**Camelback Inn Water Conservation Initiatives  
1996 to Present**

<u>Year</u>	<u>Program/Description</u>	<u>Cost</u>	<u>Gallons Saved Annually</u>
<b>2008</b>	<b>Rain Bird System Upgrade Program</b> Upgrade to Stratus II hardware and software for irrigation and control systems to convert to new operating system and to optimize irrigation control.	\$ 10,000	472,450
<b>2007</b>	<b>Auto Sensor Faucet Program</b> Retrofit existing public faucets with new Sloan Optima sensor technology faucets to reduce average use time from 15 seconds to 10 seconds. Install Sloan sensor faucets in all renovated public areas.	\$ 14,200	45,000
<b>2006</b>	<b>Laundry Upgrade Program</b> Replace 400 lb washers with new model 50% water-efficient washers.	\$ 65,000	2,758,256
<b>2006</b>	<b>Pressure Reduction Program</b> Reduce existing 110 psi system pressure to below 70 psi to reduce system leakage in pvc piping.	\$ 24,000	4,800,341
<b>2005</b>	<b>Shower Head Program</b> Retrofit existing guest room 2.0 gpm Speakman showerheads with new low-flow 1.5 gpm showerheads.	\$ 19,587	1,164,228

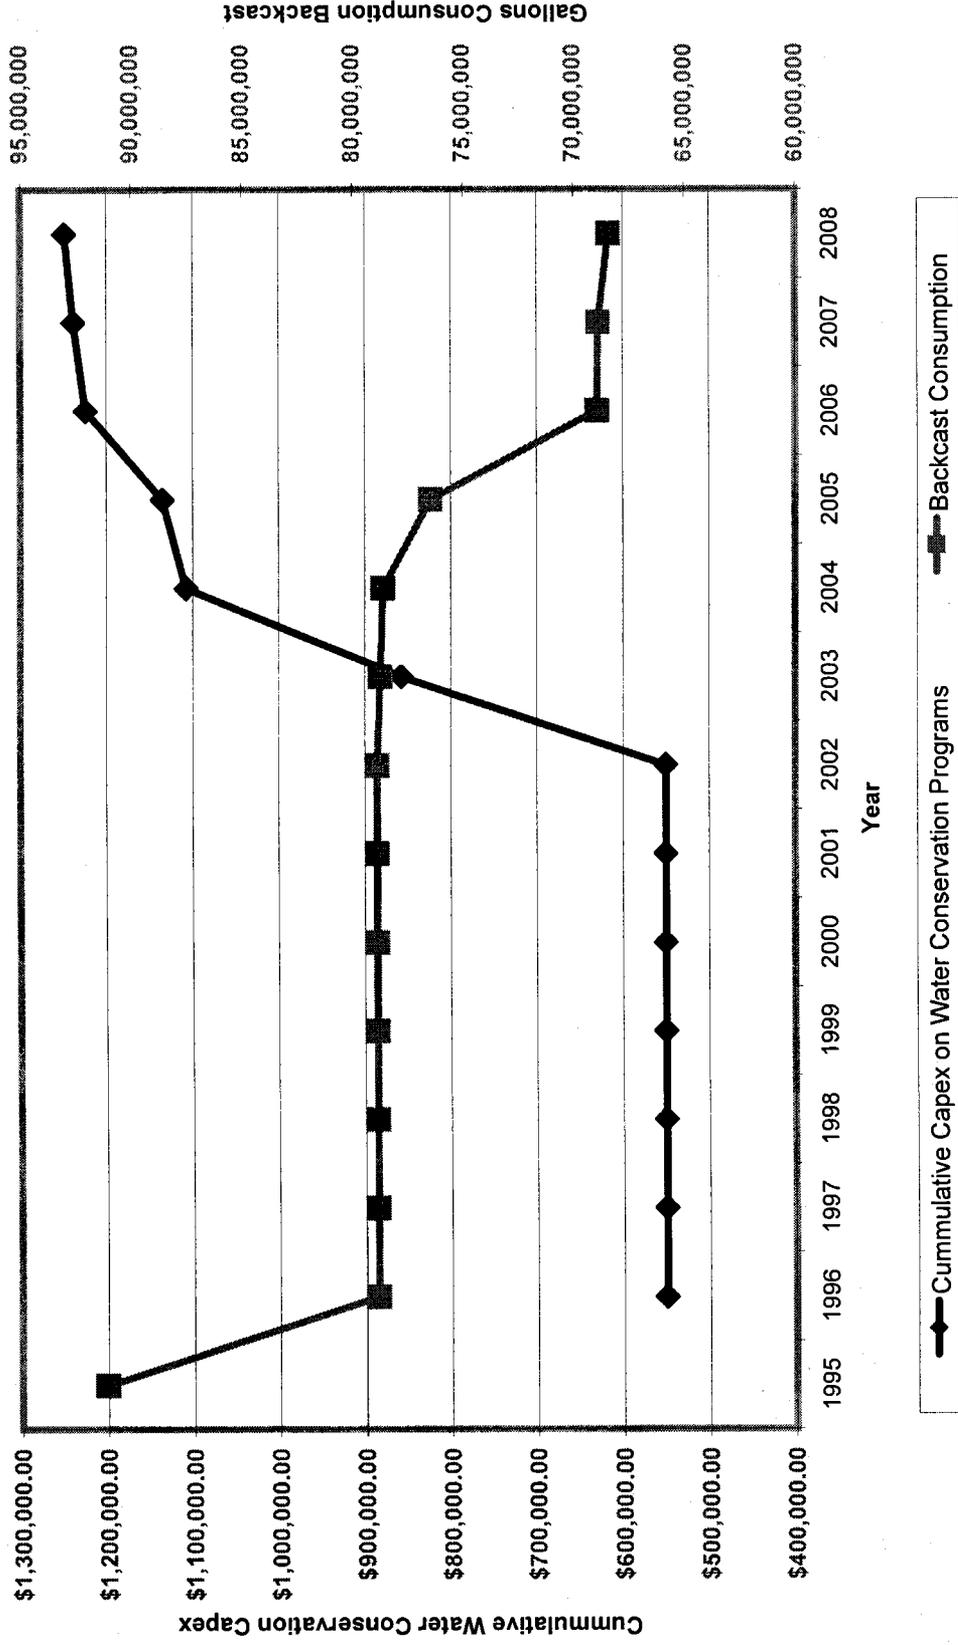

**Camelback Inn Water Conservation Initiatives  
1996 to Present (Continued)**

<b>2005 Aerator Retrofit Program</b>	\$ 906	285,390
Retrofit 453 existing 2.2 gpm guest room faucet aerators with new low-flow 1.5 gpm model.		
<b>2005 "Just Like Home" Program</b>	(minimal)	696,000
Bed linens changed every three days instead of every day unless otherwise ordered by guest.		
<b>2005 Recirculating Pump Program</b>	\$ 7,000	7,950
Install or upgrade recirculating pumps on hot water runs to eliminate water waste.		
<b>2004 Pitch 'n Put Turf Reduction Program</b>	\$ 250,000	130,680
Reduce pitch 'n put turf by 1.5 acres, convert to xeriscape.		
<b>2003 Spa Efficiency Program</b>	\$ 7,500	120,000
Eliminate Thalasootherapy equipment.		
<b>2003 Spa Xeriscape Program</b>	\$ 300,000	15,708
Convert 10,500 square feet of turf into xeriscape around spa complex, outfit with efficient drip irrigation.		

**Camelback Inn Water Conservation Initiatives  
1996 to Present (Continued)**

<b>1996 Toilet Replacement Program</b>	\$	215,175	2,794,147
Replace all existing 453 guest room 4.0 gpf toilets with new model 1.6 gpf Kohler power flush models—first in industry.			
<b>1996 Rain Bird Irrigation Management Program</b>	\$	250,000	9,449,000
Install new Rain Bird irrigation control system and widespread valve controls, along with new bubblers and drip irrigation where possible.			
<b>1996 Turf Reduction Program</b>	\$	85,000	11,968
Reduce 100 series rooms' common turf area by 8,000 square feet			
<b>Totals:</b>	\$	<b>1,248,368</b>	<b>22,751,118</b>

**Water Conservation Capex and Backcast Consumption 1995 to 2008**  
*Increased Capex on Water Conservation Has Resulted in Decreased Expected Consumption by About 23 Million Gallons per Year*

**Water and Energy Talking Points Used By Camelback Inn's  
Sales and Marketing Department**

**Water and Energy Conservation is an important element of the  
Camelback Inn's effort to differentiate itself from its competition.**

## **Energy Conservation Talking points for CBI**

Here at the Inn we are always looking for ways to conserve energy. Some of our energy conservation comes in the form of water savings others are gas and electricity related. We have put the following conservation methods in place here at the Inn to help conserve energy:

1. We have invested \$25,000 in a state of the art irrigation system here at the Inn.
  - This system is equivalent to a golf course irrigation system.
  - This irrigation method includes a valve system that enables the Inn to separate our landscaping into many watering time zones. This gives us the ability to regulate water flow to all of our plant life to prevent over watering in areas that don't require water on a regular basis. An Example of this would be the ability to water older trees on a weekly basis and flowers on a daily basis. Without this system both vegetations would receive the same amount of water.
  - This state of the art system gives us the ability to monitor the system via a lap top computer. If a leak is detected in our system at night, our Landscape manager has the ability to close the valve to that area from home instead of having to wait until the next day to have the leak fixed.
2. We extensively employ xeriscape around our property as to avoid needing water in those areas.
3. We use drip irrigation where ever possible on property.
4. During our remodels here at the Inn we look for ways to convert grassy knolls into desert landscaping whenever possible. This was accomplished in our 2003 remodel and again in our current 2007 remodel.
5. We have installed recirculating pumps for all areas of the Inn. These pumps give our guest the ability to recognize hot water at first opening of the tap without having to waste water down the drain waiting for it to get to their desired temperature.
6. We were the first Resort in our industry to remove our standard 4 gallon flush toilets and installed power flush toilets that only use 1.6 gallons of water per flush.
7. We have installed new shower heads that regulate the water flow while enabling us to afford our guest an adequate high pressure shower.

8. We have installed water saving aerators at each guest sink that allows a good flow with minimum water usage.
9. We ensure through a weigh in process that we put the proper pounds of clothing into our Washers to ensure we are getting the maximum for the water used per cycle.
10. We have a sheet program in our rooms for the guest. If they desire we will not change the sheets in their room until they depart. Thus saving water instead of washing them daily.
11. We do periodic energy walks around property to look for any leaks or dripping faucets that need repair to avoid wasting water.
12. All public space restrooms are equipped with sensor faucets, urinals and toilets for water savings.
13. We have put a water treatment program in place that enables us to cut back on cooling tower water use. We also do not need to blow down our Boilers as frequently thus saving money as well.
14. We have replaced every light in our guest rooms with energy efficient lighting.
15. We have retrofitted a good majority of our four foot fluorescent lighting to T-8 ballast in our Kitchens and other public places.
16. We recycle the following product on property:
  - a. White Paper
  - b. News Paper
  - c. Cardboard
  - d. Batteries
  - e. Ballast
  - f. Old Computers
  - g. Fluorescent Lights
  - h. Compressors
  - i. Copper
  - j. Other metals.

17. When replacing old equipment our goal is to get the most energy efficient models for our property.
18. We have an Energy Committee that meets monthly to discuss ways to save energy in each department.
19. Offices with windows are now turning on fewer lights when working daylight hours whenever possible.
20. We do energy walks of the property to look for potential electrical savings, reminding people to turn off lights in meeting spaces that are not being used.
21. We have an Automative Logic Computer that we program to run all of our meeting space A/C units so they are only running when necessary in each meeting room on property. This system also controls A/C in our Spa and Golf Club and lighting all around the Inn and Golf Course.
22. We consume only 5 to 10 kWh's per day/per room depending on the season we are in.
23. We have installed new A/C Units in our Ballroom space with carbon dioxide sensors built in to optimize indoor air quality.

### **“Just Like Home” Linen Reuse Program**

**The attached program card allows guests to reduce the frequency of  
linen changes to every third day.**

**"JUST LIKE HOME"  
LINEN REUSE PROGRAM**

Your bed linens are fresh when you arrive.

We change bed linens every third day and upon each checkout for conservation purposes. However, we are delighted to meet your needs by changing your linens upon request. Simply place this card on the pillow each day you would like your linens changed.
