net losses are due to timing; LLC is in the development phase of operations, and losses are expected until construction is complete. LLC's financial results can be summarized as follows:

LLC's Financial Summary	Balance At December 31, 2014 (In Thousands)	Balance At December 31, 2013 (In Thousands)
Total Assets	**$ 2,115**	$ 1,618
Total Liabilities	**36**	40
Total Equity	**$ 2,079**	$1,578
Revenues	**$ 0**	$ 0
Expenses	**222**	256
Net Loss	**$ (222)**	$ (256)

SICAN's share of net loss for the year is calculated using the weighted average capital accounts during the year. During the year ended December 31, 2014 and 2013, SICAN's loss was 15% and 21% respectively, which represented net loss of around $34,000 and $53,000 (a cumulative to date of $111,000). Although SICAN owns less than 20% of the profit and loss percentages of LLC at December 31, 2014, CWC Consolidated accounts for the investment using the equity method since SICAN is the managing member of LLC and has significant influence over LLC's operations.

4. SECURITIES AVAILABLE-FOR-SALE, AT MARKET:

The carrying amounts of investment securities available-for-sale are as follows:

	At December 31, 2014 (In Thousands)		
	Cost	**Unrealized Gains (Losses)**	**Fair Value**
Certificates of Deposit with maturities within one-year	**$ 1,058**	**$ 0**	**$ 1,058**
Certificates of Deposit with maturities of 1-5 years	**451**	**0**	**451**
Mortgage Backed Securities U.S.	**267**	**(19)**	**248**
Total	**$ 1,776**	**$ (19)**	**$1,757**

4. SECURITIES AVAILABLE-FOR-SALE, AT MARKET (continued):

	At December 31, 2013 (In Thousands)		
	Cost	Unrealized Gains (Losses)	Fair Value
Certificates of Deposit with maturities within one-year	$ 728	$ 0	$ 728
Certificates of Deposit with maturities of 1-5 years	447	0	447
Mortgage Backed Securities U.S.	307	(64)	243
Total	$ 1,482	$(64)	$ 1,418

Expected maturities will differ from contractual maturities since issuers may have the right to call or prepay obligations with or without call or prepayment penalties.

5. TRUST'S RIGHT-OF-WAY USE PERMITS:

TRUST's right-of-way use permits consist of the following:

	Balance At December 31, 2014 (In Thousands)	Balance At December 31, 2013 (In Thousands)
ROW Use Permits	**$ 517**	$ 128
Less: Accumulated Amortization	**(11)**	(1)
Total	**$ 506**	$ 127

This investment was funded from non-member non-utility income. Total amortization expense amounted to $9,891 and $1,397 for the years ended December 31, 2014 and 2013, respectively. TRUST's right of ways acquired during the years ended December 31, 2014, 2013 and prior were valued at a cost of $389,057, $126,031, and $2,399, respectively, and will be amortized over periods ranging from 10 years to 50 years. The following schedule by year relates to the estimated amortization expense for right of ways:

	At Year End December 31 (In Thousands)
2015	**$ 13**
2016	**14**
2017	**13**
2018	**14**
2019	**13**
Total	**$ 67**

6. DEFERRED CHARGES:

Advance payments relating to future water allocation from Central Arizona Project will be amortized to expense when usage occurs. Other deferred charges include stored water credits with the Arizona Department of Water Resources, rate case expenses and advance land lease rental. The water credits will be expensed when used, rate case expenses have been amortized over three years and land rental is amortized over the term of the lease.

CWC incurred municipal and industrial water service capital charges for its 2,858 acre-feet allocation of $60,018 and $50,015 in 2014 and 2013 respectively.

7. LONG-TERM DEBT:

On November 5, 2014, the Arizona Corporation Commission approved a $3,320,000, 15-year debt instrument with Compass Bank and Compass Mortgage Corporation ("CB"). CWC entered into a loan agreement with CB on November 14, 2014 to apply $2,119,208 to extinguish CWC's outstanding debt instrument with JPMorgan Chase and committed to borrow $1,115,000 for the purpose of building a two million gallon reservoir.

At December 31, 2014, CWC borrowed $283,000 toward construction and financing costs, bringing CWC's long-term debt to $2,402,208. The remaining $832,000 was drawn in March 2015 (see **Note 14, Subsequent Events**).

The note to CB matures on November 14, 2029, when the remaining unpaid balance is due in full. It is CWC's intent to extend the maturity of this note. Future maturities of long-term debt outstanding at December 31, 2014, based on the terms of the signed commitment are as follows:

	At Year End December 31 (In Thousands)
2015	$ 66
2016	93
2017	98
2018	104
2019	109
2020-2024	656
2025-2029	2,108
Future Maturities	3,234
Amounts Drawn Subsequent to 12/31/2014	(832)
Amount Due at 12/31/2014	$2,402

7. LONG-TERM DEBT (continued):

CB has first Deed of Trust on CWC's utility plant and the utility's revenues.

CWC's current debt agreement contains various covenants and requires CWC to maintain a debt service ratio of at least 1.2 as of the end of any year.

Long-term debt monthly payments equal to the accrued interest on the note commence December 14, 2014. Monthly principal and interest payments of $22,730 commence April 14, 2015. Interest accrues at a variable rate of LIBOR plus 2.7%.

The outstanding long-term balances of long-term debt were $2,402,208 and $2,236,291 at December 31, 2014 and December 31, 2013, respectively.

8. MARK-TO-MARKET VALUE OF INTEREST RATE SWAP:

On November 14, 2014, CWC entered into an interest rate Swap agreement with CB which CWC designated as a hedge against the variability in future interest payments due on $3,234,208. CWC will pay CB 2.98%; in return CB will pay LIBOR rate to CWC. The terms of the swap agreement effectively convert the variable rate interest payments due on the note to a fixed rate of 5.68% through maturity on November 15, 2029.

CWC is exposed to interest rate risk associated with CWC's floating rate debt. CWC entered into an interest rate swap in order to manage interest rate risk and adjust the interest rate profile of CWC's debt to achieve a target mix of floating and fixed rate debt. Any unrealized gains and losses as a result of the derivative will be presented as Other Comprehensive Income. In 2014, CWC recognized $222,529 as unrealized loss.

9. INCOME TAX:

As a 501(c)(12), CWC was not subject to income tax in 2014 and 2013. SICAN and TRUST incurred the following income tax for 2014 and 2013:

	At December 31, 2014		
	SICAN	TRUST	Total
Current			
Federal	$ 0	$ 0	$ 0
State	50	0	50
Total Current Tax Expense	50	0	50
Deferred			
Federal	261	$3,019	3,280
State	128	331	459
Total Deferred Tax Expense	389	3,350	3,739
Income Tax Expense	$ 439	$ 3,350	$3,789

	At December 31, 2013		
	SICAN	TRUST	Total
Current			
Federal	$ 351	$ 3,726	$ 4,077
State	176	363	539
Total Current Tax Expense	527	4,089	4,616
Deferred			
Federal	(30)	1,301	1,271
State	(15)	93	78
Total Deferred Tax Exp. (Benefit)	(45)	1,394	1,349
Income Tax Expense	$ 482	$ 5,483	$ 5,965

Deferred taxes are recognized for temporary differences between the bases of assets and liabilities for financial statements and income tax purposes. The differences relate primarily to accrual to cash differences and the amortization lives of intangible assets.

For SICAN, a valuation allowance of $23,792 is not recognized as a deferred tax asset at December 31, 2014 since the future benefit from accrual to cash differences from the Investment in LLC are not expected to be realized due to expected changes in profit and loss allocations in future years. The valuation increased by $6,827 during the year ended December 31, 2014.

The components of the net deferred tax asset (liability) at December 31, 2014 and December 31, 2013 are as follows:

9. INCOME TAX (continued):

	At December 31, 2014		
	SICAN	TRUST	Total
Deferred Tax Asset			
Current	$ 221	$ 2,690	$ 2,911
Total Deferred Tax Asset	221	2,690	2,911
Deferred Tax Liability			
Noncurrent	0	(3,050)	(3,050)
Total Deferred Tax Liability	0	(3,050)	(3,050)
Net Deferred Tax Asset (Liability)	$ 221	$ (360)	$ (139)

	At December 31, 2013		
	SICAN	TRUST	Total
Deferred Tax Asset			
Current	$ 610	$ 4,023	$ 4,633
Total Deferred Tax Asset	610	4,023	4,633
Deferred Tax Liability			
Noncurrent	0	(1,033)	(1,033)
Total Deferred Tax Liability	0	(1,033)	(1,033)
Net Deferred Tax Asset (Liability)	$ 610	$ 2,990	$ 3,600

10. SUPPLEMENTAL CASH FLOW INFORMATION:

CWC, SICAN, and TRUST engaged in the following investing and financing noncash transactions.

CWC's expired Advance in Aid of Construction contracts totaled $106,929 and $352,465 in 2014 and 2013, respectively.

CWC Consolidated Statements of Cash flow recognized $89,657 and $99,622 in interest payments in 2014 and 2013, respectively. No income taxes were paid by CWC in 2014 and 2013. SICAN paid $527 and $588 in income tax during 2014 and 2013, respectively. TRUST paid $2,696 and $11,255 in income tax during 2014 and 2013, respectively.

11. RETIREMENT PLAN:

CWC has defined contribution retirement plans which cover substantially all employees who worked more than 1000 hours in a given year. Under the provisions of these plans, 10% to 21% of qualified employees' salaries and wages are contributed by CWC to the Retirement Plans for investment by the plan trustees.

CWC recorded expenses for these contributions of $124,576 and $160,409 for the years ended December 31, 2014 and 2013, respectively.

Under the terms of the 401(k) plan and 401(k) Roth plan, qualified employees can contribute to the plan. Qualified employees become fully vested in the employer's contributions after five years of eligible service, as defined in the plan.

12. FAIR VALUE MEASUREMENTS:

FASB ASC 820, Fair Value Measurements and Disclosures, (ASC 820) establishes a framework for measuring fair value. That framework provides a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (level 1 measurements) and the lowest priority to unobservable inputs (level 3 measurements).

The three levels of the fair value hierarchy are described as follows:

Level 1: Inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that CWC Consolidated has the ability to access.

Level 2: Inputs to the valuation methodology include:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets or liabilities in inactive markets;
- Inputs other than quoted prices that are observable for the asset or liability;
- Inputs that are derived principally from or corroborated by observable market data by correlation or other means.

If the asset or liability has a specified (contractual) term, the level 2 input must be observable for substantially the full term of the asset or liability.

Level 3: Inputs to the valuation methodology are unobservable and significant to the fair value measurement.

12. FAIR VALUE MEASUREMENTS (continued):

The asset or liability's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. Valuation techniques used need to maximize the use of observable inputs and minimize the use of unobservable inputs.

The following is a description of the valuation methodologies used for assets measured at fair value. There have been no changes in the methodologies used at December 31, 2014 and 2013.

Securities Available-for-Sale – Certificates of Deposits: The fair values of available-for-sale Certificates of Deposits are based on quoted market prices for those or similar investments.

Mark-to-Market Value of Interest Rate Swap: The fair value of mark-to-market swap interest is based on the current and present value of projected 1-month LIBOR rates.

Securities Available-for-Sale – Mortgage-Backed Securities: The fair values of available-for-sale securities are based on quoted market prices for those or similar investments.

The preceding methods described may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair value. Furthermore, although CWC believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date. SICAN and TRUST did not hold securities in 2013 and 2014.

The following table sets forth by level, within the fair value hierarchy, CWC's assets and liabilities at fair value:

Level 1	**Balance At December 31, 2014 (In Thousands)**	Balance At December 31, 2013 (In Thousands)
Securities Available-for-Sale Certificates of Deposits	**$ 1,509**	$ 1,175
Securities Available-for-Sale Mortgage Backed Securities	248	243
Total Assets	$ 1,757	$ 1,418

12. FAIR VALUE MEASUREMENTS (continued):

	Balance At December 31, 2014 (In Thousands)	Balance At December 31, 2013 (In Thousands)
Level 2 Liabilities – Mark-to-Market Value of Interest Rate Swap	$ 223	$ 0

13. SALES TAXES:

Some transactions require CWC to collect sales tax from its customers. These transactions are presented in CWC Consolidated Statements of Revenues and Expenses as Operating Revenues. These taxes totaled $243,161 and $249,574 in 2014 and 2013, respectively.

14. SUBSEQUENT EVENTS:

Management has evaluated subsequent events through March 27, 2015, the date on which the financial statements were available to be issued.

On March 12, 2015, CWC drew down the remaining $832,000 available on the long-term debt.

What is the level of arsenic for each well on your system? _____mg/l
(If more than one well, please list each separately.)

If system has fire hydrants, what is the fire flow requirement? 1500 GPM for 2 hrs
(This is a preference from the fire district, not a requirement, as we are not a municipality)

If system has chlorination treatment, does this treatment system chlorinate continuously?
(X) Yes ( ) No

Is the Water Utility located in an ADWR Active Management Area (AMA)?
(X) Yes ( ) No

Does the Company have an ADWR Gallons Per Capita Per Day (GPCPD) requirement?
( ) Yes (X) No

If yes, provide the GPCPD amount:_____

Note: If you are filing for more than one system, please provide separate data sheets for each system.
