| 2.0     | July 31, 1998 | Final release         |

## II. Introduction

### A. Background

The Telecommunications Act of 1996 (the Act) requires Bell Atlantic-New York (BA-NY) to:

- Provide nondiscriminatory access to its operations support systems (OSS) on appropriate terms and conditions;
- Provide the documentation and support necessary for competitive local exchange carriers (CLECs) to access and use these systems; and
- Demonstrate that BA-NY's systems are operationally ready and provide an appropriate level of performance.

Compliance with these requirements will allow competitors to obtain pre-ordering information, submit service orders for resold services and unbundled network elements (UNEs), submit trouble reports, and obtain billing information at a level deemed to be non-discriminatory when compared with BA-NY's retail operations.

BA-NY offers various systems, including both application-to-application interfaces and terminal-type/Web-based systems, which CLECs can use to access BA-NY's OSS in order to perform these tasks. The New York Public Service Commission (PSC) has been considering the matter of BA-NY's compliance with the requirements of Section 271 of the Act in the context of Case 97-C-0271. To this end, the PSC has retained KPMG Peat Marwick LLP to assist it with assessing whether BA-NY is meeting these requirements.

### B. Scope

This document describes the plan to evaluate BA-NY's OSS systems, interfaces, and processes that enable CLECs to compete with BA-NY for customers' local telephone service. In determining the breadth and depth of the test, all stages of the CLEC-ILEC relationship were considered. These include the following:

- Establishing the relationship
- Performing daily operations
- Maintaining the relationship

Further, each of the service delivery methods – resale, unbundled network elements (UNE), unbundled network elements-platform (UNE-P), and combinations – were included in the scope of the test.

The plan has been divided into four domains to organize and facilitate testing:

- Pre-Ordering, Ordering, and Provisioning (POP)
- Maintenance and Repair (M&R)
- Billing (BLG)
- Relationship Management and Infrastructure (RM&I)

Within each of the domains, the methods and processes to be applied to measure BA-NY's performance within that domain are described along with the specific points in the systems and processes where BA-NY performance will be evaluated. The results of the test will be compared against measures and criteria identified by the PSC such as the Interim Guidelines for Carrier-to-Carrier Service Standards Proceeding (Case 94-C-0139) and other measures and criteria as deemed appropriate by the PSC.

This plan also describes the development and application of base scenarios to be used in evaluating BA-NY's OSS and related support services. A scenario may be specific to a particular domain or it may span domains providing an end-to-end test of BA-NY's systems and processes. These were developed to simulate real-world production to ensure adequate coverage for the test. These base scenarios will be used to develop test cases intended to introduce additional variables such as errors and supplements to further simulate real world transactions. These scenarios were developed with input from the PSC, BA-NY, and the CLECs.

### C. Objective

This overall objective of this document is to provide a description of a comprehensive plan to test Bell Atlantic's OSS systems, interfaces, and processes. This master test plan shall be the basis by which individual tests can be developed and executed to help the PSC in determining whether BA-NY's provision of access to OSS functionality enables and supports CLEC entry in the local market. In meeting those objectives, KPMG developed a test plan that is intended to provide adequate breadth and depth to evaluate the entire CLEC/ILEC relationship under real world conditions.

## D. Audience

The audience for this document falls into two main categories:

1. Readers who will utilize this document during the testing process
2. Interested parties who have some stake in the result of the BA-NY OSS evaluation and wish to have insight into the evaluation effort

The primary users of this document are the Phase 2 Test Manager and the vendor for the CLEC Test Transaction Generator. Other audiences are the PSC, BA-NY, the CLECs, and the Department of Justice (DOJ).

### *1.0 Phase 2 Test Manager*

The Phase 2 Test Manager has overall responsibility for the management of the testing process described in this document. This document will be used by the Phase 2 Test Manager to guide the various parties involved in this testing effort.

### *2.0 CLEC Test Transaction Generator Vendor*

At the direction of the Phase 2 Test Manager, the CLEC Test Transaction Generator will be responsible for the input and measurement of a series of data-driven tests.

### *3.0 New York Public Service Commission*

The New York Public Service Commission is responsible for providing input on additional tests, measures, or criteria that should be considered. The Phase 2 Test Manager will provide results and preliminary evaluation of the results to the PSC. The PSC is responsible for the final evaluation of the test results.

### *4.0 Bell Atlantic-New York*

BA-NY will use this document to understand the testing framework in order to prepare its test bed. This document describes the requirements BA-NY must satisfy to prepare for and execute the tests.

### *5.0 CLEC(s)*

The CLECs will use this document to understand the breadth and depth of the test. In addition, this document describes the elements required of the CLECs to prepare for their role in the tests.

### *6.0 Department of Justice*

The Department of Justice will observe the process of developing, conducting, and evaluating the tests.

### E. Assumptions

This section describes the assumptions made in the development of this Test Plan.

- The Web GUI interface is the only interface that will be evaluated for Maintenance and Repair.
- BA-NY and the CLECs will provide suitable resources in sufficient numbers to assist the Phase 2 Test Manager and CLEC Test Transaction Generator with the evaluation effort and on-going work center support.
- BA-NY will provide access to appropriate documentation.
- BA-NY will provide the necessary resources, facilities, and support to set up the Test Transaction Generator and the test bed required to execute the tests (e.g., office space; equipment; IDs; security access; customer accounts and addresses; and RSIDs.)
- BA-NY will process test transactions as part of normal processing including the provisioning of some scenarios/test cases.
- BA-NY and the CLECs will provide the facilities required to execute the live scenarios.
- BA-NY and the CLECs will allow the Phase 2 Test Manager to observe retail and wholesale processes on-site during the evaluation effort.
- BA-NY and the CLECs will give the Phase 2 Test Manager access to historical data and current operational reports, as needed, to complete the evaluation.
- BA-NY will allow the Phase 2 Test Manager to inspect algorithms that may have a bearing on parity access, such as the algorithm used to manage trouble reports.
- BA-NY will maintain a stable environment for the duration of the evaluation.
- The vendor for the CLEC Test Transaction Generator will provide the Phase 2 Test Manager access to, or a copy of, the results database maintained by the Test Transaction Generator.
- The vendor for the CLEC Test Transaction Generator is responsible for evaluating the documentation, integration support, and

interfaces that BA-NY provides CLECs trying to develop and access its OSS.

- All stakeholders identified in the preceding section agree with and commit to supporting efforts as outlined in the responsibilities matrix found in Table VIII-4 of Section VIII, Phase 2 Overview.
- Regulatory, legal, and confidentiality issues or concerns can be resolved without significant impact to either the intent of the tests, the ability to execute the tests, or the schedules for their execution.

#### **F. Limitations**

The purpose of this section is to describe the limitations of the testing effort. These limitations will be described in terms of what is to be tested and what conclusions can be drawn from the results.

- In some cases, certain order types, troubles, and processes may not be practically tested in a test environment. Examples include orders with very long interval periods, high volumes of test provisioning transactions or the Network Design Review (NDR) process. Accordingly, the test may take the form of an interview, inspection, live orders review, review of historical performance or operational reports, or some other method that will capture the performance of BA-NY with respect to the order types and processes in question. The Domain Test Plans will identify the tests that can be executed live and those that must be executed by other means. Long interval tests that prove to have no alternative test methods that foreshorten the test will be referred, with a recommendation for disposition, to the PSC. The PSC will make the final decision regarding the disposition of such tests.
- Operational, time and resource constraints make it impossible to construct a feasible, exhaustive test suite. Significant effort has been expended to clearly portray the scope of the proposed suite, and it is believed this suite does provide both extensive and sufficient coverage. Provision has been made in the Phase 2 plan to amend or extend the test coverage if, in the judgment of the PSC, an amendment or extension is deemed justified.
- It is not practical or desirable to execute certain live tests that would disrupt service to BA-NY or CLEC customers. An example would be an M&R test that requires an equipment failure. BA-NY performance for these test cases will be evaluated by other means.

The Domain Test Plans will identify the tests that can be executed live and those that must be executed by other means.

### G. Document Structure

This section describes the structure of the document. It includes a table that lists each major section number along with a brief description.

*Table II-1 Document Overview*

| Sect. No.  | Section  | Content   |
|------------|--|---|
| I          | Document Control   | Identifies document distribution and necessary approvals.   |
| II         | Introduction to the Document                                   | Documents project background, scope, and objectives, assumptions, and limitations. Includes who should read the document, and how it is structured.   |
| III        | Test Plan Framework  | Describes the methodologies for testing Bell Atlantic's systems, interfaces and processes. Includes how testing is segmented and organized, testing components, entrance and exit criteria, data acquisition, and traceability. |
| IV         | Pre-Ordering, Ordering, and Provisioning Domain Test Section   | Describes the methodologies to be applied directly to the pre-ordering, ordering, and provisioning domain.  |
| V          | Maintenance and Repair Domain Test Section                     | Describes the methodologies to be applied directly to the maintenance and repair domain.  |
| VI         | Billing Domain Test Section                                    | Describes the methodologies to be applied directly to billing domain.   |
| VII        | Relationship Management and Infrastructure Domain Test Section | Describes the methodologies to be applied to evaluating activities and processes in the relationship management and infrastructure test domain.   |
| VIII       | Phase 2 Overview   | Describes the roles and responsibilities, testing deliverables, and testing controls of Phase 2.  |
| Appendix A | Test Scenarios   | Describes the scenarios for use in Phase 2 testing.   |
| Appendix B | Traceability and Coverage Matrices                             | Contains coverage matrix that cross-references test target with types of measures applied. Also has matrices that cross reference test scenarios with test processes, product family, delivery method, and order type.          |
| Appendix C | Normal and Peak Volumes Test Section                           | Describes the volumes to be used in testing.  |
| Appendix D | Statistical Approach   | Describes the statistical methods and tests used to determine whether parity exists.  |
| Appendix E | Metrics Criteria   | Lists metrics for process areas gathered from sources such as the Interim Guidelines.   |
| Appendix F | References / Documents   | References used in developing this document.  |
| Appendix G | Domain Test Timeline   | Describes timelines for POP, M&R, RM&I, and Billing domains.  |
| Appendix H | Glossary   | Testing terms and definitions used in this document.  |

### III. Test Plan Framework

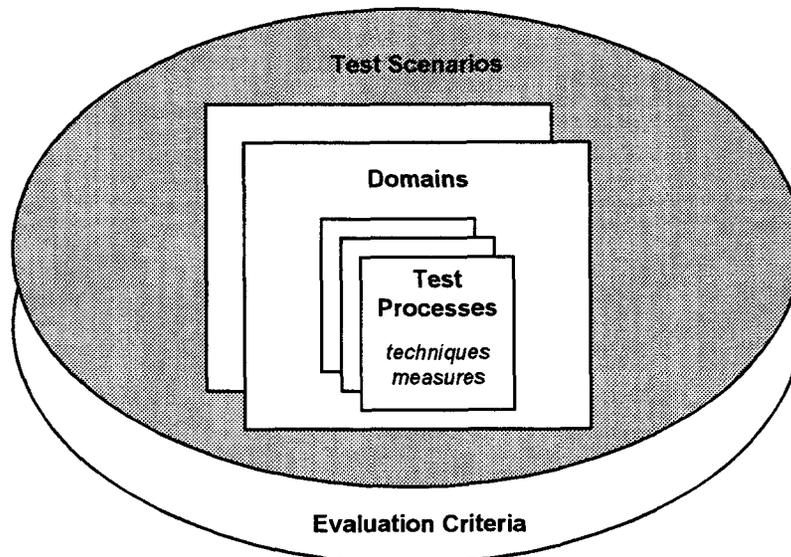

The overall test of BA-NY's OSS is designed to be multi-faceted and provide end-to-end coverage of the systems, interfaces, and processes that fall within the scope of the testing effort. In constructing a master test plan, many factors were considered, including the systems and processes to be tested, the measurement points and respective evaluation criteria, and the necessary conditions required in order to stage a successful, efficient, and objective test.

In order to develop a comprehensive, complete, and thorough test of BA-NY's OSS systems, interfaces, and processes, the master test plan framework was defined along four key dimensions:

- Test Scenarios
- Test Domains
- Test Processes
- Evaluation Criteria

The relationship between these four key dimensions are illustrated below.

*Figure III-1: Key Test Plan Framework Dimensions*

The test scenarios and the test domains define **what is to be tested**. *Test scenarios* provide the contextual basis for testing by defining the transactions, products,

volumes, data elements, and other variables that must be considered and included during testing. The *test domains* organize and define the systems and processes to be tested.

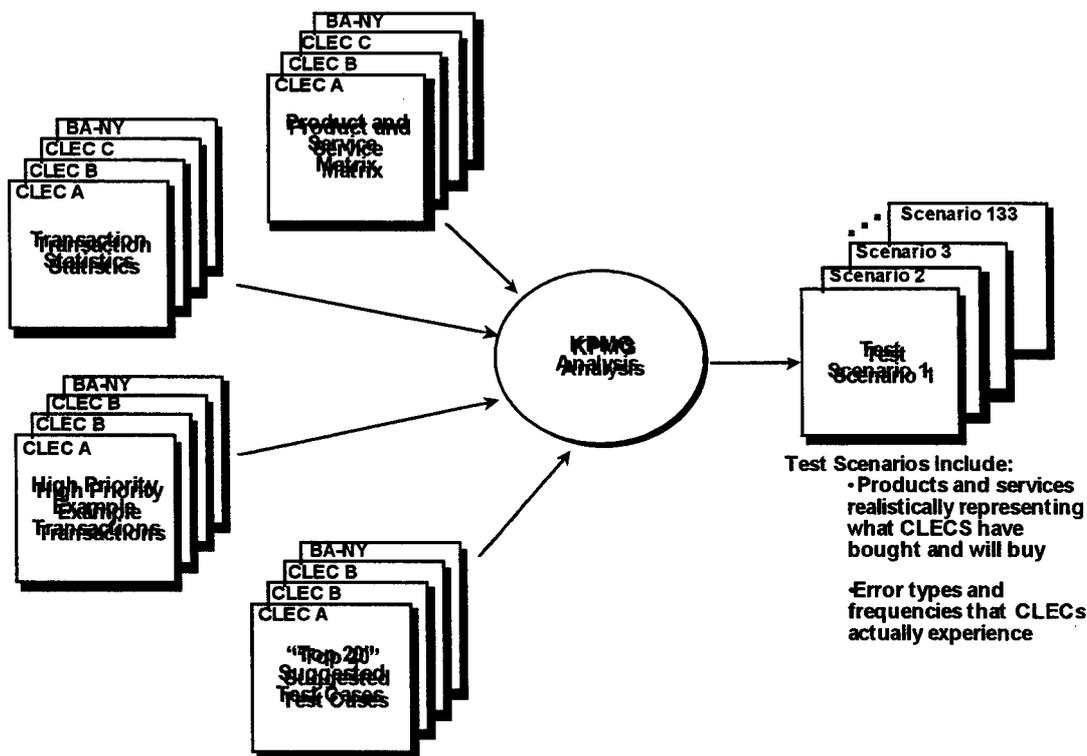

Test processes and evaluation criteria define **how testing will be conducted**. *Test processes* define the techniques, measures, inputs, activities, and outputs of each component test. *Evaluation criteria* serve as the basis for evaluation by defining the norms against which test results are compared.

These concepts are discussed in more detail in the following sections.

**A. Test Scenarios**

KPMG worked with the CLECs and BA-NY to develop 133 base test scenarios.

*Figure III-2: Scenario Development*

The test scenarios describe realistic situations in which CLECs purchase wholesale services and network elements from BA-NY to be resold or repackaged to the CLEC's end-user customer on a retail basis. The key principles applied in generating the base scenarios included: (1) emulating real world

coverage, mix, and types of transactions while (2) balancing the requirement for practical and reasonably executable transactions which would not unduly disrupt normal production or negatively affect customer service. In general, each test scenario describes a real-world situation which will be used to create test cases.

### *1.0 Scenario Purpose*

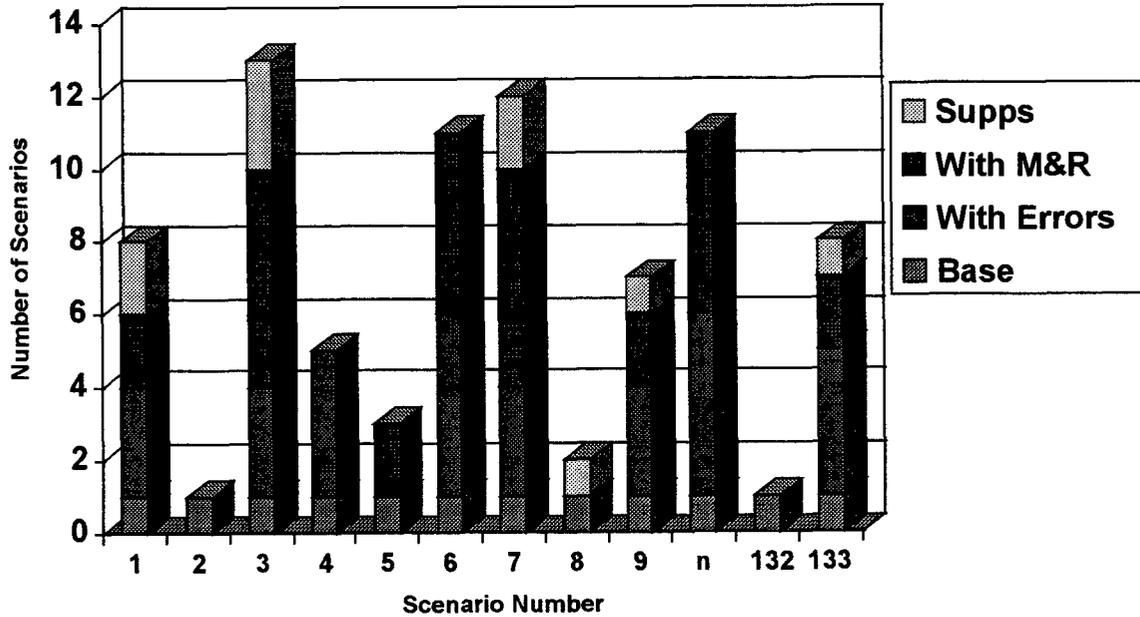

Scenarios serve several key purposes. Scenarios help define the products, services, and transactions that should be included for testing. In this regard, test scenarios provide the guidance for developing "real world" test cases to simulate live production in a controlled test environment. These scenarios will be used to test functionality, performance, and other attributes associated with the ability of CLECs to access information from BA-NY business processes and associated systems. Scenarios provide a way to bridge across test domains, thereby facilitating both point-specific and end-to-end testing of various systems and processes and providing the breadth and depth of coverage of products and services to be tested.

### *2.0 Scenario Use*

Variables will be introduced into the base scenarios to create a number of test situations. Types of variables include errors (e.g., invalid USOCs), supplements (e.g., changes to an order), and Maintenance and Repair test situations. Tests situations may also vary by the type of features that are requested. For example, the base scenario may specify call waiting as a feature but the test situation may use caller ID instead of call waiting. The test situations may also vary the timing and sequence of the transactions.

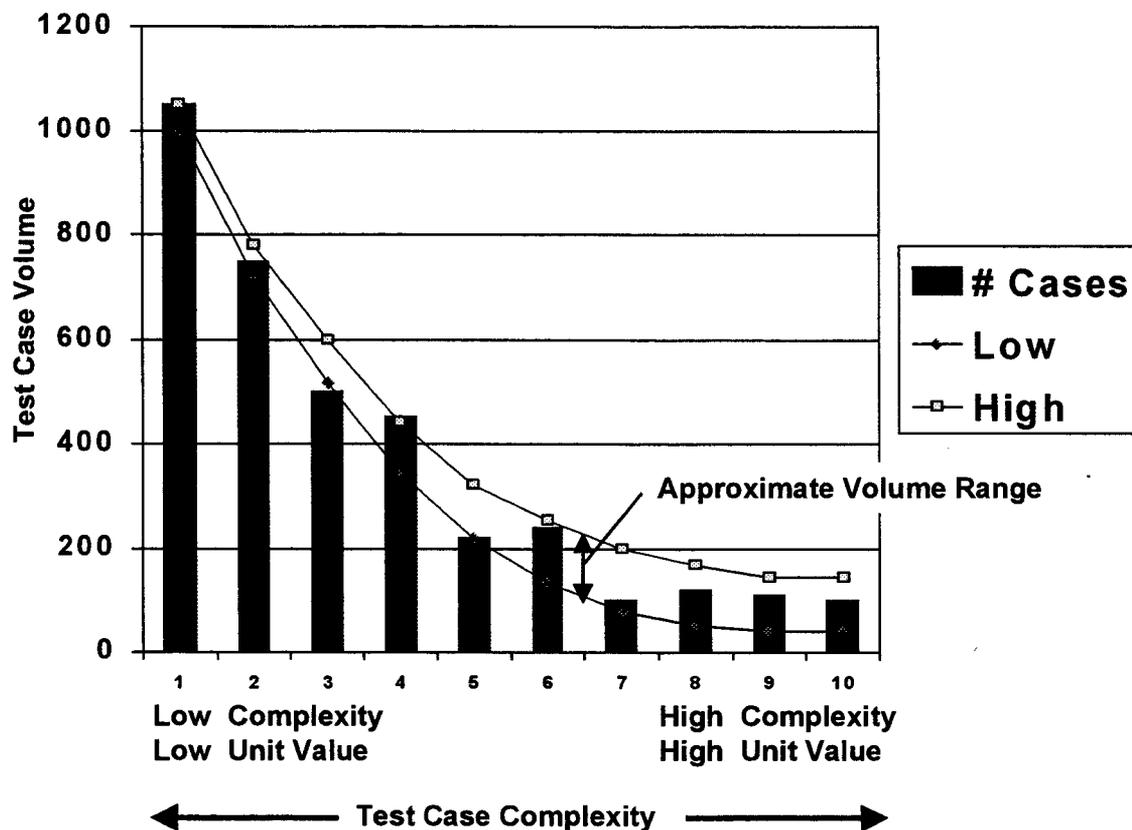

The following chart depicts several possible variations of test situations for each scenario. In this example, the variables include supplements, M&R, and errors.

Figure III-3: Base Scenarios and Test Situations

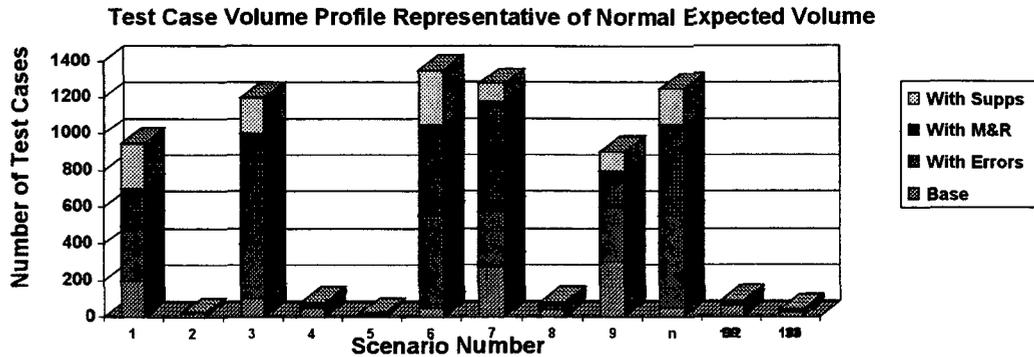

Detailed test cases will be generated from these test situations. Volumes must be assigned to each of the test cases based on complexity and expected real world production. While more complex scenarios are expected to occur with less frequency, test case generation must ensure that the more complex and high value cases do occur to obtain adequate coverage. The following chart depicts the methodology in determining the appropriate distribution of transactions with simpler transactions occurring more frequently than complex transactions.

Figure III-4: Volume Distribution by Complexity

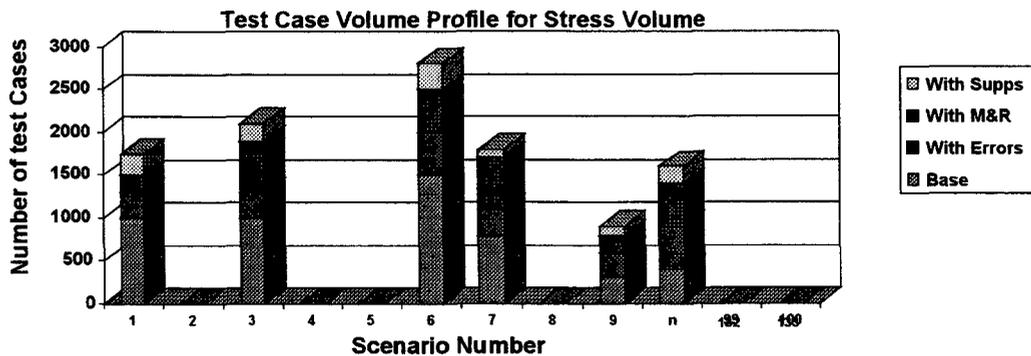

After determining the appropriate distribution, normal expected volumes will then be assigned to each of the test situations based on complexity and expected real world production in the July to December 1999 timeframe. Individual test cases that match the situations will be generated based on the volume that has been assigned. These projected test case volumes will be used to measure BA-NY's ability to meet agreed upon functionality and measures of service (e.g., response times, intervals) in this timeframe.

Figure III-5: Normal Expected Volumes

In addition, a stress volume test will be conducted to test the capacity and identify potential choke points of the interfaces. Stress volumes will be assigned to a subset of the test case types based on some multiplier of the normal expected volumes.

Figure III-6: Stress Volumes

These test cases will be utilized for *transaction-driven system analysis* test processes which are further discussed below.

A copy of the base scenarios is provided in Appendix A. These are the base scenarios to be used to generate specific test situations which drive the definition of detailed test cases for various components of the total test.

## B. Test Domains

The areas subject to testing have been organized into four domains:

- Pre-Ordering, Ordering, and Provisioning
- Maintenance and Repair
- Billing
- Relationship Management and Infrastructure

These four domains correspond to the four respective business functions that comprise the BA-NY/CLEC relationship. The domains are useful in organizing the areas to be tested and the specific tests to be conducted.

Within each of these test domains, specific targets have been identified for testing. Examples of test targets include application systems (e.g., RETAS), business processes (e.g., daily usage feeds), management practices (e.g., change management), and documents (e.g., CLEC Handbook). Additionally, for each of the test targets, the processes, sub-processes, and attributes which are to be included for testing within each target are specified.

## C. Test Processes

Within each of the four domains, specific test processes to be executed have been defined.

In general, two kinds of tests have been developed:

- Transaction-Driven System Analysis
- Operational Analysis

### *1.0 Transaction-Driven System Analysis*

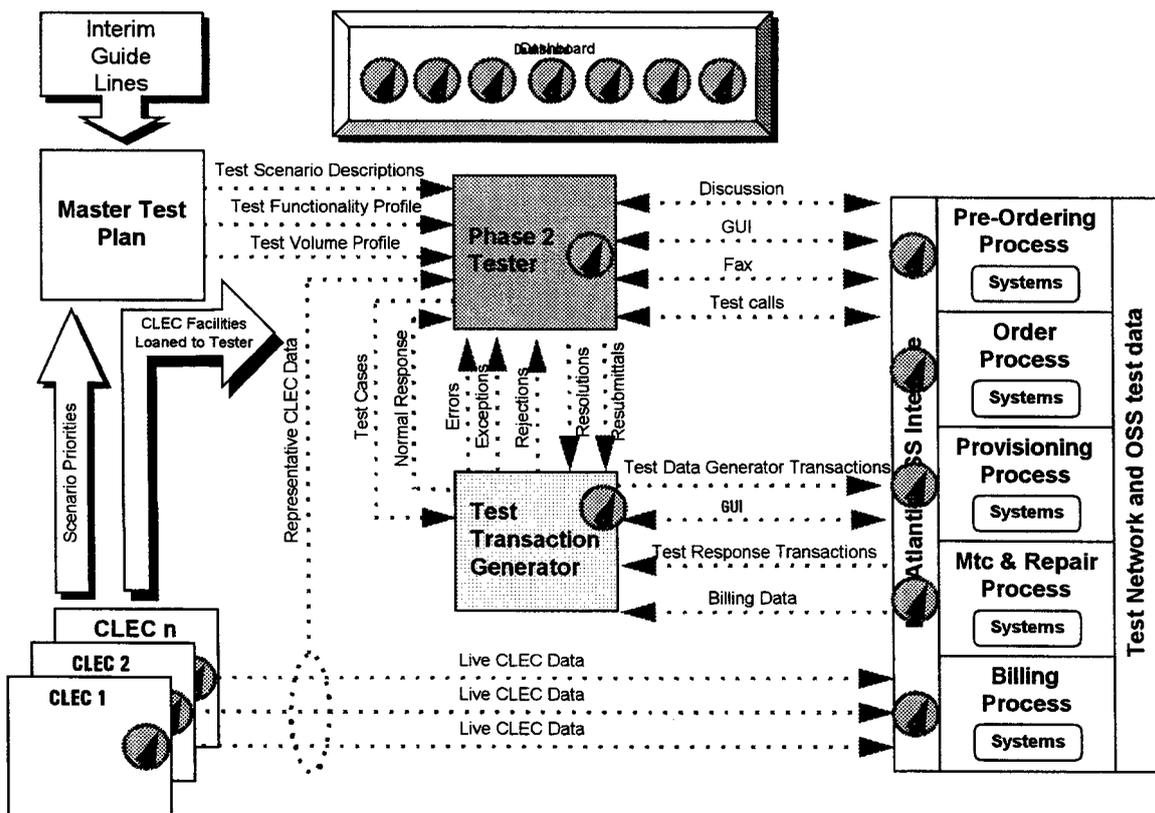

Tests which utilize transaction-driven system analysis rely on initiation of transactions, tracking of transaction progress, and analysis of transaction completion results to evaluate a system under test. Transaction-driven system analysis requires defining several key facets of testing, including the data sources (e.g., CLEC live data, BA-NY historical data), the system components under test (e.g., application-to-application interfaces, graphical user interfaces), and volumes (e.g., normal, stress).

Transaction-driven system analysis is to be utilized extensively in the following three domains:

- Pre-Ordering, Ordering, and Provisioning
- Maintenance and Repair
- Billing

The transactions to be used in each transaction-driven system analysis test will be derived from higher level sets of one or more transactions called test cases, which in turn have been developed from base test scenarios. See Scenario section above for additional discussion. Many transaction-driven tests utilize a Test Transaction Generator (TTG) to facilitate testing. The overall conceptual framework for transaction-driven system analysis is illustrated in the chart below.

Figure III-7: Transaction-Driven Systems Analysis Framework

As indicated above, transaction-driven tests will be performed utilizing a Test Transaction Generator (TTG), CLEC live test cases, and CLEC live production.

### 1.1 Test Transaction Generator

The TTG provides the capability to generate the full suite of real world test cases by submitting transactions via BA-NY's EDI and GUI interfaces and collecting information about the response times, intervals, and other compliance measures.

The TTG will generate and supplement the required number of transactions to test normal expected and stress volumes, ensure the processing of the full breadth of transactions during the test period, and repeat test cases in the required volumes in a controlled test environment. A work center will be assembled to provide for interactive processing, such as handling errors, exceptions, and resubmittals. This work center will also submit manual transactions to BA-NY and await responses. The work center will require participation from both the CLECs and BA-NY to facilitate a real world simulation of a CLEC interfacing with BA-NY.

Further, the TTG will be required to document its ability to build, test, and place in operation the functionality required to successfully process transactions utilizing BA-NY's documentation, account management, help desk, and training support.

### 1.2 CLEC Live Test Cases

CLEC live test cases provide an alternative test method for transactions which may not be practical to provide in a test environment and further facilitate a more realistic depiction of real world production. CLEC participation will be solicited to provide real test cases during the test period.

The CLEC test allows for an element of blind testing and tracking performance in a "real-world" environment. This will require extensive participation by the Phase 2 Test Manager to observe the execution in order to measure, audit, inspect and monitor progress and report results. The Phase 2 Test Manager will be responsible for monitoring both the CLEC and BA-NY sides of the transaction.

### 1.3 CLEC Live Production

CLEC live production will be continuously monitored during the test period to assess performance and service levels that are experienced during the test. These overall measures will be compared to the results from the test and be included in the final report. Further, there are scenarios where in-progress live transactions cannot be obtained or are not practical to execute in a test environment. These will be evaluated utilizing historical information. Historical transactions will be applied in those cases where the process has been stable for a sufficient length of time.

## 2.0 Operational Analysis

Tests utilizing operational analysis focus on the form, structure, and content of the business process under study. This test method will be used to evaluate day-to-day operations and operational management practices, including policy development, procedural development, and procedural change management. Operational analysis validates and verifies the results of a process to determine that the process functioned correctly and according to documentation and expectations. Operational analysis also tests compliance by reviewing management practices and operating procedures against legal, statutory, and other requirements.

### D. Evaluation Criteria

Measures and their corresponding evaluation criteria provide the basis for conducting tests. Evaluation criteria are the norms, benchmarks, standards, and guidelines used to evaluate measures identified for testing. Evaluation criteria provide a framework for the scope of tests, the types of measures that must be taken during testing, and the approach necessary for analyzing results.

Evaluation criteria are defined by four types, as described below.

**Table III-1: Evaluation Criteria**

| Criteria Type | Description  | Example  |
|---------------|--|--|
| Quantitative  | These criteria set a threshold for performance where a numerical range of values is possible, such as response time.   | System response time is four seconds or less.                        |
| Qualitative   | These criteria set a threshold for performance where a range of quality values is possible, such as level of customer satisfaction.                                  | Documentation defining daily usage feeds is adequate.                |
| Parity        | These are criteria that require two measurements to be developed and compared, such as whether external response time is at least as good as internal response time. | CLEC transaction time no greater than BA-NY Retail transaction time. |
| Existence     | These are criteria where only two possible test results can exist (e.g., true/false, presence/absence), such as whether a document exists or not.                    | Documentation defining daily usage feeds exists.                     |

The evaluation criteria to be applied in the overall test effort are based largely on the legal and regulatory requirements for functionality and performance applicable to BA-NY's OSS. In some cases, evaluation criteria were drawn from the PSC's Carrier-to-Carrier Working Group. Overall, evaluation criteria are derived from three types of sources, as shown below.

**Table III-2: Sources of Evaluation Criteria**

| Evaluation Criteria               | Description   |
|-----------------------------------|---|
| Legal and Regulatory Requirements | Requirements specified by statute and regulation, such as FCC orders, court orders, PSC regulations, federal and state statutes, and other binding requirements resulting from judicial or governmental proceedings.  |
| Consensus Requirements            | Norms, benchmarks and standards developed by formal consensus proceedings, such as the PSC's Carrier-to-Carrier Working Group.  |
| Good Management Practices (GMP)   | Widely recognized standards and guidelines promulgated by sanctioned industry and governmental organizations and other bodies (e.g., Telecommunications and Industry Forum); also includes benchmarks, performance goals, and guidelines derived from industry and topic area experts, BA-NY and CLEC performance targets, publications, academic journals and other sources. |

The specific evaluation criteria to be utilized for the overall test effort are provided in Appendix E.

**E. Test Process Elements**

For every test defined within each domain, the process includes a description of the test, its objectives, the targets and scope of the test, the measures to be used, the test scenarios which apply to the test, the test's inputs, activities, and outputs, as well as entrance and exit criteria. Several key test process elements are described in the following sections. Each test process specifies the evaluation techniques used to capture and analyze information developed during testing and the evaluation measures used to conduct testing.

**1.0 Entrance Criteria**

Entrance criteria are those requirements that must be met before individual tests can commence. Global entrance criteria, which apply to every individual test (except where noted otherwise) include the following:

- 1. The Test Plan has been approved.**

The Test Plan must be approved by the PSC.

- 2. All legal dependencies have been resolved.**

Any pending legal and regulatory proceedings that impact the ability to perform the test must be concluded in a manner which allow testing to proceed. Any necessary legal or regulatory approvals must be secured.

- 3. The PSC has verified relevant measurements to be used in the test.**

Measurements specified in the Interim Guidelines must be fully functional, tested, and operationally ready. Fully functional BA-NY measurements are required to support collection of test results and to ensure a method exists to monitor on-going compliance. With assistance from the Phase 2 Test Manager, the PSC will assess the operational readiness of all required BA-NY measurements and verify that all requirements have been met.

**4. All required BA-NY interface capabilities must be operationally ready.**

Electronic interfaces to all OSS access functions of Pre-Ordering, Ordering, Provisioning, Maintenance and Repair, and Billing must be fully tested and operational. EDI-8 and EDI-9 (Pre-Ordering) must be tested and operational. All GUI interface capabilities must be operational.

**5. The Test Transaction Generator Vendor must be operationally ready.**

The TTG is to be developed by a vendor based upon specifications and documentation provided by BA-NY. Several test methods are dependent upon the use of the TTG. Furthermore, successful operation of the TTG will demonstrate the feasibility of developing, testing, and operating the CLEC side of the OSS interface based upon documentation supplied by BA-NY.

**6. CLEC facilities and personnel are available to support the CLEC elements of the Test Plan.**

CLECs will use the Test Plan to prepare their organization for the relevant tests. This could include the designation of appropriate on-site working space and equipment for the testers, the training or hiring of necessary personnel, and any other appropriate measures in order to facilitate test implementation.

In addition to these global entrance criteria, test-specific entrance criteria, where applicable, are defined within each test.

*Table III-3 Global Entrance Criteria*

| Criteria   | Responsible Party |
|--|-------------------|
| The Test Plan has been approved.                 | PSC               |
| All legal dependencies have been resolved.       | BA-NY             |
| Resolutions to legal dependencies approved.      | PSC               |
| The PSC has verified relevant measurements to be | PSC               |

|  |       |
|--|-------|
| used in the test.  |       |
| All required BA-NY interface capabilities must be operationally ready.                     | BA-NY |
| Test Transaction Generator Vendor must be operationally ready.                             | TTG   |
| CLEC facilities and personnel are available to support the CLEC elements of the Test Plan. | CLEC  |

**2.0 Exit Criteria**

Exit criteria are the requirements that must be met before the tests defined in the Test Plan can be concluded.

**1. All required test activities must be completed.**

For each test, all fact finding and analysis activities must be completed. All results and test methodologies have been documented.

**2. All change control, verification, and confirmation steps have been completed.**

The results of test activities must be documented and reviewed for accuracy. Any results that require clarification or follow-up are confirmed.

In addition to these global exit criteria, test-specific exit criteria, where applicable, are defined within each test.

**Table III-4 Exit Criteria**

|   |                |
|---|----------------|
|   |                |
| All required test activities must be completed.                               | Ph 2 Test Mgr. |
| All change control, verification, and confirmation steps have been completed. | Ph 2 Test Mgr. |

**3.0 Evaluation Techniques**

Each test relies on one or more techniques to collect and record measurements and analyze the results. The five types of techniques defined for this test are described in the chart below.

**Table III-5: Evaluation Techniques**

| TECHNIQUE              | DESCRIPTION   |
|------------------------|---|
| Transaction Generation | Transaction generation is the use of live, historical, and/or generated data which is executed through the system under review. The results of this test are evaluated for quality. |

|                 |   |
|-----------------|---|
| Report Review   | Review and analysis of historical data, reports, metrics, and other information in order to assess the effectiveness of a particular system or business function. This includes performance measurement reports and other management reports. |
| Inspection      | Physical review of process activities and products, including site visits, walk-throughs, read-throughs, and work center observations.  |
| Logging         | Monitoring activities and collecting information by logging process events and products as they happen. Logging can be mechanized or manual.  |
| Document Review | Compilation and review of books, manuals, and other publications related to the process and system under study.   |

## F. Comprehensive Test Coverage and Traceability

In order to ensure the tests are fair, comprehensive, and trace back to the requirements, we have included a series of compliance matrices and cross-references in Appendix B. These matrices illustrate the breadth and depth of testing and describe how various test elements are traced from the compliance requirements through the test process.

### 1.0 Compliance Requirements Traceability

Compliance Requirements coverage is demonstrated by the evaluation criteria table provided in Appendix E. This table specifies the domain(s) in which various requirements specified in relevant FCC, New York Public Service Commission, BA-NY Compliance Filings and Agreements, and consensus agreements are addressed.

### 2.0 Test Target / Test Measure Cross-Reference

A coverage matrix is provided in Appendix B of this report to demonstrate the types of measures being applied across all test targets defined within the overall test plan.

### 3.0 Test Scenario Cross-References

Several cross references are provided to illustrate the applicability and coverage of various test scenarios. These include the following exhibits and are included in Appendix B:

- Test Scenario/Test Process Cross-Reference
- Test Scenario/BA-NY Product Family Cross-Reference
- Test Scenario/Delivery Method Cross-Reference
- Test Scenario/Order Type Cross-Reference

## IV. Pre-Ordering, Ordering, and Provisioning Domain Test Section

### A. Purpose

The purpose of this section is to define the specific tests to be undertaken in evaluating the systems, processes, and other operational elements associated with BA-NY's support for Pre-Ordering, Ordering, and Provisioning activities for Wholesale. The purpose of the specified tests is to evaluate functionality, to evaluate compliance with measurement agreements, and to provide a basis for comparing this operational area to parallel systems and processes supporting BA-NY's Retail Operations.

### B. Organization

The Pre-Ordering, Ordering, and Provisioning Domain (POP) is comprised of 10 primary Test Target Areas. These Test Target Areas include:

1. Pre-Ordering
2. Order Processing
3. Provisioning
4. Order "Flow Through"
5. BA-NY POP Metrics
6. POP Documentation
7. Work Center/Help Desk Support
8. Provisioning Process Parity
9. Provisioning Coordination Process
10. Scalability Review

Each Test Target Area is further broken down in the "Scope" section that follows into a number of increasingly discrete Process and Sub Process Areas that serve to identify the particular area of interest to be tested and the types of measures that apply.

In the POP Domain there is not a one-to-one correspondence between the Test Target Areas and the Test Processes. One or more tests have been developed to

evaluate each Test Target Area dependent on the scope of the testing required in each area. Each specific test is described in Section D – Test Processes.

In an effort to simulate the end-to-end process, the first three Test Target Areas (Pre-Ordering, Order Processing, and Provisioning) will be components of the following Test Processes:

- POP1: EDI – Functional Evaluation
- POP2: GUI – Functional Evaluation
- POP3: “Live CLEC” – Functional Evaluation
- POP4: Manual Order – Process Evaluation
- POP5: “Normal Volume” Performance Test
- POP6: “Stress Volume” Performance Test

In addition to those listed above, Test Processes will also be defined for the following:

- POP7: Order “Flow Through” Evaluation
- POP8: BA-NY POP Metrics Evaluation
- POP9: POP Documentation Review
- POP10: Work Center/Help Desk Support Evaluation
- POP11: Provisioning Parity Process Evaluation
- POP12: Provisioning Coordination Process Evaluation
- POP13: Scalability Review

### C. Scope

The purpose of this section is to identify the system, process, and document areas that will be tested within the Pre-Ordering, Ordering, and Provisioning Domain Test Processes.

The POP domain will be tested using end-to-end test cases. Pre-Ordering and Ordering transactions will be interspersed. The GUI and the EDI interfaces will be tested. Orders will be issued using both the ASR and LSR format. The GUI will be tested from multiple terminals at the same time. Orders that can be

submitted either through the GUI or through EDI will not be submitted manually (e.g., paper, FAX) as a part of the testing process. If a scenario calls for an order type that can not be submitted electronically, the request will be faxed as a part of the test activities. The manual order procedures for all order types, however, will be evaluated using operational analysis techniques.

The EIF application-to-application interface will not be tested, since this unique interface is being discontinued.

The following order types will be tested:

- Migrate "as is"
- Migrate "as is" with changes
- Migrate "as specified"
- New
- Change
- Suspend/Restore
- Disconnect
- Inside Move
- Outside Move
- Change to New Local Service Provider
- UNE Loop Cut Over

The following delivery methods will be tested:

- Resale
- UNE Platform
- Unbundled Loop
- Interconnect
- Other Unbundled Network Elements
- Combinations of Unbundled Network Elements

In addition to service activities, directory listing activities will also be tested.

All ordering activities and/or products identified as "flow through" conditions in Appendix 2 of the Pre-Filing Agreement will be tested to ensure that they do not require manual handling. While the activities and/or products in Appendix

3 of the Pre-Filing Agreement will also be tested, they are not required to satisfy "flow through" criteria.

Transactions will be submitted with known error conditions. Supplements and Cancels will also be tested. Transactions will be submitted during normal CLEC/reseller interface operational hours, as documented by BA-NY.

Multiple products and features will be tested. The tests will cover a broad range of the options available to CLECs and resellers. A cross reference of scenarios to product family (high level grouping of service type) is available in Appendix B.

More than one end-office and more than one city will be tested. Service locations supported by different BA-NY ordering, provisioning, and CO switching and transmission configurations will be tested.

Only a portion of the test cases will be physically provisioned. Some orders will be future dated, allowing them to be canceled prior to work scheduling and provisioning. In addition to test orders, the CLECs will be solicited for "live" orders to assist in the testing of complex services and services with long lead times.

Both the EDI and the GUI interface will be tested during the "normal volume" test. It is anticipated that the primary interface for the larger CLECs for pre-order, ordering, and provisioning activities will be the EDI interface. Only the EDI interface will be stress tested. The GUI interface will not be stress tested.

The EDI format that will be used for testing will be based upon LSOG 2 - EDI 8 for ordering and provisioning transactions, and LSOG 3 - EDI 9 for pre-ordering transactions. In addition, any agreed upon interface business rules and formats negotiated between BA-NY and the CLECs/resellers will be included in the test transaction formats.

Documentation affecting the POP domain given to the CLECs and the resellers - including the CLEC Handbook, the Reseller Handbook, GUI training and other appropriate documentation - will be reviewed.

The work center/help desk will be evaluated for basic functionality, performance, escalation procedures, and security.

Ten Test Target Areas have been defined within the Pre-Ordering, Ordering, and Provisioning Domain. The following charts contain the processes and measures associated with each Test Target Area:

### *1.0 Pre-Ordering*

The table below outlines the processes and sub-processes involved in evaluating BA-NY's Pre-Ordering functionality and performance.

Table IV-1 Test Target: Pre-Ordering

| Process Area     | Sub-Process  | Evaluation Measure                                   | Evaluation Technique                    | Criteria Type               |
|------------------|--|--|---|-----------------------------|
| Validate Address | Create Address Validation request transaction                          | Clarity, accuracy, and completeness of documentation | Document Review, Transaction Generation | Qualitative<br>Quantitative |
|                  |  | Accessibility of GUI                                 | Transaction Generation                  | Quantitative                |
|                  |  | Accessibility of interface                           | Transaction Generation                  | Quantitative                |
|                  | Send address request using BTN (AN)                                    | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |
|                  | Send address validation request using other account number (AN) format | Accessibility of interface                           | Transaction Generation                  | Quantitative                |
|                  |  | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |
|                  | Send address validation request using WTN                              | Accessibility of interface                           | Transaction Generation                  | Quantitative                |
|                  |  | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |
|                  | Send address validation request using address                          | Accessibility of interface                           | Transaction Generation                  | Quantitative                |
|                  |  | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |
|                  | Receive "match" response   | Timeliness of response                               | Logging                                 | Quantitative                |
|                  |  | Accuracy and completeness of response                | Transaction Generation, Inspection      | Quantitative                |

*Table IV-1 Test Target: Pre-Ordering*

| Process Area | Sub-Process                          | Evaluation Measure                                   | Evaluation Technique                        | Criteria Type               |
|--------------|--------------------------------------|--|---|-----------------------------|
|              | Receive "near match" response        | Timeliness of response                               | Logging                                     | Quantitative                |
|              |                                      | Accuracy and completeness of response                | Transaction Generation, Inspection          | Quantitative                |
|              | Receive "no match" response          | Timeliness of response                               | Logging                                     | Quantitative                |
|              |                                      | Accuracy of response                                 | Transaction Generation, Inspection          | Quantitative                |
|              | Receive error response               | Timeliness of response                               | Logging                                     | Quantitative                |
|              |                                      | Accuracy and completeness of response                | Transaction Generation, Inspection          | Quantitative                |
|              |                                      | Clarity and accuracy of error message                | Inspection, Document Review                 | Quantitative<br>Qualitative |
|              | Match response to validation request | Accuracy of response                                 | Transaction Generation                      | Quantitative                |
|              | Correct errors                       | Clarity, accuracy, and completeness of documentation | Document Review, Transaction Generation     | Quantitative<br>Qualitative |
|              |                                      | Accuracy and completeness of help desk information   | Logging, Transaction Generation, Inspection | Quantitative<br>Qualitative |
|              | Resubmit address inquiry             | Accessibility of interface                           | Transaction Generation                      | Quantitative                |
|              | Verify response received             | Accuracy and completeness of response                | Logging                                     | Quantitative                |

Table IV-1 Test Target: Pre-Ordering

| Process Area | Sub-Process   | Evaluation Measure                                   | Evaluation Technique                    | Criteria Type               |
|--------------|---|--|---|-----------------------------|
|              | Determine status of inquiry                                 | Accuracy and completeness of capability              | Transaction Generation                  | Quantitative                |
|              | Create copy of information usable for subsequent processing | Accuracy and completeness of information provided    | Inspection, Transaction Generation      | Quantitative                |
|              |   | Usability of information                             | Inspection                              | Qualitative                 |
|              |   | Consistency with retail capability                   | Inspection                              | Parity                      |
| Retrieve CIR | Determine type of inquiry to send (CSIQ or CTIQ)            | Clarity, accuracy, and completeness of documentation | Document Review, Transaction Generation | Qualitative<br>Quantitative |
|              | Create CIR request transaction                              | Clarity, accuracy, and completeness of documentation | Document Review, Transaction Generation | Qualitative<br>Quantitative |
|              |   | Accessibility of GUI                                 | Transaction Generation                  | Quantitative                |
|              | Send CIR request using BTN (AN)                             | Accessibility of interface                           | Transaction Generation                  | Quantitative                |
|              |   | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |
|              | Send CIR request using WTN                                  | Accessibility of interface                           | Transaction Generation                  | Quantitative                |
|              |   | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |

*Table IV-1 Test Target: Pre-Ordering*

| Process Area | Sub-Process                                 | Evaluation Measure                         | Evaluation Technique               | Criteria Type               |
|--------------|---|--|------------------------------------|-----------------------------|
|              | Send CIR request using circuit number       | Accessibility of interface                 | Transaction Generation             | Quantitative                |
|              |   | Accuracy and completeness of functionality | Transaction Generation             | Quantitative                |
|              | Send request for directory information only | Accessibility of interface                 | Transaction Generation             | Quantitative                |

| Other (TBD)              |                            |                                     |                               |             |

## 9.5 Scenarios

This test does not rely on scenarios.

## 9.6 Test Approach

This test uses operational analysis techniques to evaluate M&R coordination activities. Any aspects of the coordination techniques that require CLEC notification or CLEC involvement of any kind will be tested. It will involve thorough documentation review and interviews of personnel directly responsible for M&R coordination.

### 9.6.1 Inputs

1. Process documentation for joint meet procedures and coordinated testing
2. Notification procedures for joint meet procedures and coordinated testing
3. Bell Atlantic interviewees
4. Interviewer personnel

### 9.6.2 Activities

1. Review all relevant information and documentation.
2. Conduct Bell Atlantic interviews.
3. Document the results of the findings.

### 9.6.3 Outputs

1. Completed observation reports

Table IV-1 Test Target: Pre-Ordering

| Process Area                                  | Sub-Process  | Evaluation Measure                                   | Evaluation Technique                        | Criteria Type                               |
|---|--|--|---|---|
|   | Receive error response   | Timeliness of response                               | Logging                                     | Quantitative                                |

## 2.0 Order Processing

The table below outlines the processes and sub-processes involved in evaluating BA-NY's Ordering functionality and performance.

**Table IV-2 Test Target: Order Processing**

| Process Area    | Sub-Process                                   | Evaluation Measure                                   | Evaluation Technique                    | Criteria Type                   |
|-----------------|---|--|---|---------------------------------|
| Submit an Order | Determine type of order to create             | Clarity and accuracy of documentation                | Document Review, Transaction Generation | Qualitative<br>Quantitative     |
|                 | Create order transaction(s)                   | Clarity, accuracy, and completeness of documentation | Document Review, Transaction Generation | Qualitative and<br>Quantitative |
|                 |   | Accessibility of GUI                                 | Transaction Generation                  | Quantitative                    |
|                 | Send order in LSR format                      | Accessibility of Interface                           | Transaction Generation                  | Quantitative                    |
|                 | Send order in ASR format                      | Accessibility of Interface                           | Transaction Generation                  | Quantitative                    |
|                 | Receive acknowledgment of valid request (ASR) | Timeliness of response                               | Logging                                 | Quantitative                    |
|                 |   | Accuracy of response                                 | Transaction Generation, Inspection      | Quantitative                    |
|                 | Receive confirmation of request (LSR)         | Timeliness of response                               | Logging                                 | Quantitative                    |
|                 |   | Accuracy of response                                 | Transaction Generation, Inspection      | Quantitative                    |
|                 | Match response to transaction                 | Accuracy of response                                 | Transaction Generation                  | Quantitative                    |

|                                       | Receive current status                          | Accuracy of information                              | Transaction Generation                  | Quantitative                |
|                                       |   | Timeliness of response                               | Logging                                 | Quantitative                |
| View Completed Order Information      | Inquire on completed order                      | Accuracy and completeness of functionality           | Transaction Generation                  | Quantitative                |
|                                       |   | Consistency with retail capability                   | Inspection                              | Parity                      |
| Follow Up on Delayed Order Activities | Contact ordering work center help desk          | Timeliness of answer                                 | Logging                                 | Quantitative                |
|                                       |   | Availability of support                              | Logging                                 | Quantitative                |
|                                       | Request status of response                      | Accuracy of response                                 | Inspection                              | Quantitative                |
|                                       |   | Completeness of response                             | Inspection                              | Quantitative                |
|                                       |   | Timeliness of response                               | Logging                                 | Quantitative                |

**Table IV-2 Test Target: Order Processing**

| Process Area                           | Sub-Process                                  | Evaluation Measure                      | Evaluation Technique | Criteria Type |
|--|--|---|----------------------|---------------|
|  | Escalate request for information             | Accuracy and completeness of procedures | Inspection           | Quantitative  |
|  |  | Compliance to procedures                | Logging              | Quantitative  |
|  | Monitor closure of request                   | Completeness and accuracy of follow-up  | Inspection, Logging  | Quantitative  |
|  |  | Timeliness of answer                    | Logging              | Quantitative  |
| Request Order Population Support       | Contact appropriate work center or help desk | Availability of support                 | Logging              | Quantitative  |
|  | Ask question                                 | Accuracy of response                    | Inspection           | Quantitative  |
|  |  | Completeness of response                | Inspection           | Quantitative  |
|  |  | Timeliness of response                  | Logging              | Quantitative  |
| Request Order Error Correction Support | Contact appropriate work center or help desk | Timeliness of answer                    | Logging              | Quantitative  |
|  |  | Availability of support                 | Logging              | Quantitative  |
|  | Ask question                                 | Accuracy of response                    | Inspection           | Quantitative  |
|  |  | Completeness of response                | Inspection           | Quantitative  |
|  |  | Timeliness of response                  | Logging              | Quantitative  |

### 3.0 Provisioning

The table below outlines the processes and sub-processes involved in evaluating BA-NY's provisioning interface functionality and performance.

**Table IV-3 Test Target: Provisioning**

| Process Area               | Sub-Process   | Evaluation Measure                         | Evaluation Technique               | Criteria Type |
|----------------------------|---|--|------------------------------------|---------------|
| Receive Order Confirmation | Receive LSR Service Request Confirmation                      | Timeliness of response                     | Logging                            | Quantitative  |
|                            |   | Timeliness of dates                        | Logging, Transaction Generation    | Quantitative  |
|                            |   | Accuracy of data                           | Inspection, Transaction Generation | Quantitative  |
|                            | Receive ASR Firm Order Commitment                             | Timeliness of response                     | Logging                            | Quantitative  |
|                            |   | Timeliness of dates                        | Logging, Transaction Generation    | Quantitative  |
|                            |   | Accuracy of data                           | Inspection, Transaction Generation | Quantitative  |
|                            | Match response to transaction                                 | Accuracy of response                       | Transaction Generation             | Quantitative  |
|                            | Receive error/reject notification after original confirmation | Timeliness of response                     | Logging                            | Quantitative  |
|                            |   | Accuracy of response                       | Transaction Generation, Inspection | Quantitative  |
|                            |   | Accuracy and completeness of error message | Inspection, Document Review        | Qualitative   |
|                            |   | Applicability of order flow-through        | Transaction Generation, Inspection | Quantitative  |

*Table IV-3 Test Target: Provisioning*

| Process Area             | Sub-Process                              | Evaluation Measure                                   | Evaluation Technique                        | Criteria Type               |
|--------------------------|--|--|---|-----------------------------|
|                          | Correct errors                           | Clarity, accuracy, and completeness of documentation | Document Review, Transaction Generation     | Quantitative<br>Qualitative |
|                          |  | Accuracy and completeness of help desk information   | Logging, Transaction Generation, Inspection | Quantitative<br>Qualitative |
|                          | Re-submit order                          | Accessibility of Interface                           | Transaction Generation                      | Quantitative                |
|                          | Verify response received                 | Accuracy and completeness of response                | Transaction Generation                      | Quantitative                |
|                          | Determine status of transaction response | Accuracy and completeness of capability              | Transaction Generation                      | Quantitative                |
| Receive Design Documents | Receive Circuit Layout (CLR)             | Timeliness of response                               | Logging                                     | Quantitative                |
|                          |  | Timeliness of dates                                  | Logging, Transaction Generation             | Quantitative                |
|                          |  | Accuracy of data                                     | Inspection, Transaction Generation          | Quantitative                |
|                          | Receive Design Layout (DLR)              | Timeliness of response                               | Logging                                     | Quantitative                |
|                          |  | Timeliness of dates                                  | Logging, Transaction Generation             | Quantitative                |
|                          |  | Accuracy of data                                     | Inspection, Transaction Generation          | Quantitative                |
|                          | Match response to transaction            | Accuracy of response                                 | Transaction Generation                      | Quantitative                |
|                          | Verify response received                 | Accuracy and completeness of response                | Transaction Generation                      | Quantitative, Existence     |

*Table IV-3 Test Target: Provisioning*

| Process Area                       | Sub-Process   | Evaluation Measure                      | Evaluation Technique               | Criteria Type |
|------------------------------------|---|---|------------------------------------|---------------|
|                                    | Determine status of transaction response            | Accuracy and completeness of capability | Transaction Generation             | Quantitative  |
| Provision Jointly Provided Service | Appear on established provisioning date and time    | Accuracy of dates                       | Logging                            | Quantitative  |
|                                    |   | Availability of personnel               | Logging                            | Quantitative  |
|                                    | Perform joint provisioning activities               | Accuracy of preparation                 | Logging                            | Quantitative  |
|                                    |   | Accuracy of work                        | Logging                            | Quantitative  |
| Test Jointly Provided Service      | Prepare for test on established date(s) and time(s) | Accuracy of dates                       | Logging                            | Quantitative  |
|                                    |   | Availability of personnel               | Logging                            | Quantitative  |
|                                    | Perform joint testing activities                    | Accuracy and completion of preparation  | Inspection                         | Quantitative  |
|                                    |   | Accuracy of work                        | Inspection                         | Quantitative  |
| Receive Completion Notification    | Receive Completion Notification Transaction         | Timeliness of response                  | Logging                            | Quantitative  |
|                                    |   | Timeliness of dates                     | Logging, Transaction Generation    | Quantitative  |
|                                    |   | Accuracy of data                        | Inspection, Transaction Generation | Quantitative  |
|                                    | Match response to transaction                       | Accuracy of response                    | Transaction Generation             | Quantitative  |
|                                    | Verify response received                            | Accuracy and completeness of response   | Transaction Generation             | Quantitative  |
|                                    | Determine status of transaction response            | Accuracy and completeness of capability | Transaction Generation             | Quantitative  |
|                                    | Test service  | Accuracy of provisioning                | Transaction Generation, Logging    | Quantitative  |

*Table IV-3 Test Target: Provisioning*

| Process Area                  | Sub-Process                            | Evaluation Measure         | Evaluation Technique               | Criteria Type |
|-------------------------------|--|----------------------------|------------------------------------|---------------|
| Receive Jeopardy Notification | Receive Jeopardy notification          | Timeliness of notification | Logging                            | Quantitative  |
|                               |  | Timeliness of dates        | Logging, Transaction Generation    | Quantitative  |
|                               |  | Accuracy of data           | Inspection, Transaction Generation | Quantitative  |
|                               |  | Frequency of notification  | Logging                            | Quantitative  |
|                               | Identify reason for jeopardy           | Accuracy of response       | Transaction Generation             | Quantitative  |
|                               | Monitor follow-up activities           | Timeliness of closure      | Logging, Transaction Generation    | Quantitative  |
|                               |  | Compliance with procedures | Logging                            | Quantitative  |
| Receive Delay Notification    | Receive Delay Notification Transaction | Timeliness of response     | Logging                            | Quantitative  |
|                               |  | Timeliness of dates        | Logging, Transaction Generation    | Quantitative  |
|                               |  | Accuracy of data           | Inspection, Transaction Generation | Quantitative  |
|                               |  | Frequency of delay         | Transaction Generation             | Quantitative  |

Table IV-3 Test Target: Provisioning

| Process Area                                 | Sub-Process                                | Evaluation Measure                      | Evaluation Technique   | Criteria Type |
|--|--|---|------------------------|---------------|
|  | Match response to transaction              | Accuracy of response                    | Transaction Generation | Quantitative  |
|  | Identify reason for delay                  | Accuracy of response                    | Transaction Generation | Quantitative  |
| Follow Up on Delayed Provisioning Activities | Contact provisioning work center help desk | Timeliness of answer                    | Logging                | Quantitative  |
|  |  | Availability of support                 | Logging                | Quantitative  |
|  | Request status of response or delay        | Accuracy of response                    | Inspection             | Quantitative  |
|  |  | Completeness of response                | Inspection             | Quantitative  |
|  |  | Timeliness of response                  | Logging                | Quantitative  |
|  | Escalate request for information           | Accuracy and completeness of procedures | Inspection             | Quantitative  |
|  |  | Compliance to procedures                | Logging                | Qualitative   |
|  | Escalate request for provisioning          | Accuracy and completeness of procedures | Inspection             | Quantitative  |
|  |  | Compliance to procedures                | Logging                | Qualitative   |
|  | Monitor to closure                         | Timeliness of closure                   | Logging                | Quantitative  |
|  |  | Compliance to procedures                | Inspection             | Qualitative   |

#### 4.0 Order "Flow Through"

The table below outlines the processes and sub-processes involved in evaluating the ability of orders to "flow through" BA-NY's front end system without manual intervention.

*Table IV-4 Test Target: Order "Flow Through"*

| Process Area                 | Sub-Process                                 | Evaluation Measure                                      | Evaluation Technique                        | Criteria Type |
|------------------------------|---|---|---|---------------|
| Submit "Flow Through" Orders | Determine if order should "flow through"    | Applicability as "flow through" in pre-filing agreement | Inspection                                  | Quantitative  |
|                              |   | Applicability as "flow through" in existing system      | Inspection                                  | Qualitative   |
|                              | Submit "flow through" order through GUI     | Accessibility of interface                              | Transaction Generation                      | Quantitative  |
|                              | Submit "flow through" order through EDI     | Accessibility of interface                              | Transaction Generation                      | Quantitative  |
| Monitor "Flow Through" Order | Identify orders that did "flow through"     | Compliance with "flow through" standards                | Transaction Generation, Inspection, Logging | Quantitative  |
|                              | Identify orders that did not "flow through" | Clarity of manual steps                                 | Transaction Generation, Inspection, Logging | Quantitative  |
|                              | Verify all orders were processed            | Completeness of order processing                        | Logging                                     | Quantitative  |

#### 5.0 BA-NY POP Metrics

The table below outlines the processes and sub-processes involved in evaluating the completeness, applicability, and security of pre-ordering, ordering, and provisioning metrics captured by BA-NY.

**Table IV-5 Test Target: BA-NY POP Metrics**

| Process Area                                   | Sub Process  | Evaluation Measure  | Evaluation Technique         | Criteria Type                    |
|--|--|---|------------------------------|----------------------------------|
| Validate Metrics Information Gathering Process | Identify control points where measurements are taken | Applicability and measurability of control points                               | Inspection                   | Quantitative                     |
|  | Identify data sources for each reported metric       | Applicability and completeness of data sources                                  | Inspection                   | Quantitative                     |
|  | Identify each tool used by BA to collect data        | Applicability and reliability of tools  | Inspection                   | Quantitative                     |
| Evaluate Quality of Metric Reported            | Evaluate calculations                                | Accuracy and applicability of calculations                                      | Inspection                   | Quantitative                     |
|  | Evaluate tools                                       | Accuracy, security and controllability of data housed in tools                  | Inspection Checklists        | Quantitative                     |
| Evaluate Reports                               | Evaluate report format                               | Consistency of reporting results with data collected                            | Inspection                   | Qualitative                      |
|  | Evaluate report content                              | Accuracy of metrics reporting<br><br>Completeness and applicability of measures | Inspection<br><br>Inspection | Quantitative<br><br>Quantitative |

**6.0 POP Documentation**

The table below outlines the processes and sub-processes involved in evaluating the organization, usability, and accuracy of POP documentation produced by BA-NY.

**Table IV-6 Test Target: POP Documentation**

| Process Area          | Sub Process                   | Evaluation Measure                       | Evaluation Technique | Criteria Type               |
|-----------------------|-------------------------------|--|----------------------|-----------------------------|
| Acquire Documentation | Receive current documentation | Availability of up-to-date documentation | Documentation Review | Qualitative<br>Quantitative |

| Process Area                         | Sub Process                                     | Evaluation Measure                  | Evaluation Technique | Criteria Type |
|--------------------------------------|---|-------------------------------------|----------------------|---------------|
| Evaluate Documentation               | Evaluate documentation format                   | Organization of documentation       | Documentation Review | Qualitative   |
|                                      | Evaluate documentation content                  | Usability of documentation          | Documentation Review | Qualitative   |
|                                      |   | Comprehensive-ness of documentation | Documentation Review | Quantitative  |
|                                      |   | Accuracy of documentation           | Documentation Review | Quantitative  |
| Evaluate EDI Interface Documentation | Evaluate EDI interface population documentation | Compliance to standards             | Documentation Review | Quantitative  |

**7.0 POP Work Center/Help Desk Support**

The table below outlines the processes and sub-processes involved in evaluating the timeliness, consistency, and accuracy of handling work center and help desk activities related to pre-ordering, ordering, and provisioning performed by BA-NY.

**Table IV-7 Test Target: POP Work Center/Help Desk Support**

| Process Area              | Sub-Process          | Evaluation Measure                           | Evaluation Technique | Criteria Type |
|---------------------------|----------------------|--|----------------------|---------------|
| Respond to Help Desk Call | Answer call          | Timeliness of call                           | Inspection           | Quantitative  |
|                           | Interface with user  | Usability of user interface                  | Inspection           | Qualitative   |
|                           |                      | Availability of user interface               | Inspection           | Quantitative  |
|                           | Log call             | Accuracy and completeness of call logging    | Document Review      | Quantitative  |
|                           |                      | Accuracy of call logging                     | Inspection           | Qualitative   |
|                           | Record severity code | Compliance of call logging - severity coding | Inspection           | Qualitative   |

*Table IV-7 Test Target: POP Work Center/Help Desk Support*

| Process Area           | Sub-Process                             | Evaluation Measure                                      | Evaluation Technique  | Criteria Type |
|------------------------|---|---|-----------------------|---------------|
| Process Help Desk Call | Resolve user question, problem or issue | Completeness and consistency of process                 | Documentation Review, | Quantitative  |
|                        |   | Accuracy of response                                    | Inspection            | Quantitative  |
|                        |   |   | Inspection            |               |
|                        | Record follow-up is required            | Accuracy and constancy of process                       | Inspection            | Quantitative  |
|                        | Follow-up on commitments                | Measurability of adherence to response time             | Inspection            | Quantitative  |
|                        |   | Complete and accurate follow-up                         | Inspection            | Qualitative   |
| Close Help Desk Call   | Post closure information                | Completeness, consistency, and timeliness of process    | Inspection            | Quantitative  |
|                        |   | Accuracy of posting                                     | Inspection            | Quantitative  |
| Monitor Status         | Track status                            | Accuracy and completeness of status tracking capability | Inspection            | Existence     |
|                        |   | Consistency and frequency of follow-up activities       | Document Review       | Qualitative   |
|                        |   | Availability of jeopardy notification                   | Document Review       | Quantitative  |

**Table IV-7 Test Target: POP Work Center/Help Desk Support**

| Process Area              | Sub-Process                             | Evaluation Measure                                | Evaluation Technique | Criteria Type |
|---------------------------|---|---|----------------------|---------------|
|                           | Send jeopardy notification              | Timeliness of jeopardy notification               | Logging, Inspection, | Quantitative  |
|                           |   | Completeness of the procedures                    | Document Review      | Qualitative   |
|                           |   | Consistency of and adherence to the process       | Inspection           | Qualitative   |
|                           | Report status                           | Completeness and consistency of reporting process | Inspection           | Qualitative   |
|                           |   | Accuracy and timeliness of report                 | Inspection           | Quantitative  |
|                           |   | Accessibility of status report                    | Inspection           | Quantitative  |
| Request Escalation        | Identify escalation procedure           | Accuracy and completeness of procedure            | Document Review      | Existence     |
|                           | Evaluate escalation procedure           | Completeness of the procedure                     | Document Review      | Qualitative   |
|                           |   | Consistency of the process                        | Inspection           | Qualitative   |
| Manage Workforce Capacity | Identify work force planning procedures | Accuracy and completeness of procedure            | Document Review      | Existence     |
|                           | Evaluate work force planning procedures | Completeness of procedure                         | Document Review      | Qualitative   |
|                           | Review staffing plans                   | Scalability of staff volume                       | Inspection           | Qualitative   |

**Table IV-7 Test Target: POP Work Center/Help Desk Support**

| Process Area                   | Sub-Process                  | Evaluation Measure  | Evaluation Technique        | Criteria Type |
|--------------------------------|------------------------------|---|-----------------------------|---------------|
| Provide Security and Integrity | Provide secured access       | Completeness and applicability of security procedures, profiles, and restrictions | Document Review, Inspection | Qualitative   |
|                                |                              | Controllability of intra-company access   | Document Review, Inspection | Qualitative   |
| Manage the Help Desk Process   | Provide management oversight | Completeness and consistency of operating management practices                    | Inspection                  | Qualitative   |
|                                |                              | Controllability, efficiency and reliability of process                            | Inspection                  | Qualitative   |
|                                |                              | Completeness of process improvement practices                                     | Inspection                  | Qualitative   |

**8.0 Provisioning Process Parity**

The table below outlines the processes and sub-processes involved in evaluating the level of parity provided by the BA-NY provisioning systems and processes to the CLECs and resellers.

**Table IV-8 Test Target: Provisioning Process Parity**

| Process Area                | Sub-Process                                  | Evaluation Measure                                  | Evaluation Technique | Criteria Type |
|-----------------------------|--|---|----------------------|---------------|
| Provisioning Process Parity | Evaluate Order entry system (BA-NY internal) | Consistency and repeatability as compared to Retail | Inspection           | Parity        |

**Table IV-8 Test Target: Provisioning Process Parity**

| Process Area | Sub-Process                                   | Evaluation Measure                                  | Evaluation Technique | Criteria Type |
|--------------|---|---|----------------------|---------------|
|              | Evaluate workflow management                  | Consistency and repeatability as compared to Retail | Inspection           | Parity        |
|              | Evaluate workforce scheduling                 | Consistency and repeatability as compared to Retail | Inspection           | Parity        |
|              | Evaluate CO wiring process                    | Consistency and repeatability as compared to Retail | Inspection           | Parity        |
|              | Evaluate switch memory administration process | Consistency and repeatability as compared to Retail | Inspection           | Parity        |
|              | Evaluate outside plant wiring process         | Consistency and repeatability as compared to Retail | Inspection           | Parity        |
|              | Evaluate special construction process         | Consistency and repeatability as compared to Retail | Inspection           | Parity        |
|              | Evaluate other provisioning process areas     | Consistency and repeatability as compared to Retail | Inspection           | Parity        |

### 9.0 Provisioning Coordination Process

The table below outlines the tests to evaluate the procedures and processes in place to support for joint provisioning of services by the CLEC and BA-NY.

Table IV-9 Test Target: Provisioning Coordination Process

| Process Area                              | Sub-Process                                   | Evaluation Measure  | Evaluation Technique        | Criteria Type |
|---|---|---|-----------------------------|---------------|
| Support Provisioning Coordination Process | Identify orders requiring coordination        | Availability of procedures and methods                        | Document Review             | Existence     |
|   |   | Completeness and consistency of processes                     | Document Review, Inspection | Qualitative   |
|   |   | Consistency and repeatability compared to Retail              | Inspection                  | Parity        |
|   | Request coordination with order               | Completeness and consistency of processes                     | Document Review, Inspection | Quantitative  |
|   | Receive notification of provisioning schedule | Completeness and consistency of processes                     | Document Review, Inspection | Qualitative   |
|   |   | Timeliness of notification                                    | Document Review, Inspection | Quantitative  |
|   | Manage coordinated provisioning cases         | Completeness and consistency of operating management practice | Inspection                  | Qualitative   |
|   |   | Controllability, efficiency and reliability of process        | Inspection                  | Qualitative   |
|   |   | Completeness of process improvement practices                 | Inspection                  | Qualitative   |

### 10.0 Scalability Review

The table below outlines the processes and sub-processes involved in evaluating the scalability of the interfaces provided by BA-NY to support the pre-ordering, ordering, and provisioning processes.

Table IV-10 Test Target: Scalability Review

| Process Area             | Sub-Process                           | Evaluation Measure                                  | Evaluation Technique        | Criteria Type |
|--------------------------|---------------------------------------|---|-----------------------------|---------------|
| POP Scalability          | Evaluate mechanized interfaces        | Capacity of the interface to support volumes        | Inspection                  | Qualitative   |
|                          |                                       | Scalability of the interface                        | Inspection                  | Qualitative   |
|                          | Evaluate manual processes             | Capacity of the manual processes to support volumes | Inspection                  | Qualitative   |
|                          |                                       | Scalability of the manual processes                 | Inspection                  | Qualitative   |
|                          | Evaluate systems                      | Capacity of the systems to support volumes          | Inspection                  | Qualitative   |
|                          |                                       | Scalability of the systems                          | Inspection                  | Qualitative   |
| Manage Capacity Planning | Identify capacity planning procedures | Availability of procedure                           | Document Review             | Existence     |
|                          | Evaluate capacity planning procedures | Completeness of procedure                           | Document Review, Inspection | Qualitative   |
|                          |                                       | Applicability and reliability of tools              | Inspection                  | Qualitative   |
|                          | Review staffing plans                 | Scalability of staff volume                         | Inspection                  | Qualitative   |

#### D. Test Processes

This section contains the specific evaluations/tests to be performed in the analysis of BA-NY's support of Wholesale Pre-Ordering, Ordering, and Provisioning operations. The following test processes are will be conducted:

- POP1: EDI - Functional Evaluation
- POP2: GUI - Functional Evaluation
- POP3: "Live CLEC" - Functional Evaluation
- POP4: Manual Order - Process Evaluation

- POP5: "Normal Volume" Performance Test
- POP6: "Stress Volume" Performance Test
- POP7: Order "Flow Through" Evaluation
- POP8: BA-NY POP Metrics Evaluation
- POP9: POP Documentation Review
- POP10: Work Center/Help Desk Support Evaluation
- POP11: Provisioning Parity Process Evaluation
- POP12: Provisioning Coordination Process Evaluation
- POP13: Scalability Review

### ***1.0 POP1: EDI - Functional Evaluation***

#### **1.1 Description**

The EDI Functional Evaluation is a comprehensive review of all of the functional elements of Pre-Ordering, Ordering, and Provisioning as delivered through the EDI interface, the achievement of the agreed upon measures, and an analysis of performance via the interface in comparison to BA-NY's Retail system.

EDI will be tested through transactions generated via the test transaction generator (TTG). The TTG vendor will also be responsible for recording the information required to produce the output reports.

The EDI-Functional Evaluation will look at an end-to-end view of the service negotiation through provisioning process. It will include a mix of stand-alone pre-ordering and ordering transactions, along with pre-order transactions followed by orders, supplements, and cancels. The TTG will monitor for appropriate response transactions, including provisioning transactions. Both ASR and LSR orders will be tested. Erred as well as error free transactions will be tested.

Not all orders will go through the physical provisioning process. Some will be future dated, and others will be canceled before provisioning activities commence. This will be particularly true for volume and stress testing orders.

The EDI Functional Evaluation test will be conducted in two steps. The initial step will include a small number of test transactions covering a variety of conditions. It will be used to ensure that the base functionality and interface are working. The second step will be to test the functionality in conjunction with other interface methods using normal expected volumes. The second step will be

executed as a part of "POP5: Normal Volume Performance Testing". The activities listed apply to both steps of the test.

In addition, the EDI interface will be subjected to stress testing as defined in "POP6: 'Stress Volume' Performance Test' which is defined below.

### 1.2 Objective

The objective of this test is to validate the existence, functionality, and behavior of the EDI interface to BA-NY for pre-ordering, ordering, and provisioning transaction requests and responses.

### 1.3 Entrance Criteria

| Criteria  | Responsible Party   |
|---|---------------------|
| All global entrance criteria  | See Table III-3     |
| The Test Transaction Generator Vendor must be operationally ready                   | Ph 2 TTG            |
| BA-NY EDI interface tested and up to the standards levels required for the test     | BA-NY               |
| Initial BA-NY measurement evaluation completed (POP8: BA-NY POP Metrics Evaluation) | Ph 2 Test Mgr., PSC |
| BA-NY measurements available at the CLEC level                                      | BA-NY               |
| Interface facilities between "Pseudo CLEC" and BA-NY in place and tested            | BA-NY, Ph 2 TTG     |
| Test bed data bases and facilities in place   | BA-NY               |
| Test Scenarios selected   | Ph 2 Test Mgr.      |
| Specific Test Cases and expected results developed                                  | Ph 2 Test Mgr.      |
| "POP9: POP Documentation Review" completed  | Ph 2 Test Mgr.      |
| Specific Evaluation techniques developed  | Ph 2 Test Mgr.      |
| Evaluation Criteria defined and approved  | Ph 2 Test Mgr., PSC |
| Detailed "Go/No Go" checklist created   | Ph 2 Test Mgr.      |
| Help Desk log and contact checklists created  | Ph 2 Test Mgr.      |
| Provisioning log and activity checklists created                                    | Ph 2 Test Mgr.      |
| Manual jeopardy/delay notification log created                                      | Ph 2 Test Mgr.      |

### 1.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

1. Pre-Ordering
1. Order Processing
1. Provisioning

### 1.5 Scenarios

The specific scenarios to be used in this test can be found in Appendix B.

### 1.6 Test Approach

#### 1.6.1 Inputs

1. Test cases and expected results
2. Test case execution schedule
3. TTG Software
4. Documentation (CLEC Handbook, Reseller Handbook, etc.)
5. Trained personnel to execute test cases
6. Test "Go/No Go" checklist
7. Help Desk log and contact checklists
8. Provisioning log and activity checklists
9. Manual jeopardy/delay notification log

#### 1.6.2 Activities

1. Use test cases to develop transactions and transaction content based upon instructions provided in the appropriate handbook(s).
2. Submit transactions via the TTG. Submittal date and time and appropriate transaction information logged by TTG.
3. Receive transaction responses via the TTG. Receipt date, time, response transaction type, and response condition (valid vs. reject) logged by TTG.
4. Match transaction response to original transaction via TTG. TTG verifies matching transaction can be found and records mismatches.

5. TTG verifies transaction response contains expected data and flags non-expected errors.
6. Manually review unexpected errors. Identify error source (TTG or BA-NY). Identify and log reason for the error. Determine if test should be discontinued.
7. Contact help desk for support as indicated in test cases and for unexpected errors following the appropriate resolution procedures. Log response time, availability, and other behavior of functions as identified on the help desk checklist.
8. Correct expected errors via manual input for generation through TTG. Re-submittal date, time, and appropriate information logged by the TTG.
9. Identify transactions for which responses have not been received. Where multiple responses are expected for the same request, the receipt of each response will be monitored. Record missing responses.
10. Review status of pending orders. Verify and record accuracy of response.
11. Jeopardy and delay notifications are recognized and logged via the TTG. Any jeopardy or delay notifications not received electronically are logged using the jeopardy/delay notification log.
12. Perform joint provisioning. Record results using appropriate provisioning log and activity checklist.
13. Perform testing on jointly provisioned services. Record results using appropriate provisioning log and activity checklist.
14. Test completion on a sampling of the orders that have been provisioned. Record results in appropriate provisioning log and activity checklist.
15. Generate "Pseudo CLEC" reports.
16. Generate BA-NY Carrier to Carrier report for test date range.
17. Compare "Pseudo CLEC" metrics to BA-NY retail metrics.

### 1.6.3 Outputs

1. BA-NY Carrier to Carrier Report
2. Reports that provide the metrics to support the standards of performance defined in various arbitrated agreements
3. Variance between actual performance and the standards of performance defined in various arbitrated agreements
4. Report of expected results versus actual test case results
5. Non-expected error count by type and percentage of total
6. Report of non-expected errors as the result of documentation problems
7. Rejects received after confirmation notification and percentage of total
8. Transaction counts, error ratio, response time, etc., by transaction type, product family, and delivery method
9. Minimum, maximum, mean, average, and aggregate response time/interval per transaction set
10. Transaction counts per response time/interval range per transaction set
11. Orders erred after initial confirmation
12. "Flow through" orders by order type, product family, etc.
13. Completed help desk logs and checklists
14. Completed provisioning logs and checklists
15. Completed jeopardy/delay notification logs
16. Help desk accuracy and timeliness report
17. Provisioning accuracy and timeliness report
18. "Pseudo CLEC" to other CLEC comparison
19. TTG measurement reports
20. Measure of parity performance between retail and wholesale

**1.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**2.0 POP2: GUI Functional Evaluation****2.1 Description**

The GUI Functional Evaluation is a comprehensive review of all of the functional elements of Pre-Ordering, Ordering, and Provisioning as delivered through the GUI interface, the achievement of the agreed upon measures, and an analysis of performance via the interface in comparison to BA-NY's Retail system.

The GUI will be tested through transactions either entered manually or generated through animated screen capability developed by the test transaction generator (TTG) vendor. Where possible the TTG will also be responsible for recording the information required to produce the output reports.

The GUI-Functional Evaluation will look at an end-to-end view of the service negotiation through the provisioning process. It will include a mix of stand-alone pre-ordering and ordering transactions, along with pre-order transactions followed by orders, supplements, and cancels. Either the work center testers or the TTG will monitor for appropriate response transactions, including provisioning transactions. Erred as well as error-free transactions will be tested.

Not all orders will go through the physical provisioning process. Some will be future dated, and others will be canceled before provisioning activities commence.

The GUI Functional Evaluation test will be conducted in two steps. The initial step will include a small number of test transactions covering a variety of conditions. It will be used to ensure that the base functionality is working. The second step will be to test the functionality in conjunction with other access methods using normal expected volumes. The second step will be executed as a part of "POP5: Normal Volume Performance Testing". The activities listed apply to both steps of "POP1: EDI Functional Evaluation" and "POP5: Normal Volume Performance Testing".

Stress testing will not apply to GUI.

**2.2 Objective**

The objective of this test is to validate the accuracy, completeness, and behavior of the GUI interface to BA-NY for pre-ordering, ordering, and provisioning transaction requests and responses.

### 2.3 Entrance Criteria

| Criteria   | Responsible Party            |
|--|------------------------------|
| All global entrance criteria   | See Table II-3               |
| Identification of GUI data entry/response tracking techniques to be used by the TTG vendor | Ph 2 , Ph 2 Test Mgr.<br>TTG |
| The Test Transaction Generator Vendor must be operationally ready to support GUI           | Ph 2<br>TTG                  |
| BA-NY GUI interface tested and up to the standards required for the test                   | BA-NY                        |
| GUI interface facilities between "Pseudo CLEC" and BA-NY in place and tested               | BA-NY, Ph 2<br>TTG           |
| GUI security and IDs established for work center personnel                                 | BA-NY, Ph 2 Test Mgr.        |
| Multiple GUI workstations in place   | Ph 2 Test Mgr., Ph 2<br>TTG  |
| Initial BA-NY measurement evaluation completed (POP8: BA-NY POP Metrics Evaluation)        | Ph 2 Test Mgr., PSC          |
| BA-NY measurements available at the CLEC level   | BA-NY                        |
| Test bed data bases and facilities in place  | BA-NY                        |
| Test Scenarios selected  | Ph 2 Test Mgr.               |
| Specific Test Cases and expected results developed   | Ph 2 Test Mgr.               |
| Detailed "Go/No Go" checklist created  | Ph 2 Test Mgr.               |
| Specific Evaluation techniques developed   | Ph 2 Test Mgr.               |
| Evaluation Criteria defined and approved   | Ph 2 Test Mgr., PSC          |
| Help Desk log and contact checklist  | Ph 2 Test Mgr.               |
| Provisioning log and activity checklist  | Ph 2 Test Mgr.               |
| Manual jeopardy/delay notification log   | Ph 2 Test Mgr.               |

### 2.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

#### 1. Pre-Ordering

2. Order Processing

3. Provisioning

- 2.5 Scenarios

The specific scenarios to be used in this test can be found in Appendix B.

- 2.6 Test Approach

- 2.6.1 Inputs

1. Test cases and expected results
2. Test case execution schedule
3. TTG Software
4. Documentation (CLEC Handbook, Reseller Handbook, etc.)
5. Trained personnel to execute test cases
6. Test "Go/No Go" checklist
7. Help Desk log and contact checklists
8. Provisioning log and activity checklists
9. Manual jeopardy/delay notification log

- 2.6.2 Activities

1. Use test cases to develop transactions and transaction content based upon instructions provided in the appropriate handbook(s).
2. Submit transactions via the TTG. Submittal date, time and appropriate transaction information logged by TTG.
3. Receive transaction responses via the TTG. Receipt date, time, response transaction type, and response condition (valid vs. reject) logged by TTG.
4. Match transaction response to original transaction via TTG. TTG verifies matching transaction can be found and records mismatches.
5. TTG verifies transaction response contains expected data and flags non-expected errors.
6. Manually review non-expected errors. Identify error source (TTG or BA-NY). Identify and log reason for the error. Determine if test should be discontinued.

7. Contact help desk for support as indicated in test cases and for unexpected errors following the appropriate resolution procedures. Log response time, availability, and other behavior of functions as identified on the help desk checklist.
8. Correct expected errors via manual input for generation through TTG. Re-submittal date, time, and appropriate information logged by the TTG.
9. Identify transactions for which responses have not been received. Where multiple responses are expected for the same request, the receipt of each response will be monitored. Record missing responses.
10. Review status of pending orders. Verify and record accuracy of response.
11. Jeopardy and delay notifications are recognized and logged via the TTG. Any jeopardy or delay notifications not received electronically are logged using the jeopardy/delay notification log.
12. Perform joint testing. Record results using appropriate provisioning log and activity checklist.
13. Perform joint provisioning. Record results using appropriate provisioning log and activity checklist.
14. Test completion on a sampling of the orders that have been provisioned. Record results in appropriate provisioning log and activity checklist.
15. Generate "Pseudo CLEC" reports.
16. Generate BA-NY Carrier to Carrier report for test date range.
17. Compare "Pseudo CLEC" metrics to BA-NY retail metrics.

### 2.6.3 Outputs

1. BA-NY Carrier to Carrier Report
2. Reports that provide the metrics to support the standards of performance defined in various arbitrated agreements

3. Variance between actual performance and the standards of performance defined in various arbitrated agreements
4. Report of expected results versus actual test case results
5. Non-expected error count by type and percentage of total
6. Report of non-expected errors as the result of documentation problems
7. Rejects received after confirmation notification and percentage of total
8. Transaction counts, error ratio, response time, etc. by transaction type, product family and delivery method
9. Minimum, maximum, mean, average, and aggregate response time/interval per transaction set
10. Transaction counts per response time/interval range per transaction set
11. Orders erred after initial confirmation
12. Number of orders that "flowed through" orders by order type, product family, etc.
13. Completed help desk logs and checklists
14. Completed provisioning logs and checklists
15. Completed jeopardy/delay notification logs
16. Help desk accuracy and timeliness report
17. Provisioning accuracy and timeliness report
18. "Pseudo CLEC" to other CLEC comparison
19. TTG measurement reports
20. Measure of parity performance between retail and wholesale
21. Summary report

**2.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

### 3.0 POP3: "Live CLEC" Functional Evaluation

#### 3.1 Description

The "Live CLEC" Functional Evaluation test process provides an alternate test method through the use of live CLEC orders for those ordering and provisioning processes that require long elapsed times or facilities that are not practical to provide in a test bed environment. This test allows for an element of blind testing and tracking performance in a "real world" environment.

The CLECs will be solicited for live orders to support a selection of test cases. Gauges will be put in place at the CLEC location to accurately monitor the test case. Tests will also be monitored within the BA-NY operation. The monitoring will be done by the Phase 2 Test Manager.

Where in-progress live orders can not be obtained, historical information may be used for those complex ordering and provisioning processes that have been in place and stable for a sufficient length of time. Use of historical information instead of live or test orders will be limited to ASR ordering and provisioning functions.

It is anticipated that the "Live CLEC" Functional Evaluation test can be started early in Phase 2. It will start during the preparation period for the other tests and continue through the "Normal Volume" performance testing cycle.

#### 3.2 Objective

The objective of this test is to validate the capability and behavior of BA-NY for pre-ordering, ordering, and provisioning transaction requests and responses for those ordering and provisioning processes that require long elapsed times or facilities that are not practical to provide in a test bed environment.

#### 3.3 Entrance Criteria

| Criteria   | Responsible Party     |
|--|-----------------------|
| All global entrance criteria   | See Table II-3        |
| CLEC gauges identified   | Ph 2 Test Mgr. , CLEC |
| Potential "Live CLEC" test cases selected and expected results defined | Ph 2 Test Mgr., CLEC  |
| "Live CLEC" monitoring checklists developed                            | Ph 2 Test Mgr.        |
| CLEC volunteers identified   | Ph 2 Test Mgr., CLEC  |
| Specific Evaluation techniques developed                               | Ph 2 Test Mgr.        |
| Evaluation Criteria defined and approved                               | Ph 2 Test Mgr., PSC   |
| Help Desk Log and Checklists created                                   | Ph 2 Test Mgr.        |

| Criteria                                     | Responsible Party |
|--|-------------------|
| Ordering and Provisioning Checklists created | Ph 2 Test Mgr.    |
| Jeopardy/Delay notification logs created     | Ph 2 Test Mgr.    |

### 3.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

1. Pre-Ordering
2. Order Processing
3. Provisioning

### 3.5 Scenarios

The specific scenarios that have the potential to be forwarded to the CLECs for live input can be found in Appendix B.

### 3.6 Test Approach

#### 3.6.1 Inputs

1. Test Cases and expected results
2. "Live CLEC" orders
3. CLEC gauges
4. "Live CLEC" monitoring checklists
5. Trained personnel to monitor test cases
6. Help Desk log and contact checklists
7. Ordering and Provisioning checklists
8. Jeopardy/Delay notification log
9. Historical BA-NY and CLEC information

#### 3.6.2 Activities

1. Solicit CLECs for live orders to support a selection of test cases.
2. Record CLEC submissions for testing.
3. Verify accuracy of CLEC gauges.
4. Match submissions to selected test scenarios and test cases.

5. Select submissions that will be included in the live test.
6. Identify scenarios and test cases for which live CLEC input was not received. Identify and record how those scenarios and test cases will be tested.
7. Establish monitoring schedule for "Live CLEC" orders.
8. Monitor submission of live orders.
9. Monitor transaction responses. Receipt date, time, response transaction type, and response condition (valid vs. reject) logged.
10. Verify transaction responses contain expected data. Record errors.
11. Manually review errors. Identify error source (CLEC or BA-NY). Identify and log reason for the error.
12. Monitor contacts to the help desk for support as needed for errors and non-error related assistance. Log response time, availability, and other behavior of functions as identified on the help desk checklist. Log resubmission of transactions after errors have been corrected.
13. Identify transactions for which responses have not been received. Record missing responses.
14. Log any jeopardy or delay notifications.
15. Monitor order stages and provisioning activities. Complete provisioning checklist.
16. Generate "Live CLEC" reports.
17. Compare CLEC metrics to BA-NY metrics for the test case.

### 3.6.3 Outputs

1. Individual test case metrics
2. Reports for each CLEC and summary of all CLECs:
  - Error count by type, and percentage of total
  - Rejects received after confirmation notification and percentage of total

- Transaction counts, error ratio, response time, etc. by transaction type, product family, and delivery
  - Minimum, maximum, mean, average, and aggregate response time/interval per transaction set
  - Transaction counts per response time/interval range per transaction set
  - Reports that provide the metrics to support the standards of performance defined in various arbitrated agreements
  - Help desk accuracy and timeliness report
  - Provisioning accuracy and timeliness report
  - Variance between actual performance and the standards of performance defined in various arbitrated agreements
3. Completed help desk checklists
  4. Completed provisioning checklists
  5. Completed jeopardy/delay notification log
  6. Report of expected versus actual test case results

**3.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**4.0 POP4: Manual Order Process Evaluation**

**4.1 Description**

The Manual Order Process Evaluation Test is a comprehensive review of the processes used to handle orders that have been manually submitted to BA-NY. Manual orders are usually submitted via fax. Test orders will not be submitted manually by the Phase 2 Test Manager unless a scenario calls for an order type that can not be submitted electronically. These manual orders will be tested as a part of the "POP5: "Normal Volume" Performance Test".

Operational analysis techniques will be used to conduct this test. It will rely on the development of various checklists to facilitate a structured walk through of the manual order handling process.

#### 4.2 Objective

The objective of this test is to validate process and procedure used to support manual submission of orders for service.

#### 4.3 Entrance Criteria

| Criteria                     | Responsible Party     |
|------------------------------|-----------------------|
| All global entrance criteria | See Table III-3       |
| Manual Orders Procedures     | Ph 2 Test Mgr.        |
| Interview checklist          | Ph 2 Test Mgr.        |
| Process review checklist     | Ph 2 Test Mgr.        |
| List of people to interview  | BA-NY, Ph 2 Test Mgr. |

#### 4.4 Test Scope

The scope of this test is to verify the procedures used to perform the processes and sub-processes associated to the Test Target Areas when data is submitted manually (examples: paper or fax).

1. Pre-Ordering
2. Order Processing
3. Provisioning

#### 4.5 Scenarios

Not Applicable

#### 4.6 Test Approach

##### 4.6.1 Inputs

1. Manual Order Procedures
2. Interview checklist
3. Process review checklist
4. Personnel to conduct interviews

##### 4.6.2 Activities

1. Review procedure documents.
2. Interview BA-NY personnel.
3. Monitor/walk through process.
4. Complete interview checklists.
5. Complete process review checklist.

6. Create evaluation summary.

#### 4.6.3 Outputs

1. Completed process review checklists
2. Completed interview checklists
3. Evaluation summary

#### 4.7 Exit Criteria

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

### 5.0 POP5: "Normal Volume" Performance Test

#### 5.1 Description

The "Normal Volume" Performance Test is a comprehensive review of the capabilities, response times, intervals, and other compliance measures for all of the elements of the POP domain using projected transaction volumes for the July/December 1999 time frame.

The "Normal Volume" Performance Test will look at an end-to-end view of the service negotiation through provisioning process. It will include a mix of stand-alone pre-ordering and ordering transactions, along with pre-order transactions followed by orders, supplements, and cancels.

Transactions will be submitted using both the EDI and the GUI interface. If a scenario calls for an order type that can not be submitted electronically the request will be faxed as a part of the test activities. "Live CLEC" test orders that happen to be in the pipeline at the time of the test will continue to be monitored.

Not all orders will go through the physical provisioning process. Some will be future dated, and others will be canceled before provisioning activities commence.

In order to test products with longer provisioning intervals it is anticipated that this test will span approximately two weeks. While transactions will be submitted throughout the entire two week period, it is anticipated that only three days during that period will include the projected daily volumes.

This is the second follow-on to both "POP1: EDI Functional Evaluation" and "POP2: GUI Functional Evaluation." All of the attributes and activities that apply to those tests also apply to this test.

## 5.2 Objective

The objective of the "Normal Volume" Performance Test is to measure BA-NY's capability to meet agreed upon functionality and measures of service for projected July/December 1999 Pre-ordering, Ordering, and Provisioning transaction volumes.

## 5.3 Entrance Criteria

| Criteria  | Responsible Party               |
|---|---------------------------------|
| All global entrance criteria  | See Table III-3                 |
| All POP1, POP2 entrance criteria  | See above                       |
| Successful completion of "POP1: EDI - Functional Evaluation"              | BA-NY, Ph 2 Test Mgr., PSC, TTG |
| Successful completion of "POP2: GUI - Functional Evaluation"              | BA-NY, Ph 2 Test Mgr., PSC, TTG |
| Agreement on "normal volumes" and distribution by scenario and entry mode | Ph 2 Test Mgr., PSC             |
| Test Scenarios selected   | Ph 2 Test Mgr.                  |
| Specific Test Cases developed   | Ph 2 Test Mgr.                  |
| Test Case execution schedule developed                                    | Ph 2 Test Mgr.                  |

## 5.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

1. Pre-Ordering
2. Order Processing
3. Provisioning
4. Order "Flow Through"

## 5.5 Scenarios

The specific scenarios to be used in this test can be found in Appendix B.

## 5.6 Test Approach

### 5.6.1 Inputs

1. Test cases (15,000 - 20,000) and expected results
2. Test case execution schedule

3. Documentation (CLEC Handbook, Reseller Handbook, etc.)
4. Personnel to execute test cases
5. Test "Go/No Go" checklist
6. Help Desk log and contact checklists
7. Provisioning log and activity checklists
8. Manual jeopardy/delay notification log

### 5.6.2 Activities

1. Use test cases to develop transactions and transaction content based upon instructions provided in the appropriate handbook(s).
2. Submit EDI and GUI transactions. Submittal date, time and appropriate transaction information are logged.
3. Receive transaction responses via EDI, GUI. Receipt date, time, response transaction type, and response condition (valid vs. reject) are logged.
4. Submit and monitor manual orders if required. Submittal date, time and appropriate transaction information are logged. Receipt date, time, response transaction type, and response condition (valid vs. reject) are logged.
5. Match transaction response to original transaction. Verify matching transaction can be found and record mismatches.
6. Verify transaction response contains expected data and flag non-expected errors.
7. Manually review non-expected errors. Identify error source (TTG or BA-NY). Identify and log reason for the error. Determine if test should be discontinued.
8. Contact help desk for support as indicated in test cases and for unexpected errors following the appropriate resolution procedures. Log response time, availability, and other behavior of functions as identified on the help desk checklist.
9. Correct expected errors. Re-submittal date, time, and appropriate information are logged.

10. Identify transactions for which responses have not been received. Where multiple responses are expected for the same request, the receipt of each response will be monitored. Record missing responses.
11. Review status of pending orders. Verify and record accuracy of response.
12. Jeopardy and delay notifications are recognized and logged. Any jeopardy or delay notifications not received electronically are logged using the jeopardy/delay notification log.
13. Perform joint testing. Record results using appropriate provisioning log and activity checklist.
14. Perform joint provisioning. Record results using appropriate provisioning log and activity checklist.
15. Test completion on a sampling of the orders that have been provisioned. Record results in appropriate provisioning log and activity checklist.
16. Generate "Pseudo CLEC" reports.
17. Generate BA-NY Carrier to Carrier report for test date range.
18. Compare "Pseudo CLEC" metrics to BA-NY retail metrics. Review "Pseudo CLEC" BA-NY measures.
19. Compare "Pseudo CLEC" to aggregate. Identify variance in service levels between "Pseudo CLEC" and live CLEC support.

### 5.6.3 Outputs

1. BA-NY Carrier to Carrier Report
2. Reports that provide the metrics to support the standards of performance defined in various arbitrated agreements
3. Variance between actual performance and the standards of performance defined in various arbitrated agreements
4. Report of expected results versus actual results
5. Non-expected error count by type and percentage of total

6. Rejects received after confirmation notification and percentage of total
7. Report of non-expected errors as the result of documentation problems
8. Transaction counts, error ratio, response time, etc. by transaction type, product family and delivery method
9. Minimum, maximum, mean, average, and aggregate response time/interval per transaction set
10. Transaction counts per response time/interval range per transaction set
11. Orders erred after initial confirmation
12. "Flow through" orders by order type, product family, etc.
13. Completed help desk logs and checklists
14. Completed provisioning logs and checklists
15. Completed jeopardy / delay notification logs
16. Help desk accuracy and timeliness report
17. Provisioning accuracy and timeliness report
18. "Pseudo CLEC" to other CLEC comparison
19. TTG measurement reports
20. Measure of parity performance between retail and wholesale
21. Summary Report

**5.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**6.0 POP6: "Stress Volume" Performance Testing**

**6.1 Description**

The "Stress Volume" Performance Test will identify the capacity and potential choke point of the EDI interface put in place to access pre-ordering information from and submit orders to BA-NY through the use of higher than normal volumes of transactions. The GUI interface will not be stress tested.

Unlike the other tests in this domain, the "Stress Volume" Performance Test will not look at an end-to-end view of the service negotiation process. A subset of the

test case types created for the "POP5: "Normal Volume" Performance Test" will be submitted. Orders will not go through the physical provisioning process. Orders will, however, go through the confirmation process. It will include a mix of stand-alone pre-ordering and ordering transactions, along with pre-order transactions followed by orders, supplements, and cancels. Errors will also be tested.

Transactions will be limited to those that should "flow through" the system without human intervention. The "flow through" criteria in this case apply to supplements, cancels, and errors as well as initial order and pre-ordering transactions. While unexpected errors and orders that fall out for human intervention will be tracked, they will not be corrected or manually submitted into the system. Volumes of different transactions will be generated concurrently from multiple users.

All transactions will be submitted by the TTG via the EDI interface.

This test will be conducted in one day during an off-peak time period in order to limit the impact of the test on live production activities. Transactions volumes will be increased over time until the maximum volumes identified for stress testing have been achieved.

### 6.2 Objective

The objective of the "Stress Volume" Performance Test is to test the capacity and identify the potential choke point of the EDI interface and "flow through" system put in place to access pre-ordering information from and submit orders to BA-NY.

### 6.3 Entrance Criteria

| Criteria  | Responsible Party   |
|---|---------------------|
| All global entrance criteria                                      | See Table III-3     |
| Successful completion of "POP5: "Normal Volume" Performance Test" | Ph 2 Test Mgr., PSC |
| Successful completion of "POP7: Order "Flow Through" Evaluation"  | Ph 2 Test Mgr., PSC |
| Agreed upon stress test volumes and scenario distribution         | Ph 2 Test Mgr., PSC |
| Test Scenarios selected   | Ph 2 Test Mgr.      |
| Specific Test Cases developed                                     | Ph 2 Test Mgr.      |
| Test Case execution schedule developed                            | Ph 2 Test Mgr.      |

## 6.4 Test Scope

The scope for this test includes elements of the following Test Target Area processes and sub-processes:

1. Pre-Ordering
2. Order Processing
3. Provisioning
4. Order "Flow Through"

## 6.5 Scenarios

The specific scenarios to be used in this test can be found in Appendix B.

## 6.6 Test Approach

### 6.6.1 Inputs

1. Test cases and volume
2. Test case execution schedule
3. Personnel to execute test cases
4. Test "Go/No Go" checklist

### 6.6.2 Activities

1. Submit transactions with increasingly larger volumes via the TTG. Submittal date, time and appropriate transaction information logged by TTG.
2. Receive transaction responses via the TTG. Receipt date, time, response transaction type, and response condition (valid vs. reject) logged by TTG.
3. Match transaction response to original transaction via TTG. TTG verifies matching transaction can be found and records mismatches.
4. TTG verifies transaction response contains expected data and flags non-expected errors.
5. Manually review non-expected errors. Identify error source (Pseudo CLEC, TTG, or BA-NY). Identify and log reason for the error. Errors will not be corrected.
6. Identify transactions for which responses were expected in the time frame, but have not been received. Record missing responses.

7. Record system resources usage.
8. Match response times and system resource usage to identify actual or potential choke points.
9. Generate "Pseudo CLEC" reports.

**6.6.3 Outputs**

1. Reports that provide the metrics to support the response time interval standards that apply to sub-set of transactions tested
2. Variance between actual performance and the standards of performance defined in various arbitrated agreements
3. Non-expected error count by type and percentage of total
4. Transactions missing responses by transaction type, product family, and size of transaction
5. Transaction counts, error ratio, response time, etc. by transaction type, product family, and delivery method
6. Minimum, maximum, mean, average, and aggregate response time/interval per transaction set
7. Transaction counts per response time/interval range per transaction set
8. Response time / interval / non-response trend as transactions increased
9. Orders erred after initial confirmation
10. TTG measurement reports
11. Summary report

**6.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**7.0 POP7: Order "Flow Through" Evaluation**

**7.1 Description**

The Order "Flow Through" Evaluation tests the ability of orders to flow through from the CLEC through the interface into the BA-NY ordering system without

any human intervention. Only orders that qualify as "flow through" because they are specifically identified as flow through in the Pre-Filing Agreement or are currently considered to be "flow through" will be tested.

"Flow through" orders will be submitted through both the GUI and the EDI interfaces. Supplements and cancels that are considered to be "flow through" will also be submitted. The order transactions will be monitored to verify that they do not "fall out" for manual handling in the BA-NY work center.

The only errors that will be introduced as a part of this test are those that should result in an automatic error/reject transaction without any human intervention. Planned errors will not be corrected and re-submitted for purposes of this test.

This test could be conducted as a stand alone test or included as a part of the EDI and GUI functional and normal volume testing (POP1, POP2, POP5)

### 7.2 Objective

The objective of the Order "Flow Through" Test is to verify the ability of BA-NY to flow all order types agreed to in the pre-filing agreement from the CLEC through their front end system without manual intervention.

### 7.3 Entrance Criteria

| Criteria   | Responsible Party     |
|--|-----------------------|
| All global entrance criteria                         | See Table III-3       |
| Successful completion of "POP1: EDI Functional Test" | Ph 2 Test Mgr., PSC   |
| Successful completion of "POP2: GUI Functional Test" | Ph 2 Test Mgr., PSC   |
| Test Scenarios selected                              | Ph 2 Test Mgr.        |
| Specific Test Cases developed                        | Ph 2 Test Mgr.        |
| Test Case execution schedule developed               | Ph 2 Test Mgr.        |
| BA-NY manual order handling measures in place        | BA-NY, Ph 2 Test Mgr. |
| Evaluation Criteria defined and approved             | Ph 2 Test Mgr., PSC   |

### 7.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

4. Order "Flow Through"

## 7.5 Scenarios

The specific scenarios to be used in this test can be found in Appendix B

## 7.6 Test Approach

### 7.6.1 Inputs

1. Test Cases and expected results
2. Test case execution schedule
3. TTG Software
4. Trained personnel to execute test cases
5. Test "Go/No Go" checklist

### 7.6.2 Activities

1. Submit order transactions via EDI and the GUI. Submittal date, time and appropriate transaction information logged.
2. Receive transaction responses. Receipt date, time, response transaction type, and response condition (valid vs. reject) logged by TTG.
3. TTG verifies transaction response contains expected data and flags non-expected errors.
4. Identify orders that had manual handling. Identify reason for manual handling. Record for manual handling and order attributes.
5. If there was an error that caused the order not to flow through, identify error source (Pseudo CLEC, TTG, or BA-NY). Identify and log reason for the error. BA-NY errors will not be corrected.
6. Correct any Pseudo CLEC or TTG errors and re-submit. Verify orders now flow through.
7. Verify that all orders submitted are accounted for. Log any orders that are submitted but do not appear as processed or erred by BA-NY.
8. Generate BA-NY manual handling report.
9. Generate "Pseudo CLEC" reports.

### 7.6.3 Outputs

1. Percentage and number of orders that flowed through by order type, product family, etc.
2. Percentage and number of orders that did not flow through by order type, product family, etc.
3. Orders that did not flow through by reason code
4. Variance between actual performance and the standards of performance defined in various arbitrated agreements
5. Report of expected results versus actual results
6. Report of orders not processed
7. BA-NY manual handling report
8. Summary Report

**7.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**8.0 POP8: BA-NY POP Metrics Evaluation**

*8.1 Description*

The POP Process Metrics Evaluation is a comprehensive end-to-end operational analysis of the processes and systems used to capture BA-NY Wholesale pre-ordering, ordering, and provisioning metrics.

This test will use operational analysis techniques. It will rely on the development of various evaluation checklists to facilitate a structured walk through of the metric gathering and reporting processes.

In addition, as one of the activities in the "POP5 - "Normal Volume" Performance Test" there will be a comparison of the BA-NY metrics to those produced as the result of transaction based test data.

**8.2 Objective**

The objective of this test is to evaluate the capture, tracking, and reporting of pre-ordering, ordering, and provisioning metrics required by regulatory bodies.

**8.3 Entrance Criteria**

| Criteria                     | Responsible Party |
|------------------------------|-------------------|
| All global entrance criteria | See Table III-3   |

| Criteria  | Responsible Party     |
|---|-----------------------|
| Interview guide/questionnaire developed for process evaluation    | Ph 2 Test Mgr.        |
| Process evaluation checklists completed                           | Ph 2 Test Mgr.        |
| Report Validation checklist completed and approved                | Ph 2 Test Mgr., PSC   |
| BA-NY POP Process and System specialists available for interviews | BA-NY, Ph 2 Test Mgr. |

#### 8.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

5. BA-NY POP Metrics

#### 8.5 Scenarios

Not Applicable

#### 8.6 Test Approach

##### 8.6.1 Inputs

1. Detailed Operational Test Plan and task checklist
2. BA-NY Metrics Report
3. Interview guide/questionnaire
4. Process evaluation checklists
5. Report Validation checklist
6. Personnel to review procedures and systems and conduct interviews

##### 8.6.2 Activities

1. Review metric reports using report validation checklist.
2. Conduct process evaluation using the process evaluation checklists.
3. Conduct interviews using interview guide/questionnaire.
4. Review historical metrics reports.
5. Complete checklist values.

6. Review POPs 1, 2, and 5 and compare to BA-NY metrics.

**8.6.3 Outputs**

1. A report that shows, for each legally required metric, an evaluation of metric input gathering, calculations, and tracking and reporting
2. Completed report validation checklist
3. Completed process evaluation checklists
4. Completed interview questionnaire

**8.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**9.0 POP 9: POP Documentation Review**

**9.1 Description**

The POP Documentation Evaluation is a comprehensive operational analysis of the pre-ordering, ordering, and provisioning documentation used by CLECs to carry out business processes. This is a high level review intended to make sure documentation prepared and distributed by BA-NY is subject to good management practice.

Operational analysis techniques will be used to evaluate BA-NY's compliance to standards and internal documentation. It will rely on the development of various evaluation checklists to facilitate a structured review of the documentation proper as well as its application in a business environment.

In addition, the documented interface specifications will be reviewed to assess their compliance with industry standards.

The accuracy of the documentation at the functional level, including how to populate EDI transactions, will be verified as a part of the set up and on-going activities required to execute the functional and performance tests listed below:

POP1 - EDI Functional Evaluation

POP2 - GUI Functional Evaluation

POP5 - "Normal Volume" Performance Test

## 9.2 Objectives

The objective of this evaluation is to determine the accuracy, currency, availability, and usability of the POP documentation, and the compliance to industry standards of the relevant POP transactions.

## 9.3 Entrance Criteria

| Criteria   | Responsible Party |
|--|-------------------|
| All global entrance criteria   | See Table III-3   |
| Documentation Evaluation Checklist created to measure the general documentation attributes | Ph 2 Test Mgr.    |
| Standards Compliance Checklist created to measure compliance to standards                  | Ph 2 Test Mgr.    |

## 9.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

6. POP Documentation

## 9.5 Scenarios

Not applicable

## 9.6 Test Approach

### 9.6.1 Inputs

1. Detailed Operational Test Plan and task checklist
2. EDI-8 Standard
3. LSOG 2 Ordering and Provisioning standards
4. LSOG 3 Pre-Ordering standards
5. Documented CLEC/reseller interface agreements
6. CLEC Handbook
7. Re-Sale Handbook
8. GUI training material
9. Other appropriate documentation
10. EDI transaction population instructions
11. Documentation Evaluation Checklist
12. Standards Compliance Evaluation Checklist

**9.6.2 Activities**

1. Conduct documentation evaluation of each document using the documentation evaluation checklist.
2. Conduct compliance to standards evaluation for the EDI interface using standards evaluation checklist.
3. Compile results and create summary reports.

**9.6.3 Outputs**

1. Completed documentation evaluation checklist for each document reviewed
2. Completed standards compliance checklist for the EDI interface
3. Report showing level of BA-NY's compliance to industry standards
4. Summary documentation evaluation report

**9.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**10.0 POP 10: Work Center/Help Desk Support Evaluation****10.1 Description**

The POP Work Center/Help Desk Support Evaluation is a comprehensive operational analysis of the work center/help desk processes developed by BA-NY to provide support to Resellers and CLECs with OSS questions, escalations, problems, and issues related to pre-ordering, ordering, and provisioning. Basic functionality, performance, escalation procedures, and security will be evaluated.

Operational analysis techniques will be used to evaluate BA-NY's work center/help desk support. It will rely on the development of various evaluation checklists to facilitate a structured walk-through of the major work center/help desk processes with BA-NY representatives and to review process documentation.

This test will also involve two types of surveys:

- An evaluation of BA-NY's handling of a recent sample of problems

- An initiation of a series of calls to obtain answers to a standard set of questions

In the first survey, CLECs will be asked to provide recent inquiries from which a sample will be selected to solicit feedback; and in the second, CLECs will be asked to provide a set of questions from which the Phase 2 Test Manager will select a standard set. CLECs will be involved in initiating calls for the second survey.

In addition, the help desk will be accessed and support documented as a part of the following functional and performance tests:

POP1 - EDI Functional Evaluation

POP2 - GUI Functional Evaluation

POP5 - "Normal Volume" Performance Test

### 10.2 Objectives

The objectives of this evaluation are to:

- determine completeness and consistency of work center/help desk processes and responses
- determine whether the escalation procedure is correctly documented, maintained, published and followed
- determine the accuracy, completeness, and functionality of procedures for measuring, tracking, projecting, and maintaining work center/help desk performance
- ensure accuracy and completeness of reasonable security measures to ensure integrity of work center/help desk data and the ability to restrict access to parties with specific access permissions
- ensure the work center/help desk effort has effective management oversight
- ensure responsibilities for performance improvement are defined and assigned

### 10.3 Entrance Criteria

| Criteria   | Responsible Party |
|--|-------------------|
| All global entrance criteria                         | See Table III-3   |
| Work Center/Help Desk Evaluation Checklist completed | Ph 2 Test Mgr.    |

| Criteria  | Responsible Party |
|---|-------------------|
| CLEC Problem Feedback Survey completed                        | Ph 2 Test Mgr.    |
| POP Problem Response Survey with standard questions completed | Ph 2 Test Mgr.    |
| Escalation Procedure Checklist completed                      | Ph 2 Test Mgr.    |

#### 10.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

- POP Work Center / Help Desk Support

#### 10.5 Scenarios

Not applicable

#### 10.6 Test Approach

##### 10.6.1 Inputs

- Work Center/Help Desk Evaluation Checklist
- Escalation Procedures Checklist
- Help Desk Questions/Answers
- CLEC Problem Feedback Survey
- POP Problem Response Survey

##### 10.6.2 Activities

- Conduct work center/help desk evaluation using the Work Center/Help Desk Support Checklist.
- Conduct escalation procedure review using Escalation Procedure Checklist.
- Identify sample set of current problems on which to issue feedback surveys.
- Send CLEC Problem Feedback Surveys to CLECs.
- Receive and compile CLEC Problem Feedback Surveys.
- Initiate calls to work center to ask questions listed on the POP Problem Response Survey.
- Record answers on the POP Problem Response Survey.

8. Compile survey results for both surveys.

**10.6.3 Outputs**

1. Completed Work Center/Help Desk Evaluation Checklist
2. Completed Escalation Procedure Checklist
3. Report summarizing results of CLEC Problem Feedback Surveys
4. Report showing number of times standard questions received valid answers on the POP Problem Response Survey
5. Summary Report

**10.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**11.0 POP11: Provisioning Process Parity Evaluation**

**11.1 Description**

The Provisioning Process Parity Evaluation is a review of the processes, systems, and interfaces that provide provisioning for CLEC and Reseller orders. The review will focus on these areas:

- Order interfaces
- Workflow definitions
- Workforce scheduling
- Memory administration
- Service activation
- Test and acceptance
- Exception handling
- Completion notices

The focus of the evaluation will be "downstream" interfaces from manual processing and the DCAS system that serves as the gateway for all order processing.

As appropriate, provisioning processes for different products and services will be evaluated separately. This will be required in those cases where the process and/or systems used for provisioning are different by product.

An operational analysis technique will be used to evaluate BA-NY's systems and processes for parity with corresponding Retail functions. It will consist of targeted interviews of key development and process-owner personnel along with structured reviews of processes, systems, and interfaces documentation.

### 11.2 Objective

The objective of this evaluation is to determine the degree to which the provisioning environment supporting CLEC and Reseller orders is on parity with internal BA provisioning.

### 11.3 Entrance Criteria

| Criteria  | Responsible Party     |
|---|-----------------------|
| All global entrance criteria  | See Table III-3       |
| Detailed Provisioning Process Parity Evaluation Checklist developed | Ph 2 Test Mgr.        |
| DCAS system documentation available                                 | BA-NY                 |
| Provisioning process documentation available                        | BA-NY                 |
| Technical platforms specifications available                        | BA-NY                 |
| Databases specifications available                                  | BA-NY                 |
| Data communications and interfaces specifications available         | BA-NY                 |
| Interview guide/questionnaire developed                             | Ph 2 Test Mgr.        |
| Interviewees identified and schedule developed                      | BA-NY, Ph 2 Test Mgr. |

### 11.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

8. Provisioning Process Parity

### 11.5 Scenarios

Not Applicable

### 11.6 Test Approach

#### 11.6.1 Inputs

1. Products and services list
2. BA-NY provisioning process documentation
3. Interview guide/questionnaire
4. Interviewees (per process area)
  - Provisioning process owners
  - Provisioning process staff
  - User requirements project leader
  - Technical architect
  - Data architect
  - Data communications architect
5. Interview schedule
6. Detailed Provisioning Process Parity Evaluation Checklist
7. DCAS system documentation
8. Provisioning process documentation
9. Technical platforms specifications
10. Databases specifications
11. Data communications and interfaces specifications

#### 11.6.2 Activities

1. Identify all process documentation needed for review.
2. Identify relevant systems and interfaces.
3. Identify all system documentation available for review.
4. Conduct structured review of documentation using Provisioning Process Parity Evaluation Checklist.
5. Conduct interviews using the interview guides and questionnaires.
6. Inspect physical systems and communications environments.
7. Document findings.

#### 11.6.3 Outputs

1. Completed Provisioning Process Parity Evaluation Checklist
2. Completed interview questionnaires
3. Interview Summaries
4. Summary Findings, Conclusions

**11.7 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

**12.0 POP12: Provisioning Coordination Process Evaluation**

**12.1 Description**

The POP Provisioning Coordination Process Evaluation is a review of the procedures, processes, and operational environment used to support coordinated provisioning with CLECs.

The evaluation will address products and situations that require coordinated provisioning to minimize customer disruption. The requirement for coordination may come from either BA-NY policy or a CLEC request.

An operational analysis test approach will be used to evaluate BA-NY's Provisioning Coordination Processes. It will consist of targeted interviews of key development personnel along with structured reviews of process documentation facilitated by an evaluation checklist. Case studies of actual coordination processes will be created or selected from live situations. The CLECs will be solicited by the test team for live coordination efforts to make up the case studies. Case studies will be selected and tracked in practice to determine process operation.

**12.2 Objective**

The objectives of this evaluation are to:

- determine completeness and consistency of provisioning coordination processes
- determine whether the provisioning coordination processes are correctly documented, maintained, and published
- determine the accuracy, completeness, and functionality of procedures for measuring, tracking, projecting, and maintaining provisioning coordination processes performance

- ensure the provisioning coordination processes have effective management oversight
- ensure responsibilities for provisioning coordination processes performance improvement are defined and assigned

### 12.3 Entrance Criteria

| Criteria   | Responsible Party |
|--|-------------------|
| All global entrance criteria                                   | See Table III-3   |
| CLEC Case Study Request completed                              | Ph 2 Test Mgr.    |
| CLEC Case Study Monitoring Form completed                      | Ph 2 Test Mgr.    |
| Detailed Provisioning Coordination Process Checklist developed | Ph 2 Test Mgr.    |
| Interview Guide/Questionnaire developed                        | Ph 2 Test Mgr.    |

### 12.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

9. Provisioning Coordination Process

### 12.5 Test Approach

#### 12.5.1 Inputs

1. CLEC Case Study Request
2. CLEC Case Study Monitoring Form
3. Provisioning Coordination Process Checklist
4. Interview Guide/Questionnaire

#### 12.5.2 Activities

1. Send CLEC Case Study Requests to CLECs.
2. Receive and compile CLEC case study input suggestions.
3. Select and record case studies to monitor.
4. Monitor case studies and record results on monitoring form.
5. Conduct structured review of documentation using Provisioning Coordination Process Checklist.

6. Conduct interviews with key process personnel using interview guide and questionnaire.
7. Review coordinated provisioning case studies.
8. Document findings.

**12.5.3 Outputs**

1. CLEC Case Study submission and selection matrix
2. Completed CLEC Case Study Monitoring Forms
3. Completed Provisioning Coordination Process Checklist
4. Completed Interview Questionnaires
5. Interview Summaries
6. Summary Findings, Conclusions

**12.6 Exit Criteria**

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All global exit criteria satisfied | See Table III-4   |

**13.0 POP13: Scalability Review**

**13.1 Description**

The POP Scalability Evaluation is a review of the architecture and operational environment supporting the functions of pre-ordering, ordering, and provisioning. The review focuses on the following elements that contribute to scalability:

- Modularity
- Database design
- Technology platform
- Interface design
- Interface technology
- Manual processes
- Technology Architecture
- Data Architecture
- Application Architecture.

The environment reviewed will encompass GUI, manual (paper/FAX) and electronic (EDI) interfaces for the POP functions. In addition to these interfaces, the focus of the review will be the DCAS system that serves as the gateway for all processing, as well as its interfaces to "downstream" and supporting systems.

An operational analysis technique will be used to evaluate BA-NY's systems and processes capacity. This evaluation will be conducted by experienced IT professionals. It will consist of targeted interviews of key development personnel along with structured reviews of system documentation. The findings from the "POP6: 'Stress Volume' Performance Test" will be used as input into the scalability evaluation.

The following personnel will be interviewed for the sub-process areas:

- User requirements project leader
- Technical Architect
- Capacity planner
- Development Project Leader
- Data Architect
- Database Designer
- Application developers
- Web GUI Designer
- Data Communications Architect

### 13.2 Objective

The objective of this evaluation is to determine the degree to which the POP environment can be scaled to accommodate order of magnitude increases in transaction volumes and users.

### 13.3 Entrance Criteria

| Criteria  | Responsible Party     |
|---|-----------------------|
| All global entrance criteria                      | See Table III-3       |
| Availability of documentation identified as input | BA-NY                 |
| Interview Guide/Questionnaire developed           | Ph 2 Test Mgr.        |
| Interviewees identified and scheduled             | BA-NY, Ph 2 Test Mgr. |
| Detailed evaluation checklists developed          | Ph 2 Test Mgr.        |

| Criteria   | Responsible Party        |
|--|--------------------------|
| POP6: "Stress Volume" Performance Test completed | Ph 2 Test Mgr., Ph 2 TTG |

### 13.4 Test Scope

The scope for this test includes the following Test Target Area processes and sub-processes:

#### 10. Scalability Review

### 13.5 Test Approach

#### 13.5.1 Inputs

1. DCAS System Documentation
2. EDI System Specification
3. GUI System Specification
4. Subsystem Designs available
5. Program Structure Specifications
6. Technical Platform Specifications
7. Database Specifications
8. Data Communication Specifications
9. POP6: "Stress Volume" Performance Test results
10. Other (TBD)
11. Interview Guide/Questionnaire
12. Interviewees (see list in description)
13. Interview schedule
14. Scalability Evaluation Checklists

#### 13.5.2 Activities

1. Identify interface, process, and system objects for evaluation.
2. Identify all evaluation objects system documentation available for review.
3. Conduct interviews with key development and support personnel using interview guides and questionnaires.

4. Review evaluation objects, capacity planning methods, tools and reports using the appropriate scalability evaluation checklist.
5. Inspect physical systems and communications environments using the appropriate scalability evaluation checklist.
6. Evaluate/review findings in light of "POP6: 'Stress Volume' Performance Test" measurements to draw or confirm conclusions.
7. Summarize findings.
8. Create report.

**13.5.3 Output**

1. Completed Scalability Evaluation Checklists
2. Completed interview questionnaires
3. Interview Summaries
4. Summary Findings, Conclusions

**13.6 Exit Criteria**

| Criteria                 | Responsible Party |
|--------------------------|-------------------|
| All global exit criteria | See Table III-4   |

## V. Maintenance and Repair Domain Test Section

### A. Purpose

The purpose of this section is to define the specific tests to be undertaken in evaluating the systems, processes, and other operational elements associated with Bell Atlantic's support for Wholesale Maintenance and Repair activities. The goal of these tests is to provide a basis for comparing this operational area to parallel systems and processes supporting Bell Atlantic's Retail Operations.

### B. Organization

The Maintenance and Repair domain is organized into seven primary Test Target Areas, which represent the key focus areas for testing in this domain.

The Test Target Areas are:

- Repair Trouble Administration System (RETAS)
- M&R process performance measurements
- The wholesale M&R process
- M&R process and systems documentation
- Wholesale M&R work center support (includes resale and unbundled services support centers, RSSC and RCCC)
- Network surveillance support
- M&R coordination

One or more tests have been developed to evaluate each Test Target Area dependent on the scope of testing required in each area. The Test Target Areas, and associated processes, sub-processes, and/or operational elements to be evaluated are documented in Section C. – Scope. Each specific test is described in Section D. – Test Processes below.

### C. Scope

The purpose of this section is to identify the system, process, and related operational areas that will be evaluated within the Maintenance and Repair domain and to identify any related areas which are out of scope.

### *1.0 In Scope*

The testing to be performed in each Test Target Areas varies based on the nature of the specific target. In general, the areas which focus on operational support systems dedicated to wholesale support will require testing to evaluate basic functional capabilities, comparative functionality to retail, performance under projected normal transaction volumes, and stress/load testing. Process performance measures will be reviewed to determine their validity and accuracy. End-to-end process testing will evaluate wholesale performance metrics relative to retail. Functions within the process will also be evaluated to identify inconsistencies between wholesale and retail and potential bottleneck areas.

Applicable published documentation will be reviewed for accuracy, completeness, and effectiveness in use. Work Center operations and procedures will be tested to determine timeliness, accuracy, and effectiveness. Additional ancillary operations and procedures will also be reviewed.

### *2.0 Out of Scope*

Capacity of the end-to-end M&R process will not be directly tested, as this would require the addition of trained personnel to existing work groups. It would also result in a large number of erroneous dispatch requests, causing substantial disruption to normal repair activities and adversely impacting customer service. As the M&R process for wholesale services is fully integrated with Retail operations once the trouble report has been entered, it is reasonable to assume that Bell Atlantic will be able to accommodate incremental growth in troubles as a function of an expanded service and facility base due to competition.

### *3.0 Test Target Areas in the M&R Domain*

For each Test Target Area the charts below depict the major process areas, sub-processes, and dimensions to be measured, as well as the evaluation measures, techniques, and criteria types to be applied. Measurement details are listed in Appendix D.

#### **3.1 Repair Trouble Administration System (RETAS )**

Table V-1 depicts processes and sub-process elements of RETAS to be evaluated.

**Table V-1 Test Target: RETAS**

| Functionality             | Test Target                       | Test Target Description                                      | Test Method              | Test Results                       |
|---------------------------|-----------------------------------|--|--------------------------|------------------------------------|
| Trouble Reporting         | Create/Enter Trouble Reports (TR) | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
|                           | Modify TRs                        | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
|                           | Close/Cancel TRs                  | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
|                           | Retrieve TR Status                | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
| Trouble History Access    | Retrieve Trouble History          | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
| Access To Test Capability | Initiate MLT Test                 | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
|                           | Receive MLT Test Results          | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
|                           | Initiate SARTS Test               | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |
|                           | Receive SARTS Test Results        | Functionality exists as documented<br>Timeliness of Response | Inspection<br>Inspection | Existence<br>Qualitative<br>Parity |

**Table V-1 Test Target: RETAS**

| Performance Area | Test Process                           | Performance Measure                               | Evaluation Technique              | Output Type                 |
|------------------|--|---|-----------------------------------|-----------------------------|
| Performance      | Projected Normal Loads                 | Timeliness of Response<br>Operability             | Inspection<br>Transaction Logging | Qualitative<br>Quantitative |
|                  | Stress/Load                            | Timeliness of Response<br>Operability<br>Capacity | Inspection<br>Transaction Logging | Quantitative<br>Qualitative |
|                  | System Availability                    | Availability                                      | Inspection<br>Case Study          | Parity                      |
| Function-ability | Functional Equivalence to STARREP/SIMS | Existence of Specific Function                    | Inspection                        | Parity<br>Qualitative       |
| Scalability      |  | Scalability                                       | Inspection                        | Qualitative<br>Quantitative |

RETAS functionality will be reviewed within the context of specific documentation addressing its use and in comparison to its retail analog STARREP/SIMS. Its performance will be evaluated under normal projected loads and in a stress/load test mode. In addition, its scalability will be assessed. As RETAS is a subsystem of DCAS, performance testing and the scalability evaluation will be integrated with those elements of DCAS.

**3.2 M&R Process Performance Measurements**

Table V-2 depicts the processes and sub-processes to be evaluated in this Test Target Area.

**Table V-2: Test Target: M&R Process Performance Measurements**

| Process Area             | Sub-Process  | Performance Measure | Evaluation Technique | Output Type |
|--------------------------|--|---------------------|----------------------|-------------|
| Retail Metrics Processes | Network Trouble Report Rate Measurement Process      | Accuracy            | Inspection           | Qualitative |
|                          | Percentage of Subsequent Reports Measurement Process | Accuracy            | Inspection           | Qualitative |

**Table V-2: Test Target: M&R Process Performance Measurements**

| Program Area                | Test Process   | Primary Metrics                   | Evaluation Methodology | Qualification Type          |
|-----------------------------|--|-----------------------------------|------------------------|-----------------------------|
|                             | Missed Appointments Measurement Process              | Accuracy                          | Inspection             | Qualitative                 |
|                             | Repair Interval Measurement Process                  | Accuracy                          | Inspection             | Qualitative                 |
| Wholesale Metrics Processes | Network Trouble Report Rate Measurement Process      | Accuracy<br>Equivalence to Retail | Inspection             | Qualitative                 |
|                             | Percentage of Subsequent Reports Measurement Process | Accuracy<br>Equivalence to Retail | Inspection             | Qualitative Parity          |
|                             | Missed Appointments Measurement Process              | Accuracy<br>Equivalence to Retail | Inspection             | Qualitative Parity          |
|                             | Repair Interval Measurement Process                  | Accuracy<br>Equivalence to Retail | Inspection             | Qualitative Parity          |
| RETAS                       | Response Time Measures                               | Accuracy                          | Inspection             | Qualitative<br>Quantitative |
|                             | System Availability Measures                         | Accuracy<br>Equivalence to Retail | Inspection             | Quantitative                |

In the M&R process performance measurements Test Target Area, the processes for calculating the relevant metrics will be reviewed to evaluate the accuracy and validity of the metrics and to determine the equivalence of wholesale metrics to their retail analogs where they exist. RETAS response time and availability performance measures will be also be evaluated.

3.3 Wholesale M&R Process

Table V-3 depicts the specific functions to be evaluated in the wholesale maintenance and repair process Test Target Area.

Table V-3 Test Target: Wholesale M&R Process

| Process Area                          | Subprocess                            | Measurement Strategy                   | Evaluation Technique   | Criteria Type               |
|---------------------------------------|---------------------------------------|--|------------------------|-----------------------------|
| Trouble Report Processing - Resale    | Test Trouble (CLEC via RETAS)         | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Determine Dispatch Requirement (CLEC) | Accuracy of Test Information           | Inspection             | Qualitative                 |
|                                       | Enter Trouble Report (CLEC)           | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Receive Response (CLEC)               | Timeliness                             | Inspection             | Quantitative                |
|                                       | Receive Error Notification (CLEC)     | Timeliness<br>Accuracy<br>Completeness | Inspection             | Quantitative<br>Qualitative |
|                                       | Correct Trouble Report (CLEC)         | Accuracy                               | Inspection             | Qualitative                 |
|                                       | Dispatch Trouble (ILEC)               | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Clear/Close Trouble Report (ILEC)     | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Issue IDC/MSC                         | Accuracy                               | Inspection             | Qualitative                 |
|                                       | Issue OQS Reports                     | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
| Trouble Report Processing - UNE/UNE-P | Test Trouble (CLEC)                   | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Determine Dispatch Requirement (CLEC) | Accuracy of Test Information           | Inspection             | Qualitative                 |
|                                       | Enter Trouble Report (CLEC)           | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Receive Response                      | Timeliness                             | Inspection             | Quantitative                |
|                                       | Receive Error Notification            | Timeliness<br>Accuracy<br>Completeness | Inspection             | Quantitative<br>Qualitative |
|                                       | Correct Trouble Report                | Accuracy                               | Inspection             | Qualitative                 |
|                                       | Dispatch Trouble (ILEC)               | Accuracy<br>Timeliness                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Clear/Close Trouble Report (ILEC)     | Accuracy<br>Timeliness                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Issue IDC/MSC                         | Accuracy                               | Inspection             | Qualitative                 |
|                                       | End to End Process - Resale           | Measurements                           | Comparison With Retail | Inspection                  |

**Table V-3 Test Target: Wholesale M&R Process**

| Process Area                   | Sub-Process   | Evaluation Metrics     | Evaluation Methods                   | Evaluation Type |
|--------------------------------|---------------|------------------------|--------------------------------------|-----------------|
| End to End Process - Resale    | Process Flows | Comparison with Retail | Inspection                           | Qualitative     |
| End to End Process - UNE/UNE-P | Measurements  | Comparison With Retail | Inspection                           | Quantitative    |
| End to End Process - UNE/UNE-P | Process Flows | Comparison with Retail | Inspection                           | Qualitative     |
| Manual Handling - Resale       |               | Accuracy<br>Timeliness | Observation<br>Logging<br>Interviews | Qualitative     |
| Manual Handling - UNE/UNE-P    |               | Accuracy<br>Timeliness | Observation<br>Logging<br>Interviews | Qualitative     |

Both resale and UNE/UNE-P operations will be reviewed by using CLEC test cases and following them through the M&R process. The functional equivalence of M&R processing of wholesale and retail trouble reports will be evaluated by using the existing set of M&R metrics being reported by Bell Atlantic. Process flow documentation will be reviewed, if available, and manual handling requirements will be captured and analyzed.

**3.4 M&R Process and Systems Documentation**

M&R documentation will be reviewed both in a standalone mode and within the context of its use, correctness, and completeness in performing trouble activities as part of RETAS and M&R process testing/evaluations.

**Table V-4 Test Target: M&R Process and Systems Documentation**

| Process Area      | Sub-Process                         | Evaluation Metrics                  | Evaluation Methods            | Evaluation Type |
|-------------------|-------------------------------------|-------------------------------------|-------------------------------|-----------------|
| M&R Documentation | CLEC Handbook (M&R Sections)        | Clarity<br>Accuracy<br>Completeness | Inspection<br>Document Review | Qualitative     |
|                   | Resale Handbook (M&R Sections)      | Clarity<br>Accuracy<br>Completeness | Inspection<br>Document Review | Qualitative     |
|                   | RETAS CLEC Student Training Guide   | Clarity<br>Accuracy<br>Completeness | Inspection<br>Document Review | Qualitative     |
|                   | RETAS Resale Student Training Guide | Clarity<br>Accuracy<br>Completeness | Inspection<br>Document Review | Qualitative     |

**Table V-4 Test Target: M&R Process and Systems Documentation**

| Test Target Area | Call Process                       | Problem Tracking                    | Resolution                    | Qualitative |
|------------------|------------------------------------|-------------------------------------|-------------------------------|-------------|
|                  | CLEC Training Guide (M&R Sections) | Clarity<br>Accuracy<br>Completeness | Inspection<br>Document Review | Qualitative |
|                  | RETAS Online Help                  | Clarity<br>Accuracy<br>Completeness | Inspection                    | Qualitative |
|                  | Other (TBD)                        | Clarity<br>Accuracy<br>Completeness | Inspection                    | Qualitative |

**3.5 Wholesale M&R Work Center Support**

Wholesale M&R support centers will be targeted for analysis per the following Test Target Area matrix in addition to the manual handling analysis referred to under the M&R process Test Target Area:

**Table V-5 Test Target: Wholesale M&R Work Center Support**

| Test Target Area                | Call Process         | Problem Tracking       | Resolution                           | Qualitative |
|---------------------------------|----------------------|------------------------|--------------------------------------|-------------|
| Call Processing                 | Call Answer          | Speed of Answer        | Inspections<br>Logging<br>Interviews | Qualitative |
|                                 | Call Logging         | Accuracy               | Inspections<br>Logging<br>Interviews | Qualitative |
|                                 | Prioritization       | Existence<br>Accuracy  | Inspections<br>Logging<br>Interviews | Qualitative |
| Problem Tracking and Resolution | Documentation        | Clarity<br>Accuracy    | Document Review<br>Interviews        | Qualitative |
|                                 | Identify and Resolve | Timeliness<br>Accuracy | Inspections<br>Logging<br>Interviews | Qualitative |
|                                 | Track Problem        | Existence              | Inspections<br>Logging<br>Interviews | Qualitative |
|                                 | Log Status and Close | Accuracy               | Inspections<br>Logging<br>Interviews | Qualitative |
|                                 | Notify Customer      | Timeliness             | Inspections<br>Logging<br>Interviews | Qualitative |
| Expedite/ Escalation Procedures | Documentation        | Clarity<br>Accuracy    | Document Review<br>Interviews        | Qualitative |

**Table V-5 Test Target: Wholesale M&R Work Center Support**

| Process Area              | Sub-Process             | Evaluation Measure                  | Evaluation Technique                 | Critical Type |
|---------------------------|-------------------------|-------------------------------------|--------------------------------------|---------------|
|                           | Call Answer             | Accessibility<br>Speed of Answer    | Inspections<br>Logging<br>Interviews | Qualitative   |
|                           | Escalation<br>Logging   | Accuracy                            | Inspections<br>Logging<br>Interviews | Qualitative   |
|                           | Identify and<br>Resolve | Timeliness                          | Inspections<br>Logging<br>Interviews | Qualitative   |
|                           | Log Status and<br>Close | Accuracy                            | Inspections<br>Logging<br>Interviews | Qualitative   |
|                           | Notify Customer         | Timeliness                          | Inspections<br>Logging<br>Interviews | Qualitative   |

### 3.6 Network Surveillance Support

The table below depicts the process areas and sub-processes to be evaluated in the Test Target Area. The evaluation is focused on the existence and effectiveness of processes and documented procedures to address CLEC/ILEC interactions.

**Table V-6 Test Target: Network Surveillance Support**

| Process Area            | Sub-Process                             | Evaluation Measure                  | Evaluation Technique           | Critical Type               |
|-------------------------|---|-------------------------------------|--------------------------------|-----------------------------|
| Network<br>Surveillance | IOF Surveillance                        | Existence                           | Interviews<br>Procedure Review | Quantitative<br>Qualitative |
|                         | AIN/SS7<br>Interconnect<br>Surveillance | Existence                           | Interviews<br>Procedure Review | Quantitative<br>Qualitative |
| Outage<br>Notification  | Process<br>Documentation                | Clarity<br>Accuracy<br>Completeness | Interviews<br>Document Review  | Qualitative                 |

### 3.7 M&R Coordination

The table below depicts the process areas and sub-processes to be evaluated in the Test Target Area. The evaluation is focused on the existence and

effectiveness of processes and documented procedures to address CLEC/ILEC interactions.

**Table V-7 Test Target: M&R Coordination**

| Test Process          | Test Target             | Test Objectives (M&R)               | Evaluation Technique          | Output Type |
|-----------------------|-------------------------|-------------------------------------|-------------------------------|-------------|
| Joint Meet Procedures | Process Documentation   | Clarity<br>Accuracy<br>Completeness | Interviews<br>Document Review | Qualitative |
|                       | Notification Procedures | Timeliness<br>Accuracy              | Interviews                    | Qualitative |
| Coordinated Testing   | Process Documentation   | Clarity<br>Accuracy<br>Completeness | Interviews<br>Document Review | Qualitative |
|                       | Notification Procedures | Timeliness<br>Accuracy              | Interviews                    | Qualitative |
| Other (TBD)           |                         |                                     |                               |             |

#### D. Test Processes

This section describes the specific evaluations/tests to be performed in the analysis of Bell Atlantic's support of Wholesale Maintenance and Repair operations. Testing in this domain has been broken down into nine separate evaluations:

- M&R1: RETAS Functional Evaluation
- M&R2: RETAS Performance Evaluation
- M&R3: RETAS Scalability Evaluation
- M&R4: M&R Process Performance Measurements Evaluation
- M&R5: M&R Process Evaluation
- M&R6: M&R Documentation Review
- M&R7: M&R Work Center(s) Support Evaluation
- M&R8: Network Surveillance Support Evaluation
- M&R9: M&R Coordination Evaluation

Following are detailed descriptions of each test:

##### **1.0 M&R1: RETAS Functional Evaluation**

###### **1.1 Description**

The RETAS Functional Evaluation is a comprehensive review of all of the functional elements of the RETAS System, their conformance to documented

specifications, and an analysis of its functionality in comparison to Bell Atlantic's Retail system analog, STARREP/SIMS. The test has two major phases, Phase 1 – a basic functional evaluation, and Phase 2 – a comparative functional evaluation.

**1.2 Objective**

The objective of this test is to validate the existence and behavior of RETAS functional elements as documented in CLEC and RETAS Training Guides and other applicable documents, and to evaluate the equivalence of RETAS functionality to STARREP/SIMS.

**1.3 Entrance Criteria**

| Criteria   | Responsible Party |
|--|-------------------|
| Global Entrance Criteria have been satisfied             | See Table III-3   |
| Detailed Test Plan completed                             | Ph 2 Test Mgr.    |
| Test Scenarios selected                                  | Ph 2 Test Mgr.    |
| Specific Test Cases and Transaction Sets developed       | Ph 2 Test Mgr.    |
| Basic documentation review completed                     | Ph 2 Test Mgr.    |
| Detailed Functional Checklist created                    | Ph 2 Test Mgr.    |
| Test bed of working services selected and/or established | BA-NY             |
| Specific Evaluation techniques developed                 | Ph 2 Test Mgr.    |
| Physical access to Bell Atlantic Web site established    | BA-NY             |
| Security access to RETAS established                     | BA-NY             |
| Evaluation Criteria defined and approved                 | PSC               |
| Checklists and Interview Guides created                  | Ph 2 Test Mgr.    |

**1.4 Test Scope**

*Table V-8 Test Target: M&R RETAS Functional Evaluation*

| Process Area      | Sub-Process                      | Evaluation Objectives   | Evaluation Technique | Quality Type                       |
|-------------------|----------------------------------|---|----------------------|------------------------------------|
| Trouble Reporting | Create/Enter Trouble Report (TR) | Functionality exists as documented<br>Timeliness              | Inspection           | Existence<br>Qualitative<br>Parity |
|                   | Modify TR                        | Functionality exists as documented<br>Usability<br>Timeliness | Inspection           | Existence<br>Qualitative<br>Parity |

**Table V-8 Test Target: M&R RETAS Functional Evaluation**

| Test Case                 | Test Case Description                  | Test Case Objectives  | Test Case Method      | Test Case Results                  |
|---------------------------|--|---|-----------------------|------------------------------------|
|                           | Close/Cancel TR                        | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
|                           | Retrieve TR Status                     | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
| Trouble History Access    | Retrieve Trouble History               | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
| Access To Test Capability | Initiate MLT Test                      | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
|                           | Receive MLT Test Results               | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
|                           | Initiate SARTS Test                    | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
|                           | Receive SARTS Test Results             | Functionality exists as documented<br>Usability<br>Timeliness | Inspection            | Existence<br>Qualitative<br>Parity |
| Functionality             | Functional Equivalence to STARREP/SIMS | Existence of Specific Function                                | Inspection Interviews | Parity<br>Qualitative              |

### 1.5 Scenarios

The specific scenarios to be used in this test are identified in Appendix B.

### 1.6 Test Approach

This test is broken down into two phases:

- Phase 1 involves the use of GUI test cases created for this test to evaluate RETAS functionality and to determine if the system behaves as documented. General usability and timeliness of the basic functions will also be assessed.
- Phase 2 involves observation and interviews of Retail customer service attendants (CSA) processing trouble calls and entering

trouble reports into STARREP and SIMS (Retail analogs to RETAS) to assess functionality in comparison to RETAS.

### 1.6.1 Inputs

1. Test cases (10 to 20)
2. Documentation (RETAS Student Guide, etc.)
3. Functionality checklists
4. Interview guide
5. Personnel to execute test cases
6. Personnel to interview retail and observe their use of STARREP and SIMS

### 1.6.2 Activities - Phase 1

1. Use GUI test cases created for this test and appropriate Bell Atlantic documentation to perform each of the functions listed on the checklist provided via the RETAS GUI interface.
2. Verify that each system function behaves as documented.
3. Note any anomalies in the space provided on the checklist.
4. Note any discrepancies between RETAS documentation and behavior.
5. Ensure that all trouble reports entered in RETAS have been canceled.

### 1.6.3 Activities - Phase 2

1. Use the checklist and interview guide to conduct interviews with several (5 to 10) CSAs selected at random from the Residence and Business M&R work centers.
2. Observe CSA trouble report activities as identified on the checklist provided.
3. Note the presence and behavior of functions identified on the checklist.
4. Identify any anomalies relative to the functions being observed.

5. Note any additional relevant information from the CSA interview (e.g., additional capabilities, performance, etc.).
6. Determine and document any M&R functions that can be performed from a STARREP or SIMS Workstation that are not available in RETAS.
7. Perform a detailed evaluation of relative functionality and capabilities between RETAS and STARREP/SIMS.

### 1.6.5 Activities - Common

1. Document the results and findings from the activities conducted in Phases 1 and 2.

### 1.6.6 Outputs

1. Completed checklists from Phases 1 and 2 activities
2. Completed interview summaries
3. Summary reports of findings from each phase, including a discussion of anomalies and relevant observations relating to usability and timeliness of each system interface
4. A Summary report comparing relative functionality in RETAS and STARREP highlighting differences and contrasting ease of use of the two systems in performing the functions observed

### 1.7 Exit Criteria

| Criteria   | Responsible Party |
|--|-------------------|
| Global exit criteria have been satisfied                                 | See Table III-4   |
| All activities completed   | Ph 2 Test Mgr.    |
| Checklists and reports completed by personnel participating in the test. | Ph 2 Test Mgr.    |

## 2.0 M&R2: RETAS Performance Evaluation

### 2.1 Description

The RETAS performance evaluation is a transaction driven test designed to evaluate the behavior of the RETAS system and its interfaces under load conditions. This test will be conducted twice. The first execution will use transaction sets established to simulate projected volumes for peak busy hour

and peak busy day operation EOY 1999. The second execution will use a multiple of the volumes used in the first execution. As RETAS is a sub-system of the DCAS system, this test must be executed at the same time as the DCAS performance test.

**2.2 Objective**

The objective of this test is to evaluate the behavior of RETAS under load conditions, to determine system performance in terms of response time and operability, and to identify future performance bottlenecks.

**2.3 Entrance Criteria**

| Criteria   | Responsible Party |
|--|-------------------|
| Global entrance criteria have been satisfied   | See Table III-3   |
| Test transaction generator has been fully tested and is operational for the submission of GUI test cases | Ph 2 TTG          |
| Test transaction sets have been built and validated  | Ph 2 Test Mgr.    |
| System test bed has been established   | BA-NY             |
| RETAS/DCAS test coordination details have been worked out  | Ph 2 Test Mgr.    |

**2.4 Test Scope**

*Table V-9 Test Target: M&R RETAS Performance Evaluation*

| Performance Area | Subcategory            | Transaction Measure                   | Evaluation Technique                 | Output Type                 |
|------------------|------------------------|---------------------------------------|--------------------------------------|-----------------------------|
| Performance      | Projected Normal Loads | Timeliness<br>Operability             | Inspection<br>Transaction Generation | Qualitative<br>Quantitative |
|                  | Stress/Load            | Timeliness<br>Operability<br>Capacity | Inspection<br>Transaction Generation | Qualitative<br>Quantitative |

**2.5 Scenarios**

The specific scenarios to be used in this test are identified in Appendix B.

**2.6 Test Approach**

This test uses the TTG to submit RETAS GUI test transactions to RETAS. The transaction sets are structured to provide a transaction mix consistent with current system usage, projected normal volumes, and stress/load volumes. Submission rates should mirror peak busy hour and peak busy day behaviors.

### 2.6.1 Inputs

1. Test cases and transaction sets
2. Personnel to operate test transaction generator
3. Personnel to supervise and observe test execution
4. DCAS/RETAS systems and associated test beds
5. Test transaction generator

### 2.6.2 Activities

1. Feed transaction sets to DCAS/RETAS using the test transaction generator.
2. Periodically exercise RETAS functionality manually during test execution.
3. Observe and capture observations from (2) above in terms of performance and operability.
4. Capture transaction performance statistics via data test generator (automatic).
5. Capture transaction performance statistics via DCAS/RETAS (automatic).
6. Monitor DCAS/RETAS system interfaces to identify any bottleneck conditions (Bell Atlantic system personnel).
7. Ensure that all generated trouble reports have been canceled/closed.
8. Reset test bed for next test (if required) or clean up production databases (Bell Atlantic).
9. Execute test once with normal projected transaction volumes and once with stress/load volumes.
10. Analyze performance reports.
11. Review execution and observation reports.
12. Document results and generate summary report.

### 2.6.3 Outputs

1. Test execution and observation reports
2. Test transaction generator performance reports
3. DCAS/RETAS performance reports
4. Summary report

**2.7 Exit Criteria**

| Criteria                                 | Responsible Party |
|--|-------------------|
| Global exit criteria have been satisfied | See Table III-4   |

**3.0 M&R3: RETAS Scalability Evaluation****3.1 Description**

The RETAS scalability evaluation is a detailed review of the architecture and development environment of the RETAS application, focusing on modularity, database design, technology platform, interface design, development methodologies and practices, and other technology architecture, data architecture, and application architecture elements to determine its scalability. Use of standard development methodologies and conformance to IT industry standards and guidelines will also be assessed.

As RETAS is a subsystem of DCAS, this evaluation will be done as a part of the DCAS scalability evaluation.

**3.2 Objective**

The objective of this evaluation is to determine the degree to which the RETAS application can be scaled to accommodate order of magnitude increases in transaction volumes and users.

**3.3 Entrance Criteria**

| Criteria                                      | Responsible Party |
|---|-------------------|
| Global entrance criteria satisfied            | See Table III-3   |
| RETAS system documentation available          | BA-NY             |
| – system specification                        | BA-NY             |
| – subsystem design                            | BA-NY             |
| – program structure specification             | BA-NY             |
| – technical platform specification            | BA-NY             |
| – database specifications                     | BA-NY             |
| – data communication specifications           | BA-NY             |
| – other (TBD)                                 | BA-NY             |
| Scalability evaluation matrix developed       | Ph 2 Test Mgr.    |
| Interview guide/questionnaire developed       | Ph 2 Test Mgr.    |
| Development personnel available for interview | BA-NY             |

### 3.4 Test Scope

*Table V-10 Test Target: M&R RETAS Scalability Evaluation*

| Test Target       | Test Objective | Test Method | Test Approach         | Test Type   |
|-------------------|----------------|-------------|-----------------------|-------------|
| RETAS Scalability |                | Scalability | Inspection Interviews | Qualitative |

### 3.5 Scenarios

Scenarios are not used in this test.

### 3.6 Test Approach

This evaluation will be conducted by experienced IT professionals and will consist of targeted interviews of key development personnel along with structured reviews of system documentation.

The following personnel will be interviewed:

- User requirements project leader
- User requirements developer
- Technical architect
- Development project leader
- Data architect
- Database designer
- Data administrator
- Application developers
- Testing administrator
- Web GUI designer
- Data communications architect

#### 3.6.1 Inputs

1. Scalability evaluation matrix
2. Scalability evaluation interview guides
3. Personnel to perform evaluation

#### 3.6.2 Activities

1. Identify all system documentation available for review.
2. Conduct structured review of documentation.
3. Conduct interviews with key development and support personnel.
4. Document findings.

**3.6.3 Outputs**

1. Completed scalability evaluation matrix
2. Interview summaries
3. Summary findings and conclusions

**3.7 Exit Criteria**

| Criteria                                       | Responsible Party |
|--|-------------------|
| Global exit criteria have been satisfied       | See Table III-4   |
| Documentation reviews completed.               | Ph 2 Test Mgr.    |
| Interviews completed.                          | Ph 2 Test Mgr.    |
| Products (outputs) documented above completed. | Ph 2 Test Mgr.    |

**4.0 M&R4: M&R Process Performance Measurements Evaluation**

**4.1 Description**

The M&R process performance measurements evaluation is a thorough operational analysis of the processes and systems used to capture Bell Atlantic wholesale Maintenance and Repair metrics and their retail analogs, where they exist. It is an evaluation of the statistical validity of the measures, themselves, and a determination of the equivalence between retail and wholesale metrics.

**4.2 Objective**

The objective of this test is to evaluate the accuracy of Bell Atlantic performance measures of its Maintenance and Repair process as established in the interim guidelines for carrier-to-carrier performance standards and reports. The purpose is to determine their applicability/usability in testing the parity of Bell Atlantic's wholesale and retail Maintenance and Repair processes. The intent is to utilize existing metrics along with sampled CLEC trouble cases in evaluating the equivalence of Bell Atlantic's wholesale and retail Maintenance and Repair operations in a subsequent test (see M&R5 below).

**4.3 Entrance Criteria**

| Criteria | Responsible Party |
|----------|-------------------|
|----------|-------------------|

| Criteria  | Responsible Party |
|---|-------------------|
| Global entrance criteria satisfied  | See Table III-3   |
| Detailed operational analysis plan developed                                  | Ph 2 Test Mgr.    |
| Task checklist developed.   | Ph 2 Test Mgr.    |
| Metrics analysis matrix developed   | Ph 2 Test Mgr.    |
| Bell Atlantic M&R metrics process and systems experts available for interview | BA-NY             |
| Interview guide/questionnaire developed                                       | Ph 2 Test Mgr.    |
| All applicable carrier-to-carrier performance measures in place               | BA-NY             |

4.4 Test Scope

*Table V-11 Test Target: M&R Process Performance Measurements Evaluation*

| Process Area                | Measurement Process                                  | Measurement Objective          | Evaluation Methods   | Criteria Type      |
|-----------------------------|--|--------------------------------|----------------------|--------------------|
| Retail Metrics Processes    | Network Trouble Report Rate Measurement              | Accuracy                       | Inspection Interview | Qualitative        |
|                             | Percentage of Subsequent Reports Measurement Process | Accuracy                       | Inspection Interview | Qualitative        |
|                             | Missed Appointments Measurement Process              | Accuracy                       | Inspection Interview | Qualitative        |
|                             | Repair Interval Measurement Process                  | Accuracy                       | Inspection Interview | Qualitative        |
| Wholesale Metrics Processes | Network Trouble Report Rate Measurement              | Accuracy Equivalence to Retail | Inspection Interview | Qualitative Parity |
|                             | Percentage of Subsequent Reports Measurement Process | Accuracy Equivalence to Retail | Inspection Interview | Qualitative Parity |
|                             | Missed Appointments Measurement Process              | Accuracy Equivalence to Retail | Inspection Interview | Qualitative Parity |

**Table V-11 Test Target: M&R Process Performance Measurements Evaluation**

| Process Area | Sub-Process                                   | Evaluation Metric              | Evaluation Technique | Control Type             |
|--------------|---|--------------------------------|----------------------|--------------------------|
|              | Repair Interval Measurement Process           | Accuracy Equivalence to Retail | Inspection Interview | Qualitative Parity       |
|              | Percentage Cleared within 24 Hours - Specials | Accuracy Equivalence to Retail | Inspection Interview | Qualitative Parity       |
| RETAS        | Response Time Measures                        | Accuracy                       | Inspection Interview | Qualitative Quantitative |

#### 4.5 Scenarios

Scenarios are not utilized in this test.

#### 4.6 Test Approach

This test utilizes operational analysis techniques, structured interviews with Bell Atlantic subject matter experts, and reviews of involved metrics data capture and reporting procedures and systems (e.g. NAMS, NORD) to evaluate the accuracy/validity of wholesale M&R process metrics. It also assesses the equivalence of the methodology used in the production of wholesale and retail metrics. It involves the inspection of system functions and process flows in the calculation of each metric coupled with interviews with systems and metrics process subject matter experts.

##### 4.6.1 Inputs

1. Operational analysis plan and task checklist
2. Interview guides
3. Metrics analysis matrix
4. Personnel to review procedures and systems and conduct interviews

##### 4.6.2 Activities

1. Conduct procedure reviews.
2. Conduct system reviews.
3. Conduct interviews.
4. Document the results of above.

### 4.6.3 Outputs

1. Operational review report

### 4.7 Exit Criteria

| Criteria  | Responsible Party |
|---|-------------------|
| Global exit criteria have been satisfied            | See Table III-4   |
| All operational analysis tasks/activities completed | Ph 2 Test Mgr.    |
| Operational review report completed                 | Ph 2 Test Mgr.    |

## 5.0 M&R5: M&R Process Evaluation

### 5.1 Description

This evaluation is comprised of three major elements. The first (Sub-Test 1) is a review of historical metrics reports produced by Bell Atlantic (validated in M&R Test 4 above) to assess the parity of Bell Atlantic's retail and wholesale Maintenance and Repair operations. This sub-test also includes a review of process flow documentation. This "black box" approach is predicated on the successful validation of the metrics established in the Interim Guidelines for Carrier-to-Carrier Performance Standards and Reports to measure Bell Atlantic's M&R performance and demonstrate retail/wholesale Parity.

The second element (Sub-Test 2) is comprised of sampling CLEC trouble reports and their results and calculating the relevant metrics to determine wholesale M&R process parity performance. This element will be performed in addition to the historical metrics analysis described above and as an alternative approach in the event that M&R4 identifies one or more of the Wholesale metrics invalid.

Along with the two test elements, the third element is an evaluation of trouble report fallouts for manual handling. The purpose of this evaluation is to identify causative factors and to determine whether manual handling requirements imposed on the wholesale maintenance and repair process introduce unnecessary overhead not included in metrics calculations used to evaluate retail/wholesale process equivalence. This evaluation will be performed in conjunction with the M&R work center support evaluation (M&R7) and will be documented there.

### 5.2 Objective

The objective of this test is to evaluate the equivalence of Bell Atlantic's end-to-end processes for trouble reporting and repair of retail and wholesale services.

5.3 Test Scope

Table V-12 Test Target: M&R Process Evaluation

| Process Step                          | Sub-Process                           | Performance Objectives                 | Inspection Technique   | Quality Level               |
|---------------------------------------|---------------------------------------|--|------------------------|-----------------------------|
| Trouble Report Processing - Resale    | Test Trouble (CLEC via RETAS)         | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Determine Dispatch Requirement (CLEC) | Accuracy of Test Information           | Inspection             | Qualitative                 |
|                                       | Enter Trouble Report (CLEC)           | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Receive Response                      | Timeliness                             | Inspection             | Quantitative                |
|                                       | Receive Error Notification            | Timeliness<br>Accuracy<br>Completeness | Inspection             | Quantitative<br>Qualitative |
|                                       | Correct Trouble Report                | Accuracy                               | Inspection             | Qualitative                 |
|                                       | Dispatch Trouble (ILEC)               | Accuracy<br>Timeliness                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Trouble Report Processing - Resale    | Clear/Close Trouble Report (ILEC)      | Accuracy<br>Timeliness | Inspection                  |
|                                       | Issue OQS Reports                     | Accuracy<br>Timeliness                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Trouble Report Processing - UNE/UNE-P | Test Trouble (CLEC)                    | Timeliness<br>Accuracy | Inspection                  |
| Determine Dispatch Requirement (CLEC) |                                       | Accuracy of Test Information           | Inspection             | Qualitative                 |
|                                       | Enter Trouble Report (CLEC)           | Timeliness<br>Accuracy                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Receive Response                      | Timeliness                             | Inspection             | Quantitative                |
|                                       | Receive Error Notification            | Timeliness<br>Accuracy<br>Completeness | Inspection             | Quantitative<br>Qualitative |
|                                       | Correct Trouble Report                | Accuracy                               | Inspection             | Qualitative                 |
|                                       | Dispatch Trouble (ILEC)               | Accuracy<br>Timeliness                 | Inspection             | Quantitative<br>Qualitative |
|                                       | Clear/Close Trouble Report (ILEC)     | Accuracy<br>Timeliness                 | Inspection             | Quantitative<br>Qualitative |
| End to End Process - Resale           | Issue IDC/MS                          | Accuracy                               | Inspection             | Qualitative                 |
|                                       | Measurements                          | Comparison With Retail                 | Inspection             | Quantitative                |

**Table V-12 Test Target: M&R Process Evaluation**

| Test Target                    | Test Process               | Test Method            | Test Frequency | Test Type    |
|--------------------------------|----------------------------|------------------------|----------------|--------------|
| End to End Process - Resale    | Process Flow Documentation | Comparison with Retail | Inspection     | Qualitative  |
| End to End Process - UNE/UNE-P | Measurements               | Comparison With Retail | Inspection     | Quantitative |
| End to End Process - UNE/UNE-P | Process Flow Documentation | Comparison with Retail | Inspection     | Qualitative  |
| Manual Handling - Resale       |                            | Accuracy<br>Timeliness | Inspection     | Qualitative  |
| Manual Handling - UNE/UNE-P    |                            | Accuracy<br>Timeliness | Inspection     | Qualitative  |

**5.4 Scenarios**

Scenarios for Sub-Test 2 are documented in Appendix B. The intent is to utilize CLEC test cases for this test that match or resemble the specified scenarios. If minimum sample sizes cannot be achieved and/or scenario requirements cannot be met, additional troubles will be entered using GUI test cases and the test bed to supplement CLEC test cases.

**5.4.1 Sub-Test 1 – Metrics and Process Flow Review**

*5.4.1.1 Entrance Criteria*

| Criteria  | Responsible Party |
|---|-------------------|
| Global entrance criteria have been satisfied              | See Table III-3   |
| M&R metrics for the six most recent months are available  | BA-NY             |
| M&R performance measurements evaluation completed         | Ph 2 Test Mgr.    |
| M&R metrics have been found to be accurate                | Ph 2 Test Mgr.    |
| Retail and wholesale process flow documentation available | BA-NY             |

*5.4.1.2 Test Approach*

This sub-test involves the inspection and analysis of historical metrics data and process flow documentation. Historical

metrics for Bell Atlantic's retail and wholesale M&R processes will be compared and variances between metrics will be identified and analyzed for significance. Metrics will also be graphed to determine if any trends are developing. Wholesale and retail Process Flow documentation will also be reviewed and differences will be noted. Where possible, effects of the identified differences will be assessed.

5.4.1.2.1 Inputs

1. Retail and wholesale M&R metrics for the six most recent months
2. Retail and wholesale process flow documentation
3. Personnel to review the above

5.4.1.2.2 Activities

1. Review and graph individual metrics.
2. Identify and calculate variances for each metric.
3. Determine the significance of the variances.
4. Identify and document potential trends if they exist.
5. Summarize results of the above analysis.
6. Review and compare wholesale and retail process flows.
7. Identify differences between the two processes.
8. Assess the potential impact of each difference if possible.
9. Document process flow analysis results.

5.4.1.2.3 Outputs

1. M&R metrics analysis report
2. Process flow analysis report

5.4.1.3 Exit Criteria

| Criteria                                 | Responsible Party |
|--|-------------------|
| Global exit criteria have been satisfied | See Table III-4   |
| M&R metrics analysis report completed    | Ph 2 Test Mgr.    |
| Process flow analysis report completed   | Ph 2 Test Mgr.    |

5.4.2 Sub-Test 2 – CLEC Trouble Report Analysis

## 5.4.2.1 Entrance Criteria

| Criteria   | Responsible Party |
|--|-------------------|
| Global entrance criteria have been satisfied                 | See Table III-3   |
| CLEC trouble report monitoring set up                        | Ph 2 Test Mgr.    |
| Sample size determined and validated                         | Ph 2 Test Mgr.    |
| Sampling period established                                  | Ph 2 Test Mgr.    |
| Specific data capture requirements and methodology developed | Ph 2 Test Mgr.    |
| CLEC agreement to participate in data capture                | CLEC              |

## 5.4.2.2 Test Approach

This sub-test involves the tracking of selected resale and UNE/UNE-P trouble reports (CLEC test cases) through the M&R process and the capture of event times, errors, problems, anomalies, manual handling requirements, and other significant events in the life of each trouble. Applicable metrics will be calculated using the sample population and observations will be documented.

## 5.4.2.2.1 Inputs

1. Data capture matrices
2. Personnel to monitor trouble report processes for selected troubles
3. Personnel to observe and review the above operation

## 5.4.2.2.2 Activities

1. Select resale trouble reports to track.
2. Log test request time.
3. Note test results and time.
4. Note dispatch decision and rationale.
5. Log trouble report submission time.
6. Periodically monitor trouble report throughout its life using TR status transactions in both RETAS and LMOS.
7. Note significant events in its life cycle (error occurrences, corrections, dispatch time, time cleared, CLEC notification, etc.).

8. Repeat the above steps until resale sample size has been met.
9. Repeat the above steps for UNE/UNE-P trouble reports.
10. Calculate significant metrics.
11. Document observations.

#### 5.4.2.2.3 Outputs

1. M&R metrics report calculated from sample
2. Summary report of observations

#### 5.4.2.3 Exit Criteria

| Criteria                                  | Responsible Party |
|---|-------------------|
| Global exit criteria have been satisfied  | See Table III-4   |
| Manual handling analysis report completed | Ph 2 Test Mgr.    |
| Process flow analysis report completed    | Ph 2 Test Mgr.    |
| M&R metrics report completed              | Ph 2 Test Mgr.    |
| Final test report completed               | Ph 2 Test Mgr.    |

### 6.0 M&R6: M&R Documentation Review

#### 6.1 Description

The M&R documentation review is a comprehensive analysis of the documentation used by CLECs to interact with Bell Atlantic in conducting Maintenance and Repair activities. This test is a high level review intended to evaluate the quality and completeness of the Maintenance and Repair documentation prepared by Bell Atlantic. This test is not designed to determine whether system functionality matches functionality described in the documentation. That analysis is being done in conjunction with M&R1: RETAS functionality evaluation.

#### 6.2 Objectives:

The objective of this evaluation is to assess the overall quality of documentation produced by Bell Atlantic to assist CLECS in the Maintenance and Repair domain.

#### 6.3 Entrance Criteria

| Criteria                                     | Responsible Party |
|--|-------------------|
| Global entrance criteria have been satisfied | See Table III-3   |

| Criteria  | Responsible Party |
|---|-------------------|
| System documentation available  | BA-NY             |
| RETAS system available  | BA-NY             |
| Documentation evaluation checklist created to measure general documentation quality | Ph 2 Test Mgr.    |
| Bell Atlantic documentation specialists are available for interviews                | BA-NY             |

**6.4 Test Scope**

**Table V-13 Test Target: M&R Documentation Review**

| Product Area      | Documentation                       | Test Criteria                       | Test Methods                                    | Test Type   |
|-------------------|-------------------------------------|-------------------------------------|---|-------------|
| M&R Documentation | CLEC Handbook (M&R Sections)        | Clarity<br>Accuracy<br>Completeness | GUI Test Cases<br>Interviews<br>Document Review | Qualitative |
|                   | Resale Handbook (M&R Sections)      | Clarity<br>Accuracy<br>Completeness | GUI Test Cases<br>Interviews<br>Document Review | Qualitative |
|                   | RETAS CLEC Student (Training) Guide | Clarity<br>Accuracy<br>Completeness | GUI Test Cases<br>Interviews<br>Document Review | Qualitative |
|                   | CLEC Training Guide (M&R Sections)  | Clarity<br>Accuracy<br>Completeness | GUI Test Cases<br>Interviews<br>Document Review | Qualitative |
|                   | RETAS Online Help                   | Clarity<br>Accuracy<br>Completeness | GUI Test Cases<br>Interviews<br>Document Review | Qualitative |
|                   | Other (TBD)                         | Clarity<br>Accuracy<br>Completeness | GUI Test Cases<br>Interviews<br>Document Review | Qualitative |

Note: GUI Test Cases referenced above are used in M&R1: RETAS Functionality Evaluation

**6.5 Scenarios**

This test does not rely on scenarios.

**6.6 Test Approach**

This test uses a combination of operational analysis techniques in evaluating Bell Atlantic wholesale M&R documentation. It also involves targeted interviews and the use of their results as part of the overall evaluation.

**6.6.1 Inputs**

1. Detailed operational test plan and task checklist
2. M&R documentation to include: CLEC Handbook, Resale Handbook, RETAS Student Guides, RETAS On-line Help Facility
3. Other related M&R documentation not mentioned above (if applicable)
4. Documentation evaluation checklist
5. Bell Atlantic documentation specialists
6. CLEC documentation users, if possible

**6.6.2 Activities**

1. Obtain relevant documentation needed to carry out business processes related to M&R.
2. Conduct documentation evaluation using documentation evaluation checklist.
3. Conduct interviews with BA documentation specialists.
4. Conduct interviews with CLEC documentation users.
5. Compile results.

**6.6.3 Outputs**

1. Completed checklists
2. Documented interview results
3. Summary documentation evaluation report

**6.7 Exit Criteria**

| Criteria                                 | Responsible Party |
|--|-------------------|
| Global exit criteria have been satisfied | See Table III-4   |

## 7.0 M&R7: M&R Work Center Support Evaluation

### 7.1 Description

The M&R work center support evaluation is a comprehensive operational analysis of the work center/help desk processes developed by Bell Atlantic to provide support to CLECs with questions, problems, and issues related to wholesale trouble reporting and repair operations.

### 7.2 Objective

The objective of this test is to evaluate the effectiveness of M&R work center support operations and adherence to common support center/help desk procedures. An additional objective is to analyze the nature and frequency of problems referred to the work center to determine if they indicate potential problems in other M&R Domain areas (e.g. RETAS).

Specifically, this evaluation is designed to:

- Determine completeness and consistency of work center/help desk processes and procedures
- Determine whether expedite and escalation procedures are correctly documented and work effectively
- Ensure existence of reasonable security measures to ensure integrity of work center/help desk data and the ability to restrict access to parties with specific access permissions
- Determine the timeliness and accuracy in identifying and resolving problems
- Determine the existence and functionality of procedures for measuring, tracking, projecting and maintaining work center/help desk performance

### 7.3 Entrance Criteria

| Criteria  | Responsible Party        |
|---|--------------------------|
| Detailed test plan completed and approved             | Ph 2 Test Mgr.           |
| Techniques and instrumentation developed and approved | Ph 2 Test Mgr. and BA-NY |
| Test criteria identified and approved                 | Ph 2 Test Mgr.           |
| Data and documentation request completed              | Ph 2 Test Mgr.           |
| Required data and documentation provided              | BA-NY                    |
| Schedule for test defined                             | Ph 2 Test Mgr.           |

| Criteria  | Responsible Party |
|---|-------------------|
| Work center/help desk evaluation checklist completed          | Ph 2 Test Mgr.    |
| CLEC problem feedback survey completed                        | Ph 2 Test Mgr.    |
| M&R problem response survey with standard questions completed | Ph 2 Test Mgr.    |

7.4 Test Scope

Table V-14 Test Target: Work Center Support Evaluation

| Process Step                    | Sub-Process                    | Performance Metrics         | Measurement Methods                  | Measurement Type |
|---------------------------------|--------------------------------|-----------------------------|--------------------------------------|------------------|
| Call Processing                 | Call Answer                    | Timeliness                  | Inspections<br>Logging<br>Interviews | Qualitative      |
|                                 | Call Logging                   | Accuracy                    | Inspections<br>Logging<br>Interviews | Qualitative      |
|                                 | Prioritization                 | Existence<br>Accuracy       | Inspections<br>Logging<br>Interviews | Qualitative      |

### 7.5 Scenarios

This test does not rely on scenarios.

### 7.6 Test Approach

The test approach involves the use of pre-test CLEC surveys to assist in determining customer perception of M&R work center support and to focus operational reviews of the involved Bell Atlantic work centers (RSSC and RCCC).

Following the surveys, an operational analysis of each center will be performed. These rely on the use of evaluation checklists to facilitate a structured walk-through of the major work center/help desk processes with Bell Atlantic representatives and to review process documentation.

In addition, work center/CLEC interactions will be captured and analyzed for a target period (one month). They will be analyzed for root cause and accuracy/timeliness of resolution.

#### 7.6.1 Inputs

1. CLEC feedback survey
2. Work center/help desk evaluation checklists
3. CLEC/work center contact logs
4. CLEC process and procedure documentation

#### 7.6.2 Pre-Test Activities

1. Develop CLEC survey.

2. Conduct CLEC survey.
3. Analyze and document survey results.

### 7.6.3 Test Activities

1. Conduct work center/help desk support evaluations using work center/help desk support checklists.
2. Set up work center contact logs.
3. Capture CLEC/work center contact information for one month.
4. Analyze and collate contacts by type and root cause.
5. Summarize results of the work center evaluations.
6. Summarize contact analysis results.

### 7.6.4 Outputs

1. Completed checklists from the work center/help desk evaluations
2. Report summarizing results of the work center/help desk evaluations
3. Contact analysis results report

### 7.7 Exit Criteria

| Criteria                                 | Responsible Party |
|--|-------------------|
| Global exit criteria have been satisfied | See Table III-4   |

## 8.0 M&R8: Network Surveillance Support Evaluation

### 8.1 Description

The network surveillance support evaluation is a review of the processes and other operational elements associated with Bell Atlantic's network surveillance and network outage notification processes and procedures as they relate to wholesale operations. It is composed of an analysis of network surveillance processes related to surveillable network elements that are also Wholesale products. It also involves a review of the procedures followed by the NSAC which reference or are related to CLEC operations.

### 8.2 Objective

The objective of this test is to determine the functionality of network surveillance and network outage notification procedures and to assess the performance capabilities of network outage notification procedures for wholesale operations.

### 8.3 Entrance Criteria

| Criteria                               | Responsible Party |
|--|-------------------|
| Global entrance criteria have been met | See Table III-3   |

### 8.4 Test Scope

| Test Scope Area      | Test Process                      | Test Objectives/Measurements        | Test Method/Techniques | General Type             |
|----------------------|-----------------------------------|-------------------------------------|------------------------|--------------------------|
| Network Surveillance | IOF Surveillance                  | Existence<br>Reliability            | Inspection             | Existence<br>Qualitative |
|                      | AIN/SS7 Interconnect Surveillance | Existence<br>Reliability            | Inspection             | Existence<br>Qualitative |
| Outage Notification  | Process Documentation             | Clarity<br>Accuracy<br>Completeness | Inspection             | Qualitative              |
|                      | Notification Procedures           | Timeliness Accuracy<br>Completeness | Inspection             | Qualitative              |

### 8.5 Scenarios

This test does not rely on scenarios.

### 8.6 Test Approach

This test uses operational techniques to evaluate Bell Atlantic's Network Services Assurance Center (NSAC) operations associated with network surveillance for wholesale operations. Any aspects of the NSAC which relate to CLEC facilities and/or require CLEC notification or CLEC involvement of any kind will be evaluated. It will assess the performance of NSAC's CLEC notification procedures in the event of a network outage as well as normal communication and surveillance procedures.

#### 8.6.1 Inputs

1. NSAC operational analysis plan and task checklist
2. Analysis plan and task checklist
3. Interview guides
4. Documentation of all notification and network surveillance procedures for wholesale

5. Designated NSAC personnel for interviews (likely three to five people)

**8.6.2 Activities**

1. Using the operational analysis plan, conduct process analysis at NSAC.
2. Conduct documentation review.
3. Conduct procedure interviews with 3-5 people at the NSAC.
4. Document the results of above.

**8.6.3 Outputs**

1. Completed checklists
2. Operations review report
3. Procedures review report

**8.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| All global exit criteria have been satisfied | See Table III-4   |

**9.0 M&R9: M&R Coordination Process Evaluation**

**9.1 Description**

The Maintenance and Repair coordination process evaluation is a test of the systems, processes, procedures, and other operational elements associated with M&R coordination activities between Bell Atlantic and CLEC operations organizations.

**9.2 Objective**

The objective of this test is to determine the adequacy of M&R coordination processes and systems as they relate to joint CLEC/Bell Atlantic activities in the Maintenance and Repair domain.

**9.3 Entrance Criteria**

| Criteria                               | Responsible Party |
|--|-------------------|
| Global entrance criteria have been met | See Table III-3   |

2. Summary report

9.7 Exit Criteria

| Criteria                                     | Responsible Party |
|--|-------------------|
| All global exit criteria have been satisfied | See Table III-4   |

## VI. Billing Domain Test Section

### A. Purpose

The purpose of this section is to describe the specific tests to be undertaken in evaluating the systems, processes and other operational elements associated with BA-NY's support for Wholesale Billing. The tests are designed to evaluate BA-NY's compliance to measurement agreements and to ensure adherence to good management practices.

### B. Organization

This section provides a high level outline of what will be tested within the Billing Test Domain and how it will be tested. Subsequent sections describe the scope in the context of the primary Test Target Areas, and test descriptions or evaluations that are planned.

The Billing Domain will address the seven primary Test Target Areas listed below:

- Billing Process Metrics
- Billing Documentation
- Billing Work Center/Help Desk Support
- Resale Bill Certification Process
- Usage Rejects
- Daily Usage Feed
- Carrier Bills (relevant CABS and CRIS bills)

Within the 'Scope' section, each Test Target is further broken out into a number of increasingly discrete Process and Sub Process Areas that will be the subjects of Billing Domain testing. These process areas serve to identify the particular area of interest to be tested and the types of measurements that apply.

In the last section of the document, Test Processes, each Billing Test will be described along with its specific objectives, scope, entrance and exit criteria, and testing approach.

One or more tests have been designed to evaluate each Test Target Area depending on the scope of the testing required in each area. The Test Target Areas, and associated processes, sub-processes, and/or operational elements to be evaluated are documented in Section C. - Scope.

In order to test the seven Billing test targets, seven distinct tests have been designed. Each specific test is described in Section D – Test Processes. These tests are titled as follows:

- BLG1: Billing Process Metrics Evaluation
- BLG2: Billing Documentation Evaluation
- BLG3: Billing Work Center/Help Desk Support Evaluation
- BLG4: Resale Bill Certification Process Evaluation
- BLG5: Usage Reject Process Evaluation
- BLG6: Functional Usage Evaluation
- BLG7: Functional Bill Cycle Evaluation

The first four planned tests match their respective targets one for one and can be addressed earlier in the testing process.

The last three tests focus on subsets or multiple aspects of the last three target areas. They involve the accuracy and completeness of the appropriate usage and/or billing charges flowing through the billing process and onto the carrier's daily usage feed (DUF) and/or bill (for Resale or UNE products). Both CABS and CRIS bills will be examined depending on the ordered service. The last two test processes will involve the inclusion of a set of test calls and Pre-Ordering, Ordering, and Provisioning scenarios.

### C. Scope

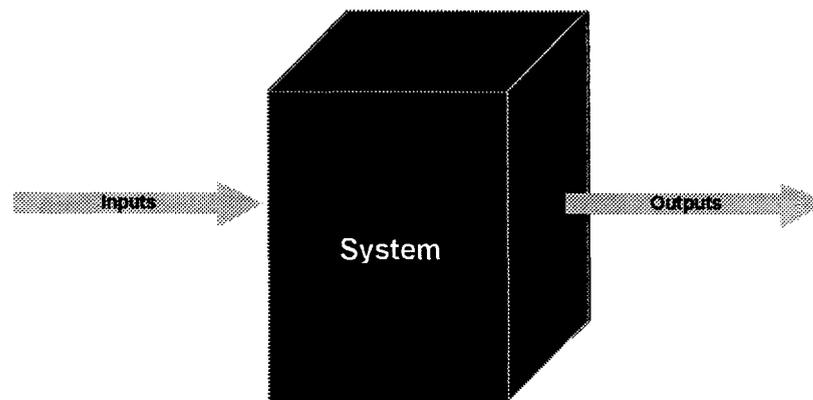

This purpose of this section is to identify the systems, processes, and document areas that will be the subject of Billing Test Processes.

The testing of billing components will be limited to the seven Test Target Areas:

- Billing Process Metrics
- Billing Documentation
- Billing Work Center/Help Desk Support
- Resale Bill Certification Process
- Usage Rejects
- Daily Usage Feed
- Carrier Bills (relevant CABS and CRIS bills)

Billing will be evaluated using a black box or input/output-driven testing approach (see Figure VI-1 below). Within this context, the tester is not concerned with the behavior or structure of the internal components but is focused on the presence and accuracy of input information appearing accurately on the final outputs (e.g., daily usage feed and bills).

*Figure VI-1: Billing as a 'Black Box'*

The system is defined

what is done, not how.

To create the test calls for use in testing the input usage stream, the Phase 2 Test Manager will create a test call matrix which includes all call types, product mixes and usage from multiple switches and multiple cities.

Two test strategies being employed in the other test domains include comparison to retail and performance testing. Since there are no related outputs for BA-NY Retail, running parallel Retail and Wholesale processes to evaluate equivalence is not required. However, bills from Retail and Wholesale will be examined for impacts due to class of service changes. Also, since performance is not an issue in the production of daily usage feeds and Wholesale Bills, there are no planned stress or load tests in the Billing Domain.

The Billing Domain has the following general requirements for BA-NY (more details are listed with each test in the Test Process subsection below):

- Generation of test calls per the revised test call matrix
- Loading of a set of test customers into the test bed for billing purposes
- Processing of POP test cases into the test bed from more than one end office and city (e.g., new connects/disconnects, changes)

- Running of both CRIS and CABS bill processing, depending on the products ordered and changes in service class

### 1.0 Test Targets within Billing Domain Scope

For each test target area in the Billing Domain, the charts below identify the major process areas and sub-processes, evaluation measures and techniques, and criteria types. Further information on measurements and applicable evaluation criteria can be found in Appendix E.

#### 1.1 Billing Process Metrics

Table VI-1 below outlines the processes and sub-processes involved in evaluating the completeness, applicability, and security of billing metrics captured and reported by BA-NY.

*Table VI-1 Test Target: Billing Metrics*

| Process Area                                   | Sub-Process  | Evaluation Measure   | Evaluation Technique | Criteria Type |
|--|--|--|----------------------|---------------|
| Validate Metrics Information Gathering Process | Identify control points where measurements are taken | Applicability and measurability of control points              | Inspections          | Quantitative  |
|  | Identify data sources for each reported metric       | Applicability and completeness of data sources                 | Inspections          | Quantitative  |
|  | Identify each tool used by BA to collect data        | Applicability and reliability of tools                         | Inspections          | Quantitative  |
| Evaluate Quality of Metric Reported            | Evaluate calculation                                 | Accuracy and applicability of calculations                     | Inspections          | Quantitative  |
|  | Evaluate tools                                       | Accuracy, security and controllability of data housed in tools | Inspections          | Quantitative  |
| Evaluate Reports                               | Evaluate report format                               | Consistency of reporting results with data collected           | Inspections          | Qualitative   |
|  | Evaluate report content                              | Accuracy of metrics reporting                                  | Inspections          | Quantitative  |

## 1.2 Billing Documentation

Table VI-2 below outlines the processes and sub-processes involved in evaluating the organization, usability, comprehensiveness, and accuracy of billing documentation produced by BA-NY.

*Table VI-2 Test Target: Billing Documentation*

| Process Area                         | Sub-Process                                     | Evaluation Measure                       | Evaluation Technique | Criteria Type |
|--------------------------------------|---|--|----------------------|---------------|
| Acquire Documentation                | Receive current documentation                   | Availability of up-to-date documentation | Documentation Review | Qualitative   |
| Evaluate Documentation               | Evaluate documentation format                   | Organization of documentation            | Documentation Review | Qualitative   |
|                                      |   | Ease of Use of documentation             | Documentation Review | Qualitative   |
|                                      | Evaluate documentation content                  | Comprehensiveness of documentation       | Documentation Review | Quantitative  |
|                                      |   | Accuracy of documentation                | Documentation Review | Quantitative  |
| Evaluate EDI Interface Documentation | Evaluate EDI interface population documentation | Compliance to standards                  | Documentation Review | Quantitative  |

## 1.3 Billing Work Center/Help Desk Support

Table VI-3 below outlines the processes and sub-processes involved in evaluating the timeliness, consistency, and accuracy of handling work center and help desk activities performed by BA-NY.

*Table VI-3 Test Target: Billing Work Center/Help Desk Support*

| Process Area           | Sub-Process | Evaluation Measure | Evaluation Technique | Criteria Type |
|------------------------|-------------|--------------------|----------------------|---------------|
| Receive Help Desk Call | Answer call | Timeliness of call | Inspections          | Quantitative  |

**Table VI-3 Test Target: Billing Work Center/Help Desk Support**

| Process Area           | Sub-Process                             | Evaluation Measure   | Evaluation Technique              | Criteria Type                |
|------------------------|---|--|-----------------------------------|------------------------------|
|                        | Interface with user                     | Usability of user interface                                  | Inspections                       | Qualitative                  |
|                        |   | Availability of user interface                               | Inspections                       | Quantitative                 |
|                        | Log call                                | Existence of call logging                                    | Document Review                   | Quantitative                 |
|                        |   | Accuracy of call logging                                     | Inspections                       | Qualitative                  |
|                        | Record severity code                    | Compliance of call logging - severity coding                 | Inspections                       | Qualitative                  |
| Process Help Desk Call | Resolve user question, problem or issue | Completeness and consistency of process                      | Documentation Review, inspections | Quantitative                 |
|                        |   | Accuracy of response   | Inspections                       | Quantitative                 |
| Receive Claim          | File claim                              | Completeness and consistency of process                      | Documentation Review, inspections | Qualitative                  |
|                        |   | Accuracy of response   | Inspections                       | Qualitative                  |
|                        | Process claim                           | Completeness, consistency, and timeliness of process         | Inspections, report review        | Qualitative                  |
|                        | Issue adjustment when necessary         | Completeness and consistency of process                      | Documentation review, inspection  | Qualitative                  |
|                        | Disposition claim                       | Accuracy, completeness and reliability of disposition report | Inspections, report review        | Quantitative and Qualitative |

**Table VI-3 Test Target: Billing Work Center/Help Desk Support**

| Process Area              | Sub-Process                             | Evaluation Measure                                   | Evaluation Technique       | Criteria Type |
|---------------------------|---|--|----------------------------|---------------|
| Close Help Desk Call      | Post closure information                | Completeness, consistency, and timeliness of process | Inspections                | Quantitative  |
|                           |   | Accuracy of posting                                  | Inspections, report review | Quantitative  |
| Monitor Status            | Track Status                            | Existence of status tracking capability              | Inspections                | Existence     |
|                           |   | Consistency and frequency of follow-up activities    | Document Review            | Qualitative   |
|                           |   | Availability of jeopardy notification                | Document Review            | Quantitative  |
|                           | Report Status                           | Completeness and consistency of reporting process    | Inspections, report review | Qualitative   |
|                           |   | Accuracy and timeliness of report                    | Inspections, report review | Quantitative  |
|                           |   | Accessibility of status report                       | Inspections                | Quantitative  |
| Request Escalation        | Identify escalation procedure           | Existence of procedure                               | Document Review            | Existence     |
|                           | Evaluate escalation procedure           | Completeness of the procedure                        | Document Review            | Qualitative   |
|                           |   | Consistency of the process                           | Inspection                 | Qualitative   |
| Manage Workforce Capacity | Identify work force planning procedures | Existence of procedure                               | Document Review            | Existence     |

**Table VI-3 Test Target: Billing Work Center/Help Desk Support**

| Process Area                   | Sub-Process                             | Evaluation Measure  | Evaluation Technique         | Criteria Type |
|--------------------------------|---|---|------------------------------|---------------|
|                                | Evaluate work force planning procedures | Completeness of procedure   | Document Review              | Qualitative   |
|                                | Review staffing plans                   | Scalability of staff volume   | Report review                | Qualitative   |
| Provide Security and Integrity | Provide secured access                  | Completeness and applicability of security procedures, profiles, and restrictions | Document Review, Inspections | Qualitative   |
|                                |   | Controllability of intra-company access   | Document Review, Inspections | Qualitative   |
| Manage the Help Desk Process   | Provide management oversight            | Completeness and consistency of operating management practices                    | Inspections                  | Qualitative   |
|                                |   | Controllability, efficiency and reliability of process                            | Inspections                  | Qualitative   |
|                                |   | Completeness of process improvement practices                                     | Inspections                  | Qualitative   |

**1.4 Resale Bill Certification Process**

Table VI-4 below outlines the processes and sub-processes involved in evaluating the completeness, applicability, and controllability of the Resale Bill Certification Process established by BA-NY to ensure bill quality.

**Table VI-4 Test Target: Resale Bill Certification Process**

| Process Area                 | Sub-Process  | Evaluation Measure                              | Evaluation Technique       | Criteria Type |
|------------------------------|--|---|----------------------------|---------------|
| Review certification process | Review BA-NY's process documentation                   | Completeness and applicability of documentation | Documentation review       | Quantitative  |
|                              | Determine planned interval of conducting the process   | Applicability of intervals                      | Inspections                | Qualitative   |
|                              | Determine planned involvement of CLECs in the process  | Applicability of CLEC involvement               | Inspections                | Qualitative   |
|                              | Validate information gathering                         | Completeness and controllability of process     | Inspections                | Qualitative   |
|                              | Evaluate reports/outputs of bill certification process | Accuracy of reports                             | Inspections, report review | Qualitative   |

### 1.5 Daily Usage Feed

Table VI-5 below outlines the processes and sub-processes involved in evaluating the completeness, accuracy, controllability, and timeliness of providing usage to CLECs on a daily basis.

**Table VI-5 Test Target: Daily Usage Feed**

| Process Area           | Sub-Process                                    | Evaluation Measure                                      | Evaluation Technique                               | Criteria Type                |
|------------------------|--|---|--|------------------------------|
| Receipt of Usage by BA | Receive switch records at Data Center          | Completeness and accuracy of switch records             | Transaction Generation, inspections, report review | Quantitative and Qualitative |
| Daily Usage Feed       | Create usage feed                              | Completeness and accuracy of usage records              | Inspections  | Quantitative and Qualitative |
|                        | Define balancing and reconciliation procedures | Availability of balancing and reconciliation procedures | Inspections  | Qualitative                  |
|                        | Route usage                                    | Controllability of usage                                | Inspections  | Qualitative                  |

Table VI-5 Test Target: Daily Usage Feed

| Process Area                  | Sub-Process   | Evaluation Measure   | Evaluation Technique       | Criteria Type                |
|-------------------------------|---|--|----------------------------|------------------------------|
| Deliver Usage to CLEC         | Send direct connect                                   | Timeliness of arrival  | Inspections, logging       | Quantitative                 |
|                               | Send cartridge tape                                   | Timeliness of arrival  | Inspections, logging       | Quantitative                 |
|                               | Acknowledge arrival                                   | Controllability and reliability of usage transfer            | Inspections                | Qualitative                  |
| Reject Process                | CLEC identifies erred usage                           | Accuracy of reject identification process                    | Inspections                | Quantitative and Qualitative |
|                               | CLEC returns erred usage                              | Accuracy, completeness and reliability of returns            | Inspections, logging       | Quantitative and Qualitative |
|                               | BA sends corrections when necessary                   | Accuracy, completeness and reliability of corrections        | Inspections, logging       | Quantitative and Qualitative |
|                               | BA provides item disposition for all returned records | Accuracy, completeness and reliability of disposition report | Inspections, report review | Quantitative and Qualitative |
| Maintain Usage History        | Create usage backup                                   | Reliability of repeatable process                            | Inspections                | Existence                    |
|                               | Request Backup data                                   | Availability of data   | Inspection                 | Existence                    |
| Status Tracking and Reporting | Track valid usage                                     | Completeness and accuracy of data                            | Inspections                | Quantitative and Qualitative |
|                               | Account for no usage                                  | Completeness and accuracy of data                            | Inspections                | Quantitative and Qualitative |
|                               | Account for missing usage (gaps)                      | Completeness and accuracy of data                            | Inspections                | Quantitative and Qualitative |

### 1.6 Carrier bills (relevant CABS and CRIS bills)

Table VI-6 below outlines the processes and sub-processes involved in evaluating the completeness, accuracy, controllability, and timeliness of providing bills to CLECs for resale and UNE products on a monthly basis.

*Table VI-6 Test Target: Carrier Bills*

| Process Area          | Sub Process                       | Evaluation Measure                                  | Evaluation Technique              | Criteria Type |
|-----------------------|-----------------------------------|---|-----------------------------------|---------------|
| Collect Payment       | Receive payment                   | Completeness and accuracy of payments               | Inspections, report review        | Qualitative   |
|                       | Track payment                     | Consistency and controllability of tracking process | Inspections                       | Quantitative  |
|                       | Handle mismatches                 | Controllability of exception processing             | Inspections                       | Quantitative  |
| Maintain Bill Balance | Carry balance forward             | Accuracy of bill balance                            | Inspections                       | Qualitative   |
| Run Billing           | Define billing schedule           | Availability of billing schedule rules              | Inspections, documentation review | Existence     |
|                       | Define restart and recovery rules | Availability of restart and recovery procedures     | Inspections                       | Existence     |
|                       | Initiate the bill cycle           | Controllability of cycle components                 | Inspections                       | Qualitative   |
|                       | Select Billing Accounts           | Completeness and accuracy of extraction             | Inspections, report review        | Quantitative  |
| Review Bills          | Verify normal recurring charges   | Completeness and accuracy of data                   | Inspections                       | Qualitative   |
|                       | Verify one-time charges           | Completeness and accuracy of data                   | Inspections                       | Qualitative   |
|                       | Verify prorated recurring charges | Completeness and accuracy of data                   | Inspections                       | Qualitative   |
|                       | Verify Usage Charges              | Completeness and accuracy of data                   | Inspections                       | Qualitative   |
|                       | Verify discounts                  | Completeness and accuracy of data                   | Inspections                       | Qualitative   |

Table VI-6 Test Target: Carrier Bills

| Process Area          | Sub Process                                    | Evaluation Measure  | Evaluation Technique | Criteria Type |
|-----------------------|--|---|----------------------|---------------|
|                       | Verify adjustments (debits and credits)        | Completeness and accuracy of data                           | Inspections          | Qualitative   |
|                       | Verify late charges                            | Completeness and accuracy of data                           | Inspections          | Qualitative   |
|                       | Verify taxes                                   | Completeness and accuracy of data                           | Inspections          | Qualitative   |
|                       | Convert to BDT Format                          | Completeness and accuracy of data                           | Inspections          | Existence     |
| Balance Cycle         | Define balancing and reconciliation procedures | Availability of balancing and reconciliation procedures     | Inspections          | Existence     |
|                       | Produce Control Reports                        | Completeness and accuracy in generation of control elements | Report review        | Qualitative   |
|                       | Release cycle                                  | Compliance to balancing and reconciliation procedures       | Inspections          | Qualitative   |
| Deliver Bill          | Conduct Connect Direct                         | Timeliness of media arrival                                 | Inspections, logging | Qualitative   |
|                       | Create Magnetic Tape Cartridge                 | Timeliness of media arrival                                 | Inspections, logging | Qualitative   |
| Maintain Bill History | Maintain billing information                   | Timeliness and controllability of billing information       | Inspections          | Existence     |
|                       | Access billing information                     | Accessibility and availability of billing information       | Inspection           | Parity        |
| Request Resend        |  | Timeliness of the delivery                                  | Inspections, logging | Existence     |

**D. Test Processes**

This section describes the specific evaluations/tests to be performed in the analysis of BA-NY's support of billing operations. They are listed in the order of suggested execution. Any dependencies on other test processes are identified in the entrance criteria.

**1.0 BLG1: Billing Process Metrics Evaluation**

**1.1 Description:**

The Billing Process Metrics Evaluation is an end-to-end operational analysis of the processes and systems used to capture BA-NY Wholesale Billing metrics. It will include the evaluation of the metrics process flow and related documentation.

**1.2 Objective:**

The objective of this test is to evaluate the capture, tracking, and reporting of billing metrics required by regulatory bodies.

**1.3 Entrance Criteria:**

| Criteria  | Responsible Party |
|---|-------------------|
| All Global Entrance Criteria satisfied                                | See Table III-3   |
| BA-NY Billing Process and System specialists available for interviews | BA-NY             |
| Metrics Process Evaluation Checklist developed                        | Ph 2 Test Mgr.    |

**1.4 Test Scope:**

The scope of this test includes all processes, sub-processes, and measurements from the Billing Process Metrics test target (refer to Table VI-1 above).

**1.5 Scenarios:**

Not Applicable.

**1.6 Test Approach:**

This test will use operational analysis techniques. It will rely on the development of various evaluation checklists to facilitate a structured walk-through of the metric gathering and reporting processes.

**1.6.1 Inputs**

1. Detailed Operational Test Plan
2. Metrics Process Evaluation Checklist
3. BA-NY personnel to review procedures and systems

**1.6.2 Activities**

1. Conduct process evaluation.
2. Review metrics data capture methods, instruments and gauges.
3. Review metrics output reports.
4. Complete checklist values.

**1.6.3 Outputs**

1. End-to-end evaluation report of metric process.
2. Completed checklist values.

**1.7 Exit Criteria:**

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All Global Exit Criteria satisfied | See Table III-4   |

**2.0 BLG2: Billing Documentation Evaluation**

**2.1 Description:**

The Billing Documentation Evaluation is an operational analysis of the billing documentation used by CLECs to read and process the DUF and carrier billing output from BA-NY.

**2.2 Objectives:**

The objectives of this evaluation are to:

- Determine the accuracy and usability of the billing documentation.
- Determine BA-NY's compliance of relevant billing outputs with the industry standards as stated in Appendix D (for DUF and CABS bills).
- Determine BA-NY's compliance with its CLEC documentation in regards to the technical format of the transmission.

**2.3 Entrance Criteria:**

| Criteria | Responsible Party |
|----------|-------------------|
|----------|-------------------|

| Criteria   | Responsible Party |
|--|-------------------|
| All Global Entrance Criteria satisfied   | See Table III-3   |
| EDI-9 operational  | BA-NY             |
| CLEC Handbook available  | BA-NY             |
| Resale Handbook available  | BA-NY             |
| CABS Standards available   | BA-NY             |
| Billing Training Material available  | BA-NY             |
| Other Appropriate Documentation available  | BA-NY             |
| EDI transaction population instructions  | BA-NY             |
| Standards Evaluation Checklist created to measure compliance to standards                      | Ph 2 Test Mgr.    |
| Documentation Evaluation Checklist created to measure the general documentation attributes     | Ph 2 Test Mgr.    |
| Technical Format Evaluation Checklist created to compare documented format to technical format | Ph 2 Test Mgr.    |

#### 2.4 Test Scope:

Since the scope of this test is directly related to the Billing Documentation test target, refer to Table VI-2 above.

#### 2.5 Scenarios:

Not applicable.

#### 2.6 Test Approach:

The test approach is to use operational analysis to evaluate BA-NY's compliance with standards. In addition, it will evaluate how closely BA-NY's internal documentation matches the technical formats that they produce and the CLECs must process.

##### 2.6.1 Inputs

1. Detailed Operational Test Plan and task checklist
2. EDI-9 Standard
3. CABS standard
4. Billing Documentation
5. Standards Evaluation Checklist
6. Documentation Evaluation Checklist

7. Technical Format Evaluation Checklist

2.6.2 Activities

1. Conduct Standards Evaluation using Standards Evaluation Checklist.
2. Conduct Documentation Evaluation using Documentation Evaluation Checklist.
3. Conduct Technical Format Evaluation using Technical Format Evaluation Checklist.
4. Compile results.

2.6.3 Outputs

1. Completed checklist values from the Documentation Evaluation
2. Report showing level compliance of outputs to industry standards
3. Report showing compliance of CABS and DUF technical formats to BA-NY's document specifications

2.7 Exit Criteria:

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All Global Exit Criteria satisfied | See Table III-4   |

3.0 BLG3: Billing Work Center/Help Desk Support Evaluation

3.1 Description:

The Billing Work Center/Help Desk Support Evaluation is an operational analysis of the work center/help desk processes developed by BA-NY to provide support to Resellers and CLECs with usage and/or billing related questions, problems and issues. Basic functionality, performance, escalation procedures, and security will be evaluated.

3.2 Objectives:

The objectives of this evaluation are to:

- Determine completeness and consistency of work center/help desk processes and responses.
- Determine whether the escalation procedure is correctly documented, maintained, published and followed.

- Determine the accuracy, completeness, and functionality of procedures for measuring and tracking work center/help desk performance. Determine the accuracy, completeness, and functionality of procedures for projecting resource needs and maintaining work center/help desk performance.
- Ensure accuracy and completeness of reasonable security measures to ensure integrity of work center/help desk data and the ability to restrict access to parties with specific access permissions.
- Ensure the work center/help desk effort has effective management oversight.
- Ensure responsibilities for performance improvement are defined and assigned.

**3.3 Entrance Criteria:**

| Criteria  | Responsible Party     |
|---|-----------------------|
| All Global Entrance Criteria satisfied                          | See Table III-3       |
| Detailed Test Plan completed and approved                       | Ph 2 Test Mgr.        |
| CLEC Problem Feedback Questionnaire developed                   | Ph 2 Test Mgr.        |
| Billing Problem Response Form with standard questions completed | Ph 2 Test Mgr., CLECs |
| Escalation Procedures available                                 | BA-NY                 |
| Escalation Procedure Evaluation Checklist completed             | Ph 2 Test Mgr.        |
| Claims/adjustment Procedure Evaluation Checklist completed      | Ph 2 Test Mgr.        |
| Techniques and instrumentation developed and approved           | Ph 2 Test Mgr.        |
| Test criteria identified and approved                           | Ph 2 Test Mgr.        |
| Data and documentation request completed                        | Ph 2 Test Mgr.        |
| Required data and documentation provided                        | BA-NY                 |

**3.4 Test Scope:**

Since the scope of this test is directly related to the Billing Work Center/Help Desk Support test target, refer to Table VI-3 above.

**3.5 Scenarios:**

Not applicable.

### 3.6 Test Approach:

The test approach is to use operational analysis to evaluate BA-NY's processes and related documentation. It will rely on the development of various evaluation checklists to facilitate a structured walk-through of the major work center/help desk processes with BA-NY representatives and to review process documentation.

This test will also evaluate BA-NY's handling of a recent sample of problems and initiate a series of calls to obtain answers to a standard set of billing questions.

CLECs will be asked to provide recent inquiries from which a sample will be selected to solicit feedback. CLECs also will be asked to provide sets of questions from which the Phase II Tester will select a standard set. CLECs will be involved in initiating calls under the Phase II Tester's supervision.

#### 3.6.1 Inputs

1. Detailed test plan
2. Techniques and instrumentation
3. Test criteria
4. Data and documentation
5. Claim/Adjustment Procedure Evaluation Checklist
6. Work Center/Help Desk Support Checklist
7. Escalation Procedure Evaluation Checklist
8. Help Desk questions/answers
9. CLEC Problem Feedback Questionnaire
10. Billing Problem Response Form

#### 3.6.2 Activities

1. Conduct Work Center/Help Desk Support Evaluation using the Work Center/Help Desk Support Checklist.
2. Conduct escalation procedure review using Escalation Procedure Evaluation Checklist.
3. Conduct claim/adjustment review using Claim/Adjustment Procedure Evaluation Checklist.
4. Identify sample set of current problems on which to issue Feedback Questionnaires.
5. Send CLEC Problem Feedback Questionnaire to

- CLECs.
- 6. Receive and compile CLEC Problem Feedback Questionnaire.
- 7. Initiate calls to BA-NY work center to ask standard set of questions on the Billing Problem Response Form.
- 8. Record answers on the Billing Problem Response Form.
- 9. Compile results.

**3.6.3 Outputs**

- 1. Completed Work Center/Help Desk Evaluation Checklist
- 2. Completed Escalation Procedure Evaluation Checklist
- 3. Completed Claim/adjustment Procedure Evaluation Checklist
- 4. Report summarizing results of CLEC Problem Feedback Questionnaires
- 5. Report showing number of times standard questions received valid answers on the Billing Problem Response Forms

**3.7 Exit Criteria:**

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All Global Exit Criteria satisfied | See Table III-4   |

**4.0 BLG4: Resale Bill Certification Process Evaluation**

**4.1 Description:**

The Resale Bill Certification Evaluation is an operational analysis of the bill certification process defined by BA-NY and CLECs to measure bill quality.

**4.2 Objectives:**

The objectives of this evaluation are to:

- Determine completeness and consistency of the bill certification processes.
- Determine the existence and functionality of procedures for measuring, tracking, and reporting the bill certification process.

- Ensure responsibilities for performance improvement are defined and assigned.
- Verify the integrity of the process.

#### 4.3 Entrance Criteria:

| Criteria  | Responsible Party |
|---|-------------------|
| All Global Entrance Criteria                          | See Table III-3   |
| Detailed test plan completed and approved             | Ph 2 Test Mgr.    |
| Techniques and instrumentation developed and approved | Ph 2 Test Mgr.    |
| Test criteria developed and approved                  | Ph 2 Test Mgr.    |
| Roles and responsibilities of participants defined    | Ph 2 Test Mgr.    |
| Data and documentation request completed              | Ph 2 Test Mgr.    |
| Required data and documentation provided              | BA-NY             |

#### 4.4 Test Scope:

Since the scope of this test is directly related to the Resale Bill Certification Process test target, refer to Table VI-4 above.

#### 4.5 Scenarios:

Not applicable.

#### 4.6 Test Approach:

The test approach is to use operational analysis to evaluate the completeness and applicability of BA-NY's bill certification process. It will rely on the development of various evaluation checklists to facilitate a structured walk-through of the major bill certification processes with BA-NY representatives and to review process documentation.

##### 4.6.1 Inputs

1. Detailed Operational Test Plan and task checklist
2. Bill Certification Documentation
3. Bill Certification Evaluation Checklist

##### 4.6.2 Activities

1. Conduct Bill Certification Evaluation using the Bill Certification Checklist
2. Compile results

### 4.6.3 Outputs

1. Completed checklist findings from the evaluation

#### 4.7 Exit Criteria:

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All Global Exit Criteria satisfied | See Table III-4   |

### 5.0 BLG5: Usage Reject Process Evaluation

#### 5.1 Description:

The Usage Reject Process Evaluation is an operational analysis of the usage reject process and related documentation used by BA-NY to process usage rejects from CLECs.

#### 5.2 Objectives:

The objective of this evaluation is to determine the accuracy, completeness and reliability of reject information.

#### 5.3 Entrance Criteria:

| Criteria  | Responsible Party |
|---|-------------------|
| All Global Entrance Criteria satisfied              | See Table III-3   |
| Documentation on Reject Process available           | BA-NY             |
| CLEC involvement to help identify sample of rejects | CLECs             |
| CLEC request for rejects completed                  | CLECs             |
| Usage Reject Evaluation Checklist developed         | Ph 2 Test Mgr.    |

#### 5.4 Test Scope:

The scope of this test includes a *subset* of processes, sub-processes and measurements from the Daily Usage Feed test target. Those that are relevant are listed in the Table VI-7 below.

*Table VI-7 Test Target: Daily Usage Feed*

| Process Area   | Sub-Process                 | Evaluation Measure                        | Evaluation Technique | Criteria Type                |
|----------------|-----------------------------|---|----------------------|------------------------------|
| Reject Process | CLEC identifies erred usage | Accuracy of reject identification process | Inspections          | Quantitative and Qualitative |

| Process Area | Sub-Process   | Evaluation Measure   | Evaluation Technique | Criteria Type                |
|--------------|---|--|----------------------|------------------------------|
|              | CLEC returns erred usage                              | Accuracy, completeness and reliability of returns            | Inspections          | Quantitative and Qualitative |
|              | BA sends corrections when necessary                   | Accuracy, completeness and reliability of corrections        | Inspections          | Quantitative and Qualitative |
|              | BA provides item disposition for all returned records | Accuracy, completeness and reliability of disposition report | Inspections          | Quantitative and Qualitative |

### 5.5 Scenarios:

Not applicable.

### 5.6 Test Approach:

The test approach is to use operational analysis. It will rely on the development of various evaluation checklists to facilitate a structured walk-through of the reject process with BA-NY representatives and to review process documentation. It will also include soliciting three CLECs to gather relevant data to help with the evaluation. If no rejects are available, then the Phase II Tester, coordinating with BA-NY, should intervene to ensure rejects occur.

#### 5.6.1 Inputs

1. Request to CLECs for rejects
2. Rejects from CLECs
3. Usage Reject Evaluation Checklist
4. Documentation on the Usage Process

#### 5.6.2 Activities

1. Conduct Reject Process Evaluation using Reject Evaluation Checklist.
2. Compile results.

#### 5.6.3 Outputs

1. Completed checklist findings from the Reject Process Evaluation

## 2. Report showing analysis of CLEC rejects

**5.7 Exit Criteria:**

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All Global Exit Criteria satisfied | See Table III-4   |

**6.0 BLG6: Functional Usage Evaluation****6.1 Description:**

The Functional Usage Evaluation is an operational and systems analysis of the ability of usage to flow through usage processes and billing and appear accurately on the Daily Usage Feed (DUF) per schedule.

**6.2 Objective:**

The objective of this test is to evaluate the following:

- Accuracy of the usage on the DUF
- Timeliness of the DUF delivery

**6.3 Entrance Criteria:**

| Criteria   | Responsible Party |
|--|-------------------|
| All Global Entrance Criteria satisfied   | See Table III-3   |
| BA-NY facilities to make test calls  | BA-NY             |
| Test Call Matrix developed (showing required mix and volumes of test calls)                            | Ph 2 Test Mgr.    |
| Successful completion of "BLG1: Billing Process Metrics" Evaluation completed and passed               | BA-NY             |
| Detailed Test Plan completed and approved  | Ph 2 Test Mgr.    |
| Techniques and instrumentation developed and approved  | Ph 2 Test Mgr.    |
| Test criteria developed and approved   | Ph 2 Test Mgr.    |
| Historical reports for timeliness of DUF and carrier bill delivery are available for the last 6 months | BA-NY             |
| Availability of BA-NY resources to test and produce DUF  | BA-NY             |
| CLEC survey has been developed to capture arrival dates of DUF   | Ph 2 Test Mgr.    |

### 6.4 Test Scope

Since the scope of this test is directly related to the Daily Usage Feed test target, refer to Table IV-7.

### 6.5 Scenarios

Not Applicable - will use test calls to generate required data

### 6.6 Test Approach

This test will use operational and systems analysis to evaluate the completeness and accuracy of calls contained in the DUF as well as the arrival of the DUF at the CLECs.

The test call sample will contain calls generated manually at BA-NY's test bed facilities by the Phase 2 Test Manager over a two-day period. The sample will include calls placed throughout the day, including some before and after midnight. Test calls will include all types of calls from multiple switches, including 411, 611, 911 and casual calls (e.g., ABC).

In addition, historical reports will be reviewed from a sample set of months (TBD) to compare BA-NY versus CLEC arrival dates.

#### 6.6.1 Inputs

1. Detailed Test Plan
2. Test Call Matrix to identify test call mix
3. Expected results defined for DUF

#### 6.6.2 Activities

1. Generate test calls listed on Test Call Matrix per the Test Plan.
2. Run usage processing with test calls.
3. Run process to produce the DUF.
4. Transport DUF to CLEC.
5. Log transport send date per BA-NY.
6. Log receipt date of the DUF at the CLECs.
7. Validate all appropriate calls are on the DUF.
8. Validate accuracy of the usage data for all call types.
9. Collect CLEC data about arrival of DUFs for sample months.

**6.6.3 Outputs**

1. A report showing BA-NY's DUF delivery dates compared to CLECs' arrival dates. Standards are listed in Appendix E.
2. Report showing actual test results versus predicted test results and discrepancies for DUF content.

**6.7 Exit Criteria**

| Criteria                                 | Responsible Party |
|--|-------------------|
| All Global Exit Criteria satisfied       | See Table III-4   |
| All call results reviewed and documented | Ph 2 Test Mgr.    |

**7.0 BLG7: Functional Bill Cycle Evaluation**

**7.1 Description:**

The Functional Bill Cycle Evaluation is a systems analysis of the ability to accurately bill usage plus monthly recurring and non-recurring charges on the appropriate type of bill. An accurately billed item will contain the correct price and correct supporting information, such as start/end dates, duration, standard amounts, and discount amounts. This test will also evaluate the timeliness of bill delivery to the CLECs.

BA-NY will need to run a bill cycle from the initial test bed prior to any POP tests to use as a baseline set of bills. This will reduce the need to run multiple bill cycles during the test.

Monthly charges will be examined for both Resale and UNE billing on CABS and CRIS bills. The following Table VI-8 reflects a number of key characteristics of Retail and UNE customers' billing information to use in the design of test cases for billing in Phase 2. Information includes the various charge components and their destination bill.

**Table VI-8: Key Characteristics Of Billing Information for Resale and UNE Customers,.**

| Billing Components | Account Information (source) | Rating System (usage and/or MRC/NRC) | Usage | Bills (output) | Bill Inquiries (output) |
|--------------------|------------------------------|--------------------------------------|-------|----------------|-------------------------|
|                    |                              |                                      |       |                |                         |

**Table VI-8: Key Characteristics Of Billing Information for Resale and UNE Customers.**

|           | Billing Components                                  | Account Information (source) | Rating System (usage and/or MRC/NRC) | Usage | Bills (output)   | Bill Inquiries (output) |
|-----------|---|------------------------------|--------------------------------------|-------|------------------|-------------------------|
| Resale    | Usage   | CRIS                         | MCRIS                                | DUF   | CABS (via BCRIS) | CRIS                    |
|           | MRC/NRC   | BCRIS                        | BCRIS                                | N/A   | CABS (via BCRIS) | CRIS                    |
| UNE-P     | UNE-P usage (line port)                             | CABS                         | CABS                                 | DUF   | CABS (via MCRIS) | CABS                    |
|           | UNE-P MRC/NRC                                       | CABS                         | CABS                                 | N/A   | CABS             | CABS                    |
| UNE       | UNE-loops usage and MRC/NRC                         | BCRIS                        | MCRIS/BCRIS                          | DUF   | CRIS             | ICRIS                   |
| UNE-Other | UNE-ports, IOF, collocation, SS7                    | CABS                         | CABS                                 | DUF   | CABS             | CABS                    |
|           | High Cap Loops (D3) MRC/NRC                         | CABS                         | CABS                                 | N/A   | CABS             | CABS                    |
|           | Main Directory Listings                             | CABS                         | CABS                                 | N/A   | CABS             | CABS                    |
|           | Additional Directory Listings                       | CRIS                         | BCRIS                                | N/A   | CRIS             | CRIS                    |
| Retail    | Non-unbundled Services MRC/NRC (Ancillary services) | CRIS                         | BCRIS                                | N/A   | CRIS             | ICRIS                   |

**7.2 Objective:**

The objective of this test is to evaluate the timely delivery of the bill and the accurate and timely appearance of charges on the appropriate bill. Appearance of charges will depend on the type of products ordered and/or class of service changes for resale and UNE. Details to be evaluated include:

- Appropriate proration of charges for new and/or disconnected service.
- Customer charges for what they have ordered are accurate (order matches billing).
- New/disconnected products appear (or do not appear) on the bill.
- Bill dates are correct and match appropriate date from provisioning process.
- Payments and adjustments appear on the bill.
- Bills are delivered to CLECs and Resellers in a timely manner.

**7.3 Entrance Criteria:**

| Criteria  | Responsible Party |
|---|-------------------|
| All Global Entrance Criteria satisfied  | See Table III-3   |
| BLG6: Functional Usage Evaluation complete  | Ph 2 Test Mgr.    |
| All CRIS and CABS baseline bills produced from the initial test bed   | BA-NY             |
| Contents verified for each baseline bill.   | BA-NY             |
| Calls made during BLG6: Functional Usage Evaluation processed through to the DUF and available for billing. | BA-NY             |
| Availability of BA-NY resources to test and produce CRIS and CABS bills                                     | BA-NY             |
| POP Tests have modified the initial test bed with orders (adds, changes, disconnects, new features)         | Ph 2 Test Mgr.    |
| Test Results defined for each test case   | Ph 2 Test Mgr.    |
| Test Results defined for each bill cycle  | Ph 2 Test Mgr.    |
| Bill Validation Checklist complete for each bill cycle  | Ph 2 Test Mgr.    |
| Cycle balancing procedures documented   | BA-NY             |

| Criteria   | Responsible Party |
|--|-------------------|
| CLEC Survey developed to gather arrival date information | Ph 2 Test Mgr.    |

#### 7.4 Test Scope:

Since the scope of this test is directly related to the Carrier Bills test target (both CABS and CRIS bills), refer to Table VI-6.

The Table VI-9 below shows the entire list of bill types for Resale and UNE. Relevant types will be selected for review based upon the product mix and anticipated charges as defined in the expected test results.

**Table VI-9: Resale and UNE Bill Types**

| UNE charge categories  | Bill Code | Billing Title  | Comment  |
|--|-----------|--|--|
| Other  | K02       | Billing and Collection Services (MRC/NRC)            | Miscellaneous charges  |
| Other  | K91       | Expanded Interconnection Service                     | Physical Collocation (cage and associated FCC tariffed charges)  |
| Other  | K41       | Cage Account for 914 Tariff                          |  |
| Line Port, Unbundled Loop, and Unbundled Dedicated Transport | M40       | Unbundled Facility Access Service (analog) (MRC/NRC) | Inter-Office Facility (IOF), channelized Hi Cap loops, & Network Interface Devices (NID). Transport also includes ISDN PRI, DTS, EEL, DS1 and trunk ports. |
| Other  | M41       | Unbundled Facility Access Service (MRC/NRC)          | Virtual Collocation  |
| Line Port  | U09       | Unbundled LIDB (per event usage charges)             | Line Information Database dips   |
| Other  | U10       | Local Number Portability (per event charges)         | CSR database dips (on a contract and casual basis)   |
| Other  | Y38       | CLEC (MRC/NRC, interconnection usage charges)        | Facilities Based CLEC (New York only)  |

*Table VI-9: Resale and UNE Bill Types*

| UNE charge categories         | Bill Code | Billing Title  | Comment   |
|-------------------------------|-----------|--|---|
| Line Port, Other              | Y40       | Unbundled Line Port<br>(MRC/NRC, unbundled usage charges)  | TN Level  |
| Unbundled Dedicated Transport | Y41       | Unbundled Trunk Port<br>(MRC/NRC, unbundled usage charges) | Facilities-based CLEC and Meet Point A&B Usage, IP charges. (This contains only facilities. Trunk ports are billed on the M40.) |
| Line Port, Other              | Y42       | Unbundled Line Port<br>(MRC/NRC, unbundled usage charges)  | DS1 Level. Includes ISDN PRI.   |
| Other                         | Y77       | Unbundled Access Loop Service<br>(per event usage charges) | Unbundled SS7-STP Connections (Currently no usage is billed on this account).   |
| Unbundled Loop                | CRIS      | Unbundled Loop Summary<br>(of SBNs)<br>(MRC/NRC)           | 2- & 4-wire analog loop and Network Interface Device (NID)  |
| N/A                           | CRIS      | SNB - Retail   | Billing of retail product not available as an unbundled wholesale product   |

### 7.5 Scenarios:

A preliminary selection of scenarios has been identified for billing purposes (refer to Appendix B). A final set needs to be selected for all products that include, specifically:

- Test cases for 'as-is/conversion' customers (some of which have Supplements)
- Test cases for disconnects
- Test cases for changes to other items (e.g., features)
- Test cases with errors

All migration situations should be adequately represented for customers' transitioning billing from:

- BA-NY to a CLEC
- CLEC to BA-NY
- CLEC to CLEC

### 7.6 Approach:

This test will use a combination of systems and operational analysis to evaluate the completeness and accuracy of charges that should appear on the bill based on the staged input data (usage information from the BLG6: Functional Usage Evaluation and selected scenarios). Expected results will be defined for each test case and test cycle. In addition, historical reports will be reviewed from a sample set of months to compare BA-NY versus CLEC arrival dates.

Two bill periods will be processed for the same set of customers.

- The first bill period consists of the baseline bills where customers created for this test are billed for the first time directly from the initial test bed. These bills are produced prior to the execution of any POP scenarios.
- The second bill period consists of bills produced after selected scenarios have been executed (see section 7.5 'Scenarios' above). As a result of including these scenarios, this second set of bills will include items such as prorates, disconnects, migrations, and adjustments. Some customers will be created during the POP test execution, and will only receive second period bills.

Carriers' customers will order many products that will be billed through both CABS and CRIS. Therefore, at least two billing cycles will be used - one for CABS bills, and at least one for CRIS bills. Additional bill cycles may be needed to accomplish all test cases. This requirement should be finalized during the detailed test planning process.

This series of processes is required to validate the full range of the charge type life cycle for new and/or disconnected customers or customers making changes.

#### 7.6.1 Inputs

1. Detailed Test Plan
2. Test Cases from the POP Domain
3. Scenarios have been executed. Test bed has data required to bill (e.g., customers, payments and adjustments)
4. Expected results for each test case
5. Expected results for each test cycle
6. BA-NY people and resources available to run bill

cycles

7. CLEC Survey

**7.6.2 Activities**

1. Run Billing for Cycle 1 - CABS billing.
2. Balance Bill cycle (e.g., usage, MRC/NRC, payments, adj., etc.).
3. Validate test results for each test case (e.g., proration for new/disconnects).
4. Validate test results for billing cycle (e.g., totals for usage, charge types, etc.).
5. Identify discrepancies.
6. Run Billing for Cycle 2 - CRIS billing.
7. Balance Bill cycle (e.g., usage, MRC/NRC, payments, adj., etc.).
8. Validate test results for each test case (e.g., full month of charges).
9. Validate test results for billing cycle (e.g., totals for usage, charge types, etc.).
10. Identify discrepancies.
11. Run additional bill cycles, if necessary. Repeat 6-9.
12. CLECs will log delivery of the CABS bill.
13. Collect CLEC's data about arrival of the bills for sample months.

**7.6.3 Outputs**

1. A report showing each test case, expected results, and discrepancies.
2. A report showing actual versus predicted cycle balancing and any discrepancies.
3. A report showing BA-NY's CABS bill delivery dates compared to the CLEC's bill delivery dates.

**7.7 Exit Criteria:**

| Criteria                           | Responsible Party |
|------------------------------------|-------------------|
| All Global Exit Criteria satisfied | See Table III-4   |
| All bills reviewed                 | Ph 2 Test Mgr.    |

## **VII. Relationship Management and Infrastructure Domain Test Section**

### **A. Purpose**

The purpose of this section is to define the specific tests to be undertaken in evaluating the systems, processes and other operational elements associated with BA-NY's establishment and maintenance of business relationships with the CLECs. Areas to be evaluated include the provision of on-going operational support to CLECs in a manner both adequate to CLEC business needs and comparable to that provided to BA-NY Retail Operations.

### **B. Organization**

The Relationship Management and Infrastructure "Scope" section contains a series of tables that identify the types of tests to be associated with each Target Test Area and are organized based upon test subject matter.

The subsequent section, Relationship Management and Infrastructure "Test Process," provides additional information and tables that further define the testing approach, inputs, outputs, as well as entrance and exit criteria. The tests are grouped to enable an efficient overall test procedure.

### **C. Scope**

The Relationship Management and Infrastructure Domain is comprised of seven Target Test Areas, representing important and generally distinct areas of effort undertaken by BA-NY to establish and subsequently support the CLEC relationship. These Target Test Areas include:

- Change Management
- Interface Development
- Account Establishment & Management
- Network Design, Collocation, and Interconnection Planning
- System Administration Help Desk
- CLEC Training
- Forecasting

Each Target Test Area is further broken down into a number of increasingly discrete Process and Sub Process Areas that serve to identify the particular area of interest under test.

### *Change Management*

**Table VII-1 Test Target : Change Management**

| Process Area      | Sub Process/ Attribute      | Evaluation Measure  | Evaluation Technique                           | Criteria Type |
|-------------------|-----------------------------|---|--|---------------|
| Change Management | Developing Change Proposals | Completeness and consistency of change development process      | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Evaluating Change Proposals | Completeness and consistency of change evaluation process       | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Implementing Change         | Completeness and consistency of change implementation process   | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Intervals                   | Reasonableness of change interval                               | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Documentation               | Timeliness of documentation updates                             | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Tracking Change Proposals   | Adequacy and completeness of change management tracking process | Inspection<br>Document review<br>Report review | Qualitative   |

*Interface Development***Table VII-2 Test Target: Interface Development**

| Process Area                          | Sub Process/Attribute                 | Evaluation Measure  | Evaluation Technique                           | Criteria Type |
|---------------------------------------|---------------------------------------|---|--|---------------|
| Developing and Maintaining Interfaces | Software development                  | Adequacy and completeness of software development methodology   | Inspection<br>Document review<br>Report review | Qualitative   |
| Develop Interface Documentation       | Document development and distribution | Adequacy and completeness of interface document development and distribution procedures                                   | Inspection<br>Document review<br>Report review | Qualitative   |
|                                       | Document structure                    | Adequacy and completeness of interface document structure   | Inspection<br>Document review<br>Report review | Qualitative   |
| Developing and Maintaining Interfaces | Implementation                        | Compliance with schedule of interface development deliverables (as defined in the TIS Change Management Process document) | Inspection<br>Document review<br>Report review | Qualitative   |

*Account Establishment & Management**Table VII-3 Test Target: Account Establishment & Management*

| Process Area                         | Sub Process/ Attribute                             | Evaluation Measure  | Evaluation Technique          | Criteria Type |
|--------------------------------------|--|---|-------------------------------|---------------|
| Establishing an Account Relationship | Staffing   | Appropriate roles and responsibilities  | Inspection<br>Document review | Qualitative   |
|                                      |  | Capacity, coverage, and account allocation  | Inspection<br>Document review | Qualitative   |
| Maintaining an Account Relationship  | Respond to account inquiry/ request for assistance | Timeliness of response  | Report review<br>Logging      | Quantitative  |
|                                      | Escalation   | Adequacy and completeness of escalation procedures                                    | Inspection<br>Document review | Qualitative   |
|                                      | Communications                                     | Compliance with pre-filing commitment for industry letters and conferences            | Inspection<br>Document review | Qualitative   |
|                                      | Communication                                      | Adequacy and completeness of emergency communication and notifications                | Inspection<br>Document review | Qualitative   |
| Documentation - CLEC Handbook(s)     | Document development and distribution              | Adequacy and completeness of CLEC Handbook(s) development and distribution procedures | Inspection<br>Document review | Qualitative   |
|                                      | Document structure                                 | Adequacy and completeness of CLEC Handbook(s) structure                               | Inspection<br>Document review | Qualitative   |

*Network Design, Collocation, and Interconnection Planning**Table VII-4 Test Target: Network Design, Collocation, and Interconnection Planning*

| Process Area             | Sub Process/Attribute                             | Evaluation Measure  | Evaluation Technique          | Criteria Type |
|--------------------------|---|---|-------------------------------|---------------|
| NDR Process              | Preparation for NDR meetings                      | Usability and completeness of NDR forms   | Document review<br>Inspection | Qualitative   |
|                          | NDR Meetings                                      | Adequacy and completeness of process  | Program managed process       | Qualitative   |
| Collocation              | Collocation requirements forecasting              | Usability and completeness of collocation forecast forms  | Document review<br>Inspection | Qualitative   |
|                          | Evaluation of collocation requirements process    | Adequacy and completeness of process  | Program managed process       | Qualitative   |
|                          | Forecast analysis                                 | Availability of results to commission and CLECs   | Document review<br>Inspection | Existence     |
| Interconnection Planning | Interconnection planning information requirements | Completeness and usability of instructions for preparing for the Interconnection Planning meeting | Document review<br>Inspection | Qualitative   |
|                          | Evaluation of Interconnection Planning process    | Adequacy and completeness of process  | Program managed process       | Qualitative   |

*System Administration Help Desk**Table VII-5 Test Target: System Administration Help Desk*

| Process Area                       | Sub Process/Attribute                         | Evaluation Measure                                | Evaluation Technique                           | Criteria Type |
|------------------------------------|---|---|--|---------------|
| Initiate Help Desk Call Processing | Call answer                                   | Timeliness of call answer                         | Transaction generation<br>Report review        | Quantitative  |
|                                    | User interface                                | Ease of use of user interface                     | Inspection<br>Document review                  | Qualitative   |
|                                    | Call logging                                  | Accuracy and completeness of call logging         | Inspection<br>Document review                  | Qualitative   |
|                                    | Severity coding                               | Accuracy and completeness of severity coding      | Inspection<br>Document review<br>Report review | Qualitative   |
| Process Help Desk Call             | Resolution of user question, problem or issue | Completeness and consistency of process           | Inspection<br>Document review                  | Qualitative   |
|                                    | Resolution of user question, problem or issue | Accuracy of response                              | Transaction generation<br>Report review        | Quantitative  |
| Close Help Desk Call               | Closure posting                               | Completeness and consistency of process           | Inspection<br>Document review                  | Qualitative   |
|                                    |   | Accuracy of posting                               | Transaction generation<br>Report review        | Quantitative  |
|                                    |   | Timeliness of process                             | Transaction generation<br>Report review        | Quantitative  |
| Status Tracking and Reporting      | Status tracking and reporting                 | Completeness and consistency of reporting process | Inspection<br>Document review                  | Qualitative   |

Table VII-5 Test Target: System Administration Help Desk

| Process Area           | Sub Process/Attribute           | Evaluation Measure   | Evaluation Technique          | Criteria Type |
|------------------------|---------------------------------|--|-------------------------------|---------------|
| Problem Escalation     | User initiated escalation       | Completeness and consistency of process                        | Inspection<br>Document review | Qualitative   |
| Capacity Management    | Capacity planning process       | Completeness and consistency of process                        | Inspection<br>Document review | Qualitative   |
| Security and Integrity | Data access controls            | Safety of process  | Inspection<br>Document review | Qualitative   |
| Process Management     | General management practices    | Completeness and consistency of operating management practices | Inspection<br>Document review | Qualitative   |
|                        | Performance measurement process | Controllability, efficiency and reliability of process         | Inspection<br>Document review | Qualitative   |
|                        | Process improvement             | Completeness of process improvement practices                  | Inspection<br>Document review | Qualitative   |

## CLEC Training

Table VII-6 Test Target: CLEC Training

| Process Area                       | Sub Process/Attribute            | Evaluation Measure   | Evaluation Technique          | Criteria Type |
|------------------------------------|----------------------------------|--|-------------------------------|---------------|
| Training Program Development       | Develop curriculum               | Completeness of training curriculum and forums   | Document review<br>Inspection | Qualitative   |
|                                    |                                  | Adequacy of procedures to respond to information about training quality and utilization      | Document review<br>Inspection | Qualitative   |
|                                    |                                  | Adequacy of procedures to accept CLEC input regarding training curriculum                    | Document review<br>Inspection | Qualitative   |
|                                    | Publicize training opportunities | Availability of information about training opportunities                                     | Document review<br>Inspection | Qualitative   |
| Training Program Quality Assurance | Attendance/utilization tracking  | Adequacy of process to track utilization and attendance of various training tools and forums | Document review<br>Inspection | Qualitative   |
|                                    | Session effectiveness tracking   | Adequacy of process to survey training recipients on effectiveness of training               | Document review<br>Inspection | Qualitative   |

*Table VII-6 Test Target: CLEC Training*

| Process Area       | Sub Process/Attribute           | Evaluation Measure                                       | Evaluation Technique          | Criteria Type |
|--------------------|---------------------------------|--|-------------------------------|---------------|
|                    | Instructor oversight            | Adequacy of procedures to monitor instructor performance | Document review<br>Inspection | Qualitative   |
| Process Management | Performance measurement process | Controllability, efficiency and reliability of process   | Inspection<br>Document review | Qualitative   |
|                    | Process improvement             | Completeness of process improvement practices            | Inspection<br>Document review | Qualitative   |

**Forecasting***Table VII-7 Test Target: Forecasting*

| Process Area | Sub Process/Attribute                 | Evaluation Measure                                      | Evaluation Technique        | Criteria Type |
|--------------|---------------------------------------|---|-----------------------------|---------------|
| Forecasting  | Forecast development                  | Compliance with BA-NY documented forecasting procedures | Report review<br>Inspection | Qualitative   |
|              | Forecast publication and confirmation | Availability of published forecast summaries            | Report review<br>Inspection | Existence     |

**D. Test Process**

Ten test processes have been designed to address the seven Test Target areas. The organization of the subject test processes is as follows:

- RMI1 - Change Management Practices Verification and Validation Review
- RMI2 - Interface Development Verification and Validation Review

- RMI3 - Account Establishment & Management Verification and Validation Review
- RMI4 - Account Establishment & Management Performance Data Review
- RMI5 - Network Design Request, Collocation, and Interconnection Planning Verification and Validation Review
- RMI6 - System Administration Help Desk Functional Review
- RMI7 - System Administration Help Desk Performance Data Review
- RMI8 - System Administration Help Desk Verification and Validation Review
- RMI9 - CLEC Training Verification and Validation Review
- RMI10 - Forecasting Verification and Validation Review

### **1.0 Test RMI1: Change Management Practices Verification and Validation Review**

#### **1.1 Description**

This test evaluates the overall policies and practices for managing change in the procedures and systems necessary for establishing and maintaining effective BA-NY/CLEC relationships. This test will rely on checklists and inspections.

#### **1.2 Objectives**

The objectives of this test are to determine the adequacy and completeness of procedures for developing, publicizing, conducting, and monitoring change management.

#### **1.3 Entrance Criteria**

| <b>Criteria</b>                       | <b>Responsible Party</b> |
|---------------------------------------|--------------------------|
| Global Entrance Criteria requirements | See Table III-3          |
| Process evaluation checklist          | Ph 2 Test Mgr.           |
| Interview guides                      | Ph 2 Test Mgr.           |

## 1.4 Test Scope

**Table VII-8 Test Target: Change Management Practices Verification and Validation Review**

| Process Area      | Sub Process/Attribute       | Evaluation Measure  | Evaluation Technique                           | Criteria Type |
|-------------------|-----------------------------|---|--|---------------|
| Change Management | Developing Change Proposals | Completeness and consistency of change development process      | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Evaluating Change Proposals | Completeness and consistency of change evaluation process       | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Implementing Change         | Completeness and consistency of change implementation process   | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Intervals                   | Reasonableness of change interval                               | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Documentation               | Timeliness of documentation updates                             | Inspection<br>Document review<br>Report review | Qualitative   |
|                   | Tracking Change Proposals   | Adequacy and completeness of change management tracking process | Inspection<br>Document review<br>Report review | Qualitative   |

## 1.5 Scenarios

This test does not rely on scenarios.

## 1.6 Test Approach

### 1.6.1 Inputs

1. Telecom Industry Services Change Management Process documentation
2. Other procedural and technical documentation
3. CLEC Handbook(s)
4. Evaluation checklists
5. Interview guides

**1.6.2 Activities**

1. Gather documentation.
2. Perform interviews and documentation reviews.
3. Complete evaluation checklists and interview summaries.
4. Develop and document findings.

**1.6.3 Outputs**

1. Completed evaluation checklists and interview summaries
2. Summary report

**1.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**2.0 Test RMI2: Interface Development Verification and Validation Review**

**2.1 Description**

This test evaluates key policies and practices for developing and maintaining OSS interfaces which enable the BA-NY/CLEC relationship. These policies and practices apply to interfaces such as the Internet GUI interfaces and the application-to-application interfaces. This test will rely on checklists and inspections.

**2.2 Objectives**

The objectives of this test are to determine the adequacy and completeness of key policies and procedures for developing and maintaining interfaces.

**2.3 Entrance Criteria**

| Criteria                              | Responsible Party |
|---------------------------------------|-------------------|
| Global Entrance Criteria requirements | See Table III-3   |

| Criteria                     | Responsible Party |
|------------------------------|-------------------|
| Process evaluation checklist | Ph 2 Test Mgr.    |
| Interview guides             | Ph 2 Test Mgr.    |

**2.4 Test Scope**

**Table VII-9 Test Target: Interface Development Verification and Validation Review**

| Process Area                          | Sub Process/ Attribute                | Evaluation Measure  | Evaluation Technique                           | Criteria Type |
|---------------------------------------|---------------------------------------|---|--|---------------|
| Developing and Maintaining Interfaces | Software development                  | Adequacy and completeness of software development methodology   | Inspection<br>Document review<br>Report review | Qualitative   |
| Develop Interface Documentation       | Document development and distribution | Adequacy and completeness of interface document development and distribution procedures                                   | Inspection<br>Document review<br>Report review | Qualitative   |
|                                       | Document structure                    | Adequacy and completeness of interface document structure   | Inspection<br>Document review<br>Report review | Qualitative   |
| Developing and Maintaining Interfaces | Implementation                        | Compliance with schedule of interface development deliverables (as defined in the TIS Change Management Process document) | Inspection<br>Document review<br>Report review | Qualitative   |

**2.5 Scenarios**

This test does not rely on scenarios.

**2.6 Test Approach**

**2.6.1 Inputs**

1. Telecom Industry Services Change Management Process document
2. Other procedural and technical documentation
3. CLEC Handbook(s)
4. Evaluation checklists
5. Interface development products as a result of change management efforts
6. Interview guides
7. BA-NY System Development Methodology documentation

**2.6.2 Activities**

1. Gather information
2. Review interface development products to assess whether their successful completion was performed as anticipated by the timelines in the Telecom Industry Services Change Management Process document
3. Perform interviews and documentation reviews
4. Complete evaluation checklists and interview summaries
5. Develop and document findings.

**2.6.3 Outputs**

1. Completed evaluation checklists and interview summaries
2. Comparison of actual versus expected results for interface development deliverables (as defined in the TIS Change Management Process)
3. Summary report

**2.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**3.0 Test RMI3: Account Establishment & Management Verification and Validation Review**

**3.1 Description**

This test evaluates the overall policies and practices for establishing and managing the account relationship. This test will rely on checklists and inspections.

**3.2 Objectives**

The objectives of this test are to determine the adequacy and completeness of key procedures for developing, publicizing, conducting, and monitoring account management.

**3.3 Entrance Criteria**

| Criteria                              | Responsible Party |
|---------------------------------------|-------------------|
| Global Entrance Criteria requirements | See Table III-3   |
| Process evaluation checklist          | Ph 2 Test Mgr.    |
| Interview guides                      | Ph 2 Test Mgr.    |

**3.4 Test Scope**

**Table VII-10 Test Target: Account Establishment & Management Verification and Validation Review**

| Process Area                         | Sub Process/ Attribute | Evaluation Measure                                 | Evaluation Technique          | Criteria Type |
|--------------------------------------|------------------------|--|-------------------------------|---------------|
| Establishing an Account Relationship | Staffing               | Appropriate roles and responsibilities             | Inspection<br>Document review | Qualitative   |
|                                      |                        | Capacity, coverage, and account allocation         | Inspection<br>Document review | Qualitative   |
| Maintaining an Account Relationship  | Escalation             | Adequacy and completeness of escalation procedures | Inspection<br>Document review | Qualitative   |

**Table VII-10 Test Target: Account Establishment & Management Verification and Validation Review**

| Process Area                     | Sub Process/ Attribute                | Evaluation Measure  | Evaluation Technique          | Criteria Type |
|----------------------------------|---------------------------------------|---|-------------------------------|---------------|
|                                  | Communications                        | Compliance with pre-filing commitment for industry letters and conferences            | Inspection<br>Document review | Qualitative   |
|                                  |                                       | Adequacy and completeness of emergency communication and notifications                | Inspection<br>Document review | Qualitative   |
| Documentation - CLEC Handbook(s) | Document development and distribution | Adequacy and completeness of CLEC Handbook(s) development and distribution procedures | Inspection<br>Document review | Qualitative   |
|                                  | Document structure                    | Adequacy and completeness of CLEC Handbook(s) structure                               | Inspection<br>Document review | Qualitative   |

### 3.5 Scenarios

This test does not rely on scenarios.

### 3.6 Test Approach

#### 3.6.1 Inputs

1. Telecom Industry Services Change Management Process document
2. CLEC Handbook(s)
3. Other procedural and technical documentation
4. Evaluation checklists
5. Interview guides

**3.6.2 Activities**

1. Gather information
2. Perform interviews and documentation reviews
3. Complete evaluation checklists and interview summaries
4. Develop and document findings

**3.6.3 Outputs**

1. Completed evaluation checklists and interview summaries
2. Summary report

**3.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**4.0 Test RMI4: Account Establishment and Management Performance Data Review****4.1 Description**

This test evaluates the performance of the account management function responsiveness with respect to call return and call escalation norms established by BA-NY. This test will rely on reviews of historical data and measurements, where available. No volume testing is defined for this test.

**4.2 Objectives**

The objectives of this test are to determine compliance of the account management with response time norms.

**4.3 Entrance Criteria**

| Criteria                                    | Responsible Party |
|---|-------------------|
| Global Entrance Criteria requirements       | See Table III-3   |
| Agreement of performance measures and norms | Ph 2 Test Mgr.    |
| Agreement on statistical approach           | Ph 2 Test Mgr.    |
| Provision of relevant historical data       | BA-NY             |
| Access to CLEC account management calls     | CLEC              |

#### 4.4 Test Scope

*Table VII-11 Test Target: Account Establishment and Management Performance Data Review*

| Process Area                        | Sub Process/ Attribute                             | Evaluation Measure     | Evaluation Technique     | Criteria Type |
|-------------------------------------|--|------------------------|--------------------------|---------------|
| Maintaining an Account Relationship | Respond to account inquiry/ request for assistance | Timeliness of response | Report review<br>Logging | Quantitative  |

#### 4.5 Scenarios

This test does not rely on scenarios.

#### 4.6 Test Approach

##### 4.6.1 Inputs

1. Procedural documentation
2. CLEC Handbook(s)
3. Statistical approach definition
4. Historical data (if available) on the time it takes the account managers to respond to a CLEC call; data may be from manual logs or other data sources

##### 4.6.2 Activities

1. Gather and verify information.
2. Create log to track live CLEC calls.
3. Determine and verify sample size, measurement, and statistical approach.
4. Calculate time (distribution) between CLEC contact with the account managers and account management response.
5. Compile results.
6. Develop and document findings.

##### 4.6.3 Outputs

1. Report of response times by call type, including distribution, mean, and standard deviation

## 2. Summary report

## 4.7 Exit Criteria

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**5.0 Test RMI5: Network Design Request, Collocation, and Interconnection Planning Verification and Validation Review**

## 5.1 Description

This test evaluates the key policies and practices for processing the Network Design Request, Collocation (physical and virtual) planning, and Interconnection Planning.

This test will rely on checklists, interviews and inspections.

## 5.2 Objectives

The objectives of this test are to:

- Determine whether the CLEC has sufficient information to adequately prepare for NDR, Collocation and Interconnection planning.
- Determine whether the NDR planning process is sufficiently well structured and managed to yield the desired results.
- Determine whether the Collocation planning process is sufficiently well structured and managed to yield the desired results.
- Determine whether the Interconnection planning process is sufficiently well structured and managed to yield the desired results.

## 5.3 Entrance Criteria

| Criteria                              | Responsible Party |
|---------------------------------------|-------------------|
| Global Entrance Criteria requirements | See Table III-3   |
| Process evaluation checklist          | Ph 2 Test Mgr.    |
| Interview guides                      | Ph 2 Test Mgr.    |

## 5.4 Test Scope

**Table VII-12 Test Target: Network Design Request, Collocation, and Interconnection Planning Verification and Validation Review**

| Process Area             | Sub Process/Attribute                             | Evaluation Measure  | Evaluation Technique          | Criteria Type |
|--------------------------|---|---|-------------------------------|---------------|
| NDR Process              | Preparation for NDR meetings                      | Usability and completeness of NDR forms   | Document review<br>Inspection | Qualitative   |
|                          | NDR Meetings                                      | Adequacy and completeness of process  | Program managed process       | Qualitative   |
| Collocation              | Collocation requirements forecasting              | Usability and completeness of collocation forecast forms  | Document review<br>Inspection | Qualitative   |
|                          | Evaluation of collocation requirements process    | Adequacy and completeness of process  | Program managed process       | Qualitative   |
|                          | Forecast analysis                                 | Availability of results to commission and CLECs   | Document review<br>Inspection | Existence     |
| Interconnection Planning | Interconnection planning information requirements | Completeness and usability of instructions for preparing for the Interconnection Planning meeting | Document review<br>Inspection | Qualitative   |
|                          | Evaluation of Interconnection Planning process    | Adequacy and completeness of process  | Program managed process       | Qualitative   |

## 5.5 Scenarios

This test does not rely on scenarios.

## 5.6 Test Approach

### 5.6.1 Inputs

1. CLEC Handbook(s)

2. Other procedural and technical documentation
3. Evaluation checklists
4. Interview guides

**5.6.2 Activities**

1. Gather information.
2. Perform interviews and documentation reviews.
3. Complete evaluation checklists and interview summaries.
4. Develop and document findings.

**5.6.3 Outputs**

1. Completed evaluation checklists and interview summaries
2. Summary report

**5.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**6.0 Test RMI6: System Administration Help Desk Functional Review**

**6.1 Description**

This test is the process-oriented evaluation of the system administration help desk function. This test will rely on checklists, inspections, and walk-throughs.

**6.2 Objectives**

The objectives of this test are to:

- Determine completeness and consistency of overall system administration help desk process.
- Determine whether the escalation procedure is correctly maintained, documented and published.
- Determine the existence and functionality of procedures for measuring, tracking, projecting and maintaining system administration help desk performance.
- Ensure existence of reasonable security measures to ensure integrity of system administration help desk data and the ability to restrict access to parties with specific access permissions.

- Ensure the overall help desk effort has effective management oversight.
- Ensure responsibilities for performance improvement are defined and assigned.

**6.3 Entrance Criteria**

| Criteria   | Responsible Party |
|--|-------------------|
| Limited to Global Entrance Criteria requirements | See Table III-3   |
| Process evaluation checklist                     | Ph 2 Test Mgr.    |
| Interview guides                                 | Ph 2 Test Mgr.    |

**6.4 Test Scope**

*Table VII-13 Test Target: System Administration Help Desk Functional Review*

| Process Area                  | Sub Process/ Attribute                        | Evaluation Measure   | Evaluation Technique          | Criteria Type |
|-------------------------------|---|--|-------------------------------|---------------|
| Process Help Desk Call        | Resolution of user question, problem or issue | Completeness and consistency of process                        | Inspection<br>Document review | Qualitative   |
| Close Help Desk Call          | Closure posting                               | Completeness and consistency of process                        | Inspection<br>Document review | Qualitative   |
| Status Tracking and Reporting | Status tracking and reporting                 | Completeness and consistency of reporting process              | Inspection<br>Document review | Qualitative   |
| Problem Escalation            | User initiated escalation                     | Completeness and consistency of process                        | Inspection<br>Document review | Qualitative   |
| Capacity Management           | Capacity planning process                     | Completeness and consistency of process                        | Inspection<br>Document review | Qualitative   |
| Security and Integrity        | Data access controls                          | Safety of process  | Inspection<br>Document review | Qualitative   |
| Process Management            | General management practices                  | Completeness and consistency of operating management practices | Inspection<br>Document review | Qualitative   |

**Table VII-13 Test Target: System Administration Help Desk Functional Review**

| Process Area | Sub Process/ Attribute          | Evaluation Measure                                     | Evaluation Technique          | Criteria Type |
|--------------|---------------------------------|--|-------------------------------|---------------|
|              | Performance measurement process | Controllability, efficiency and reliability of process | Inspection<br>Document review | Qualitative   |
|              | Process improvement             | Completeness of process improvement practices          | Inspection<br>Document review | Qualitative   |

### 6.5 Scenarios

This test does not rely on scenarios.

### 6.6 Test Approach

#### 6.6.1 Inputs

1. Procedural documentation (such as internal help desk procedure manual)
2. CLEC Handbook(s)
3. Evaluation checklists
4. Interview guides

#### 6.6.2 Activities

1. Gather information.
2. Perform walk-throughs and documentation reviews.
3. Complete evaluation checklists.
4. Develop and document findings.

#### 6.6.3 Outputs

1. Completed evaluation checklists
2. Summary report

**6.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**7.0 Test RMI7: System Administration Help Desk Performance Data Review****7.1 Description**

This test gathers together performance tests for the system administration help desk function.

Historical results from CLECs will be examined to measure the initial response and end-to-end response times for help desk calls. Response time distribution statistics, qualified as necessary by severity code, will be tabulated. This test will rely on reviews of historical data and measurements, where available. No volume testing is defined for this test.

**7.2 Objectives**

The objectives of this test are to:

- determine timeliness of the help desk process from inception to closure
- determine the accuracy of responses and closure postings

**7.3 Entrance Criteria**

| Criteria  | Responsible Party |
|---|-------------------|
| Includes all Global Entrance Criteria requirements  | See Table III-3   |
| Agreement on statistical approach   | Ph 2 Test Mgr.    |
| Will require NYDPS to determine specific standards of performance for: <ul style="list-style-type: none"> <li>– minimum acceptable response time(s) for initiation of help desk call processing</li> <li>– minimum acceptable response time(s) from initiation to closure of help desk calls</li> </ul> | NY-DPS            |

## 7.4 Test Scope

*Table VII-14 Test Target: System Administration Help Desk Performance Data Review*

| Process Area                       | Sub Process/ Attribute | Evaluation Measure        | Evaluation Technique                    | Criteria Type |
|------------------------------------|------------------------|---------------------------|---|---------------|
| Initiate Help Desk Call Processing | Call answer            | Timeliness of call answer | Transaction generation<br>Report review | Quantitative  |
| Close Help Desk Call               | Closure posting        | Timeliness of process     | Transaction generation<br>Report review | Quantitative  |

## 7.5 Scenarios

This test does not rely on scenarios.

## 7.6 Test Approach

### 7.6.1 Inputs

1. Procedural documentation (such as internal help desk procedure manual)
2. CLEC Handbook(s)
3. Statistical approach
4. Historical data (if available) on the time it takes the help desk to respond to a user call and to complete and close a help desk call event; data may be automated data from automated call distributor or automated call response systems as deployed or from manual logs

### 7.6.2 Activities

1. Gather and verify information.
2. If no historical information is available, create log to track live CLEC help desk calls.
3. Determine and verify sample size, measurement, and statistical approach.
4. Calculate time (distribution) between caller connection with the help desk and initiation of

substantive dialog about the problem (with service technician or automated response system).

5. Compile results.
6. Develop and document findings.

**7.6.3 Outputs**

1. Report of call answer response times and call initiation to closure times, including distribution, mean, and standard deviation
2. Summary report

**7.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**8.0 Test RMI8: System Administration Help Desk Verification and Validation Review**

**8.1 Description**

This test gathers together validation tests for the help desk function. A document review will be conducted to ensure that current and adequate instructions on the use of the interface are available to users. The tester will render an opinion as to whether any substantive errors, omissions, or findings of significant impact are present.

This test also will validate that help desk calls are logged at the help desk in accordance with existing rules and procedures. This test will be accomplished by having the tester directly observe the help desk operation.

The tester will examine the available help desk reports to determine whether call logging and severity coding appears appropriate to the description of the problem. Apparent mismatches may be referred to BA-NY personnel for additional explanation. The tester will render an opinion as to whether any findings of significant impact are present.

This test will rely extensively on reviews of checklists and inspections. No volume testing is defined for this test.

**8.2 Objectives**

The objectives of this test are to validate the:

- usability of user interface
- accuracy and completeness of call logging and severity coding

### 8.3 Entrance Criteria

| Criteria   | Responsible Party |
|--|-------------------|
| Includes all Global Entrance Criteria requirements   | See Table III-3   |
| Process evaluation checklist   | Ph 2 Test Mgr.    |
| Interview guides   | Ph 2 Test Mgr.    |
| Will require NYDPS to determine specific standards of performance for: <ul style="list-style-type: none"> <li>- minimum acceptable level(s) of correct help desk responses</li> <li>- minimum acceptable percentage(s) of accurate help desk closure postings</li> </ul> | NY-DPS            |

### 8.4 Test Scope

**Table VII-15 Test Target: System Administration Help Desk Verification and Validation Review**

| Process Area                       | Sub Process/Attribute                         | Evaluation Measure                           | Evaluation Technique                           | Criteria Type |
|------------------------------------|---|--|--|---------------|
| Initiate Help Desk Call Processing | User interface                                | Ease of use of user interface                | Inspection<br>Document review                  | Qualitative   |
|                                    | Call logging                                  | Accuracy and completeness of call logging    | Inspection<br>Document review                  | Qualitative   |
|                                    | Severity coding                               | Accuracy and completeness of severity coding | Inspection<br>Document review<br>Report review | Qualitative   |
| Process Help Desk Call             | Resolution of user question, problem or issue | Accuracy of response                         | Transaction generation<br>Report review        | Quantitative  |
| Close Help Desk Call               | Closure posting                               | Accuracy of posting                          | Transaction generation<br>Report review        | Quantitative  |

### 8.5 Scenarios

This test does not rely on scenarios.

## 8.6 Test Approach

Four areas will be examined in this test: user interface, call logging, severity coding, and capacity management.

## 8.7 Resolution of user question, problem, or issue

### 8.7.1 Inputs

1. Procedural documentation
2. CLEC Handbook(s)

### 8.7.2 Activities

1. Gather and verify information.
2. Generate test data cases/scripted dialogs of help desk inquiries and expected results.
3. Conduct help desk inquiries using test cases.
4. Compare help desk responses to expected results.
5. Develop and document findings.

### 8.7.3 Outputs

1. Summary report showing actual versus expected results

## 8.8 User interface

### 8.8.1 Inputs

1. CLEC Handbook(s)
2. Evaluation checklists

### 8.8.2 Activities

1. Gather information.
2. Perform walk-throughs and documentation reviews of user interfaces.
3. Complete evaluation checklists.

### 8.8.3 Outputs

1. Completed evaluation checklists regarding currency and adequacy of instructions on contacting and interacting with the system administration help desk

**8.9 Call logging, severity coding, and closure posting**

**8.9.1 Inputs**

1. Procedural documentation
2. CLEC Handbook(s)
3. Evaluation checklists

**8.9.2 Activities**

1. Gather information
2. Generate test data cases/scripted dialogs of help desk inquiries and expected results
3. Conduct help desk inquiries using test cases
4. Compare help desk responses to expected results
5. Perform report reviews of call logs, severity coding, and closure postings
6. Complete evaluation checklists
7. Develop and document findings

**8.9.3 Outputs**

1. Completed evaluation checklists regarding whether system administration help desk calls are logged in, closed, and classified by severity in accordance with existing rules and procedures
2. Summary report

**8.10 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**9.0 Test RMI9: CLEC Training Verification and Validation Review**

**9.1 Description**

This test evaluates key aspects of BA-NY's training program for CLECs. This test will rely on checklists and inspections.

**9.2 Objectives**

The objectives of this test are to:

- determine the existence and functionality of procedures for developing, publicizing, conducting, and monitoring CLEC training
- ensure the CLEC training effort has effective management oversight

**9.3 Entrance Criteria**

| Criteria                              | Responsible Party |
|---------------------------------------|-------------------|
| Global Entrance Criteria requirements | See Table III-3   |
| Process evaluation checklist          | Ph 2 Test Mgr.    |
| Interview guides                      | Ph 2 Test Mgr.    |

**9.4 Test Scope**

*Table VII-16 Test Target: CLEC Training Verification and Validation Review*

| Process Area                       | Sub Process/Attribute            | Evaluation Measure   | Evaluation Technique          | Criteria Type |
|------------------------------------|----------------------------------|--|-------------------------------|---------------|
| Training Program Development       | Develop curriculum               | Completeness of training curriculum and forums   | Document review<br>Inspection | Qualitative   |
|                                    |                                  | Adequacy of procedures to respond to information about training quality and utilization      | Document review<br>Inspection | Qualitative   |
|                                    |                                  | Adequacy of procedures to accept CLEC input regarding training curriculum                    | Document review<br>Inspection | Qualitative   |
|                                    | Publicize training opportunities | Availability of information about training opportunities                                     | Document review<br>Inspection | Qualitative   |
| Training Program Quality Assurance | Attendance/utilization tracking  | Adequacy of process to track utilization and attendance of various training tools and forums | Document review<br>Inspection | Qualitative   |

Table VII-16 Test Target: CLEC Training Verification and Validation Review

| Process Area       | Sub Process/Attribute           | Evaluation Measure   | Evaluation Technique          | Criteria Type |
|--------------------|---------------------------------|--|-------------------------------|---------------|
|                    | Session effectiveness tracking  | Adequacy of process to survey training recipients on effectiveness of training | Document review<br>Inspection | Qualitative   |
|                    | Instructor oversight            | Adequacy of procedures to monitor instructor performance                       | Document review<br>Inspection | Qualitative   |
| Process Management | Performance measurement process | Controllability, efficiency and reliability of process                         | Inspection<br>Document review | Qualitative   |
|                    | Process improvement             | Completeness of process improvement practices                                  | Inspection<br>Document review | Qualitative   |

### 9.5 Scenarios

This test does not rely on scenarios.

### 9.6 Test Approach

#### 9.6.1 Inputs

1. Procedural documentation (such as training manuals)
2. CLEC Handbook(s)
3. Evaluation checklists
4. Interview guides

#### 9.6.2 Activities

1. Gather information.
2. Perform interviews and documentation reviews.
3. Complete evaluation checklists and interview summaries.
4. Develop and document findings.

**9.6.3 Outputs**

1. Completed evaluation checklists and interview summaries
2. Summary report

**9.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**10.0 Test RMI10: Forecasting Verification and Validation Review****10.1 Description**

This test verifies and validates key aspects of the BA-NY/CLEC forecasting process. This test will rely on checklists and inspections.

**10.2 Objectives**

The objectives of this test are to:

- determine the existence and functionality of key procedures for developing, publicizing, conducting, and monitoring forecasting efforts
- ensure the overall forecasting effort has effective management oversight

**10.3 Entrance Criteria**

| Criteria                              | Responsible Party |
|---------------------------------------|-------------------|
| Global Entrance Criteria requirements | See Table III-3   |
| Process evaluation checklist          | Ph 2 Test Mgr.    |
| Interview guides                      | Ph 2 Test Mgr.    |

**10.4 Test Scope**

**Table VII-17 Test Target: Forecasting Verification and Validation Review**

| Process Area | Sub Process/Attribute | Evaluation Measure                                      | Evaluation Technique        | Criteria Type |
|--------------|-----------------------|---|-----------------------------|---------------|
| Forecasting  | Forecast development  | Compliance with BA-NY documented forecasting procedures | Report review<br>Inspection | Qualitative   |

| Process Area | Sub Process/ Attribute                | Evaluation Measure                           | Evaluation Technique        | Criteria Type |
|--------------|---------------------------------------|--|-----------------------------|---------------|
|              | Forecast publication and confirmation | Availability of published forecast summaries | Report review<br>Inspection | Existence     |

**10.5 Scenarios**

This test does not rely on scenarios.

**10.6 Test Approach**

**10.6.1 Inputs**

1. CLEC Handbook(s)
2. Evaluation checklists
3. Interview guides

**10.6.2 Activities**

1. Gather information.
2. Perform interviews and documentation reviews.
3. Complete evaluation checklists and interview summaries.
4. Develop and document findings.

**10.6.3 Outputs**

1. Completed evaluation checklists and interview summaries
2. Summary report

**10.7 Exit Criteria**

| Criteria                                     | Responsible Party |
|--|-------------------|
| Limited to Global Exit Criteria requirements | See Table III-4   |

**VIII. Phase 2 Overview**

The objectives of Phase 2 include the development of executable test plans, providing assistance to all parties in the preparation for these tests, execution of tests, and reporting the test results. These results will be used by the Public Service Commission to evaluate the BA-NY OSS and OSS interface system used for the following business functions:

- Pre-Ordering
- Ordering
- Provisioning
- Maintenance and Repair
- Billing

In addition, Phase 2 includes the execution of testing activities designed to evaluate processes associated with both establishing and maintaining the CLEC-BA-NY relationship. The overall scope of the testing effort is shown in the figure below.

*Table VIII-1: Test Plan Development Framework*

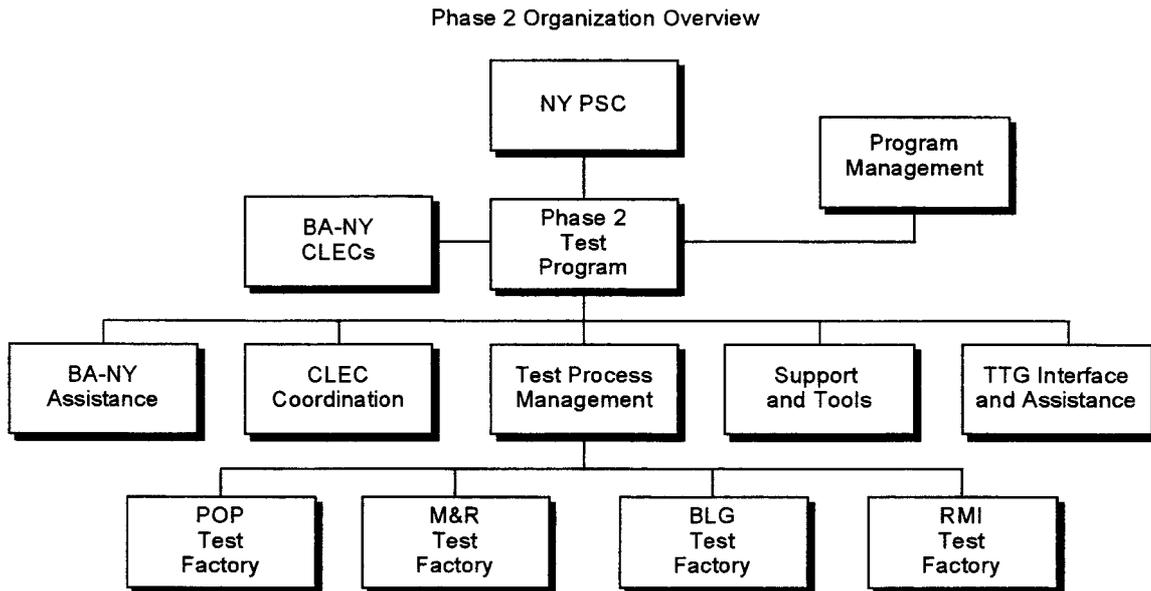

| Timing:    | Establishing a CLEC/ILEC relationship  | Performing daily operations (via systems, interfaces, processes)  | Maintaining a CLEC/ILEC relationship  |
|------------|--|---|---|
| Components | <ul style="list-style-type: none"> <li>• Start-up documentation</li> <li>• Start-up development support</li> <li>• Training</li> <li>• Creation of the interface</li> <li>• Interconnection support</li> </ul> | <ul style="list-style-type: none"> <li>• Processing of real-world test scenarios from both the BA and CLEC avenues (for resale and UNEs) with parity:                             <ul style="list-style-type: none"> <li>-Pre-Ordering</li> <li>-Ordering</li> <li>-Provisioning</li> <li>-Maintenance &amp; Repair</li> <li>-Billing</li> </ul> </li> <li>• BA retail Comparable process</li> <li>• Call Center support</li> <li>• Interface alternatives</li> </ul> | <ul style="list-style-type: none"> <li>• Help desks (for technical problems)</li> <li>• Account management Services</li> <li>• Change management                             <ul style="list-style-type: none"> <li>-Documentation</li> <li>-Interfaces</li> </ul> </li> <li>• Forecasting</li> <li>• Documentation management</li> </ul> |

| Evaluation measures (how to evaluate)    | <ul style="list-style-type: none"> <li>• Existence and quality of documentation</li> <li>• Ease of use</li> <li>• Accuracy</li> <li>• Completeness</li> <li>• Compliance</li> </ul>   | <ul style="list-style-type: none"> <li>• Quality &amp; completion of documentation</li> <li>• Compliance</li> <li>• Functional equivalence</li> <li>• Availability</li> <li>• Reject rates</li> <li>• Response times</li> <li>• Level and quality of work center support</li> <li>• Intervals</li> <li>• Error handling</li> <li>• Root cause analysis</li> </ul>   | <ul style="list-style-type: none"> <li>• Time to respond to inquiries</li> <li>• Time to resolve problems</li> <li>• Existence and usability of change management procedures</li> <li>• Existence and usability of documentation procedures</li> </ul>   |

Business processes which fall into these categories include establishing the forecasting process; conducting the Network Design Review; and performing BA-NY Help Desk functions. The organization of the Phase 2 testing effort is shown in the figure below.

Figure VIII-1: Phase 2 Organization

This section contains the following elements:

- Identification of the major stakeholders
- Definition of the major Phase 2 tasks
- Identification of Phase 2 responsibilities
- The Phase 2 schedule
- Description of the Phase 2 deliverables
- Identification of the testing controls

**A. Major Stakeholders**

Successful completion of Phase 2 testing depends upon the cooperation and contribution of a number of the stakeholders. The roles of the five major stakeholders are described in the table below.

Table VIII-1: Major Stakeholders

| Stakeholder                        | Roles  |
|------------------------------------|--|
| New York Public Service Commission | The New York Public Service Commission is the owner of the Phase 2 Test Plan with general responsibilities for: <ul style="list-style-type: none"> <li>• Reviewing the test plans</li> <li>• Observing the overall test process to ensure fairness in test preparation, execution and data collection</li> </ul> |

**Table VIII-1: Major Stakeholders**

| Stakeholder                                   | Roles  |
|---|--|
| Ph 2 Test Mgr.                                | <ul style="list-style-type: none"> <li>Receiving test reports and results</li> </ul> <p>The Ph 2 Test Mgr. provides overall management of the tests:</p> <ul style="list-style-type: none"> <li>Assisting the other stakeholders in preparing for and conducting the tests</li> <li>Providing change control throughout the testing cycle</li> <li>Reporting the results</li> </ul>  |
| BA-NY   | <p>BA-NY OSS interface systems are the subject of the testing, and BA-NY will:</p> <ul style="list-style-type: none"> <li>Establish a CLEC-ILEC relationship with the CLEC Test Transaction Generator</li> <li>Provide a test bed for data-driven tests</li> <li>Perform all actions required to prepare and execute the tests</li> </ul>  |
| Phase 2 Test Transaction Generator (Ph 2 TTG) | <p>The Phase 2 Test Transaction Generator serves at the direction of the Ph 2 Test Mgr. by:</p> <ul style="list-style-type: none"> <li>Establishing the CLEC-ILEC relationship</li> <li>Injecting test transactions into BA-NY's OSS</li> <li>Collecting and measuring the results</li> </ul>  |
| CLECs   | <p>Through discussions with the NY-PSC, the CLECs have agreed to:</p> <ul style="list-style-type: none"> <li>Provide historical pre-order, order and maintenance and repair data</li> <li>Make available for review any in-process transactions, assist in data entry in limited and controlled cases (where appropriate)</li> <li>Generate local service requests as specified by the Ph 2 Test Mgr.</li> <li>Provide facilities for specific test cases</li> </ul> |

## B. Major Tasks

This section identifies the major tasks and sub-tasks associated with the Evaluation of BA-NY Operational Support Systems.

The Phase 2 effort involves both test management and test execution. The tasks associated with test management are described in the table below.

**Table VIII-2: Phase 2 Test Management Tasks**

| Task Area  | Description   |
|--|---|
| BA-NY OSS and OSS Interface Testing Program Management | <ul style="list-style-type: none"> <li>Overall work plan development and maintenance</li> <li>Plan coordination with stakeholders</li> <li>Issues management and resolution</li> <li>Status tracking and reporting</li> </ul> |

Table VIII-2: Phase 2 Test Management Tasks

| Task Area                             | Description   |
|---------------------------------------|---|
|                                       | <ul style="list-style-type: none"> <li>• Resource acquisition, allocation, and coordination</li> <li>• Management reporting</li> </ul>  |
| Assisting BA-NY                       | <ul style="list-style-type: none"> <li>• Maintenance of effective two way communications</li> <li>• Communication and/or resolution of BA-NY concerns</li> <li>• Review of tests and test schedules with BA-NY</li> <li>• Review of test entrance and exit criteria</li> <li>• Review of test results</li> <li>• Establishment of causes of test failures and communication of remedies</li> </ul>  |
| Coordinating with the CLECs           | <ul style="list-style-type: none"> <li>• Maintenance of effective two way communications</li> <li>• Communication and/or resolution of CLEC concerns regarding participation</li> <li>• Review of tests and schedules requiring CLEC participation</li> </ul>   |
| Set-up and Manage the Testing Process | <ul style="list-style-type: none"> <li>• Development and maintenance of detailed test schedules</li> <li>• Assignment of committed resources</li> <li>• Tracking, escalation, and resolution of detail test issues</li> <li>• Scheduling and managing entrance and exit conferences</li> <li>• Ensuring the availability of work center facilities</li> <li>• Managing the work center</li> <li>• Identifying and acquiring training resources</li> </ul>   |
| Quality Assurance                     | <ul style="list-style-type: none"> <li>• Review of test plans, test execution, and test deliverables for conformance to applicable standards and norms</li> <li>• Examination of outcomes of individual tests for unexpected results requiring additional analysis or explanation</li> <li>• Ensuring in cases of failed tests that the test itself was not at fault and reported results reflect actual circumstances</li> <li>• Ensuring appropriate statistical conventions and measures are applied</li> </ul>                  |
| Reporting the Test Results            | <ul style="list-style-type: none"> <li>• Establishment of standards and formats for reporting results of individual tests</li> <li>• Development of reports summarizing individual test findings at the scenario, domain, or test process level as necessary</li> <li>• Development of the final report and accompanying documentation for PSC</li> </ul>   |
| Change Management                     | <ul style="list-style-type: none"> <li>• Acceptance of stakeholder requests for changes</li> <li>• Identification of need for test changes based upon findings and recommendation from the individual test processes</li> <li>• Analysis of change requests and requirements and development of disposition recommendations for the PSC</li> <li>• Introducing approved changes into the test cycle</li> <li>• Publishing change details to affected stakeholders</li> <li>• Maintaining logs and history of all changes</li> </ul> |

Test processes are organized by test domain within the test plan. For each test process, the test execution activities described in the table below will be accomplished.

**Table VIII-3: Phase 2 Test Execution Tasks**

| Task Area                    | Description   |
|------------------------------|---|
| Preparation Phase Activities | <ul style="list-style-type: none"> <li>• Satisfaction of Entrance Criteria</li> <li>• Development of detailed test plans</li> <li>• Development of the test tree</li> <li>• Development of detailed checklists, questionnaires, interview guidelines</li> <li>• Development of test data specifications</li> <li>• Identification of live data instances</li> <li>• Gathering of test data</li> <li>• Creation of test data, scripts, etc.</li> <li>• Definition of CLEC and Ph 2 TTG gauge requirements</li> <li>• Definition of final reporting requirements</li> </ul>         |
| Execution Phase Activities   | <ul style="list-style-type: none"> <li>• Generation of transactions</li> <li>• Submission of transactions</li> <li>• Implementation of CLEC gauges</li> <li>• Implementation of Ph 2 TTG gauges</li> <li>• Collection of transaction responses</li> <li>• Logging of events</li> <li>• Collection of gauge provided information</li> <li>• Conduct reviews, walk-throughs, interviews, surveys</li> <li>• Documentation of reviews, walk-throughs, interviews, surveys</li> <li>• Creation of data summaries and analyses</li> <li>• Reporting test process exceptions</li> </ul> |
| Completion Phase Activities  | <ul style="list-style-type: none"> <li>• Production of reports, findings, conclusions as defined in Test Plan</li> <li>• Reporting on exceptions, other observations, etc.</li> <li>• Satisfaction of Exit Criteria</li> </ul>  |

**C. Responsibilities**

The following responsibility matrices provide guidance on how the above major Phase 2 tasks will likely be allocated among these stakeholders. This allocation was developed from the perspective of the PSC.

**Table VIII-4: Phase 2 Responsibilities**

| Task                        | Ph 2 Test Mgr. | Ph 2 TTG | BA-NY | CLEC | NY-PSC |
|-----------------------------|----------------|----------|-------|------|--------|
| BA-NY OSS Interface Testing | M              | P        | M     | P    | P      |

**Table VIII-4: Phase 2 Responsibilities**

| Task   | Ph 2 Test Mgr. | Ph 2 TTG | BA-NY | CLEC | NY-PSC |
|--|----------------|----------|-------|------|--------|
| Program Management   |                |          |       |      |        |
| Assisting BA-NY  | P              | P        |       | P    |        |
| Coordinating with the CLECS  | M              |          |       |      | Q      |
| Set-up and Manage Testing Process  | M              | P        | P     | P    | Q      |
| Quality Assurance  | M              |          |       |      | Q      |
| Reporting the Test Results   | M              | P        | P     |      |        |
| Change Management  | M              | P        | P     | P    | Q      |
| Test Process   | M              | P        | P     | P    | P      |
| <b>Legend:</b><br>Quality Assurance and/or oversight role for the task<br>Management responsibility for the task<br>Participant in the carrying out the task |                |          |       |      |        |

Stakeholders not tasked with primary responsibility may wish to establish comparable internal roles to further facilitate cooperation and coordination. It must be noted that the assigned responsibilities, particularly in the Test Process arena, are generalizations that may be overridden based upon the circumstances of any specific tests.

The table below provides further specificity on the roles and responsibilities of the stakeholders during execution of the test processes.

**Table VIII-5: Test Execution Responsibilities**

| Task  | Ph 2 Test Mgr. | Ph 2 TTG | BA-NY | CLEC | NY-PSC |
|---|----------------|----------|-------|------|--------|
| <b>Preparation Phase</b>                          | M              | P        | P     | P    | Q      |
| Satisfy Entrance Criteria                         | M              | P        | P     |      | Q      |
| Develop detailed test plans                       | M              | P        | P     |      |        |
| Develop the test tree                             | M              | P        | P     |      |        |
| Develop detailed checklists, questionnaires, etc. | M              |          |       |      | Q      |
| Develop test data specifications                  | M              |          | P     |      |        |
| Identify live data instances                      | M              |          | P     |      |        |
| Gather test data                                  | M              | P        | P     | P    |        |
| Create test data, scripts                         | M              | P        | P     | P    | Q      |
| Define CLEC and Ph 2 TTG gauge requirements       | M              |          | P     |      |        |
| Define final reporting requirements               | M              |          |       |      | P      |
| <b>Execution Phase</b>                            | M              | P        | P     | P    | P      |
| Generate transactions                             | M              | P        | P     | P    |        |

Table VIII-5: Test Execution Responsibilities

| Task   | Ph 2<br>Test<br>Mgr. | Ph 2<br>TTG | BA-NY    | CLEC     | NY-PSC   |
|--|----------------------|-------------|----------|----------|----------|
| Submit transactions  | M                    | P           | P        | P        |          |
| Implement CLEC gauges  | M                    |             |          | P        |          |
| Implement Ph 2 TTG gauges  | M                    | P           |          |          |          |
| Collect transaction responses  | M                    | P           | P        | P        |          |
| Log events   | M                    | P           | P        | P        |          |
| College gauge information  | M                    | P           | P        | P        |          |
| Conduct reviews, walk-throughs,<br>interviews, surveys   | M                    |             | P        | P        | Q        |
| Document reviews, walk- throughs,<br>interviews, survey  | M                    | P           | P        |          |          |
| Create data summaries and analyses   | M                    | P           | P        | P        | Q        |
| Report test process exceptions   | M                    | P           | P        | P        | Q        |
| <b>Completion Phase</b>  | <b>M</b>             |             | <b>P</b> | <b>P</b> | <b>Q</b> |
| Produce reports findings, conclusions<br>as defined  | M                    |             | P        | P        | Q        |
| Report on exceptions, other<br>observations, etc.  | M                    |             | P        | P        | Q        |
| Satisfy Exit Criteria  | M                    |             | P        |          | Q        |
| <b>Legend:</b><br>Quality Assurance and/or oversight role for the task<br>Management responsibility for the task<br>Participant in the carrying out the task |                      |             |          |          |          |

#### D. High Level Phase 2 Project Schedule

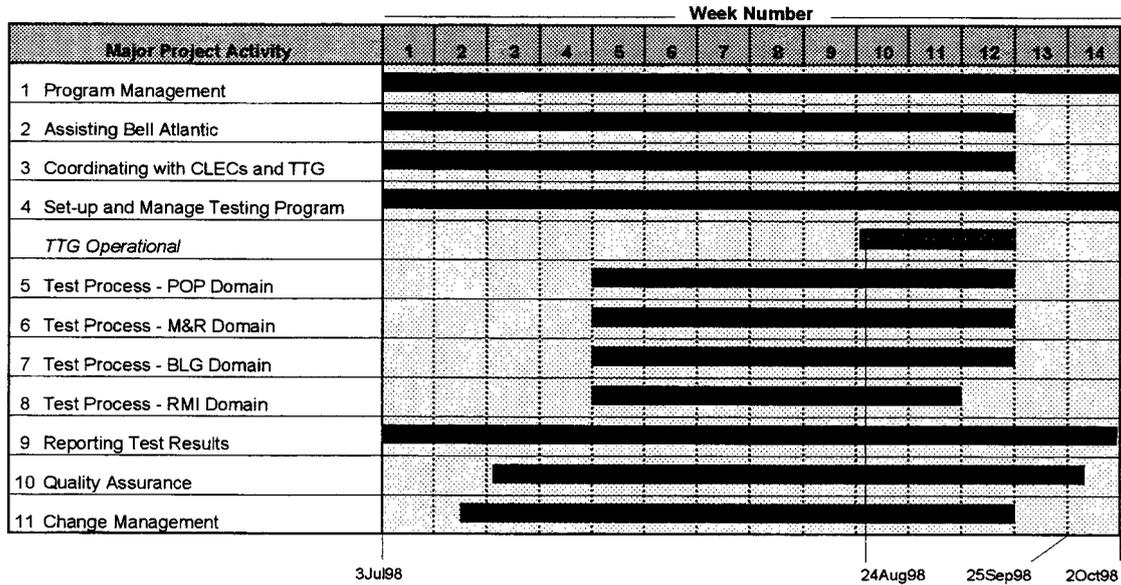

A high level Phase 2 project schedule is presented in the following figure. This schedule was developed to be as expeditious as reasonable in light of the paramount need for thoroughness and excellence in execution. Obviously, time frames may expand or contract depending on a number of variables. Finalization of the Phase 2 schedule will be a first priority for the Phase 2 Test Manager.

The schedule presented indicates a total duration of fourteen weeks based upon an estimate of work content. There may be certain tests, especially in the provisioning area, which by their nature require a longer elapsed time to complete. The Phase 2 Test Manager should develop a recommendation for the PSC regarding treatment of such cases.

The Phase 2 Test Manager should complete the Detailed Test Plans by 1 August, 1998. Testing will begin at that time with mechanized testing scheduled to start on 24 August for a period of three weeks. The Phase 2 Test Manager will issue a draft report for comment on 21 September with the final report scheduled for

release on 2 October. A more detailed view of the Test Processes schedule for each test domain can be found in Appendix G.

*Figure VIII-2: Phase 2 - High Level Schedule*

Several key milestones and dependencies have been identified in the Phase 2 schedule. While many activities have been identified to run concurrently, there are still potential bottlenecks. Likewise, this schedule is aggressive, and delays in the areas listed in the following table may cause the end date of each subsequent task to slip on a proportional basis.

*Table VIII-6: Phase 2 Milestones-Dependencies*

| Milestone/Dependency  | Responsible Party |
|---|-------------------|
| BA EDI Interface development completed, tested, and operational | BA-NY             |
| Test Bed created as specified and available for use             | BA-NY             |
| Test Transaction Generator completed, tested, and operational   | Ph 2 TTG          |
| Capability to accurately assemble a high volume of LSRs.        | Ph 2 MGR/BA-NY    |
| Active CLEC participation                                       | CLECs             |

*Table VIII-6: Phase 2 Milestones-Dependencies*

| Milestone/Dependency   | Responsible Party              |
|--|--------------------------------|
| Test cases created, data constructed, and scripts with expected results written  | Ph 2 Test Mgr.                 |
| Allocation of necessary resources  | Ph 2 Test Mgr./<br>BA-NY/CLECs |
| Checkpoint restart or equivalent backup process during initial functional testing which allows for quick recovery when errors occur within the Test Transaction Generator. | Ph 2 TTG                       |

### E. Testing Deliverables

At the conclusion of each suite of tests, the Phase 2 Test Manager will provide the PSC with a report produced in a standard format describing the following:

- The complete description of the test(s), including the attributes defined in this report
- The record of authorized test changes
- The entrance criteria met
- The exit criteria met
- The test results, as defined for the specific test(s)
- In the event of an uncorrected testing failure, an assessment of the root-cause of this failure and a recommendation for subsequent actions

At the conclusion of the testing, the Phase 2 Test Manager will provide the PSC with a final summary report of Phase 2 activities and findings.

### F. Testing Controls

To ensure the integrity and timely completion of the testing, rigorous controls will be necessary.

#### *1.0 Change Control Procedures*

During the execution of the tests during Phase 2, situations may arise in which additional tests or modified tests are required in order to meet the objective of the testing process. The Phase 2 Test Manager will be responsible for instituting

and enforcing change control procedures to accommodate these circumstances. In general, these change control procedures will include the following:

- Completing steps required to identify a change in an existing test or to define the requirement for a new test.
- Completing an analysis of the change which includes:
  - The purpose of the change
  - A description of the changed (or new) test case
  - Identification of test domain(s), scenario(s), test process(es) and test case(s) impacted
  - A revised test plan
  - Identification of resources impacted (Phase 2 Test Manager, CLEC Test Transaction Generator, BA-NY, and/or CLECs)
  - Identification of schedule impacts
- Recommendation for disposition.
- Required approvals.
- Updated test plan(s) and test schedule(s).
- Communication of revised plan(s) and schedule(s) to all affected parties.

### *2.0 Test Execution Oversight*

The oversight of the test execution will be the responsibility of the Phase 2 Test Manager under the immediate direction of a dedicated Testing Manger.

### *3.0 Test Logs*

The CLEC Test Transaction Generator and the Phase 2 Test Manager will be responsible for maintaining logs of the tests, detailed test results, and other work products sufficient to reconstruct events and justify content of the test reports.

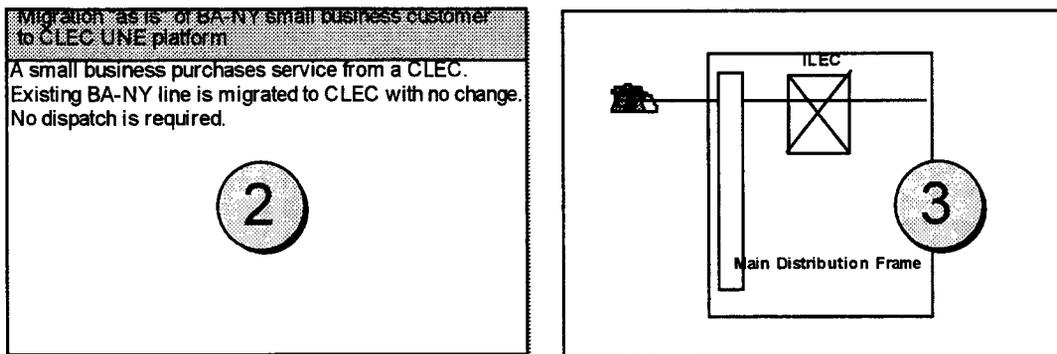

## Appendix A: Test Scenarios

### A. Description of a Generic Scenario

As part of this Master Test Plan, 133 test scenarios were developed. The test scenarios describe the ways CLECs interact with ILECs in satisfying end-user (customer) needs. These scenarios include the procurement by the CLEC of wholesale services and network elements from BA-NY; the querying of customer-specific and BA-NY-specific information from BA-NY's OSSs; and the identification and resolution of troubles.

In general, each scenario describes a single range of interactions between the CLEC and BA-NY. These base scenarios are adjusted through the introduction of known errors, supplements, etc. in order to provide a variety of possible interactions between the CLEC and BA-NY. The figure shown below provides an example of a base scenario. The numbered sections, one through five, are described in the section following the figure.

#### Base Scenario 1: Migration "as is" of BA-NY small business customer to CLEC UNE platform.

| Business Characteristic | Yes | No |
|-------------------------|-----|----|
| Resale                  |     | X  |
| UNE                     |     | X  |
| UNE Platform            | X   |    |
| New Customer            |     | X  |
| Existing BA-NY Customer | X   |    |
| Existing CLEC Customer  |     | X  |

## Appendix A

The base scenarios are described in the following pages of Appendix A. The layout of each description follows the following schema.

### 1) Base Scenario Title

The title of each scenario is shown in section one. This title is a brief description of the business transaction between an end user and the CLEC or BA-NY. In the case in which the CLEC is the ultimate end user (such as the procurement of interoffice facilities), then the title describes that transaction.

### 2) Base Scenario Description

In this section, each base scenario is briefly described in a free-text format. The description states the core business situation facing the CLEC. It is written from the end-user's perspective and typically describes an opportunity for a CLEC to provide some service or information to the end user.

### 3) Diagram

A diagram showing the physical configuration of the scenario is provided in this section. In general, the end-user is shown on the left, BA-NY facilities employed in providing a particular service are shown in the middle, and the CLEC provided facility is shown on the right. Exceptions include the use of collocated equipment which is shown in the BA-NY CO in the center of the diagram.

### 4) Business Characteristics

The business characteristics table is a Yes/No checklist that identifies specific characteristics of the transactions between the CLEC and BA-NY. This checklist identifies the service delivery method, initial status of the customer (end-user), whether the migration falls into the "as is" category, and, if applied, the form of number portability.

### 5) Test Attributes

The test attributes table is a Yes/No checklist that identifies the key processes evaluated by this base scenario. These processes include the following:

- Pre-Ordering
- Ordering
- Provisioning
- Maintenance and Repair
- Daily Usage (to review that specific usage appears on the Daily Usage Feed)
- Billing

## Appendix A

This table also shows whether a scenario is a candidate for stress testing, whether error conditions are described in the base scenario and whether order supplements are (or will be) included in the family of scenarios generated from this base scenario. In those cases in which specific supplements are not identified, the description may indicate that a variation with a supplemental order may be included.

### 6) Case Test Method

There are five different methods for executing test cases based on these scenarios. These methods are described in Section III of this document. The five methods shown in these charts are:

- TTG Normal Volume
- TTG Stress Volume
- GUI Test Case
- CLEC Test Case
- Other Manual Test

### B. Comments on the Testing of Specific Scenarios (*per NYPSC request*)

Scenarios #39, 40, 47, 48, and 67, which relate to the conversion of an access service to UNEs, were addressed in issue number 137 of the New York State Public Service Commission's UNE Collaborative. As documented in issue 303 of the Collaborative, Bell Atlantic - New York and the CLECs agreed to use Bell Atlantic's project management approach to these provisioning activities until such time as an ASR process is developed. This interim project management approach recognized the complexities involved in the implementation of standardized processes and supporting mechanisms.

The test scenario for the transition of special services to UNEs will involve observation and documentation of the execution of these type of orders if any such requests are received prior to the commencement of the testing, and the CLEC submitting such a request agrees. The Phase 2 Test Manager and/or the Test Transaction Generator and PSC Staff will observe and document the execution of the CLEC request.

Appendix B Test Scenarios

B.1 Test Target/Test Measure Cross Reference

| TEST TARGET                                       | Accessibility | Adequacy/Completeness | Availability | Accuracy | Applicability/Flexibility | Capacity | Clarity | Compliance | Completeness | Consistency | Controllability/Security | Ease of Use | Efficiency | Measurability | Reliability | Scalability | Timeliness |
|---|---------------|-----------------------|--------------|----------|---------------------------|----------|---------|------------|--------------|-------------|--------------------------|-------------|------------|---------------|-------------|-------------|------------|
| <b>Pre-Ordering, Ordering, and Provisioning</b>   |               |                       |              |          |                           |          |         |            |              |             |                          |             |            |               |             |             |            |
| Pre-Ordering                                      | X             | X                     | X            | X        |                           |          | X       |            | X            | X           |                          | X           |            |               |             |             | X          |

|                 | 40         | Migration "as is" of BA-NY large business customer with a DS1/DS3 circuit and 3/1 Multiplexor to UNE Loop and UNE IOF.                    |
|                 | 41         | Convert four BA-NY DS1s to UNE loops cross-connected to CLEC CoLo   |
|                 | 47         | 23 Special Access DS1s with 3/1 Mux to DS3 converted to UNE Loop and UNE IOF  |
|                 | 48         | 16 Special Access DS1s converted to UNE Loop and UNE IOF  |
|                 | 49         | DS1 UNE loop MUXd to DS3 UNE IOF.   |
|                 | 50         | DS1 UNE loop MUXd to DS3 and cross connected to CoLo  |
|                 | 51         | DS1 loop cross-connected to CoLo, MUX to DS3, cross-connected in BA-NY SWC to DS3 UNE IOF.  |
|                 | 53         | DS3 UNE IOF from CLEC to BA-NY SWC  |
|                 | 57         | Convert 75 PBX trunks to UNE loops, cross connect at CLEC<br>CoLo for connection to CLEC Centrex (Follows above progression of scenarios) |
|                 | 60         | Convert 8 Ba-NY (was ADSL) ISDN lines to 2-wire digital loops for cross connection to CLEC CoLo ADSL modems                               |
|                 | 62         | A CLEC buys 8 existing DS1s for transfer and connection to CLEC CoLo as UNE 4W digital loops.   |
|                 | 63         | A CLEC buys 20 new Centrex stations connected to the customer via the CLEC colo and CLEC facility.  |
|                 | 67         | Convert BA-NY 4-wire digital loops to UNE loops cross-connected to CLEC CoLo  |

**Delivery Method**

**Scenario #**

**Scenario Title**

- 68 A CLEC orders access from the CLEC CO to BA-NY LIDB.
- 69 A CLEC orders interconnection from 5 CLEC Central Offices to BA-NY "Custom 800" SCP
- 70 A portion of a customer's existing BA-NY service is converted to a CLEC using EEL.
- 71 A CLEC orders a CoLo mini-cage.
- 72 A CLEC orders a virtual CoLo.
- 73 CLEC orders dedicated DS1 trunk port with dedicated DS1 IOF ordered as a new UNE combination.
- 74 A CLEC orders 10 new DS1s for interconnection trunks from BA-NY CO to CLEC CO.
- 75 A CLEC customer buys 20 existing line ports (UNE Platform) for cross connection to CLEC facility at CLEC CoLo.
- 88 Business customer reports failure of one of four 4-wire UNE digital loops
- 90 A large business customer reports outage on DS1 UNE loop MUXd to DS3 UNE IOF
- 91 CLEC buys six new 4-wire digital DS1 UNE loops for a medium-sized ISP in NYC
- 92 A CLEC buys 25 new 2-wire analog loops & house cable for an Albany branch of a national company.
- 93 Small business customer migrates to CLEC, served by CLEC switch and 4 UNE loops, keeps 4 TNs.
- 94 Small business customer migrates to CLEC, served by CLEC switch and 4 UNE loops, keeps 4 TNs

Appendix B

95 Small business customer converts from Interim Number Portability to Long Term Number Portability

**Delivery Method**

**Scenario #**

**Scenario Title**

- 96 Residential customer migrates to CLEC, served by CLEC switch and 2 UNE loops, keeps 2 TNs.
- 97 Residential customer migrates to CLEC, served by CLEC switch and 2 UNE loops, keeps 2 TNs.
- 98 Residential customer converts from Interim Number Portability to Long Term Number Portability
- 100 Small CLEC business customer, served by CLEC switch and 4 UNE cannot originate or receive calls.
- 101 Small business customer served by CLEC via UNE Loops, with LNP, can originate calls but cannot receive calls on one line.
- 102 Small business customer changes ported telephone number.
- 106 Business customer reports failure of one of four 4-wire DS1 UNE digital loops
- 107 CLEC buys three new 4-wire digital DS0 loops to provide private line services for an existing CLEC customer
- 114 CLEC ISDN customer served by BA-NY line port reports that calls cannot be originated on his second line
- 115 Business customer reports high bit-error-rates on three 4-wire DS0 UNE digital loops.

**Resale & Platform**

- 3 Partial Migration of BA-NY residential customer's line to CLEC resale/UNE Platform
- 27 Change directory listing of a CLEC's residential customer.
- 29 Move of residence service within the same building.
- 64 Centrex customer orders a new caption listing.

## Appendix C. Normal and Peak Volume Test Section

### A. Purpose

This section defines the volumes required to evaluate the systems, processes and other operational elements associated with Bell Atlantic's support of the competitive market. The purpose of these volume tests is to evaluate Bell Atlantic's ability to process representative future wholesale transaction volumes to support competitors' entry into the market. These tests are performed at both peak and normal volumes. In addition, stress or capacity tests may be performed to test overall system capacity on selected transactions.

### B. Organization

Volume data is provided in five generic areas. These areas are:

- Expected Normal and Peak Volumes
- Volumes by Service and Order Type
- Pre-Order by Service and Order Type
- Order Confirmation by Service and Order Type
- Gross Trouble Reports

This volume data will be used as the basis for developing normal and peak volumes for each test case. A final determination of stress load test volumes, if such determination is appropriate, has not been made.

### C. Scope

Scope is defined within each appropriate domain section. Statistical analysis of volume data will be performed in accordance with the statistical principles developed during the collaborative process and described in Appendix D of this document.

### D. Data Development

Overall normal daily test volumes were developed through a synthesis of information obtained from Bell Atlantic and various CLEC participants. KPMG solicited CLEC forecast data independently. Items reviewed included:

- Bell Atlantic New York Demand Forecasts for 1998 and 1999
- Bell Atlantic In-Service Actuals and Forecasts

- CLEC Service Forecast Data Compiled by Bell Atlantic
- Historic CLEC OSS Usage Data
- Bell Atlantic CLEC Transaction Actuals as of December 1997
- Resale Services Activity Reports
- Case Studies of Market Share Changes in related Markets
- CLEC Provided Forecasts provided to KPMG

Normal Daily Volumes were calculated based on an estimate of market share captured by the CLECs during 1999 and the expected run rate in December, 1999. KPMG estimated that in December, 1999, CLECs would expect to gain lineshare at a 4.5 % annual rate (resulting in over 540,000 lines gained during 1999). The normal volume test will simulate 1.3 million orders processed annually by Bell Atlantic's OSSs. Other underlying assumptions used in the calculation include:

- 1.4 Orders/Net Line Added
- 1.2 Lines/Order
- 30% Order Volume from non-NY, BA - North states
- .6 Change/Disconnect/Move Orders per New Line Added

Peak Volumes are assumed to be 150% of normal volumes.

Orders by service were developed using Bell Atlantic's forecast of competitive lines viewed by service and order type. KPMG developed a proportion for each service and order type based on forecasted net adds during 1999, then extended the normal daily volume figure by that proportion to determine the daily volume by service and order type. The daily order volume of supplements and order changes/disconnects and moves were calculated by applying historic factors to daily volumes by service and order type.

Pre-order information was derived from the March, 1998, Bell Atlantic actuals by pre-order type as a percent of order volume. Daily volume by order/service was extended by the appropriate factor. Order Confirmation data was derived from Bell Atlantic's December, 1997, actuals and calculated using the same methodology as pre-order.

Gross Trouble Report rates were derived from January, 1998, Bell Atlantic actuals. Report rates were applied to the anticipated embedded base in December, 1999, and include initial and subsequent troubles.

The following table represents daily normal volumes for the test. A peak test will be performed at 150% of these volumes.

| Daily Pre-Order Volumes (10,887 per day) |                    |            |                     |              | Daily Order Volumes (5,271 per day) |             |               |
|--|--------------------|------------|---------------------|--------------|-------------------------------------|-------------|---------------|

## Appendix D: Statistical Approach

### A. Overview

The Phase 2 test will rely on generally accepted statistical methods to conduct analysis and render conclusions about BA-NY performance. Each test will define the data population to be observed, the measurements to be taken, and the statistical tests to be used. Data will be normalized, tabulated, and archived in a way that allows verification of test results and re-analysis of data using additional statistical methods, if appropriate.

### B. Measures

The measures (metrics and their associated norms/standards) that will serve as parameters for testing are presented in Appendix E. Many of these measures are defined in detail in the Interim Guidelines for Carrier to Carrier Performance Standards and Reports, Trial Period, January-February 1998. For example, the standard for average response time for Customer Service Records as defined in the Interim Guidelines is "Parity with Retail plus not more than 4 seconds". In cases where a metric and/or a standard does not exist or the Phase 2 Test Manager determines that the standard provides a competitive advantage to either BA-NY or the CLECs, the Phase 2 Test Manager will make recommendations of a new standard to the NY-PSC.

### C. Sampling

In instances where sampling is used, sampling will be designed so that samples are sufficiently representative of populations with respect to the measures being studied to ensure that the resulting statistical inferences made about populations are valid. For most tests, simple random sampling will be utilized.

### D. Hypothesis Testing

The Phase 2 test will employ a hypothesis testing approach to frame the analysis of test results. Using this approach, statistics will be calculated and analyzed to determine whether or not to reject a null hypothesis. Evidence provided by the calculated statistics must be sufficiently strong to reject a null hypothesis. For example, a null hypothesis can be postulated so that, for a given measure, it is assumed that parity exists between BA-NY's services to itself and to CLECs. In this example, the null hypothesis would be rejected if the differences in the ILEC and CLEC statistics are considered statistically significant.

### E. Non-Parity Tests

Some tests are designed to compare a performance parameter to a pre-determined, independent standard (e.g., 4 second response time). In these situations, estimation techniques will be utilized to make inductive inferences. Results will be expressed in terms of a range of values associated with a 95 percent confidence interval. Under valid test conditions, the standard will be considered met if it is equal to or better than the computed range of results.

For example, a test is design to monitor 100 transactions for system response time. The average system response time calculated as a result of testing is 4.12 seconds plus/minus .23 seconds (95% confidence interval). If the system response time standard is 4 seconds, this figure is within range for the test results, and the standard is considered met.

#### F. Parity Tests

Many of the tests are designed to determine whether parity exists in terms of the services BA-NY provides to itself in comparison to services it provides to CLECs. For these cases, statistics will be calculated to determine whether two samples (i.e., ILEC data points and CLEC data points) can both be regarded as drawn from the same population, thereby showing strong evidence of parity. For those parity tests where sufficiently large samples can be drawn, hypothesis testing will be done by performing a "z-test" to calculate a "z-score." A z-score is a single number which indicates the differences between sample data. A low z-score supports the hypothesis of parity (e.g., both CLEC and ILEC performance are from the same "population" in terms of performance)<sup>1</sup>.

#### G. Other Statistical Tests

There may be instances where estimation techniques or a z-test cannot be utilized (e.g., due to a small sample size). In these situations, other statistical methods will be proposed. For example, for smaller sample sizes, a standard "t-test" or permutation tests may be more appropriate.

---

<sup>1</sup> The "Statistical Tests for Local Service Parity" document produced by the Local Competition Users Group includes a discussion of z-tests and z-scores. Unless otherwise specified, 3 will be the critical value used for concluding parity using z-scores; a z-score of 3 or less indicates with 99.7% confidence that two samples came from the same population. In computing z-scores, the larger sample size will be utilized to serve as a predictor of the standard deviation of the parent population; in cases where both sample sizes are the same size, Bell Atlantic data will serve as the estimator of the population standard deviation.

## H. Results

Test results will include a summary of the statistics calculated, the hypotheses postulated for the test, and the conclusion(s) drawn based on the statistical results.

**Appendix E: Metrics - Quantitative**

Note: Interim Guidelines Performance Standards' characterizations take precedent over other sources' descriptions in duplicative cases.

**Metrics - Qualitative**

| No.  | Process                  | Metric                                | Evaluation Criteria/<br>Standards/Norms  |
|------|--------------------------|---------------------------------------|--|
| i.   | Operations Management    | Procedural Integrity and Consistency  | <p>Process responsibilities and activities are clearly defined.</p> <p>Scope and objectives of process are clearly defined and documented.</p> <p>A complete (e.g. beginning-to-end) description of the process is documented.</p> <p>The process includes procedures for addressing errors and exceptions.</p> <p>Actual procedures are carried out in compliance with documentation.</p>   |
| ii.  | Operations Management    | Performance Measurement and Reporting | <p>Process performance measures are defined and measured.</p> <p>Responsibilities for tracking performance is assigned.</p>  |
| iii. | Documentation Management | Document Development and Distribution | <p>Responsibilities and procedures for developing, updating, and distributing are specified in internal company memoranda or in the document(s).</p> <p>Distribution list for document is specified in internal company memorandum(s).</p> <p>Distribution procedure allows latest document version to be made available to participants and legitimate interested parties.</p> <p>Document(s) can be accessed by hard copy and electronic means.</p>                                      |
| iv.  | Documentation Management | Document Structure                    | <p>Scope of document (e.g., table of contents and instructions for use) is clearly defined.</p> <p>Document version is indicated within each document.</p> <p>Document provides list of contacts and other references for topics not covered in the document.</p> <p>Document indicates procedure for notifying document author(s) of errors.</p>  |
| v.   | Change Management        | Developing Change Proposals           | <p>Procedures are defined for detecting required changes (i.e., regulatory and soliciting proposals for change).</p> <p>The scope and applicability of formal change management procedures are defined.</p> <p>The impacts (i.e., resources and timelines) and objects to be changed (i.e., procedures, documents) are identified and documented for each change proposal.</p> <p>Roles and responsibilities of change "owners" and stakeholders are defined for each change proposal.</p> |
| vi.  | Change Management        | Evaluating Change Proposals           | <p>Rules and procedures are established for determining the priority and feasibility of change.</p> <p>Stakeholder input and concurrence (as appropriate) is sought and received before changes are approved.</p> <p>Arbitration and conflict resolution procedures are defined for instances where concurrence cannot be achieved.</p>  |
| vii. | Change Management        | Implementing Change                   | <p>Responsibilities for implementing changes are defined and documented.</p> <p>Stakeholders are notified of changes to be implemented.</p>  |

| No.   | Process               | Metric                            | Evaluation Criteria/<br>Standards/Norms  |
|-------|-----------------------|-----------------------------------|--|
| viii. | Change Management     | Tracking Change Proposals         | Responsibilities and procedures for soliciting and tracking proposals for and documented.<br>The status of proposed changes are tracked and reported.  |
| ix.   | Project Management    | Planning and Execution            | Projects are planned and executed according to a structured methodology<br>A common project information system and/or database is used.<br>Project managers have authority to affect the schedule, cost, scope, and of a project.<br>Risks of a project (schedule, scope, cost, etc.) are estimated and docume                                     |
| x.    | Project Management    | Project Management Scope          | The scope of a project is defined and documented up front.<br>Scope changes are quantified and tracked.<br>Formal procedures are followed to change the scope of an active project   |
| xi.   | Project Management    | Project Management Time           | The sequence and durations of project activities are developed and docu<br>Variances in planned schedule are tracked and managed.<br>Formal procedures are followed to change the schedule of an active pro  |
| xii.  | Project Management    | Project Management Cost           | The costs of project activities are estimated and documented up front.<br>The costs of project activities are tracked and managed.<br>Formal procedures are followed to change estimated costs of an active p<br>Projects are evaluated using earned value analysis (scope budget/schedule expended) at various stages.                            |
| xiii. | Project Management    | Project Human Resource Management | Each project participant has defined and documented responsibility<br>A project staffing plan (people, level of effort) is developed and docume<br>Variances in resources and level of effort are tracked and managed.   |
| xiv.  | Interface Development | Software Development              | A standardized process for developing software specifications is docum<br>The software development methodology addresses requirements definition, design, development, testing, and implementation.<br>Application development methodology provides templates for defining<br>Application development methodology defines how quality is to be ass |

## Appendix F: Reference Documents

The purpose of this section is to describe the reference documents used in the preparation of this Test Plan. This section will evolve during the course of Phases 1 and 2.

### Document Reference

| Title  | Author/Authoring Group |               | Date <sup>1</sup> |
|--|------------------------|---------------|-------------------|
| Affidavit of Adalene Spivy for MCI.                | Spivy                  | MCI           | 28-Mar-97         |
| Affidavit of Antonia Yanez for BANY                | Yanez                  | Bell Atlantic | 04-Nov-97         |
| Affidavit of Carmelo Curbelo for NYNEX             | Curbelo                | Bell Atlantic | 01-Feb-97         |
| Affidavit of Gary Butler for NYNEX                 | Butler                 | Bell Atlantic | 01-Feb-97         |
| Affidavit of Gary Butler for NYNEX                 | Butler                 | Bell Atlantic | 14-Feb-97         |
| Affidavit of John White for NYNEX                  | White                  | Bell Atlantic | 01-Feb-97         |
| Affidavit of Joseph Gansert for BA                 | Gansert                | Bell Atlantic | 01-Mar-97         |
| Affidavit of Karen Maguire for BANY                | Maguire                | Bell Atlantic | 06-Jan-98         |
| Affidavit of Maria Marzullo for MCI                | Marzullo               | MCI           | 28-Mar-97         |
| Affidavit of Matthew Coffey for NYNEX              | Coffey                 | Bell Atlantic | 01-May-98         |
| Affidavit of Patrick Garzillo for BA               | Garzillo               | Bell Atlantic | 01-Feb-97         |
| Affidavit of Roger Wieland for BANY                | Wieland                | Bell Atlantic | 04-Nov-97         |
| Affidavit of Stuart Miller for NYNEX               | Miller                 | Bell Atlantic | 01-Mar-97         |
| Affidavit of Stuart Miller for BANY                | Miller                 | Bell Atlantic | 06-Nov-97         |
| Affidavit of Timothy Connolly (part of AT&T brief) | Connolly               | AT&T          | 05-Jan-98         |
| Affidavit of Timothy Connolly for AT&T             | Connolly               | AT&T          | 19-Nov-97         |
| ANSI Standard T1.228-1995                          | T1                     | ANSI          | 16-Oct-95         |
| ANSI T1.227 Standards for OSS                      | T1                     | ANSI          | 16-Oct-95         |
| BA- Appendix from Pre-filing Statement #309        |                        | Bell Atlantic | 13-May-98         |
| BA Comments to test scenarios                      | Tempas                 | Bell Atlantic | 23-Jun-98         |

<sup>1</sup> May 1, 1998 is the default date. When no creation date could be determined and the document was known to be created recently, the default date was used.

## Appendix H: Glossary

| Term                               | Definition   |
|------------------------------------|--|
| 271 Application                    | An application to offer long distance services from an RBOC to a state or federal regulatory agency. In order to grant this application, the agency must find the applicant is in compliance with the 14 point competitive checklist described in the 1996 Telecommunications Act.   |
| ACNA                               | Access Carrier Name Abbreviation. A three to four character code used to identify a telecommunications carrier.  |
| AECN                               | Alternate Exchange Carrier Name. A unique identifier for a CLEC. Bellcore only recognized this term as Exchange Carrier Code (ECC).  |
| AMA                                | Automatic Message Accounting. A system that records and documents billing information for (long distance) calls made by a (corporate) subscriber.  |
| ASR                                | Access Service Request. Form used to order interoffice facilities such as dedicated trunk ports.   |
| BDT                                | Bill Data Tape. Format in which end user account bills are transmitted to the CLEC/Reseller.   |
| Bell Atlantic Pre-Filing Statement | A filing with the State of New York that lists commitments from Bell Atlantic with regards to BA-NY's 271 Application  |
| Bill Certification                 | Process by which Bell Atlantic demonstrates billing process management to its Reseller customers.  |
| Bill Cycle                         | The grouping of customers for purposes of billing. An end-user normally belongs to one bill cycle. In Wholesale billing, all end-users belonging to the same bill cycle are aggregated onto a single CLEC bill. Assignments of cycle and period are accomplished by Bell Atlantic.<br><br>Bill cycles enable even distribution of a large number of customers so as to allow efficient use of computing resources and to mitigate risks associated with computer failures. |
| Bill Cycle Balancing               | The procedure by which the charges associated with the inputs of a billing cycle are reconciled with the charges of the outputs of the billing cycle.  |
| Bill Period                        | The length of time covered by a customer bill. Each end-user has one bill per bill period. CLECs receive one bill per bill period and bill cycle for all end-users belonging to that period and cycle. Assignments of cycle and period are accomplished by Bell Atlantic.  |
| Billing Domain                     | Tests related to creation of correct carrier bills.  |
| Black Box                          | Internal processes within Bell Atlantic's systems that are considered out of scope for the purposes of this test plan. Correct functioning of 'black box' systems can be inferred from input and output interface files.   |

22260103.doc

| Term                                    | Definition  |
|---|---|
| BTN                                     | Billing Telephone Number. The number to which charges from a given telephone service are billed.  |
| BTN Accounts                            | Billing Telephone Number accounts. These accounts represent "dummy" phone numbers which are used to aggregate a Reseller's charges into a consolidated bill. Reseller's have several separate BTN accounts.                                     |
| CABS                                    | Carrier Access Billing System   |
| CAP                                     | Competitive Access Provider. Facilities-based carrier providing alternative access service.   |
| Carrier Bill Code                       | Each bill format has its own unique code. Particular charges will cause the production of a specific bill format. The code is related to each product, and determines on which bill the product will appear.                                    |
| Casual Usage                            | Usage dialed through a calling card or 10XXXXX.   |
| Central Office (CO)                     | Facility where subscribers' lines connect to switching equipment.   |
| Change Management                       | The process by which changes are introduced at Bell Atlantic. Important steps include: 1) Advance notification that a change will occur; 2) CLEC input is considered when making changes; and 3) Smooth roll-out of the change.                 |
| CIN                                     | Customer Identification Number. A unique number given to each customer to use as an identifier. Usually a short series of numbers at the end of the BTN.  |
| CLEC                                    | Competitive Local Exchange Carrier  |
| CLEC Handbook                           | User documentation for CLEC that describes, in 3 volumes, how to establish a CLEC, the technical specifications for interacting with Bell Atlantic, and the business rules CLECs should follow in order to purchase unbundled network elements. |
| CLEC Live Data                          | Production data delivered through interfaces that are already operational for real CLEC customers.  |
| Connect/Network Data Mover (NDM)        | An electronic method of delivering data files. Available for both mainframes and PCs.   |
| Consensus Requirements Criteria Source  | This includes benchmarks and standards developed by formal consensus proceedings, such as the NYPSC's Carrier-to-Carrier Working Group.   |
| CRIS                                    | Customer Record Information System. A database containing customer information used for billing.  |
| CSR                                     | Customer Service Record. Details of a customer's fixed monthly charges billed by the local telephone company.   |
| Customer Account Record Exchange (CARE) | Industry standard for formatting exchange of subscription information.  |
| Daily Usage Feed                        | A daily download of usage data from the switch which is delivered to Bell Atlantic's message processing system and directly to the CLEC.  |

| Term  | Definition   |
|---|--|
| Data-Driven Process                                       | Scenarios tested through the creation of generated transactions, operations data, or live data.  |
| DID number block  | Direct Inward Dialing. A block of numbers reserved for a Centrex/PBX. DID allows internal dialing by entering only extensions.   |
| Document review   | Compilation and review of books, manuals, and other publications related to the process and system under study.  |
| EDI   | Electronic Data Interchange. A process for exchanging information that is subject to industry standards.   |
| EIF   | Electronic Interface Format. A standardized file format needed to communicate with DCAS.   |
| EMI / EMR   | Exchange Message Interface / Record. Standard format in which usage data is passed to the Reseller, as specified by Bellcore.  |
| Entrance and Exit Criteria                                | The necessary conditions for starting or completing individual tests described in the Test Plan.   |
| Error/Rejection Notification                              | Notification generated by Bell Atlantic's systems when a request from a CLEC cannot be filled without additional manual clarification.   |
| Evaluation Measures                                       | Discrete set of measures to be applied to specific test components   |
| Existence Criteria Type                                   | These are criteria where only two possible test results can exist (e.g., true/false, presence/absence), such as whether a document exists or does not exist.                                     |
| Expected Results Worksheet                                | A report format that lists the expected results for each test while allowing the tester to record the current results of the test. This allows an easy comparison of numbers.                    |
| FID   | Field Identifier. A code used when administering usage limits on residence and business end users. Also refers to fields of information used in the service order.                               |
| Firm Order Confirmation                                   | A response from the Bell Atlantic Service Order Processor that acknowledges a successful receipt of an order from a CLEC.  |
| Flow-through  | An order placed by a CLEC's customer service representative that can be provisioned correctly without manual intervention by BA's service representatives.                                       |
| Good Management Practice (GMP) Guidelines criteria source | This includes benchmarks, performance goals, and guidelines derived from industry and topic area experts, BA-NY and CLEC performance targets, publications, academic journals and other sources. |
| GUI   | Graphical User Interface. A computer interface that allows users to access programs and enter data.  |
| ILEC  | Incumbent Local Exchange Carrier. The local exchange carrier for a particular area as of 1996. Bell Atlantic is the relevant ILEC.   |
| Inspection  | Physical reviews of process activities and products, including site visits, walk-throughs, read-throughs, and work center observations.  |

| Term  | Definition   |
|---|--|
| Interim Number Portability (INP)                  | The use of existing and available call routing, forwarding, and addressing capabilities to enable an end user to retain the same telephone number regardless of which local service provider is chosen.  |
| LATA  | Local Access and Transport Area. A geographic area established by law within which a Bell Operating Company may provide telecommunications services.   |
| Legal and Regulatory Requirements criteria source | This includes requirements specified by statute and regulation, such as FCC orders, court orders, NYPSC regulations, federal and state statutes, and other binding requirements resulting from judicial/governmental proceedings.                                |
| Logging   | Monitoring activities and collecting information by logging process events and products as they happen. Logging can be mechanized or manual.   |
| LPIC  | Predesignated Intra-LATA Carrier, or Local Primary Interexchange Carrier. Telephone company chosen by the end user as being the default carrier for calls outside the local calling area, but within the same LATA. These are also known as regional toll calls. |
| LSR   | Local Service Request. Form sent to Local Exchange Carrier requesting local telephone services.  |
| LUD   | Local Usage Detail. LUD is available for measured and message rate end user in a report that may be requested by the CLEC.   |
| Maintenance and Repair Domain                     | Tests related to trouble administration.   |
| Master Test Plan                                  | Identifies the overall framework and structure of the test.  |
| MCRIS   | Message Customer Record Information System. System used within BA to receive and interpret central office switch usage records.  |
| MDF   | Main Distribution Frame. The primary point at which outside plant facilities terminate within a Wire Center for interconnection to other telecommunications facilities within the Wire Center.   |
| NDR   | Network Design Review. A comprehensive planning process by which the scope of a network project is established along with the preliminary timeframe in providing service to a CLEC. This is required for any new facilities based CLEC.                          |
| OCN   | Operating Company Number. A 4 character code to identify any service provider. Specifically used to identify the Reseller on usage detail records.   |
| On-Line Service Provisioning (OLSP)               | System which allows for activation and provisioning of service orders on-line.   |
| Operational Analysis                              | Operational analysis focuses on the form, structure, and content of the business process under study. This method is used to evaluate day-to-day operations and operational management practices.  |
| OSS   | Operation Support Systems. Systems used to perform pre-ordering, ordering, provisioning, maintenance and repair, and billing.  |

| Term  | Definition   |
|---|--|
| Parity Criteria Type                              | These are criteria that require two measurements to be developed and compared, such as whether external response time is at least as good as internal response time.   |
| Performance and Capacity                          | Methods used to evaluate the performance and capacity of selected elements within the four domains. Relates to tests to determine if BA's OSS can handle quantities of orders matching a reasonable forecasted demand.   |
| PIC   | Primary Interexchange Carrier. The long distance company to which traffic is automatically routed when an end user dials 1+ in equal access areas.   |
| Port  | Point of access into a network.  |
| Pre-Ordering, Ordering, and Provisioning Domain   | Tests related to CLEC's acquisition of customer information, placing orders, and ensuring correct and timely provision and notification of order status.   |
| Provisioning                                      | The act of supplying telecommunications service or UNEs.   |
| PSC   | Public Service Commission. A state regulatory agency responsible for telecommunications companies.   |
| Qualitative Criteria Type                         | These criteria set a threshold for performance where a range of quality values is possible, such as level of customer satisfaction.  |
| RBTN  | Reseller Billing Telephone Number. This is the master account for a reseller by which all charges are grouped for placement on a single reseller bill.   |
| Recognized Standards Criteria Source              | This includes widely recognized standards and guidelines promulgated by sanctioned industry and governmental organizations and other bodies.   |
| Relationship Management and Infrastructure Domain | Tests relating to activities, processes and documents that are focused on the establishment and maintenance of the CLEC/ILEC relationship.   |
| Report Review                                     | Reviews and analysis of historical data, reports, metrics, and other information in order to assess the effectiveness of a particular system or business function. This includes performance measurement reports and other management reports.                                       |
| Resale Handbook                                   | User documentation for CLEC that describes, in 3 volumes, how to establish a reseller, the technical specifications for interacting with Bell Atlantic, and the business rules resellers should follow in order to resell Bell Atlantic products and services on an unbundled basis. |
| Resale Service Center                             | BA personnel providing support services for the submission and processing of service orders and the maintenance of services sold for resale.   |
| Resale Services Support Center                    | Group within the Resale Service Center that provides support for RETAS/DCAS use and system troubles, and for out of hours provisioning problems.   |

| Term  | Definition   |
|---|--|
| Reseller Sub-Accounts                                   | Each converted end user account automatically becomes a reseller sub-account. Each reseller sub-account contains the following identifiers. 1) Original end user BTN + new Customer code, 2) Bill Period, 3) ECC, 4) CIN.                  |
| RETAS   | Repair Trouble Administration System for wholesale and resale customers. RETAS is accessed via a World Wide Web GUI that serves as a front end.  |
| RSID  | Reseller Identification Code. Bell Atlantic's term for exchange carrier code (ECC).  |
| SBN   | Special billing number.  |
| SBTN  | Sub account Billing Telephone Number. End user telephone number for a reseller account.  |
| Scalability   | The degree to which an application can be scaled to accommodate order of magnitude increases in transaction volumes and users  |
| SMARTS  | Service Order Management Administrative Report Tracking System. A network system used by BA to administer and track service orders requiring the dispatch of technicians.  |
| STARREP/SIMS  | Retail analog to RETAS   |
| Supplements   | A change to an order taken after the original order was submitted, but before the order has been executed. Order execution should include all supplements.   |
| Suspend for Non-Payment                                 | Collection Activity including suspension of outgoing calls (one-way), or both outgoing and incoming calls (two-way)  |
| Test Bed  | A set of fictitious customers that are designed to assist with testing. The test bed consists of working lines and provisioned products, although the owning customer is fictitious. The test bed is used to test all BA system functions. |
| Test Call Matrix  | A list of call types and the quantity of calls for each type that should be included in a particular test.   |
| Test Transaction Generator (TDG)                        | This system will be created to support the testing effort. The TTG will simulate CLEC behaviors by sending transactions through BA-NY's OSS. The TTG will record the success or failures of each transaction and create reports.           |
| Test Domain   | A specific testing area with defined targets, measures, scenarios, evaluation methods, and test processes.   |
| Test Scenario Coverage Matrices / Traceability Matrices | A list of products or processes that are involved with each scenario. Describes how testing elements are traced from the compliance requirements through the test process.   |
| Test Scenario Index                                     | Master list of scenarios from which specific scenarios will be selected to be used in the testing.   |
| Test Scenario to Metrics Analysis Index Cross Reference | For each scenario, a list of metrics that are examined during the test.  |

| Term  | Definition   |
|---|--|
| Test Scenarios  | Scenarios describe realistic situations in which CLECs purchase wholesale services and network elements from BA-NY for resale to the CLEC's end-user customer on a retail basis.   |
| Test Target   | A discrete set of measures to be applied to specific test components.  |
| TISOC   | Telecom Industry Services Operations Center. This center is divided into wholesale and resale operations. This is a single point of contact for processing Reseller service requests.  |
| TN  | Telephone number.  |
| Transaction Driven - CLEC Cases   | The CLEC case method requires extensive participation by the Phase 2 tester to observe the execution, measure and monitor progress and results, and inspect and audit the execution and results.   |
| Transaction Driven - GUI Cases  | The GUI test method is applied to test cases that use the GUI approach in real-world actions.  |
| Transaction Driven - TTG Stress / Load Volume (100 percent automated)                           | The purpose of this stress and load test method is to test capacity and identify potential choke points in the accessing of information from BA-NY business processes.   |
| Transaction Driven - Test Transaction Generator (TTG) Normal Volume (automated and interactive) | Based upon normally expected transaction volumes, the TDG will derive and store expected results for comparison with actual results.   |
| Transaction-Driven System Analysis  | Transaction driven system analysis relies upon initiation of transactions, tracking of transaction progress, and analysis of transaction completion results to evaluate the automated system under test.   |
| Transaction Generation  | Transaction generation is the use of live, historical, and/or generated data and data processing capability to evaluate an automated and/or manual system under test.  |
| Unbundled Access  | Ability of other LECs to access and use BA network components to fill in gaps where these providers' networks do not have their own facilities.  |
| Unbundled Loop  | A transmission channel between an end user location and LEC central office that is not a part of, or connected to, other LEC services.   |
| Unbundled Port  | An interface on a local switching system that is not bundled with a loop or transport facility, and provides access to and from the switch and the functionality of the local switching system.  |
| UNE   | Unbundled Network Element  |
| UNE-P   | AKA Platform. This consists of a loop and port sold in combination to a CLEC. UNE-P service provides all network elements necessary to provide service to the customer without requiring the CLEC to combine the elements themselves through collocation, et al. |

| Term                        | Definition   |
|-----------------------------|--|
| USOC                        | Universal Service Order Code. A 3-5 character alphanumeric code that represents a product or service.  |
| Verification and Validation | Methods used in the evaluation of activities and processes not amenable to data-driven testing, but which require verification and validation. |
| VETS                        | Verification Evaluation and Testing System. System which allows system testing on working and testable lines.                                  |
| WTN                         | Working Telephone Number   |
