Arizona Electric Power Cooperative, Inc.

Integrated Resource Planning Actual Data Filing

Demand and Supply 2009

Docket # E-00000H-10-0094

Pursuant to Rule R14-2-703 A-B Of the Arizona Administrative Code With Decision Number 60385 Modifications Corporation Commission – Fixed Utilities

Public Filing

March 31, 2010

R14-2-703. Utility reporting requirements

- A. Demand side data. Each utility shall provide the Commission staff the demand data in subsection (A)(1) through (9) below within 90 days of the effective date of these rules and shall provide staff with updated and revised data by April 1 of each year thereafter. If records are not maintained for any item, the utility shall provide its best estimates, such as sample survey data, application factors from one years data to another year, or other methods, and fully describe how such estimates were made.
 - 1. Hourly demand for the previous calendar year disaggregated by:
 - a. Sales to end users
 - b. Sales for resale
 - c. Energy losses
 - d. Other disposition of energy such as energy furnished without charge and energy used by the utility.
 - 3. Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.
- B. Supply-side data. Each utility shall provide the Commission staff the supply data indicated in subsection (B)(1) through (4) within 90 days of the effective date of these rules and shall provide staff with updated and revised data by April 1 of each year thereafter. If records are not maintained for any item, the utility shall provide its best estimates and fully describe how those estimates were made.
 - 1. For each generating unit and purchased power contract for the previous calendar year:
 - a. In-service date
 - b. Book life or contract period
 - c. Capacity in megawatts (utility share)
 - d. Maximum unit or contract capacity by hour, or month, if such capacity varies over the year
 - e. Forced outage rate (generating units only)
 - f. Average heat rate of generating units and, if available, heat rates at selected output levels
 - g. Fuel cost for generating units in dollars per million Btu for each type of fuel,
 - h. Other variable operating and maintenance costs for units in dollars per megawatt hour
 - i. Purchased power energy costs for contract purchases in dollars per megawatt hour
 - j. Fixed operating and maintenance costs of generating units in dollars per megawatt for the year
 - k. Demand charges for purchased power

- 1. Fuel types for generating units
- m. Minimum capacity at which the unit would be run or power must be purchased
- n. Whether, under standard operating procedures, the generating unit must be run if it is available to run
- o. Maintenance schedules for generating units
- p. Other data related to generation units and purchased power contracts which the utility uses in its production, planning and supply models
- 2. For the power supply system for the previous calendar year:
 - a. A description of unit commitment procedures
 - b. Production cost
 - c. Reserve requirements
 - d. Spinning reserves
 - e. Reliability of generation, transmission and distribution systems
 - f. Interchange purchase and sale prices
 - g. Energy losses
- 3. The level of cogeneration and other forms of self-generation in the utility's service area for the previous calendar year.
- 4. As available, a description and map of the utility's transmission system, including the capacity of each segment of the transmission system.

R14-2-703. Additional requirements from ACC Decision 58643

"It is further ordered that each utility shall develop a database of existing renewable energy resources within its service area within six months from the effective date of this Decision; these inventories shall be revised annually and submitted to Staff each year as part of the historical data filings required under the IRP rules."

"It is further ordered that Arizona Public Service Company, Tucson Electric Power Company, Arizona Electric Power Cooperative, and Citizens Utilities Company shall increase their collection of end use load data, obtain commercial and industrial energy sales data by Standard Industrial Classification (SIC) category, collate that information with data on commercial and industrial customers such as number of employees in each SIC category, furnish Staff with a copy of the data to enable Staff to conduct independent analyses, and that Arizona Public Service Company, Tucson Electric Power Company, Arizona Electric Power Cooperative, and Citizens Utilities Company shall include the data described above in their annual IRP data filings."

As per Docket No. U-0000-95-506, Decision No. 60385 the following sections of the IRP rules have been omitted from this Data Filing:

R14-2-703.A.2	hourly demand by customer class and entity
R14-2-703.A.4	number of customers by class
R14-2-703.A.5	heating and cooling degree days
R14-2-703.A.6	residential customer characteristics
R14-2-703.A.7	nonresidential customer characteristics
R14-2-703.A.8	reduction in load due to demand-side-management
R14-2-703.A.9	annual average prices of electricity

R14-2-703 A.) Demand-side Data

1.) Hourly demand for the previous year disaggregated by:

a.) Sales to end users

Arizona Electric Power Cooperative, Inc. (AEPCO) sells at wholesale and to other utilities (distribution cooperatives) and does not sell directly to end users.

R14-2-703 A.) Demand-side Data

1.) Hourly demand for the previous year disaggregated by:

d.) Other disposition of energy such as energy furnished without charge and energy used by the utility.

Month	Station Energy
January	26,890.38
February	24,440.76
March	16,613.94
April	15,312.27
May	20,869.87
June	23,127.18
July	30,279.99
August	27,678.57
September	24,466.57
October	25,317.93
November	17,614.83
December	21,617.47
Annual	274,229.76

2009 Monthly Energy Used for Station Operation - MWh

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Energy disaggregated by customer class is on the following pages. Below is AEPCO's total firm load by month for the previous ten years.

Month	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Jan	467	478	501	382	392	407	415	458	435	413

Total Firm Coincidental Peak Demand – MW

Note – Mohave Electric Cooperative, Inc and Sulphur Springs Valley Electric Cooperative are Partial Requirements Members of AEPCO. As such, AEPCO only serves a portion of their load. Therefore, there may be a requirement that Mohave and/or Sulphur report separately on the portion of their load not served by AEPCO.

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Total Energy Served – MWh

Note – Mohave Electric Cooperative, Inc and Sulphur Springs Valley Electric Cooperative are Partial Requirements Members of AEPCO. As such, AEPCO only serves a portion of their energy needs. Therefore, there may be a requirement that Mohave and/or report separately on the portion of their energy not served by AEPCO.

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Residential Class - Energy Served - MWh

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Irrigation Class - Energy Served - MWh

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Small Commercial Class (< 350 kW) - Energy Served – MWh

Confidential

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Large Commercial Class (> 350 kW) - Energy Served - MWh

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Special Contracts - Other Sales - Energy Served - MWh

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Sales for Resale - Energy Served - MWh

R14-2-703 A.) Demand-side Data

3.) Coincident peak demand (megawatts) and energy demand (megawatt hours) by month for the previous ten years disaggregated by customer class and, for nonresidential customers, if available, disaggregated by type of business.

Highway Lighting Class - Energy Served - MWh

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - a.) In-service date

Unit/Contract	In-Service Date			
Gas Turbine 1	February, 1963			
Steam Turbine 1	November, 1964			
Gas Turbine 2	June, 1972			
Gas Turbine 3	June, 1975			
Gas Turbine 4	October, 2002			
Steam Turbine 2	January, 1979			
Steam Turbine 3	September, 1979			
PNM	June, 1991			
SCL-IP	January, 1969			
Parker-Davis	January, 1969			
SPPR	June, 2007			
Gas Turbine 1	February, 1963			

In-Service Date of Generating Units & Purchased Power Contracts

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - b.) Book Life or Contract Period

Unit/Contract	Retirement Date
Gas Turbine 1	***
Steam Turbine 1	***
Gas Turbine 2	***
Gas Turbine 3	***
Gas Turbine 4	***
Steam Turbine 2	December, 2035
Steam Turbine 3	December, 2035
PNM	December, 2008
SCL-IP	***
Parker-Davis	***
SPPR	September, 2010
Gas Turbine 1	***

Expected Retirement Dates

*** Indicates that no retirement date has been acknowledged or specified as of 12-31-09 and the unit/contract should be considered to be in-service through the long term planning horizon.

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - c.) Capacity in megawatts (utility share)

Unit/Contract	Maximum Capacity
Gas Turbine 1	10
Steam Turbine 1	75
Gas Turbine 2	20
Gas Turbine 3	65
Gas Turbine 4	40
Steam Turbine 2	195
Steam Turbine 3	195
SCL-IP	8.86
Parker-Davis	23.8
SPPR	25

2009 Maximum Capacity - MW

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - d.) Maximum unit or contract capacity by hour, day or month, if such capacity varies over the year.

Month	SLC-IP	Parker-Davis	SPPR
January	2.398	18.284	0.000
February	2.398	18.284	0.000
March	2.398	23.637	0.000
April	11.669	23.637	0.000
May	11.669	23.637	0.000
June	11.669	23.637	0.000
July	11.669	23.637	0.000
August	11.669	23.637	0.000
September	11.669	23.637	0.000
October	2.398	18.284	0.000
November	2.398	18.284	0.000
December	2.398	18.284	0.000

2009 Seasonal Contract Capacity - MW

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - e.) Forced outage rate (generating units only)

Unit	Actual FOR	Planning FOR
Steam Turbine 1	76.85	15.61
Gas Turbine 1	71.11	14.65
Combined Cycle (ST1 & GT1)	96.71	0.11
Gas Turbine 2	4.60	0.05
Gas Turbine 3	50.10	0.00
Gas Turbine 4	1.52	7.81
Steam Turbine 2	9.98	10.39
Steam Turbine 3	76.85	15.61

2009 Actual and Planning Forced Outage Rates - %

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - f.) Average heat rate of generating units, and, if available, heat rates at selected output levels.

Unit	2009 Average Heat Rate
Gas Turbine 1	27,767
Gas Turbine 2	16,833
Gas Turbine 3	17,934
Gas Turbine 4	11,881
Steam Turbine 1	12,258
Steam Turbine 2	10,953
Steam Turbine 3	10,867

2009 Average Heat Rate – Btu/kWh

R14-2-703 B.) Supply-side Data

1.) For each generating unit and purchased power contract for the previous calendar year:

g.) Fuel cost for generating units in dollars per million Btu for each type of fuel

2009 Variable Fuel Data

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - h.) Other variable operating and maintenance costs for generating units in dollars per megawatt hour

Unit	Variable O&M
Combined Cycle (ST1 & ST1)	\$1.25
Gas Turbine 2	\$4.00
Gas Turbine 3	\$4.00
Gas Turbine 4	\$1.25
Steam Turbine 2	\$1.25
Steam Turbine 3	\$1.25

2009 Variable Operating & Maintenance Costs - \$/MWh

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - i.) Purchase power energy costs for contract purchases in dollars per megawatt hour.

2009 Purchased Power Energy Costs - \$/MWh

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - j.) Fixed operating & maintenance costs of generating units in dollars per megawatt for the year.

2009 Fixed Operating & Maintenance Costs - \$/MW-yr

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - k.) Demand charges for purchase power

2009 Purchased Power Demand Costs - \$/kw-month

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - l.) Fuel types for generating units.

Unit	Primary Fuel	Secondary Fuel
Combined Cycle (Gt-1 + St-1)	Gas	Oil
Gas Turbine 2	Gas	Oil
Gas Turbine 3	Gas	Oil
Gas Turbine 4	Gas	Oil
Steam Turbine 2	Coal	Gas
Steam Turbine 3	Coal	Gas

2009 Primary & Secondary Fuel Types for Each Unit

R14-2-703 B.) Supply-side Data

1.) For each generating unit and purchased power contract for the previous calendar year:

m.) Minimum capacity at which the unit would be run or power must be purchased.

Unit	Minimum
Combined Cycle (Gt-1 + St-1)	35.0
Gas Turbine 2	6.0
Gas Turbine 3	15.0
Gas Turbine 4	10.0
Steam Turbine 2	120.0
Steam Turbine 3	120.0
PNM Purchase	0.0
SLC-IP Purchase	0.258
Parker-Davis Purchase	4.675
SPPR Purchase	25.0
Combined Cycle (Gt-1 + St-1)	35.0

2009 Minimum Capacity – MW

*Contract capacity varies by month. Values shown are annual off-peak minimums.

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - n.) Whether, under standard operating procedures, the generating unit must be run, if it is available.

Identification of Must-Run Units

Under standard operating procedures, if they are available to run, Steam Turbine 2 and Steam Turbine 3 must run.

R14-2-703 B.) Supply-side Data

- 1.) For each generating unit and purchased power contract for the previous calendar year:
 - o.) Maintenance schedules for generating units.

2009 Blended Fuel Cost for Apache St-3

R14-2-703 B.) Supply-side Data

2.) For the power supply system for the previous calendar year

a.) A description of unit commitment procedures

2009 Commitment Procedures

In a normal year, Apache Steam units 2 & 3 are about equal in production costs. When both Steam Units 2 & 3 were committed, they were dispatched as equally as possible. The remaining units were measurably different in production costs, with the smaller units being more expensive to operate than the larger ones.

As a preference customer in 2009, AEPCO also had contract entitlements to Parker-Davis hydro and Salt Lake City Area Integrated Projects capacity (Colorado River Storage Project hydro). These hydro contracts were AEPCO's least expensive resources and were scheduled to the extent allowed in each contract against AEPCO's loads. This tends to level the output required from Apache Station and maximize station efficiency. AEPCO also entered into short-term economy and take-or-pay agreements that were used for fuel displacement and maintenance outage coverage. These other contract resources fit into the same operational mode as the aforementioned hydro contracts.

Thus, subject to availability, the units were generally committed in economic order against the net of load minus hydro and short-term, take-or-pay contracts. Departures from strict economic order occurred when short-term forecasts of net loads did not justify startup of the next higher-cost unit or continued commitment of a particular unit. In these cases, a smaller unit (i.e. the 20 MW peaker versus the 69 MW peaker, for instance) was started instead.

2009 Energy Losses

R14-2-703 B.) Supply-side Data

3.) The level of cogeneration and other forms of self-generation in the utility's service area for the previous calendar year.

Chemstar has 2.3 MW of generation in Mohave Electric Cooperative's service area, which is started upon notification from AEPCO that a peak load condition is about to occur. Eurofresh, Inc. has a self-generation unit in Sulphur Springs Valley Electric Cooperative's service area.

The Phelps Dodge Corporation has installed capacity of 135,964 kW at its Morenci location. Of this, approximately 60 MW is considered readily available. This generation is normally only run when the cost of non-firm energy is higher than Phelps Dodge's cost of generation, when non-firm energy is unavailable, or when substation problems limit their import capability.

There may be additional self-generation or cogeneration in the service area of which AEPCO is not aware.

R14-2-703 B.) Supply-side Data

4.) As available, a description and map of the utility's transmission system, including the capacity of each segment of the transmission system.

AEPCO has divested itself of all transmission assets. Southwest Transmission Cooperative, Inc. and other third party contractors serve our transmission needs. Southwest Transmission, as a courtesy, provided the transmission line diagrams.
