Dear Sirs,

ORIGINAL

I am a big proponent of solar energy use and I feel that this part of the country lends itself very nicely to the establishment of solar energy facilities. My only concern with the proposed facility at Red Lake is the huge amounts of our most precious resource, water, that may be consumed to satisfy the needs of a WET COOLED SYSTEM. I have heard that the City of Kingman will offer the use of their effluent but I also know that as of now, Hualapai Solar is not bound by law to use the effluent and the drain on our aquifers could be locally devastating. I urge you to only consider a DRY COOLED or a PHOTOVOLTAIC SYSTEM. Allowing a company to come to our area and deplete our water supply would be highly irresponsible.

Respectfully,
Michael Bihuniak
