Chairwoman Susan Bitter Smith

The world we live in is warming up and we recklessly indulge in the cause. The longer we procrastinate and avoid taking action the harsher the effects that will take place. Lets not keep our heads in the sand, the time to act was yesterday what on earth are we waiting for.

Dear Chairwoman Susan Bitter Smith,

Why should TEP be allowed to change their rates without a rate hearing? The ACC is a concept that consumers need to be protected from greedy corporate monopolies. Is there a justification to "change the rate + rules" when the Earth + the health of it's citizens benefit from clean energy? Owners of solar systems may have made their decision to invest in solar because of their moral committment to reduce their carbon footprint or because

they wanted to reduce their costs of energy or both.

60% of Tucson's CO_2 comes from TEP.

80% or more of TEP's fuel is fossil fuel.

We live in a State that is second only to Nevada in energy received from the sun yet TEP is stuck on coal & gas.

The world is changing. ~~and~~ There is a new concern about global warming; taxing fossil fuel is probably the best way to curb burning fossil fuel and may happen soon. There is no reason to grant TEP's request

when they don't have a rate review.

Please deny this untimely + unusual request.

Sincerely,

Pat Stewart
TUCSON

P.S. Future generations will judge our transition to clean energy, don't let TEP turn us back.
