Re: Gila River Power, L.P. - Self-Certification (2007)
CEC Conditions: Commission Decision Nos. 62730, 62970
Docket No. L-00000Q-00-0099

Dear Ms. Battista:

This self-certification letter is intended to address the status of the conditions set forth in the Certificate of Environmental Compatibility ("CEC") originally issued to Gila River Power, L.P. ("Gila River") on June 30, 2000, and amended on October 26, 2000. Gila River, whom this firm represents, has requested that the following information be provided to you.

Condition No. 1: Gila River is complying with all existing applicable air and water pollution control standards and regulations, and with all existing applicable ordinances, master plans, and regulations of the State of Arizona, the County of Maricopa, the Town of Gila Bend, the United States, and any other governmental entity having jurisdiction.

Condition No. 2: Construction of the Project has been completed within the time period authorized for completion in the CEC. All four units are fully operational, and have been delivering power to areas within the State of Arizona.

Condition No. 3: Construction of the Project proceeded consistent with the design of the Project, which included at least two transmission lines emanating from the Project's transmission switchyard and interconnecting with the existing transmission system. This work has been completed and energized. Gila River is interconnected to the Arizona transmission network at both 500 kV and the 230 kV levels by three separate transmission lines. Interconnection to the 500 kV transmission network is via two dedicated 20-mile long lines, either of which can carry the entire plant output, to the new Jojoba substation, which became operational in November 2002. In addition, the station connects to the 230 kV transmission

network via a 500/230 kV transformer to the new Arizona Public Service Company's ("APS") 230 kV Panda substation that intersects the APS Liberty to Gila Bend line.

Condition No. 4: ICF Consulting had been retained by the Project to perform the transmission capacity study for Gila River. The technical study regarding transmission capacity to the Gila River Power Station was submitted on February 14, 2003.

Condition No. 5: Gila River has already submitted its Generator Interconnection Facilities Construction Agreement between APS and Panda, effective October 31, 2000, and Interconnection and Operating Agreement, effective December 22, 2000. The Interconnection and Operating Agreement was revised on December 21, 2005.

Condition No. 6: Gila River became a Class 3 member of the Western Electricity Coordinating Council ("WECC") on October 15, 2002. Gila River also signed its Reliability Management System Agreement with APS on March 15, 2002.

Condition No. 7: Gila River is a current member of the Southwest Reserve Sharing Group.

Condition No. 8: No action is required.

Condition No. 9: No human remains and/or funerary objects were encountered during construction. All contractors working on the Project were aware of this condition, and appropriate procedures were in place to deal with the matter if it had occurred.

Condition No. 10: Gila River has implemented the land management and reclamation plan as originally prepared.

If you have any questions concerning the above information, or need additional information, please let me know. Thank you for your time and consideration in this matter.

Very truly yours,

Patrick J. Black
