TARIFF FORMAT

Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the AZ C.C.. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14.

Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a)
- 2.1.1.A.1.(a)i.

Check Sheets - When a tariff filing is made with the AZ C.C., an updated check sheet accompanies the tariff filing. The check sheet lists the sheet contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages).

SECTION 3 - DESCRIPTION OF SERVICE AND RATES, (CONT'D.)**3.2 Calculation of Distance**

Usage charges for all mileage sensitive products are based on the airline distance between serving wire centers associated with the originating and terminating points of the call.

The serving wire centers of a call are determined by the area codes and exchanges of the origination and destination points.

The distance between the wire center of the Customer's equipment and that of the destination point is calculated by using the industry standard "V" and "H" coordinates.

- Step 1 -** Obtain the "V" and "H" coordinates for the wire centers serving the Customer and the destination point.
- Step 2 -** Obtain the difference between the "V" coordinates of each of the wire centers. Obtain the Difference between the "H" coordinates.
- Step 3 -** Square the differences obtained in Step 2.
- Step 4 -** Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5 -** Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6 -** Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the wire centers.

Formula:
$$\sqrt{\frac{(V_1V_2)^2 + (H_1H_2)^2}{10}}$$
