DOCKET NO. T-03253A-96-0464
Response to Staff Data Request
US South Communications, Inc. d/b/a US South and d/b/a INCOMM

A. Please provide the value of all plant and equipment currently held by the company, intended to be used to provide telecommunications service to Arizona customer.

Applicant has a DMS 500 currently valued at 1.8 million dollars which is used primarily to provide calling card services to Arizona customers.

B. Please provide a description of each asset in your response to item A, including the assets cost and location.

The Applicant has a DMS 500 switch located in Atlanta, Georgia to provide long distance services primarily calling card services to its customers nationwide including Arizona. The Nortel DMS 500 Switch ("DMS 500"), deployed in late 1996, is specifically designed to provide local and long distance interexchange telecommunication services. The DMS 500 is a modular switch that combines the Nortel DMS 250 trunk side switch with the Nortel DMS 100 line side switch.

C. Please provide the projected value of all plant and equipment to be used to provide telecommunications service to Arizona customers at the time the Company begins serving its first customer.

There is no projected value relative to Arizona operations.

D. Please provide a description of each asset in your response to item C, including the assets cost and location. N/A.

E. Please explain how the value of the company's plant and equipment is related to the Company's proposed rates.

Since the majority of the services provided in Arizona utilize the telecommunications plant solely of the underlying carrier, there is no direct relationship between the Applicant's switch costs and its intrastate Arizona rates. Currently the only Arizona traffic being switched at the Applicant's switch in Georgia is calling card traffic. The Applicant establishes postalized national rates for all of its calling card services which factor in overall costs on a national basis.
