## TARIFF FORMAT

**Sheet Numbering** - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

**Sheet Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the AZ C.C.. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14.

**Paragraph Numbering Sequence** - There are seven levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1(A)
- 2.1.1(A)(1)
- 2.1.1(A)(1)(a)
- 2.1.1(A)(1)(a)(1)

**Check Sheets** - When a tariff filing is made with the AZ C.C., an updated check sheet accompanies the tariff filing. The check sheet lists the sheet contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages).

**Section 3.0 - DESCRIPTION OF SERVICE & RATES, (CONT'D.)**

**3.4 Calculation of Distance**

Usage charges for mileage sensitive services vary based on the type of service subscribed to by the Customer. For services utilizing switched access, mileage measurements for rate schedules are based on the distance in airline miles between rate centers associated with the originating and terminating stations. For services utilizing dedicated access, mileage measurements for rate schedules are based on the distance in airline miles between the Buckeye network access point associated with the station utilizing Dedicated Access Origination/Termination and the rate center associated with the called/calling station.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1: Obtain the "V" and "H" coordinates for the serving wire center or network access point serving the Customer's location and the called/calling station.
- Step 2: Obtain the difference between the "V" coordinates. Obtain the difference between the "H" coordinates.
- Step 3: Square the differences obtained in Step 2.
- Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating locations of the call.

Formula: 
$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

**SECTION 3.0 - DESCRIPTION OF SERVICE & RATES, (CONT'D.)**

**3.12 Buckeye TeleSystem Frame Relay Service**

**3.12.1 Description**

Buckeye TeleSystem Frame Relay Service is offered to transmit data between location. Frame Relay Service (FRS) is the provision of digital non-switched facility interconnections between Customer Designated Premises and/or for the provision of dedicated transmission paths to meet specific customer requirements. Standard bit rates of 64 kbps, 1.544 Mbps and 44.736 Mbps may be selected by the Customer. Certain non-standard configurations may be provided on an Individual Case Basis (ICB).

Packet Data Networks utilize separate data networks, comprised of switching and transmission facilities. The networks provide for the transfer of data provided by a Customer in a frame format. The data are separated into discreet segments for transmission through the public packet data network.

Frame Relay Service (FRS) is a medium-speed, connection-oriented packet-switched data service that allows for the interconnection of Local Area Networks (LANs) or other compatible customer premises equipment for the purpose of connecting to a local or intrastate frame relay network. Terminal equipment accumulates the Customer data and puts them into a frame relay format suitable for transmission over the FRS network. Terminal equipment must conform to the American National Standards Institute and Telecommunication Standardization Bureau of the International Telecommunication Standards.

The Company's provision of originating FRS requires an originating special access service connection from the Customer's local exchange carrier or alternative access provider to the Company's Point of Presence. At the request of the Customer, the Company will arrange for this special access service and will pass through the charges to the Customer that the Company incurs for such special access service. These charges are in addition to those listed herein.

**SECTION 3.0 - DESCRIPTION OF SERVICE & RATES, (CONT'D.)**

**3.12 Buckeye TeleSystem Frame Relay Service, (Cont'd.)**

**3.12.1 Description, (Cont'd.)**

The Customer also will be charged for the special access service arrangements that are required to terminate the Company's FRS. The Company shall arrange for these terminating special access service arrangements from other carriers and will pass through the charges that the Company incurs for such terminating special access service from such carriers to the Customer. The terminating special access service charges are likewise in addition to those listed herein.

Due to the need to arrange for special access facilities, the Company requires advanced notice of a Customer's order for FRS prior to the initiation of FRS. Once the Customer's order for FRS is received, the Company will use its best efforts to initiate FRS within 30 to 45 days. Upon notification to the Customer, the Company may extend the initiation date of FRS to the Customer based on delays that the Company experiences in arranging for the special access.

**3.12.2 Ordering and Requirements**

FRS must be ordered by the Customer in writing and is subject to the conditions stated in the tariff. In addition, the Company shall assess a per-element installation/change charge as set forth herein.

A minimum of two FRS connections are required for data to be transported between Customer designated premises.

At the Customer's request, the Company will, at no additional charge, cooperatively test at the time of installation.

**SECTION 3.0 - DESCRIPTION OF SERVICE & RATES, (CONT'D.)**

**3.12 Buckeye TeleSystem Frame Relay Service, (Cont'd.)**

**3.12.3 Rate Categories and Regulations**

**(A) Frame Relay Connection**

The FRAC rate element recovers the cost associated with the communication path between the end user's premises and the Company frame relay switch. It consists of an end-user interface port (EUP) to the Company's network and a bundled access line. One FRAC charge applies per Customer designated premises at which the FRS connection is terminated. This applies even if the Customer designated premises and the frame relay switch are collocated. A Customer may order a port-only EUP service.

**(B) Frame Relay Inter-Network Connection**

The FRIC rate element recovers the costs associated with the communication path between the access Customer's (e.g. other common carrier, ILEC or IXC) customer designated premises and the frame relay switch.

FRIC includes the physical transmission facility between the Customer designated premises and the frame relay switch per this tariff, any interoffice transport that may apply, and the inter-network customer port (ICP) on the frame relay switch. One FRIC charge applies per Customer designated premises at which the FRS connection is terminated and applies even if the Customer designated premises and the frame relay switch are collocated. A Customer may order only an Inter-network Customer Port to interface between the frame relay switch network and another network provided by another common carrier which should be dedicated to a single Customer.

**3.12 Buckeye TeleSystem Frame Relay Service, (Cont'd.)**

**(C) Frame Relay Ports**

- (1) End-User Port (EUP) charge is applied as a discreet rate element in conjunction with jointly-provided Special Access Service and is in addition to other applicable rates and charges stated in Section 3 herein. The EUP is the physical location in the Company's switch office where the transport facility of the end-user Customer connects to the FRS network. It specifies how a frame relay switch sends and receives data from a frame relay end-user Customer LAN or compatible Customer premises equipment. The end-user Customer must specify the appropriate speed so as to match the port and the associated transport facility.
  
- (2) Inter-network Customer Port (ICP) charge is applied as a discreet rate element in conjunction with jointly-provided Special Access Service and is in addition to other applicable rates and charges identified in Section 3 herein. The ICP is the physical network-to-network interface location where the transport facility of the access Customer connects to the Company's frame relay switch network.

The access Customer must specify the appropriate speed so as to match the port and the associated transport facility.

**(D) Permanent Virtual Connection (PVC)**

A PVC is a software defined link between two frame relay ports based on Customer specified Committed Information Rate (CIR). The CIR is a transmission speed specified by the Customer ranging from 64 Kbps to 44.736 Mbps. Customers will be provided with the capacity to transmit speeds up to two times the CIR with no guarantee of completion. Customer may order multiple PVCs on a given port subject to switch limitations. Customers anticipating non-simultaneous transmission may order CIRs assigned to these multiple PVCs, the sum of which may theoretically exceed the actual throughput of the port. However, when simultaneous transmission of multiple PVCs occurs, the total of the transmission rate (CIRs) may not exceed the actual throughput of the port.

A Standard Permanent Virtual Connection (SPVC) establishes a communications path between two ports within the Company's frame relay switch network.

An Extended Permanent Virtual Connection (EPVC) establishes a communications path between two ports on two interconnected (network-to-network) frame relay networks.

**(E) Rates and Charges Types**

The two types of rates and charges include monthly rates and nonrecurring or one-time rates as described below:

**(1) Monthly Rates**

A recurring rate or rates that apply each month or fraction thereof that a FRS is provided. Each month is considered to have 30 days.

**(2) Nonrecurring Rates**

One-time charges that apply to a specific work activity (e.g., installation, moves, changes, etc.) for frame relay service are specified in this Section herein.

**(a)** Installation of Services include nonrecurring charges for FRAC, FRIC, SPVC, EPVC and Port Only. These Charges apply per item installed based on the speed of connection ordered by the Customer.

**(b)** Service Rearrangements/Moves are changes or moves to in-place service(s). A Rearrangement Charge will be applied whenever a change is made to the CIR of an existing SPVC or EPVC or the port destination of the PVC.

**(c)** Administrative changes will be made without charge for such items as account number changes, billing name, address, contact information, circuit ID, and jurisdiction change.

The minimum period for Term Discount Plans is twelve (12) months. Should the Customer choose to discontinue a Term Discount Plan prior to the completion of the minimum service period, discontinuance charges shall apply.
