DOCKETED

2003 JUL 28 P 4:04

JUL 28 2003

AZ CORP COMMISSION  
DOCUMENT CONTROL

TO: THE COMMISSION

FROM: Utilities Division

DATE: July 25, 2003

DOCKETED BY *CMR*

RE: IN THE MATTER OF THE APPLICATION OF MIDVALE TELEPHONE EXCHANGE FOR APPROVAL OF EXTENDED AREA SERVICE FOR ITS GRANITE MOUNTAIN EXCHANGE SERVICE TERRITORY (DOCKET NO. T-02532A-03-0039)

On January 21, 2003, the Commission received a letter from Midvale Telephone Exchange, Inc. ("Midvale") regarding its Granite Mountain Exchange and the fact that many of the residents of the areas are concerned that the area is not included in the Phoenix Metropolitan Local Calling Area ("Phoenix Metro"). Portions of the Granite Mountain Exchange are located within the Scottsdale city limits and the remainder of the exchange is located just outside Scottsdale's northeast city limit boundary. Currently, calls between the Granite Mountain and Phoenix Metro are toll (long distance) calls.

In its letter, Midvale provided information related to the Granite Mountain Exchange community of interest, the cost to Midvale of providing extended area service ("EAS") to include the exchange in the Phoenix Metro Area, its central office code and number portability issues and alternative methods by which the Commission could address the implementation of EAS for customers located in the Granite Mountain Exchange.

Midvale indicated that it would not file an application for EAS for the area, but it provided information so that Staff could pursue the matter if Staff so desired. Midvale indicated that there was a rate case open through which the Commission could address any issues for EAS that need to be considered in the context of a rate case. In addition, Midvale indicated that the costs associated with providing EAS to the Granite Mountain Area should be provided through the Arizona Universal Service Fund ("AUSF"). Because the Granite Mountain exchange is a new exchange, a situation which does not occur frequently, Midvale suggests that the Commission consider something other than the standard procedures that currently apply to requests for AUSF disbursements, if it wants service provided to customers in unserved areas.

### Description of the Granite Mountain Exchange

Exhibit "A" is a map that shows the locations of the northern and southern areas of the Granite Mountain Exchange, the Scottsdale city limits and the Phoenix Metro calling area boundary. The areas surrounded by the red lines are the northern and southern portions of the Granite Mountain Exchange. The northern section is bounded by Rio Verde Drive, 136<sup>th</sup> Street,

Stage Coach Pass and 144<sup>th</sup> Street. The southern section is bounded by 120<sup>th</sup> Street, Deer Valley Road, the McDowell Mountain Regional Park and Jomax Road.

The Scottsdale city limits are highlighted in yellow. Six of the nine sections (a section is equal to one square mile area) in the southern portion of the Granite Mountain Exchange are located within the Scottsdale city limits. All five sections in the northern portion of the Granite Mountain Exchange are contiguous to (although outside) the Scottsdale city limits.

The green lines represent the boundary of Qwest's Phoenix Metro Local Calling Area. The southern portion of the Granite Mountain Exchange is surrounded by the Phoenix Metro Local Calling Area. All five sections in the northern portion of the Granite Mountain Exchange are contiguous to (although outside) the Phoenix Metro Local Calling Area. All of the residents of the northern section are within one mile of the Phoenix Metro Local Calling Area boundary.

### **The Southern Portion of the Midvale Exchange**

During visits to the southern section of the Granite Mountain exchange, Staff observed that Luxor Homes is currently building houses in Section 11 (Point A on Exhibit "A"). Photograph 8 was taken at about 120<sup>th</sup> street and Alameda looking to the east. The large blue sign in the background is the Luxor Homes' Sonoran Crest Development which is in Midvale's service territory. The small blue sign is behind a green Qwest pedestal located in Qwest's service territory. Both signs are inside the Scottsdale city limits. Photograph 9 was taken from the same intersection but from the northwest corner, again looking toward the east. The building above the small blue Luxor Homes sign is the Luxor construction office.

Photograph 13 was taken from a location less than 50 feet to the right (south) of the construction office in photograph 9. The view is toward the south. The houses on the right are located in Qwest's service territory and are served by Qwest. The construction crew to the left is working on a house under construction in the Sonoran Crest Development located within Midvale's service territory. Photograph 12 shows houses already built or in the process of being built in the Sonoran Crest development.

Photograph 11 was taken at the top of the rise in the road in photographs 8 and 9. It is just north of the construction office and the view is toward the north. The road being constructed is 122<sup>nd</sup> Street in the Luxor development. The houses on the left are in Qwest's service territory and are currently being served by Qwest. The road under construction is in Midvale's service territory.

Photographs 16 and 17 were taken at a location approximately ¼ mile south of Rio Verde Drive and 122<sup>nd</sup> Street. The view is toward the south with the McDowell Mountains in the background. No development that Staff could find is currently taking place in this area.

### **The Northern Portion of the Midvale Exchange**

During its visits to the northern section of the Granite Mountain Exchange, Staff observed that there is currently a significant amount of new construction taking place within the area.

Residents of the northern section of the Granite Mountain Exchange are within one mile of the Phoenix Metro Local Calling Area boundary. Photograph 3 was taken just south of the intersection of 144<sup>th</sup> Street and Lone Mountain and the view is towards the south. Residents on the left side of the road (toward the east) are in Qwest's service territory, are served by Qwest and are located within the Phoenix Metro Local Calling Area. Residents on the right side of the road are located in Midvale's service territory and are outside the Phoenix Metro Local Calling Area.

### **Examination of Extended Area Service**

Commissions generally decide whether EAS should be implemented by conducting analyses designed to determine whether a strong enough community of interest exists between exchanges to warrant EAS. One commonly used definition of communities of interest is: "contiguous geographic areas which may be recognized as separate localities but share common interests and services with respect to government, schools, health services, public safety and emergency services, and retail business" (P.U.R. Glossary for Utility Management, Public Utility Reports, Inc., Arlington, VA, 1992).

As a result of having visited the entire Granite Mountain Exchange, Staff was able to gain some perspective relative to the requests for EAS from residents of the area. These visits were particularly helpful in assessing the contiguity of the exchange with the City of Scottsdale and the Phoenix Metro Local Calling Area and the common services. Staff found that it was not possible to complete cell phone calls from a number of locations within the Granite Mountain service area.

### **Community of Interest**

Staff reached the following conclusions regarding the Granite Mountain Exchange area community of interest:

1. The community of interest includes the City of Scottsdale.
2. There were no commercial entities in the Granite Mountain Exchange area. Scottsdale is the closest location where residents can engage in any commercial activity.
3. There were no schools in the Granite Mountain Exchange area. Children must attend Scottsdale or Cave Creek Schools. Cave Creek is also part of the Phoenix Metro Local Calling Area.
4. The northern area (two of the five sections) is contiguous to the Scottsdale city limit on the west and there are residents in an area just to the east that are currently being served by Qwest.

5. The southern area's community of interest also includes the city of Scottsdale and the Phoenix Metro Local Calling Area.

Based on the findings above, Staff recommends that the Granite Mountain Exchange be granted mandatory two-way EAS to the Phoenix Metro Exchange Area. Staff notes that this issue would never have arisen if Qwest had decided to serve that area and that outcome would have benefited the customers who will be served in the Granite Mountain Exchange Area. The Granite Mountain Exchange is virtually surrounded by customers who are served by Qwest. Staff has also concluded that in similar situations, the Commission should consider whether it is in the best interest of the customers to have the incumbent local exchange carrier that is contiguous to the unserved area serve it or to allow a new company that is willing to service the area serve it. Although, in the short run it may solve a problem by allowing the new company to serve that area, in the long run issues such as those associated with EAS to the Granite Mountain Exchange area more efficiently dealt with by having the incumbent serve that area.

#### **Cost of EAS and Cost Recovery**

While Staff recommends that the Granite Mountain Exchange be granted EAS to the Phoenix Metro Exchange Area, the issue of revenue loss recovery must be addressed. Staff believes that if EAS is authorized for the Granite Mountain Exchange, the residents of the area should be responsible for providing the revenues that Midvale is entitled to generate as a result of the Decision No. 64011.

Midvale does not provide interexchange service. Therefore, Midvale's subscribers' toll calls are carried by their presubscribed interexchange carrier ("IXC"). Midvale is compensated for the use of its network to carry toll calls through the assessment of access charges. Under the terms of Midvale's current Access Service Tariff, IXCs are assessed a charge of \$0.1406 per minute when Midvale's customers make (originate) an intrastate toll call. IXCs are assessed a charge of \$0.1468 per minute when intrastate toll calls are made to Midvale's subscribers.

Midvale has no calling data for the Granite Mountain Exchange upon which it can base an actual or reasonable estimate of interexchange calling that would be affected by implementation of mandatory two-way EAS to the Phoenix Metro Exchange Area. Midvale has estimated that with implementation of EAS in the Granite Mountain area its Access Service revenues will decline by between \$9.85 and \$11.05 per month per customer. These estimates are based on EAS traffic between Midvale's Cascabel Exchange and Qwest Corporation's ("Qwest's") Benson Exchange and Access Service revenues that are generated in Midvale's Young and Cascabel Exchanges.

Midvale has provided information which supports the following estimates of lost access revenues on an annual basis:

Year	Low Estimate	High Estimate
2003	\$14,775	\$16,575
2004	\$21,276	\$23,868
2005	\$23,876	\$26,785
2006	\$26,240	\$29,437
2007	\$28,841	\$32,354
2008	\$31,796	\$35,669

Staff recommends that the initial monthly rate for EAS be set at \$10.45 per line on an interim basis subject to true-up. This rate is the mid-point of the range of Midvale's estimate of the reduction of revenues that it would expect to see as a result of the change from toll to EAS calling between the Granite Mountain Exchange and the Phoenix Metro Local Calling Area. Staff further recommends that the Commission order Midvale to provide information on actual EAS calling volume within 18 months of the Commission's Decision in the matter. The information should be provided on a monthly basis for the most recently available twelve month period. This information would be used to evaluate and if necessary revise the monthly EAS charge.

#### Area Code Options

When the state transitioned from a single area code to two, the Phoenix local calling area retained the 602 area code and other areas outside of the Phoenix local calling area was assigned the 520 area code. Later, when the 602 area code required relief, the 480/602/623 area codes were established and their boundaries were defined along the boundaries of Qwest wire centers contained within the Phoenix local calling area. Subsequently area code relief was implemented for the 520 area code and the geography which comprises the Granite Mountain Exchange became part of the 928 area code.

Should the Commission order that the Granite Mountain Exchange be made part of the Phoenix local calling area two numbering options are possible. Option A would be that the area code for the exchange could remain 928 and all calls to and from the exchange could be rated as local. This option would be consistent with Decision 64843<sup>1</sup> where the Phoenix local calling area was extended to include the service area of Accipiter Communications, Inc. which is in the 928 area code.

Option B would be to change the area code for the exchange from 928 to 480 to be consistent with that of the surrounding Qwest service area. This option would require that customers who currently have service from Midvale change their telephone number. The 998 prefix assigned to Midvale's Granite Mountain exchange is already assigned in the 480 area code and therefore would not be available for assignment to Midvale's exchange with this option.

---

<sup>1</sup> *In the Matter of Accipiter Communications Incorporated Motion to Amend Decision No. 59346, Docket No. T-02847A-95-0026, May 28, 2002.*

However, to mitigate the impact on existing customers, Midvale could be required to have the last four numbers of a customer's telephone number remain the same when its area code and office code were changed.

This raises a policy issue unique to the Phoenix local calling area that arises when: 1) population growth occurs, 2) service is to be provided to a previously unserved area, 3) service will not be provided from a Qwest wire center located within the Phoenix local calling area and 4) customers in the previously unserved area desire their service area be added to the Phoenix local calling area. The policy issue to be addressed is whether to retain the default area code for the unserved area (either 928 or 520) or to expand the geographic boundary of one of the existing Phoenix area codes to encompass the previously unserved area (which may or may not be contiguous to the Phoenix local calling area). A related scenario that raises the same basic policy question regarding area code change could arise if a community in another local calling area requested inclusion in the Phoenix local calling area and also desired to be associated with an area code other than its current area code.

There are a variety of underlying issues that may influence the general policy to be applied in the future. Among these are: 1) the effect a change would have on area code exhaust, 2) whether a change in prefix as well as area code would be required, 3) cost to customers for a number change, 4) cost to industry to implement the number change, 5) effect of local number portability rules, 6) compatibility with number pooling, 7) the desirability of changing an area code geographic boundary with subsequent changes on local calling area, 8) differing numbering requirements placed on rural and non-rural local exchange carriers, 9) customer education needs to minimize confusion, and 10) changes in technology that negate traditional views on number assignment; such as wireless and voice over the Internet (VoIP) to name just a few.

Given the above discussion, Staff would suggest that, barring unique circumstances, continuing the policy that was established in Decision No. 64843 of not changing an exchange's area code when it is added to the Phoenix local calling area is a conservative approach that should minimize the impact to both customers and industry when changes are made in the scope of the Phoenix local calling area. However, Staff is recommending a deviation from this policy because of the unique geographic relationship between the Granite Mountain Exchange and the surrounding 480 area code.

#### **Prohibition on Number Portability Between ILEC Rate Centers**

Federal Communication Commission ("FCC") rules<sup>2</sup> do not allow for numbers to be ported between ILEC rate centers. Therefore, in the event that the area code for Granite Mountain was changed to 480, customers moving to the Granite Mountain exchange from another location in the 480 area code would not be able to retain their existing telephone number

---

<sup>2</sup> *In the Matter of Telephone Number Portability*, Docket No. 95-116, Report and Order, (Rel. August 18, 1997) ("Second Report and Order").

if they so desired. This would also be the case for customers moving from the Granite Mountain exchange to another location in the 480 area code.

### **Facility Requirements**

At the time of its filing, the Company had not performed a study of call data to identify the incremental additional quantity of facilities and the associated costs that might be required to carry the EAS calls. This was because no historic call data was available since service in the Granite Mountain exchange has just recently been established. An assumption that might be made is the quantity of planned facilities required for long distance calls will go down which would offset some of the requirement for additional local (EAS) facilities. Given the small number of customers in the exchange, as an initial assumption the Company and Staff agreed that the quantity and cost of the incremental facilities required may be a non-material issue.

Subsequently, the Company performed an assessment of the impact from implementation of EAS at another of its exchanges to facilitate estimation of facility requirements for Granite Mountain.<sup>3</sup> An additional input into estimation of the incremental quantity of facilities that might be required was the impact that inward calls to the Company's dial-up Internet service might have if EAS were to be approved by the Commission. It was also clarified by the Company that the configuration of the switch as initially installed did not have spare capacity to accommodate growth for EAS requirements.

Staff has reviewed a high-level cost estimate of the facilities that would be required for implementation of EAS. The estimate included additions to the switch, additions to equipment terminating the fiber facility that interconnects with Qwest and Engineering/Planning costs. The total cost for the facility additions is estimated to be \$71,000. Although the estimated number of T-1 circuits might be 1 or 2 high, given the modularity of the switch and an objective of insuring that sufficient capacity is in place to prevent blockage should EAS be granted, Staff believes the Company's estimate is within reasonable bounds.

The Company also provided an estimate of the interval that would be required for the engineering and ordering of material from its vendors, manufacturing/delivery of material, installation and testing and turn-up of the equipment. This time frame is estimated to be 3-4 months. Staff believes that 4 months is a realistic and achievable interval.

The Company also addressed the timing of when it would be in a position to initiate orders to its vendors should the Commission grant the addition of Granite Mountain to the Phoenix local calling area. The Company is currently in the process of substantial construction for the new areas that its CC&N was expanded to include. The additional plant investment required should EAS be ordered was not included in the Company's loan design for the Granite Mountain service area. Therefore, absent another source of funding being identified, the

---

<sup>3</sup> The scope of local calling between the two scenarios is substantially different in that the EAS implementation evaluated was to 5 rural exchanges consisting of approximately 10,000 lines versus the size of the Phoenix local calling area.

Company believes that internal funds for the necessary equipment would not be available until first Quarter 2004.

The intervals specified in the Recommendations section of this Report take into account the Company's position regarding availability of funds to implement the EAS and Industry requirements for notification of network changes.

### **Staff Recommendations**

Given the unique geographic relationship of the Granite Mountain Exchange to the Phoenix local calling area and given that, for the most part, it is surrounded by the 480 area code, Staff would recommend that the area code of this exchange be changed to 480 should the service area be added to the Phoenix local calling area.

Should the Commission determine that the Granite Mountain Exchange be added to the Phoenix local calling area and its area code changed to 480 from 928, Staff recommends the following:

1. That the Phoenix local calling area be expanded to include Midvale's Granite Mountain Exchange by June 30, 2004.
2. That the area code for Midvale's Granite Mountain Exchange be changed from 928 to 480 coincident with the exchange being added to the Phoenix local calling area.
3. That the prefix for Midvale's Granite Mountain Exchange be changed from 998 to a new prefix as determined by the NANPA coincident with the exchange being added to the Phoenix local calling area.
4. That Midvale route incoming calls to 928-998 to an intercept recording that advises the caller of the new area code and prefix for the Granite Mountain Exchange coincident with the exchange being added to the Phoenix local calling area and that such recording will stay in place for 90 days after the change to a new area code and prefix is implemented.
5. That Midvale not change the last four digits of a customer's telephone number in the process of changing the area code and prefix for its Granite Mountain Exchange customers unless a customer requests the change.
6. That Midvale provide notice to its customers of the changes to local calling area and telephone numbers a minimum of 60 days prior to the changes being implemented and that such notice shall be repeated 30 days prior to the changes.

THE COMMISSION

July 25, 2003

Page 9

7. That Midvale returns the 928-998 prefix to the NANPA by September 30, 2004<sup>4</sup> and that Staff shall be advised of its return.
8. That the initial monthly rate for EAS be set at \$10.45 per line on an interim basis subject to true-up.
9. That the Commission order Midvale to provide information on actual EAS calling volume within 18 months of the Commission's Decision in the matter.

Should the Commission determine that the Granite Mountain Exchange be added to the Phoenix local calling area and that the 928 area code be retained for the exchange, Staff recommends the following:

1. That the Phoenix local calling area be expanded to include Midvale's Granite Mountain Exchange by June 30, 2004.
2. That Midvale route 1+ calls that originate in the Granite Mountain Exchange and terminate to a NPA/NXX in the Phoenix local calling area to an intercept recording that advises the caller that the call is a local call and also advises the caller to redial the number without the "1" coincident with the Granite Mountain Exchange being added to the Phoenix local calling area.
3. That the initial monthly rate for EAS be set at \$10.45 per line on an interim basis subject to true-up.
4. That the Commission order Midvale to provide information on actual EAS calling volume within 18 months of the Commission's Decision in the matter.

FOR Ernest G. Johnson  
Director  
Utilities Division

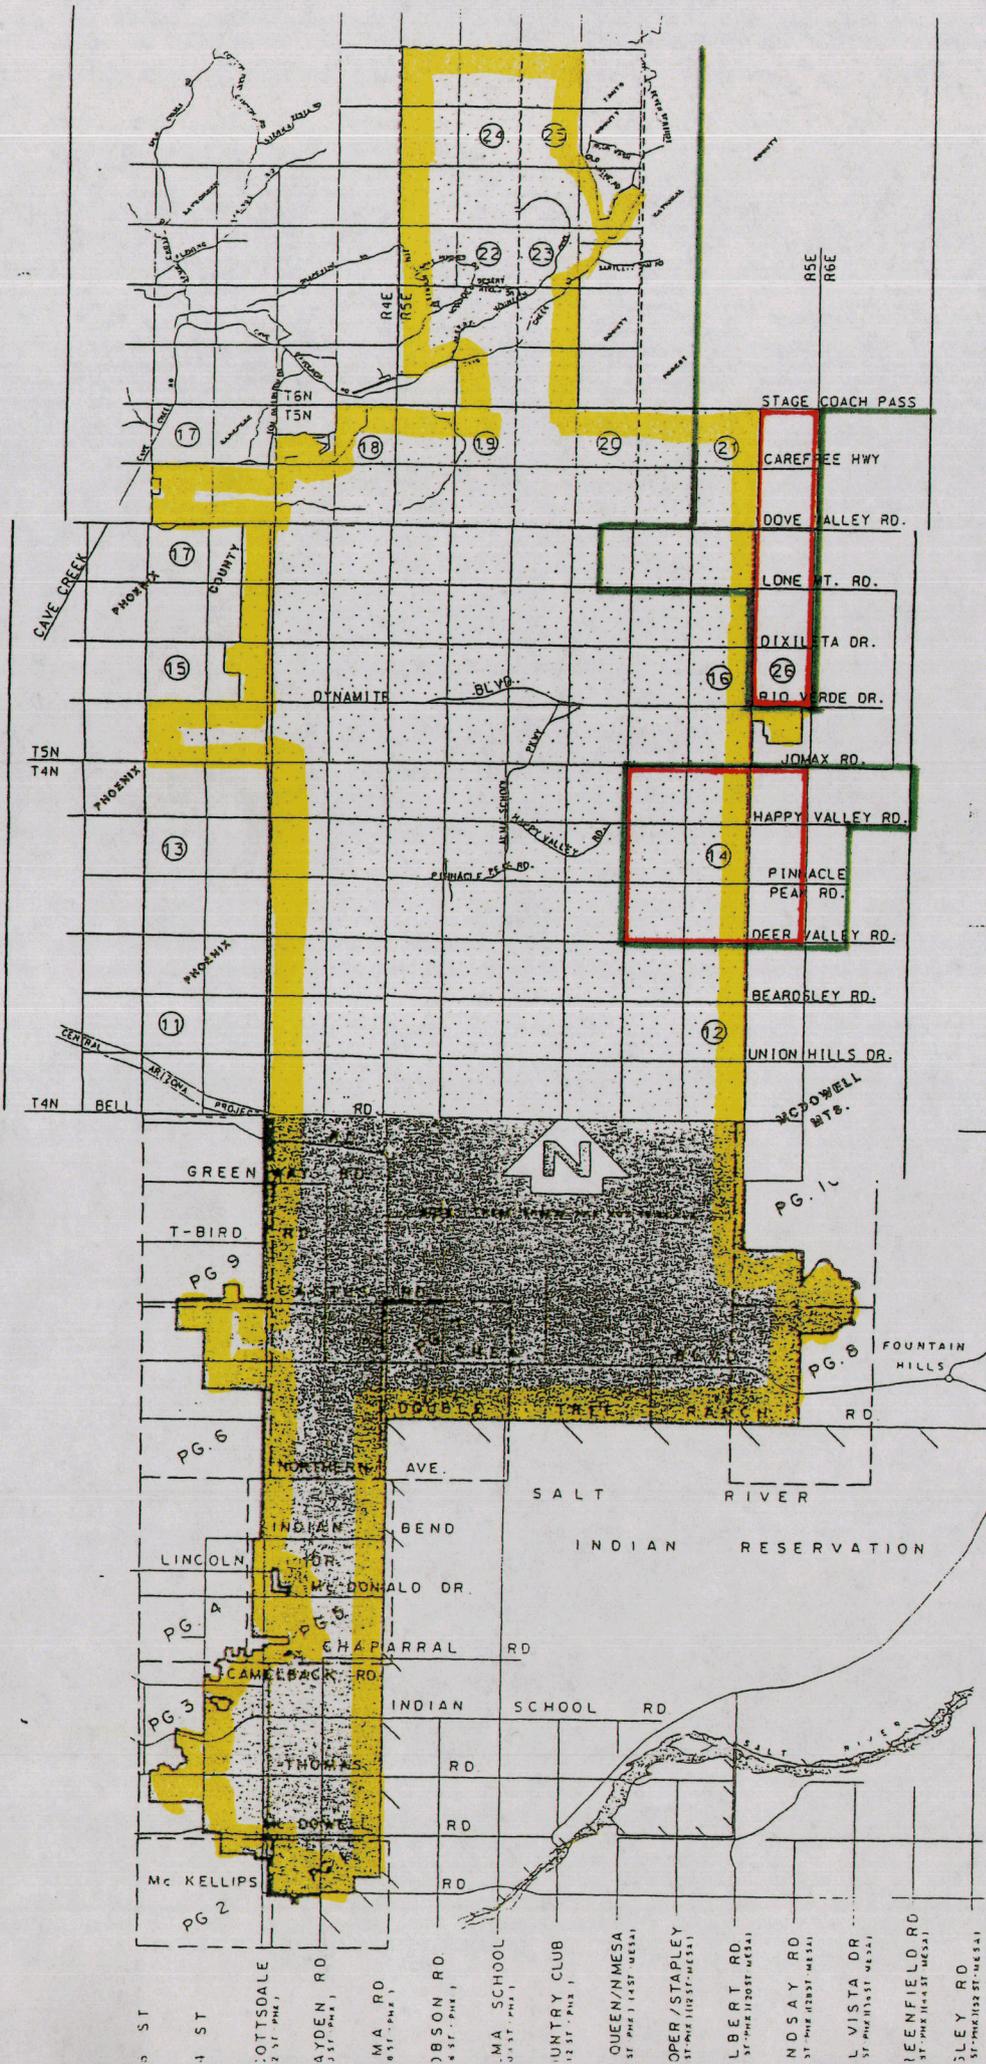

EGJ:WMS:RLB:lhm\GH

ORIGINATORS: Wilfred Shand, Jr. and Richard Boyles

---

<sup>4</sup> Staff recommends that the existing office code be retained by Midvale's Granite Mountain switch for a period of time after implementation of the area code and prefix change to facilitate use of an intercept recording (no supervision) to notify callers outside of the Granite Mountain Exchange of the change.

SERVICE FOR ITS GRANITE MOUNTAIN )  
EXCHANGE SERVICE TERRITORY )

DOCKET NO. T-02532A-03-0039

DECISION NO. \_\_\_\_\_

ORDER

Open Meeting  
August 12 and 13, 2003  
Phoenix, Arizona

BY THE COMMISSION:

FINDINGS OF FACT

1. On January 21, 2003, the Commission received a letter from Midvale Telephone Exchange, Inc. ("Midvale") regarding its Granite Mountain Exchange and the fact that many of the residents of the areas are concerned that the area is not included in the Phoenix Metropolitan Local Calling Area ("Phoenix Metro"). Portions of the Granite Mountain Exchange are located within the Scottsdale city limits and the remainder of the exchange is located just outside Scottsdale's northeast city limit boundary. Currently, calls between the Granite Mountain and Phoenix Metro are toll (long distance) calls.

2. In its letter, Midvale provided information related to the Granite Mountain Exchange community of interest, the cost to Midvale of providing extended area service ("EAS") to include the exchange in the Phoenix Metro Area, its central office code and number portability issues and alternative methods by which the Commission could address the implementation of EAS for customers located in the Granite Mountain Exchange.

1           3.       Midvale indicated that it would not file an application for EAS for the area, but it  
2 provided information so that Staff could pursue the matter if Staff so desired. Midvale indicated  
3 that there was a rate case open through which the Commission could address any issues for EAS  
4 that need to be considered in the context of a rate case. In addition, Midvale indicated that the  
5 costs associated with providing EAS to the Granite Mountain Area should be provided through the  
6 Arizona Universal Service Fund ("AUSF"). Because the Granite Mountain exchange is a new  
7 exchange, a situation which does not occur frequently, Midvale suggests that the Commission  
8 consider something other than the standard procedures that currently apply to requests for AUSF  
9 disbursements, if it wants service provided to customers in unserved areas.

10 **Description of the Granite Mountain Exchange**

11           4.       Staff has attached Exhibits and Photographs to its Memorandum on this matter.  
12 Exhibit "A" is a map that shows the locations of the northern and southern areas of the Granite  
13 Mountain Exchange, the Scottsdale city limits and the Phoenix Metro calling area boundary. The  
14 northern section of the Granite Mountain Exchange is bounded by Rio Verde Drive, 136<sup>th</sup> Street,  
15 Stage Coach Pass and 144<sup>th</sup> Street. The southern section of the Granite Mountain Exchange is  
16 bounded by 120<sup>th</sup> Street, Deer Valley Road, the McDowell Mountain Regional Park and Jomax  
17 Road.

18           5.       Six of the nine sections (a section is equal to one square mile area) in the southern  
19 portion of the Granite Mountain Exchange are located within the Scottsdale city limits. All five  
20 sections in the northern portion of the Granite Mountain Exchange are contiguous to (although  
21 outside) the Scottsdale city limits.

22           6.       The southern portion of the Granite Mountain Exchange is surrounded by the  
23 Phoenix Metro Local Calling Area. All five sections in the northern portion of the Granite  
24 Mountain are contiguous to (although outside) the Phoenix Metro Local Calling Area. All of the  
25 residents of the northern section are within one mile of the Phoenix Metro Local Calling Area  
26 boundary.

27 ...

28

1           7.     During visits to the southern section of the Granite Mountain exchange, Staff  
2 observed that Luxor Homes is currently building houses in the southern section of the Granite  
3 Mountain Exchange.

4           8.     During its visits to the northern section of the Granite Mountain Exchange, Staff  
5 observed that there is currently a significant amount of new construction taking place within the  
6 area.

7     **Examination of Extended Area Service**

8           9.     Commissions generally decide whether EAS should be implemented by conducting  
9 analyses designed to determine whether a strong enough community of interest exists between  
10 exchanges to warrant EAS. One commonly used definition of communities of interest is: "contiguous  
11 geographic areas which may be recognized as separate localities but share common interests and  
12 services with respect to government, schools, health services, public safety and emergency services,  
13 and retail business"(P.U.R. Glossary for Utility Management, Public Utility Reports, Inc., Arlington,  
14 VA, 1992).

15          10.    As a result of having visited the entire Granite Mountain Exchange, Staff was able  
16 to gain some perspective relative to the requests for EAS from residents of the area. These visits  
17 were particularly helpful in assessing the contiguity of the exchange with the City of Scottsdale  
18 and the Phoenix Metro Local Calling Area and the common services. Staff found that it was not  
19 possible to complete cell phone calls from a number of locations within the Granite Mountain  
20 service area.

21     **Community of Interest**

22          11.    Staff reached the following conclusions regarding the Granite Mountain Exchange  
23 area community of interest:

- 24           A.     The community of interest includes the City of Scottsdale.
- 25           B.     There were no commercial entities in the Granite Mountain Exchange area.  
26                 Scottsdale is the closest location where residents can engage in any commercial  
27                 activity.

27     ...  
28     ...

- 1 C. There were no schools in the Granite Mountain Exchange area. Children must  
2 attend Scottsdale or Cave Creek Schools. Cave Creek is also part of the Phoenix  
3 Metro Local Calling Area.  
4 D. The northern area (two of the five sections) is contiguous to the Scottsdale city limit  
5 on the west and there are residents in an area just to the east that are currently being  
6 served by Qwest.  
7 E. The southern area's community of interest also includes the city of Scottsdale and  
8 the Phoenix Metro Local Calling Area.

7 12. Based on the findings above, Staff recommends that the Granite Mountain  
8 Exchange be granted mandatory two-way EAS to the Phoenix Metro Exchange Area. Staff notes  
9 that this issue would never have arisen if Qwest had decided to serve that area and that outcome  
10 would have benefited the customers who will be served in the Granite Mountain Exchange Area.  
11 The Granite Mountain Exchange is virtually surrounded by customers who are served by Qwest.  
12 Staff has also concluded that in similar situations, the Commission should consider whether it is in  
13 the best interest of the customers to have the incumbent local exchange carrier that is contiguous to  
14 the unserved area serve it or to allow a new company that is willing to service the area serve it.  
15 Although, in the short run it may solve a problem by allowing the new company to serve that area,  
16 in the long run issues such as those associated with EAS to the Granite Mountain Exchange are  
17 more efficiently dealt with by having the incumbent serve that area.

18 **Cost of EAS and Cost Recovery**

19 13. While Staff recommends that the Granite Mountain Exchange be granted EAS to  
20 the Phoenix Metro Exchange Area, the issue of revenue loss recovery must be addressed. Staff  
21 believes that if EAS is authorized for the Granite Mountain Exchange, the residents of the area  
22 should be responsible for providing the revenues that Midvale is entitled to generate as a result of  
23 the Decision No. 64011.

24 14. Midvale does not provide interexchange service. Therefore, Midvale's subscribers'  
25 toll calls are carried by their presubscribed interexchange carrier ("IXC"). Midvale is  
26 compensated for the use of its network to carry toll calls through the assessment of access charges.  
27 Under the terms of Midvale's current Access Service Tariff, IXCs are assessed a charge of  
28 ...

1 \$0.1406 per minute when Midvale's customers make (originate) a toll call. IXC's are assessed a  
2 charge of \$0.1468 per minute when toll calls are made to Midvale's subscribers.

3 15. Midvale has no calling data for the Granite Mountain Exchange upon which it can  
4 base an actual or reasonable estimate of interexchange calling that would be affected by  
5 implementation of mandatory two-way EAS to the Phoenix Metro Exchange Area. Midvale has  
6 estimated that with implementation of EAS in the Granite Mountain area its Access Service  
7 revenues will decline by between \$9.85 and \$11.05 per month per customer. These estimates are  
8 based on EAS traffic between Midvale's Cascabel Exchange and Qwest Corporation's ("Qwest's")  
9 Benson Exchange and Access Service revenues that are generated in Midvale's Young and  
10 Cascabel Exchanges.

11 16. Midvale has provided information which supports the following estimates of lost  
12 access revenues on an annual basis:

	Low	High
<u>Year</u>	<u>Estimate</u>	<u>Estimate</u>
2003	\$14,775	\$16,575
2004	\$21,276	\$23,868
2005	\$23,876	\$26,875
2006	\$26,240	\$29,437
2007	\$28,841	\$32,354
2008	\$31,796	\$35,669

21 17. Staff recommends that the initial monthly rate for EAS be set at \$10.45 per line on  
22 an interim basis subject to true-up. This rate is the mid-point of the range of Midvale's estimate of  
23 the reduction of revenues that it would expect to see as a result of the change from toll to EAS  
24 calling between the Granite Mountain Exchange and the Phoenix Metro Local Calling Area. Staff  
25 further recommends that the Commission order Midvale to provide information on actual EAS  
26 calling volume within 18 months of the Commission's Decision in the matter. The information  
27 should be provided on a monthly basis for the most recently available twelve month period. This  
28 information would be used to evaluate and if necessary revise the monthly EAS charge.

1 **Area Code Options**

2 18. When the state transitioned from a single area code to two, the Phoenix local calling  
3 area retained the 602 area code and other areas outside of the Phoenix local calling area was  
4 assigned the 520 area code. Later, when the 602 area code required relief, the 480/602/623 area  
5 codes were established and their boundaries were defined along the boundaries of Qwest wire  
6 centers contained within the Phoenix local calling area. Subsequently area code relief was  
7 implemented for the 520 area code and the geography which comprises the Granite Mountain  
8 Exchange became part of the 928 area code.

9 19. Should the Commission order that the Granite Mountain Exchange be made part of  
10 the Phoenix local calling area two numbering options are possible. Option A would be that the  
11 area code for the exchange could remain 928 and all calls to and from the exchange could be rated  
12 as local. This option would be consistent with Decision No. 64843<sup>1</sup> where the Phoenix local  
13 calling area was extended to include the service area of Accipiter Communications, Inc., which is  
14 in the 928 area code.

15 20. Option B would be to change the area code for the exchange from 928 to 480 to be  
16 consistent with that of the surrounding Qwest service area. This option would require that  
17 customers who currently have service from Midvale change their telephone number. The 998  
18 prefix assigned to Midvale's Granite Mountain exchange is already assigned in the 480 area code  
19 and therefore would not be available for assignment to Midvale's exchange with this option.  
20 However, to mitigate the impact on existing customers, Midvale could be required to have the last  
21 four numbers of a customer's telephone number remain the same when its area code and office  
22 code were changed.

23 21. This raises a policy issue unique to the Phoenix local calling area that arises when:  
24 1) population growth occurs, 2) service is to be provided to a previously unserved area, 3) service  
25 will not be provided from a Qwest wire center located within the Phoenix local calling area and 4)  
26 customers in the previously unserved area desire their service area be added to the Phoenix local

27 \_\_\_\_\_  
28 <sup>1</sup> *In the Matter of Accipiter Communications Incorporated Motion to Amend Decision No. 59346, Docket No. T-02847A-95-0026, May 28, 2002.*

1 calling area. The policy issue to be addressed is whether to retain the default area code for the  
2 unserved area (either 928 or 520) or to expand the geographic boundary of one of the existing  
3 Phoenix area codes to encompass the previously unserved area (which may or may not be  
4 contiguous to the Phoenix local calling area). A related scenario that raises the same basic policy  
5 question regarding area code change could arise if a community in another local calling area  
6 requested inclusion in the Phoenix local calling area and also desired to be associated with an area  
7 code other than its current area code.

8 22. There are a variety of underlying issues that may influence the general policy to be  
9 applied in the future. Among these are: 1) the effect a change would have on area code exhaust, 2)  
10 whether a change in prefix as well as area code would be required, 3) cost to customers for a  
11 number change, 4) cost to industry to implement the number change, 5) effect of local number  
12 portability rules, 6) compatibility with number pooling, 7) the desirability of changing an area code  
13 geographic boundary with subsequent changes on local calling area, 8) differing numbering  
14 requirements placed on rural and non-rural local exchange carriers, 9) customer education needs to  
15 minimize confusion, and 10) changes in technology that negate traditional views on number  
16 assignment; such as wireless and voice over the Internet ("VoIP") to name just a few.

17 23. Given the above discussion, Staff would suggest that, barring unique circumstances,  
18 continuing the policy that was established in Decision No. 64843 of not changing an exchange's  
19 area code when it is added to the Phoenix local calling area is a conservative approach that should  
20 minimize the impact to both customers and industry when changes are made in the scope of the  
21 Phoenix local calling area. However, Staff is recommending a deviation from this policy because  
22 of the unique geographic relationship between the Granite Mountain Exchange and the  
23 surrounding 480 area code.

#### 24 **Prohibition on Number Portability Between ILEC Rate Centers**

25 24. Federal Communication Commission ("FCC") rules<sup>2</sup> do not allow for numbers to  
26 be ported between ILEC rate centers. Therefore, in the event that the area code for Granite  
27

28 <sup>2</sup> *In the Matter of Telephone Number Portability*, Docket No. 95-116, Report and Order, (Rel. August 18, 1997)  
("Second Report and Order").

1 Mountain was changed to 480, customers moving to the Granite Mountain exchange from another  
2 location in the 480 area code would not be able to retain their existing telephone number if they so  
3 desired. This would also be the case for customers moving from the Granite Mountain exchange  
4 to another location in the 480 area code.

5 **Facility Requirements**

6 25. At the time of its filing, the Company had not performed a study of call data to  
7 identify the incremental additional quantity of facilities and the associated costs that might be  
8 required to carry the EAS calls. This was because no historic call data was available since service  
9 in the Granite Mountain exchange has just recently been established. An assumption that might be  
10 made is the quantity of planned facilities required for long distance calls will go down which  
11 would offset some of the requirement for additional local (EAS) facilities. Given the small  
12 number of customers in the exchange, as an initial assumption the Company and Staff agreed that  
13 the quantity and cost of the incremental facilities required may be a non-material issue.

14 26. Subsequently, the Company performed an assessment of the impact from  
15 implementation of EAS at another of its exchanges to facilitate estimation of facility requirements  
16 for Granite Mountain.<sup>3</sup> An additional input into estimation of the incremental quantity of facilities  
17 that might be required was the impact that inward calls to the Company's dial-up Internet service  
18 might have if EAS were to be approved by the Commission. It was also clarified by the Company  
19 that the configuration of the switch as initially installed did not have spare capacity to  
20 accommodate growth for EAS requirements.

21 27. Staff has reviewed a high-level cost estimate of the facilities that would be required  
22 for implementation of EAS. The estimate included additions to the switch, additions to equipment  
23 terminating the fiber facility that interconnects with Qwest and Engineering/Planning costs. The  
24 total cost for the facility additions is estimated to be \$71,000. Although the estimated number of  
25 T-1 circuits might be 1 or 2 high, given the modularity of the switch and an objective of insuring  
26

27  
28 <sup>3</sup> The scope of local calling between the two scenarios is substantially different in that the EAS implementation  
evaluated was to 5 rural exchanges consisting of approximately 10,000 lines versus the size of the Phoenix local  
calling area.

1 that sufficient capacity is in place to prevent blockage should EAS be granted, Staff believes the  
2 Company's estimate is within reasonable bounds.

3 28. The Company also provided an estimate of the interval that would be required for  
4 the engineering and ordering of material from its vendors, manufacturing/delivery of material,  
5 installation and testing and turn-up of the equipment. This time frame is estimated to be 3-4  
6 months. Staff believes that 4 months is a realistic and achievable interval.

7 29. The Company also addressed the timing of when it would be in a position to initiate  
8 orders to its vendors should the Commission grant the addition of Granite Mountain to the Phoenix  
9 local calling area. The Company is currently in the process of substantial construction for the new  
10 areas that its CC&N was expanded to include. The additional plant investment required should  
11 EAS be ordered was not included in the Company's loan design for the Granite Mountain service  
12 area. Therefore, absent another source of funding being identified, the Company believes that  
13 internal funds for the necessary equipment would not be available until first Quarter 2004.

14 30. The intervals specified in the Recommendations section of this Report take into  
15 account the Company's position regarding availability of funds to implement the EAS and  
16 Industry requirements for notification of network changes.

17 **Staff Recommendations**

18 31. Given the unique geographic relationship of the Granite Mountain Exchange to the  
19 Phoenix local calling area and given that, for the most part, it is surrounded by the 480 area code,  
20 Staff would recommend that the area code of this exchange be changed to 480 should the service  
21 area be added to the Phoenix local calling area.

22 32. Should the Commission determine that the Granite Mountain Exchange be added to  
23 the Phoenix local calling area and its area code changed to 480 from 928, Staff recommends the  
24 following:

25 A. That the Phoenix local calling area be expanded to include Midvale's Granite  
26 Mountain Exchange by June 30, 2004.

27 B. That the area code for Midvale's Granite Mountain Exchange be changed from 928  
28 to 480 coincident with the exchange being added to the Phoenix local calling area.

...

- 1 C. That the prefix for Midvale's Granite Mountain Exchange be changed from 998 to a  
2 new prefix as determined by the NANPA coincident with the exchange being added  
3 to the Phoenix local calling area.
- 4 D. That Midvale route incoming calls to 928-998 to an intercept recording that advises  
5 the caller of the new area code and prefix for the Granite Mountain Exchange  
6 coincident with the exchange being added to the Phoenix local calling area and that  
7 such recording will stay in place for 90 days after the change to a new area code  
8 and prefix is implemented.
- 9 E. That Midvale not change the last four digits of a customer's telephone number in  
10 the process of changing the area code and prefix for its Granite Mountain Exchange  
11 customers unless a customer requests the change.
- 12 F. That Midvale provide notice to its customers of the changes to local calling area  
13 and telephone numbers a minimum of 60 days prior to the changes being  
14 implemented and that such notice shall be repeated 30 days prior to the changes.
- 15 G. That Midvale returns the 928-998 prefix to the NANPA by September 30, 2004<sup>4</sup>  
16 and that Staff shall be advised of its return.
- 17 H. That the initial monthly rate for mandatory two-way EAS be set at \$10.45 per line  
18 on an interim basis subject to true-up.
- 19 I. That the Commission order Midvale to provide information on actual EAS calling  
20 volume within 18 months of the Commission's Decision in the matter.
- 21 33. Should the Commission determine that the Granite Mountain Exchange be added to  
22 the Phoenix local calling area and that the 928 area code be retained for the exchange, Staff  
23 recommends the following:
- 24 A. That the Phoenix local calling area be expanded to include Midvale's Granite  
25 Mountain Exchange by June 30, 2004.
- 26 B. That Midvale route 1+ calls that originate in the Granite Mountain Exchange and  
27 terminate to a NPA/NXX in the Phoenix local calling area to an intercept recording  
28 that advises the caller that the call is a local call and also advises the caller to redial  
the number without the "1" coincident with the Granite Mountain Exchange being  
added to the Phoenix local calling area.
- C. That the initial monthly rate for mandatory two-way EAS be set at \$10.45 per line  
on an interim basis subject to true-up.

---

<sup>4</sup> Staff recommends that the existing office code be retained by Midvale's Granite Mountain switch for a period of time after implementation of the area code and prefix change to facilitate use of an intercept recording (no supervision) to notify callers outside of the Granite Mountain Exchange of the change.

D. That the Commission order Midvale to provide information on actual EAS calling volume within 18 months of the Commission's Decision in the matter.

CONCLUSIONS OF LAW

1. Midvale is an Arizona public service corporation within the meaning of Article XV, Section 2, of the Arizona Constitution.

2. The Commission has jurisdiction over Midvale and of the subject matter in this Application.

3. The Commission, having reviewed the tariff pages and Staff's Memorandum dated June 23, 2003, concludes that it is in the public interest to grant mandatory two-way EAS to the Phoenix Metro Local Calling Area for Midvale's Granite Mountain Exchange.

ORDER

IT IS THEREFORE ORDERED that the Granite Mountain Exchange be granted mandatory two-way EAS to the Phoenix Metro Local Calling Area.

IT IS THEREFORE ORDERED that the initial monthly rate for EAS be set at \$10.45 per line.
