Dear Arizona Corporation Commission,

I am an Arizona resident. I support energy efficiency. I'd like to see a standard of 20-1 energy efficiency by 2020.

Carrie Katar

Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314

Dear Commissioners,

As we face competing demands on our time and resources, I, like many Arizonans, am looking for ways to save money, while also preserving our finite environmental resources. This is why I am writing you; to voice my support for increasing energy efficiency requirements to at least 20% by 2020.

I want to save money and energy, and I feel that becoming energy efficient is the best way to achieve both goals. Increasing energy efficiency is an immediate, proven and important step consumers and businesses can take to save money, create jobs, stimulate the local economy and protect the environment.

I understand that energy efficiency comes with a price and want to make it clear that I am willing to have my electric rates go up in order to fund energy efficiency programs that ultimately will make my electric bill go down.

Thank you for your continued leadership on this timely and important issue.

Sincerely,

719 N. Warren Ave  
WINSLOW AZ 86047

Docket Numbers E-00000J-08-0314, G-00000C-08-0314 and E-01345A-08-0172

Dear Commissioners.

I am writing in support of increasing energy efficiency programs in Arizona as part of the Commission workshops and the APS rate case. As you know, energy efficiency is the quickest, cheapest and cleanest way for our state to meet its growing energy needs and to jump-start our economy. I support increasing energy efficiency to at least 20% by 2020.

I recognize that energy efficiency programs are an investment that requires some up front funding that can result in slightly higher electricity rates, which I am prepared to pay. I also know that investing in energy efficiency measures such as lighting and weatherization will help to lower overall electric bills. As you discuss Arizona's energy future, please consider programs that will help lower my energy use and electric bills.

Sincerely,

2025 M. Day  
Phoenix, AZ 85006

Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314

Dear Commissioners,

Like many Arizonans, I am concerned about the economy and our environment. As I make small changes in my everyday routine to save money and the planet, I urge you to make a change that will impact both the environment and the economy—choose energy efficiency by setting a standard that increases efficiency to at least 20% by 2020.

By investing in energy efficient technology we are reducing the greenhouse gas emissions that lead to global warming, while cleaning our air. This protects our environment today and for future generations of Arizonans to enjoy our beautiful state. Energy efficiency also creates jobs and drives down overall electricity bills, impacting our local and state economy in a vitally positive manner.

I am willing to see an increase in my electric rates if it means supporting energy efficiency programs that ultimately will make my electric bill go down, giving me more money to put back into the Arizona economy.

Thank you for considering my thoughts as you move forward on this issue.

Sincerely,

  
9680 W. Olive Ave apt 90  
Peoria, AZ 85345

Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314

Dear members of the Arizona Corporation Commission,

I am writing to you in support of increasing energy efficiency requirements to at least 20% by 2020 as part of the APS rate case and as part of the Commission workshops on energy efficiency. By requiring utility companies to increase energy efficiency to 20% by 2020, you are positively impacting our environment, our economy and ensuring our safety.

There are many wonderful (and vitally important) environmental benefits to choosing energy efficiency. Energy efficiency will jump-start our sluggish economy by reducing consumer energy bills. Energy efficiency costs about 2-4 cents less per kWh than traditional energy and is much less expensive than retail rates and other resources. Energy efficiency will also create jobs.

I understand that I may see an increase in utility rates and am willing to pay a bit more if it means lower total energy costs and investments by the utilities in programs to provide rebates and technical assistance to customers who purchase energy efficient lighting, air conditioners, and other equipment, or invest in measures in their home, office or other buildings that result in reductions in energy use. I also support measures to provide technical assistance and financial incentives for businesses and schools that increase their energy efficiency, as well as design assistance and incentives for builders who construct efficient homes and buildings—so that energy effective technology is made available to everyone.

Thank you for considering my comments in this matter.

Sincerely,

Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314

Dear members of the Arizona Corporation Commission,

I am writing you to express my concern about Arizona's energy future. I know that you are currently considering an APS rate case and are holding Commission workshops on energy efficiency. As such, I urge you support programs that create and advance increasing energy efficiency in our state.

Over the last year, rising oil prices have hit our headlines and our pocketbooks, creating a sharp downturn in the state and national economies, proving that there has never been a greater need (or better time) to invest in energy efficiency technology and programs. Requiring that the utilities under your jurisdiction increase energy efficiency to at least 20% by 2020 is one of the most important moves you can make to lead our state in a positive direction both sustainably and economically.

Energy efficiency is less expensive than other resources and can help alleviate the costs associated with purchasing electricity from elsewhere. It also is the quickest, cheapest and cleanest way to meet growing energy needs in our state. Although I may see an increase in my utility rates, the state's investment in energy efficiency will help jump-start our economy by driving down energy bills, thereby cutting the day-to-day expenses of consumers like myself, giving us more money to spend in our state. The move to energy efficiency will not only boost our economy by lowering costs, but creates jobs right here in the state—keeping more Arizonans employed.

Thank you for considering my comments as you deliberate over increasing energy efficiency in Arizona.

Sincerely,

6530 W. Ocotillo Rd  
5129  
Glendale AZ. 85301

**Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314**

Dear Commissioners:

I am writing to you in support of increasing energy efficiency standards to at least 20% by 2020 as part of the APS rate case and as part of the Commission workshops on energy efficiency. As you deliberate the many viewpoints presented to you, I ask you to keep in mind all that energy efficient programs and technologies can do for Arizona today and in the future.

As you know, energy efficiency is the cleanest and cheapest energy source we have. It is superior to burning coal and natural gas because it reduces the greenhouse gas emissions that warm our planet and contaminate our air. It saves money (being 2 to 4 cents cheaper per kWh than current energy resources) and by investing in energy efficient technologies and programs, we will create jobs right here in Arizona, giving a much needed boost to our struggling economy.

I realize that the move toward energy efficiency will require some up front investment on my part as a utility customer, but I am willing to pay slightly higher electricity rates if it will mean an investment in Arizona's energy future and an overall reduction in my electric bill.

As part of the APS rate case and the Commission's workshops, I encourage you to require that the utilities you oversee invest in programs to provide rebates and technical assistance to electric utility customers who purchase energy efficient lighting, air conditioners, and other equipment, or invest in measures in their home, office or other buildings that result in reductions in energy use. I also support these measures being opened to businesses, schools, and low-income housing. I also would like to see programs to help reduce the urban heat island effect we experience in Phoenix. Some ways to mitigate this effect are through the use of shading, cool roofs, and cool pavements.

Thank you for considering my comments as you move forward on this issue.

Sincerely,

*Heather McDonald*

**Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314**

Dear Commissioners:

As you make important decisions on the APS rate case and as part of the Commission workshops, I urge you to support the cleanest and cheapest source of energy we have—energy efficiency—by setting a standard of 20% by 2020. It is my feeling that we should maximize our efficiency potential and require the utilities to offer programs to assist customers to increase energy efficiency in their homes and workplaces, and to provide proper education on those programs.

I support programs that educate energy consumers on how to most efficiently manage their energy use. This includes measures to provide technical assistance and financial incentives for businesses and schools that increase their energy efficiency, as well as design assistance and incentives for builders who construct efficient homes and buildings. I also would like to see programs that provide rebates and technical assistance to electric utility customers who purchase energy efficient lighting, air conditioners, and other equipment, or invest in measures in their home, office or other buildings that result in reductions in energy use.

I am willing to pay a little more in utility rates for energy efficiency, in order to have my overall energy bill go down and to see the funds support programs that assist customers in their move toward energy efficiency, as well as make it available to all (i.e. an efficiency program that would include grants for weatherizing low-income housing – rental and owner-occupied).

As you move forward on this issue, I encourage you to make choices that will lead to a more energy efficient Arizona for all.

Thank you for your time. I look forward to your work on this important issue.

Sincerely,

To: The Arizona Corporation Commission  
Subject: The APS Rate Case before the Arizona Corporation Commission  
Docket Number E-01345A-08-0172

In my move from Flemington, New Jersey, to 2050 W. State Route 89A, #147, Cottonwood, Arizona, 86326-5353, I was shocked to see that there was hardly anything to speak of in the way of solar energy use. There are MORE constructions using solar and other sustainable energy sources in the rather "lacking-in-sunshine" State of New Jersey!!!

Certain utilities are far more expensive here in Arizona than I ever paid for a larger residence and land in NJ. It seems rather strange to me that APS is now seeking more money from their customers, and delivering less in the way of sustainable and affordable energy sources.

So I protest this hike in rates to the APS customers, when the APS company does not seem to be making much of effort to produce affordable energy. It seems to me that the Arizona Corporation Commission could insist that your utility companies move forward in the use of sustainable energy. It is MORE IMPORTANT now than it ever has been, and that means to me that Arizona needs to help the utilities make this necessary changes.

I ask that the Arizona Corporation Commission deny APS their application for another rate hike, which I feel follows rather too close behind a quite recent one. I urge you to require APS and other utilities to increase energy efficiency by at least 20% by 2020 so we can see our electric bills ultimately go down.

Sincerely concerned,

Beverly Smith

Docket Numbers E-00000J-08-0314. G-00000C-08-0314 and E-01345A-08-0172

Dear Commissioners.

I am writing in support of increasing energy efficiency programs in Arizona as part of the Commission workshops and the APS rate case. As you know, energy efficiency is the quickest, cheapest and cleanest way for our state to meet its growing energy needs and to jump-start our economy. I support increasing energy efficiency to at least 20% by 2020.

I recognize that energy efficiency programs are an investment that requires some up front funding that can result in slightly higher electricity rates, which I am prepared to pay. I also know that investing in energy efficiency measures such as lighting and weatherization will help to lower overall electric bills. As you discuss Arizona's energy future, please consider programs that will help lower my energy use and electric bills.

Sincerely,

  
Gina Kent

Dear members of the Arizona Corporation Commission,

I am writing you to express my concern about Arizona's energy future. I know that you are currently considering an APS rate case and are holding Commission workshops on energy efficiency. As such, I urge you support programs that create and advance increasing energy efficiency in our state.

Over the last year, rising oil prices have hit our headlines and our pocketbooks, creating a sharp downturn in the state and national economies, proving that there has never been a greater need (or better time) to invest in energy efficiency technology and programs. Requiring that the utilities under your jurisdiction increase energy efficiency to at least 20% by 2020 is one of the most important moves you can make to lead our state in a positive direction both sustainably and economically.

Energy efficiency is less expensive than other resources and can help alleviate the costs associated with purchasing electricity from elsewhere. It also is the quickest, cheapest and cleanest way to meet growing energy needs in our state. Although I may see an increase in my utility rates, the state's investment in energy efficiency will help jump-start our economy by driving down energy bills, thereby cutting the day-to-day expenses of consumers like myself, giving us more money to spend in our state. The move to energy efficiency will not only boost our economy by lowering costs, but creates jobs right here in the state—keeping more Arizonans employed.

Thank you for considering my comments as you deliberate over increasing energy efficiency in Arizona.

Sincerely,

Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314

Dear members of the Arizona Corporation Commission,

I am writing to you in support of increasing energy efficiency requirements to at least 20% by 2020 as part of the APS rate case and as part of the Commission workshops on energy efficiency. By requiring utility companies to increase energy efficiency to 20% by 2020, you are positively impacting our environment, our economy and ensuring our safety.

There are many wonderful (and vitally important) environmental benefits to choosing energy efficiency. Energy efficiency will jump-start our sluggish economy by reducing consumer energy bills. Energy efficiency costs about 2-4 cents less per kWh than traditional energy and is much less expensive than retail rates and other resources. Energy efficiency will also create jobs.

I understand that I may see an increase in utility rates and am willing to pay a bit more if it means lower total energy costs and investments by the utilities in programs to provide rebates and technical assistance to customers who purchase energy efficient lighting, air conditioners, and other equipment, or invest in measures in their home, office or other buildings that result in reductions in energy use. I also support measures to provide technical assistance and financial incentives for businesses and schools that increase their energy efficiency, as well as design assistance and incentives for builders who construct efficient homes and buildings—so that energy effective technology is made available to everyone.

Thank you for considering my comments in this matter.

Sincerely,

Angela Trivett

Re: Docket Numbers E-01345A-08-0172, E-00000J-08-0314 and G-00000C-08-0314

Dear members of the Arizona Corporation Commission,

I am writing you in regards to the APS rate case and Commission workshops on energy efficiency, to make known my support of energy efficient policies and programs. I encourage you to invest in our swiftly approaching future and choose increasing energy efficiency requirements to at least 20% by 2020.

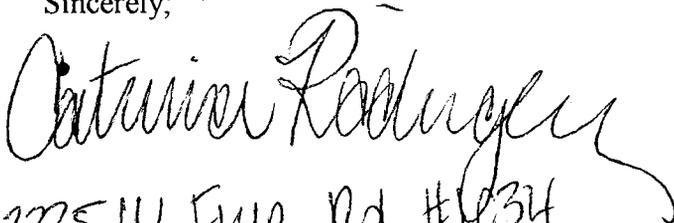

As you know, the reasons to choose energy efficiency are many -- one that is particularly important to myself and other Arizonans is the environment. All too often I see a brown cloud hanging over the Valley as a result of overusing our current energy resources. This poor air quality leads to increased public health problems and a greater financial burden for the state to treat those affected by respiratory and other illnesses. Increasing energy efficiency will help to clean our air, our environment and save money.

As we continue to grow as a city and a state, our demands for energy will only increase which is why now more than ever we need to establish clear and measurable annual goals for increasing the percentage of our energy that comes from renewable resources such as solar and wind power. We also need to make it advantageous to individuals and businesses to purchase energy efficient products, such as CFL bulbs and Energy Star appliances through rebates or tax credits.

Moving toward energy efficiency will also advance us towards energy independence as investing in energy efficient programs and technology is an option to purchasing additional electricity.

As you move forward on this issue, I ask you to thoughtfully consider our rates in the future, our environment, our health and our economy in leading this great state to a more sustainable energy future. Thank you for your work on this important and timely matter.

Sincerely,
