To whom it may concern;

It would be better to place the burden of the power line on the developers better equipped to deal with the issues such as they have at Finley Farms in Gilbert. The people will still purchase their homes with full knowledge of the power line.

In November of '04, my mother and I purchased two acres with a home in Sun Valley Farms V. This property is something that I have looked forward to having for many years. I grew up with my family at the corner of Price Rd. and Warner Rd. on two acres purchased by my family in 78. As you know that is the site of the 101 freeway. Our family went through major hardship do to the fact the state informed us of the 101 thirteen years before they acquired our property for this freeway. Two years before the acquirisation, a law came into place about the state acquiring properties two years after announcing plans. I had always wished to keep that place in the family so that I might be able to someday raise my family there. That was impossible.

Now with the purchase of this home I had hoped for the same. I have had friends in California that had to sell there property do to a lesser power line and the health risks it posed for them. This is something I do not want to deal with. I am an unwed 32 year old with the plans of eventually starting a family. I moved out to Sun Valley Farms V to reacquire the rural lifestyle that I love so much, with these hopes.

If you place the power line on the CAP through Sun Valley Farms V, Directly behind my home it would be a major detriment to my Community and me. I believe we have all moved to this area for similar reasons. I also know with property values the way they are, I would not be able to replace this property that has become home.

Please go with the recommendation of the Line Siting Committee.

Thank you for you time,

Tiffany Haefner
