**Subject:** APS Rate Increases

The reasoning behind the approval of recent changes to APS's rate structure is not understandable. The Classic rate Customers who paid 3 to 4 cents per kwh more than SRP customers for many years to fund APS's nuclear plant now have to subsidize the newbies that have the non-classic rates. I understand the desire to shift demand to off peak, but the hours are ridiculous. Industry is off peak way before 9:00 PM. Off-peak should be about about 5:00 PM. Do you not understand how this works? The 7 PM to 12 noon is also ridiculous since I would pay 21 cents/kwh during peak- which is **twice** what I pay now - just when I want to run my solar hot water pump all day, maybe a small load but still! You guys just do not seem to be with it - I sure hope another election is coming up. It really looks like a petition is definitely in order to get this ridiculous new rate structure rescinded. Do you even know what a kwh is? Do we pay you so much you do not care?
