TARIFF FORMAT

A. Sheet Numbering Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Sheet Revision Numbers Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Arizona Corporation Commission. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc., the Arizona Corporation Commission follows in their tariff approval process, the most current sheet number on file with the Commission is not always the tariff page in effect. Consult the Check Sheet for the sheet currently in effect.

C. Check Sheets When a tariff filing is made with the Arizona Corporation Commission, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revisions. The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the Arizona Corporation Commission.

3. Calculation of Charges and Distance

- .01 Chargeable time for calls will begin when connection is established between calling party and company switch. Chargeable time ends when the calling station "hangs up," thereby releasing the network connection. If the calling station does not hang up, chargeable time ends when the network connection is released by automatic timing equipment in the network.
- .02 Charges for Company's service(s) are based on the distance and duration of the call, monthly usage, and the rate period (Day, Evening, Night) when the call is placed.
- .03 Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call. For the purpose of determining airline mileage, vertical and horizontal grid lines have been established across the United States and Canada. The spacing between adjacent vertical grid lines and between horizontal grid lines represents a distance of one coordinate unit. This unit is the square root of 0.1, expressed in statute miles. A vertical (V) and a horizontal (H) coordinate is computed for each local exchange company primary serving office and serving office from its latitude and longitude location by use of appropriate map-projection equations. A pair of V-H coordinates locates a primary serving office or serving office for determining airline mileage, at a particular intersection of an established vertical grid line with an established horizontal grid line. The distance between any two primary serving offices or serving offices is the airline mileage computed as follows:

FORMULA:
$$\frac{(V^2 - V_2^2) + (H_1^2 - H_2^2)}{10}$$

- .02 Special Promotions The Company may from time to time engage in special promotional trial service offerings of limited duration, [not to exceed ninety (90) days on a per customer basis, for non-optional, recurring charges], designed to attract new subscribers or to increase subscriber awareness of a particular tariff offering.
