Subject: solar on schools  
Attachments: Conservations tips.doc

Corporation Commissioners:

I hope you do everything possible to allow Solar City and any other company to be able to place solar on schools or other government building with a lease arrangement or pay the utility to them. It is obvious like the Goldwater Institute suing over solar percentage. The fossil fuel industry has all the PR ads on TV saying we have to work together but the veracity of truth is they do not clean energy due to their power and status quo.

This is the challenge for our country for our kids having a future do to climate change and kids not paying the price with thier lives due to in the last forty years not making the hard choices. Well, this time please do the right thing. It all has to do with our national security, climate change, pollution and the toxic air in over 600 large cities now. We have no choice but to go green, it is the only alternative left as the mayor of New York City Bloomberg says.

William Zaffer  
Scottsdale, Arizona

Let's Create a Smart Sustainable Planet. Green is the way we grow, build, design, manufacture, work, and live. "because it is just better" from a fad to a strategy to win from an insoluble problem to a great opportunity.
