Dear Arizona State Corporation Commission

Attention: Mr. Bob Stump - Commissioner

RE: Perrin Ranch Industrial Wind Turbine Project

While understanding the need for renewable energy, and certainly of the opinion that we should continue on the road toward efficient renewable energy, I also feel that renewable energy should be approached in a logical, professional, while researched in a scientific manner so that our efforts and resources are concentrated in the most advantageous of ways.

Particularly in this economy, we cannot afford not to be concerned with the efficient management and use of our resources, use of our resources should be presented factually and in a clear and concise manner.

When we're proud of something we hold NO FEAR and present it to the public for their scrutiny.

With that said, I have to ask you "THE ARIZONA CORPORATION COMMISSION" if you have had time to determine that the Perrin Ranch Industrial Wind Turbine Project truly is an efficient use of the APS Rate Payers and Arizona Tax Payers resources?

Will you Please answer these few questions before we launch into a 200 Million dollar project.

How much energy will the Perrin ranch, 99Megawatt project actually produce?

Can this be answered with a scientific foundation?

As APS rate payers and Arizona tax payers do we not have a right to factual scientific information regarding how our monies are spent?

If APS, NextEra, and possibly the Arizona Corporation Commission are convinced that the Perrin Ranch Wind Project is a logical, efficient use of resources, and a scientifically based project they should be proud to supply information surrounding the Perrin Ranch Project to the public.

I have to ask Why is information regarding the actual output of these 62-405Ft. Industrial Wind Turbines so hard to obtain? Is there a lack of pride in the production of these turbine's?

Sir's WHERE IS THE BEEF!

Sincerely
James R. Lara
