DOCKETED BY *[Signature]*

IN THE MATTER OF THE COMPETITION ) DOCKET NO. RE-00000C-94-0165  
IN THE PROVISIONS OF ELECTRIC )  
SERVICES THROUGHOUT THE STATE ) **CITIZENS UTILITIES**  
OF ARIZONA. ) **COMPANY'S EXCEPTIONS**

Citizens Utilities Company ("Citizens") submits its Exceptions to the May 16, 1998, Proposed Order in the above-captioned proceeding ("Proposed Order"). Citizens is aware that the Commission Staff has also been circulating what appears to be the framework for proposed amended restructuring rules and, despite the extremely short notice, has provided preliminary comments on the Staff's framework. Citizens' Exceptions are directed solely to the Proposed Order and should not be construed to in anyway waive any opportunities for Citizens to comment on the Staff's future rulemaking procedure.

Citizens would first like to thank Hearing Officer Rudibaugh for his leadership, stamina and pleasant sense of humor, without which the hearings would have been even longer and more contentious. Further, Mr. Rudibaugh has sifted through an enormous evidentiary record, weighed the evidence against extraordinary public-policy considerations and fashioned a reasoned, well-balanced Proposed Order. However, the final order will require clarification in a few key areas that may otherwise be inconsistent with the six "primary objectives" that Mr. Rudibaugh intended to take into consideration when fashioning his order.

1 Mr. Rudibaugh identified six primary objectives:

- 2 A. Provide the Affected Utilities a reasonable opportunity to collect  
3 100 percent of their unmitigated stranded costs.  
4  
5 B. Provide incentives for the Affected Utilities to maximize their  
6 mitigation effort.  
7  
8 C. Accelerate the collection of stranded cost into as short a transition  
9 period as possible consistent with the other objectives.  
10  
11 D. Minimize the stranded cost impact on customers remaining on the  
12 standard offer.  
13  
14 E. Don't confuse customers as to the bottom line; and  
15  
16 F. Have full generation competition as soon as possible.  
17

18 Citizens agrees with each objective. But, as it stands, certain portions of the  
19 Proposed Order would make Goal A ("a reasonable opportunity to collect 100  
20 percent of their stranded costs") unobtainable. Citizens believes that this  
21 result would be inadvertent; nevertheless, the very real consequences would  
22 be significant write-offs and likely, protracted litigation that would only delay  
23 competition – thereby thwarting Goal F.  
24

25 **Citizens Exception No. 1. The Divestiture Option Would Guarantee**  
26 **Less-Than-Full Stranded Cost Recovery.**  
27

28 As Citizens has made clear in its testimony and pleadings, Citizens favors  
29 the Divestiture/Auction Methodology,<sup>1</sup> and is pleased that the Proposed Order  
30 also favors this approach. If a utility selected this option, its stranded cost for  
31 its generation portfolio would be the "difference between net market value and  
32 book value." This stranded cost would be recovered from all connected  
33 customers over ten years, but without "any carrying charges on the

---

1 Proposed Order, p. 12.

1 unamortized balance.” Unfortunately, because of the time value of money, this  
2 would guarantee that the utility would not be able to recover all of its stranded  
3 cost.

4 The time-value of money is a simple concept. It boils down to the notion  
5 that a dollar next year (or ten years from now) is worth less than a dollar  
6 today. Many of us purchased Powerball tickets last week when the jackpot  
7 reached an all-time high of \$195 Million. Under the Powerball rules, each  
8 purchaser had to select between a 25-year annuity with total payments equal  
9 to \$195 Million,<sup>2</sup> and a lump-sum “equivalent.” The Illinois couple that won  
10 the Powerball jackpot had selected the lump-sum option, so their award  
11 (before taxes) was \$104.3 Million. This illustrates the time-value concept: a  
12 25-year annuity is worth considerably less than cash today.

13 Under the Proposed Order, as written, an Affected Utility would receive  
14 whatever is determined by the auction and divestiture to be its stranded cost in  
15 ten payments over ten years, without any interest or earnings on the unpaid  
16 balance. To keep utilities whole when ordering amortizations of prudent  
17 expenses or investments, Commissions have traditionally allowed unamortized  
18 balances to earn interest at the utility’s authorized return. If we assume that  
19 to be 10%, denying any return over a ten-year recovery amortization period  
20 would be equivalent to recovering only 63% of the determined stranded costs.

21 Put another way, the divestiture approach would guarantee that 37% of  
22 stranded costs would be borne by shareholders, despite the assurance of a  
23 reasonable opportunity for their recovery. This is contradictory and, as will be  
24 shown below, would lead to immediate write-offs.

25 There is another issue with the Proposed Order’s auction-and-divestiture  
26 approach. It states that:

---

2 25 payments of \$7.7 Million.

1 "All customers connected to the Affected Utilities grid shall pay their  
2 appropriated share either through a CTC charge or through the  
3 standard offer rate.<sup>3</sup>"  
4

5 Yet, later the Proposed Order states:

6 "We have placed a limitation that customers on the standard offer will  
7 not receive an increase as a result of stranded costs.<sup>4</sup>"  
8

9 This is inconsistent and could prevent full recovery of stranded costs.

10 The problem is that a utility that divests would still have the obligation to  
11 provide power to customers that do not elect competitive suppliers. This would  
12 be done through unbundled, standard-offer tariffs. To continue to meet its  
13 public-service obligations, the utility would presumably have to purchase new  
14 resources for these customers that would be recovered through an unbundled,  
15 power-supply charge. On top of this would have to be the stranded-cost-  
16 recovery charge. As a result, it is very likely that customers would actually pay  
17 more during this period.

18 There is a related problem. It is unclear what is meant by an "increase."  
19 From what base would the increase be measured? Would it be the customers'  
20 rate on January 1, 1999, the date that the assets were divested, or some other  
21 date? Or is this intended to be a moving target, where new rates, which would  
22 include the new power supply costs and stranded-cost-recovery charge, could  
23 be no higher than what the rates would be if the asset had never been  
24 divested?  
25

26 **Citizens Exception No. 2. The Proposed Order Would Require**  
27 **Immediate Write-offs.**  
28

29 The Proposed Order correctly recognizes that "the financial community is  
30 looking for assurances that the Affected Utilities will be provided a return on

---

3 Proposed Order, p. 12.

4 Proposed Order, p. 18.

1 and of their investments". 5 The Proposed Order accurately identifies the  
2 criteria that must be met for an entity to continue to be able to recognize  
3 regulatory assets in its financial statements. However, the potential effects  
4 and requirements of Statements of Financial Accounting Standards Nos. 71,  
5 101 and 121 have not been properly interpreted or considered in their entirety.

6 These key pronouncements apply to **all** the elements of utilities' financial  
7 statements, not just the regulatory assets. For example, significant amounts  
8 of the equity component of the Allowance for Funds During Construction reside  
9 in the balances-of-utility-plant assets. Such amounts are the result of the rate-  
10 making process, and are allowed to be reported as assets only because of the  
11 assurances of future recovery in rates that have existed under traditional cost-  
12 based regulation.<sup>6</sup> Despite the clear language of Objective A (that the Affected  
13 Utilities be given a "reasonable opportunity to collect 100 percent of their  
14 unmitigated stranded costs"), Citizens has significant concerns that, in its  
15 present form, the Proposed Order is either ambiguous or contains provisions  
16 that will likely result in unintended write-offs. Clearly, if stranded cost recovery  
17 results in write-offs, the Affected Utility will not be able to recover 100 percent  
18 of its stranded costs.

19 As clearly presented in the testimony of witnesses Kissinger (TEP),  
20 McKnight (APS) and Dabelstein, the continuing applicability of SFAS No. 71  
21 requires that:

- 22 (i) rates be designed to recover the respective entity's costs of  
23 providing service; and
- 24 (ii) it is reasonable to assume such rates can be charged to and  
25 collected from customers.

26 Recent interpretations of SFAS No. 71 have clarified the requirement that cash  
27 flows to satisfy regulatory assets must come from regulated revenues, rather

---

5 Proposed Order, p. 17.

6 Similar amounts do not appear on the books of non-regulated businesses.

1 than competitive revenues. This is true even if it is probable that such  
2 competitive revenues will be earned by the respective utility. To the extent,  
3 rates are not cost-based or that sufficient assurance of future recovery of  
4 regulated revenues does not exist, SFAS No. 101 requires the immediate write-  
5 off of all regulatory assets. Further, the utility must then perform an analysis  
6 for asset impairment as required by SFAS No. 121, and reduce the carrying  
7 cost of any affected assets to their fair market value.

8 While Citizens' investment in Arizona generating assets is negligible,  
9 nevertheless it could incur write-offs associated with its regulatory assets and  
10 purchased-power agreements. The Proposed Order should be modified to  
11 remove any ambiguities and to provide the requisite assurance for future cost  
12 recovery to obviate the need for undeserved write-offs.

13 Citizens applauds the inclusion of options for recovering stranded costs in  
14 the proposed order. However, there are deficiencies or ambiguities in each of  
15 the three alternatives that could lead to mandatory write-offs for the Affected  
16 Utilities.

17 A key assumption of Option No. 1 is that expected growth of the Affected  
18 Utilities will permit an annual 20% reduction in the amount recoverable under  
19 the CTC. Such an assumption is unfounded. Citizens has not experienced such  
20 growth in its service territory, nor do we believe that any Affected Utility in the  
21 State of Arizona has experienced customer expansion of that magnitude or  
22 projects such growth. The inclusion of such a growth offset in the  
23 determination of recoverable stranded costs adds an element of uncertainty to  
24 the likelihood of future cost recovery that will undoubtedly expose the Affected  
25 Utilities to mandatory write-offs of regulatory assets and any other assets that  
26 are impaired.

27 With respect to Option No. 2, Citizens has two primary concerns.<sup>7</sup> As  
28 written, the Option may force the Affected Utilities selecting this approach to

---

7 This option is still Citizens' preferred alternative, despite these accounting concerns.

1 make unintended write-offs in two ways. First, the provision in Option No. 2  
2 that carrying charges will not be allowed on the unamortized stranded cost  
3 balance will likely require write-offs, equal to the difference between the  
4 current and net present value of the amount deferred. This writeoff would  
5 never be compensated with increased income, because the time-value of the  
6 lost earnings would never be compensated. Second, under generally accepted  
7 accounting, assets held for sale are to be reported at the lower of their  
8 respective net book value or fair market value. The mere act of determining  
9 that a sale is appropriate could trigger a writeoff. In theory, this would be  
10 compensated by increased income in future years as stranded costs are  
11 recovered, but an initial writeoff is possible.

12 With respect to Option No. 3 for stranded cost recovery, the  
13 requirements for continuing application of SFAS No. 71 would clearly not be  
14 met. Even if we look beyond the absence of any indication of just what  
15 "minimum financial ratios" would be used, this alternative would result in rates  
16 not being based on the utilities' specific costs of providing service. Therefore,  
17 an Affected Utility electing Option No. 3 would have to abandon SFAS No.71 for  
18 financial accounting and reporting.

19 Citizens' final accounting-related concern is about price caps or rate  
20 freezes. The Proposed Order states that any costs which would result in an  
21 increase to the standard offer must be deferred and included in future requests  
22 for rate relief.<sup>8</sup> Once again, this does not comport with the requirements of  
23 SFAS No. 71. Under such circumstances, rates during the interim rate  
24 freeze/price cap period would not be based on the costs of providing service.  
25 Thus, there would be less than the requisite assurance that any amounts  
26 deferred would, in fact, ever be recoverable in regulated rates.

---

8 Proposed Order, p. 18.

1 **Citizens Exception No. 3. The Divestiture/Auction Option Requires**  
2 **Additional Clarification.**  
3

4 The Divestiture/Auction Option cannot be rushed. The auction must be  
5 conducted over sufficient time to prevent Arizona's generation asset from  
6 flooding the market (thereby creating a buyer's market) and to allow utilities to  
7 schedule the auction around temporary poor market conditions. Citizens  
8 suggests that each utility be given two years to conduct the auction from the  
9 date the Commission approves the auction procedure.

10 Stranded costs must also include the costs associated with conducting  
11 the auction, such as fix-up costs, commissions, attorneys, accountants and  
12 appraisors' fees, and similar costs.  
13

14 **Citizens Exception No. 4. All Consumers Should Bear Responsibility**  
15 **For Stranded Costs.**  
16

17 **All** consumers should bear some responsibility for the costs stranded  
18 when customers take competitive power. It is recognized that some of the  
19 costs that are potentially strandable are covered by the rates charged to  
20 Standard Offer customers. Nevertheless, for competition to be successful,  
21 competition must be at the margin, and those taking competitive power must  
22 see the results of their decisions in the total price they pay for electricity. If  
23 the ten-year stranded-cost-recovery period under Option No. 2 is less than the  
24 revenue periods implicit in the successful parties' bids for the divested assets,  
25 the CTC paid by customers taking competitive power could be greater than the  
26 power cost savings they realize, thereby creating an economic **disincentive** to  
27 switch suppliers. As was recognized by the F.C.C. in the deregulation of the  
28 long distance segment of telephone industry, the F.E.R.C. in deregulating gas  
29 pipelines, and several other states such as California that are restructuring the  
30 electric industry, there is a societal value to be gained by this undertaking -- all  
31 consumers should bear some portion of the transition costs. Citizens does not  
32 oppose, however, some distinction being made in the CTC charged to Standard

1 Offer Customers and those taking competitive power supplier, to recognize that  
2 the rates charged to the former do reflect the embedded costs of some  
3 potentially strandable assets.

4  
5 **Citizens Exception No. 5. 30 Days Is Not Enough Time To Prepare A**  
6 **Stranded Cost Filing.**  
7

8 The Proposed Order would require each Affected Utility to make a  
9 stranded-cost filing within 30 days of the date of the Order.<sup>9</sup> This is simply not  
10 enough time. Preparing the estimates is a massive undertaking. It is true that  
11 some of the preliminary work can commence before the date of the final Order,  
12 but the Order will set the actual rules for calculating stranded costs. Once the  
13 rules are final, each utility will then have to evaluate its total "generation"  
14 portfolio in light of its best forecasts of future delivered power costs to  
15 calculate its stranded-cost estimate. Then, following public, evidentiary  
16 hearings, the Commission will have to determine each utility's stranded costs  
17 and recovery mechanism.

18 It makes no sense to hurry the utilities to preparing patched-together,  
19 rushed filings. This can only prolong the evidentiary hearings and ultimately  
20 delay the onset of competition. A more reasonable time, given the magnitude  
21 of the effort and the importance of the result, would be 90 days.

22  
23  
24  
25

27 . . .  
28 . . .

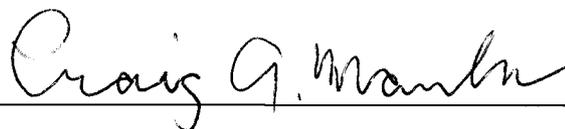

---

9 *Id.* at 13.

1 **CONCLUSION**

2 Citizens continues to support the rapid transition to a competitive  
3 environment. The Proposed Order goes far toward that goal. Again, Mr.  
4 Rudibaugh has got all the big issues right. With the incorporation of the few  
5 modest clarifications that Citizens offers in these Exceptions, the final Order  
6 will allow Arizona to cross the threshold from talking about competition to  
7 actually implementing competition.

8 RESPECTFULLY SUBMITTED this 29<sup>th</sup> day of May, 1998.
