Subject: Arizona Public Service Renewable Energy Implementation Plan E-01345A-11-0264

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy – creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Mr. Gary Henderson

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

Please do everything you can to encourage solar projects.

Arizona, of all states, should be leading the nation in this renewable energy movement. If each of us has to pay a small amount each month to preserve the livability of this fragile earth, it will be money well spent.

Thank you for considering my comments and including them in the docket.

Sincerely,
Mrs. Mary Wellington

This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy – creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Ms. Kathleen Sankey

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Subject: Arizona Public Service Renewable Energy Implementation Plan E-01345A-11-0264

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I am recently retired and a new resident of Arizona. One of my first projects as an attempt to express my appreciation for the wonderful natural resources in the state and excellent infrastructure we find here is to add solar to our home as quickly as financially possible. We arrived as some "rebate" programs were ending and budgetarily we need to save up in order to move forward. In the mean time we have noticed lots of pressure on the industry. We hope viable, affordable, sustainable solar programs are available when we move ahead with our plans.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state and our nation transition to a clean solar future, using non-polluting resources (sunlight) that Arizona has an abundance of with minimal impact on the incredible natural resources/environment here compared to all other forms of energy production.

I'm proud to be a citizen of Arizona, and to support this plan.

Thank you for considering my comments and including them in the docket.

Sincerely,
Mr. Harry Lumley

Subject: Arizona Public Service Renewable Energy Implementation Plan E-01345A-11-0264

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

In addition to the following, I would like to put in a personal statement about the fact that this project is a small price to pay to move our state from no. 3 in solar to no. 1. I personally have 24 panels and have expansion plans for another 30 with a plug in car charger. Additionally, I recently attended the dedication of the solar facility RIOGLASS in Surprise, AZ and learned the good news that APS has commissioned 300,000 panels to place as a global dome on 2000 acres it owns to supplement its energy sources with solar power. Thanks for this effort and More needs to be done! The Earth can no longer wait!

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

I've been an AZ resident for 5 years and I have always wondered why AZ is not doing more with solar power. Having grown up in upstate New York and then lived in western Montana for about 16 years, I have a deep appreciation for the abundant sunshine in this area. To me, every region should play to its strengths and the sunshine in this region is certain the southwest's defining strength.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

As Pastor at the Tempe Community Christian Church and Executive Director for Arizona Interfaith Power & Light (a religious response to climate change) we are encouraging members of our mosques, synagogues and churches to invest in solar energy. Renewable energy is not just an economic and an environmental issue, it is a moral issue. The future of our planet and the wellbeing of future generations is at stake.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

I am writing to you as one who already has installed solar hot water and am saving for solar electric. I feel that with our gift of sun in Tucson, and with the threats of climate change resulting from coal plants, that EVERYONE here has a moral obligation to use the solar gift and to drop coal-burning ASAP.

Furthermore, given the hazards of nuclear, and given the unmentioned huge carbon footprint of extracting, milling, transporting, and delivering nuclear energy, AND given the extreme WATER use for nuclear production in the desert, I favor NO MORE NUCLEAR.

In addition, I am apprehensive about the terrorist potential with centralized energy production. I feel that every structure, every home and building, should be equipped to supply at least a portion of its own energy needs, thereby scattering potential targets or outage problem areas.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Ms. Martha Burgess

Subject: Arizona Public Service Renewable Energy Implementation Plan E-01345A-11-0264

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

I have installed a grid-tied solar system on my roof and am a strong believer in this nearly free energy source. If we located an inexhaustible oil, natural gas or coal field which posed no environmental impact and a positive economic impact is there any debate that we should utilize it? Well the Sun is the equivalent in the Southwest, actually substantially better. The situation of roof-top and parking lot power plants utilizes unused space for immense benefit and diminishes the need for large scale, desert covering solar plants. Roof top installations also tie the end user directly with energy production. A benefit in many ways.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future. The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market.

We want renewable, non-polluting, solar and other green energy. We will vote for people who support that. The Green party is becoming my party of choice. Any other than the two who are doing not much to help this cause or other important causes to help people and the environment.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Dr. Shirley/George Karas

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

I was always surprised when I moved to AZ 15 years ago that I did not see the use of solar energy more frequently. I mean don't we have more sunshine than any other state? Since then, I have seen little improvement and upon looking into solar energy for my house at the time, I was shocked at the price tag!!I However, I would definitely be willing to spend \$6.00 a month to help our state transition from polluting coal plants to a clean solar future.

I understand you are currently considering the Renewable Energy Implementation Plans for three major Arizona electric utilities Arizona Public Service (APS), Tucson Electric Power (TEP), and UNS Electric. It is very important to me that we support energy plans that look to solar as our future.

I urge you to put in place a strong framework that maintain support for residential and commercial solar programs.

Thank you.

Thank you for considering my comments and including them in the docket.

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market.

My family strongly supports clean renewable energy such as solar. In fact because of rebates we were able to afford a basic eight panel starter solar installation. Please ensure continued support for this important investment in Arizona's energy future. We are able to be a world-class solar industry in our country. Solar energy manufacturing and installations are critical to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Ms. Dorist Turner

Subject: Arizona Public Service Renewable Energy Implementation Plan E-01345A-11-0264

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all. I have them on my roof and want to see everyone have them. It is so important to use energy that is not nuclear.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Ms. Patricia Orlinski

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

When I moved to Arizona, I was shocked to find that builders were not installing solar on the new houses. I was given lame excuses as to why, usually something to do with state or local regulations. It makes sense for our state to utilize as much of our wonderful, consistent sunshine as possible.

Individuals will not come forward, as the current initial upfront cost is prohibitive. We need clean, affordable solar energy.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Mrs. Anita Scheelings

Subject: Arizona Public Service Renewable Energy Implementation Plan E-01345A-11-0264

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

Energy is tied up with the health of all our lungs. Breathable air is essential. I developed respiratory issues as an adult. It can happen to anyone who breathes and Arizona is no longer a great place for clean air.

Honor your lungs and mine and everyone else's and make tracks on clean energy.

The cost of medicine alone is tremendous and the cost of sick days and lowered quality of life is also huge. This is lousy for residents and removes one of the reasons people used to visit our state.

I've put something into this, personally. There are now solar panels on my roof through APS and am very happy with them.

Let's get a lot more buildings on board and put Arizona in the news as in tune with times and taking care of pollution problems. It's a lot cheaper and a lot more responsible than letting our lungs take the hit.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

The APS 2012 Renewable Energy plan sets the stage for the coming years and will help determine how many solar rooftops we will see on our homes and businesses, how many jobs will be supported by solar industry, and whether or not there will be stability in this important market. This plan should allow us to diversify our energy mix and take advantage of the benefits that solar energy provides to the grid, energy security, and price stability.

I strongly support clean renewable energy such as solar, and I am willing to pay for it, too. Please ensure continued support for this important investment in Arizona's energy future and foster the development of a world-class solar industry in our state. Solar energy installations and manufacturing are critical components to a recovering economy and help attract investment and innovation. This brings new products to the market and lowers the cost of solar energy - creating jobs and making solar more affordable for us all.

Without strong plans that maintain support for residential and commercial solar programs, this market could shrink. That would be devastating for a significant number of solar businesses and would represent a giant step backwards for Arizona.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Thank you for considering my comments and including them in the docket.

Sincerely,
Mr. Roointon Pavri

The first thing that should be done in Arizona is to eliminate the once-in-a-lifetime alternative energy state tax deduction. That is simply a very stupid law.

Six bucks a month is a small price to pay to help our state transition from polluting coal plants to a clean solar future.

Dear Commissioner Pierce and Commissioners,

I support strong and consistent investment in solar energy in Arizona, and I am concerned about the potential for undermining this important market in the APS 2012 Renewable Energy Implementation Plan.

Please support the APS 2012 Renewable Energy plan.

I strongly support clean renewable energy such as solar. I am currently paying for renewable energy through the optional APS surcharge and I am willing to pay for it into the future. Please ensure continued support for solar and wind power in Arizona. The solar industry is critical to our future economy.

\$6 per month is a small price to pay to help our state transition to clean energy.

Bill Weatherly
