Mr. Bob Stump  
1200 W. Washington  
Phoenix, AZ 85007

Dear Mr. Stump,

The future of solar energy in Arizona is important to me, our environment and our economy. Renewable Energy Implementation plans for APS and TEP will affect the continued viability of rooftop solar on businesses and homes across Arizona.

I strongly feel that the Corporation Commission should work to advance incentives for solar in Arizona and not take steps backwards. I, like many ratepayers, am willing to invest more in my utility bill to ensure we are transitioning to clean energy and creating more jobs for our state.

Six dollars a month is a small and worthy investment for a clean energy future in Arizona.

Thank you, and please consider my comments in reference to dockets E-01345A-11-0264 and E-01933A-11-0269.

Sincerely,

Roger Jutting

**Subject:** changes in the renewable energy tariffs

Dear Bob,

You do AZ a great disservice by lowering the support for renewable energy. Your decision ignores the threat of global warming and shows no concern for supporting renewable energy jobs in this state. I have supported renewable energy with solar panels on my house as well as "on demand" water heaters. I did it not to save money but for that forgotten reason, the common good. You must have gone to a different Harvard than I did. I can't speak for Stanford, but your education seems to have a big hole in it.

Best wishes, John Mueller '60

This is an open letter to the ACC, so if this has been directed to the wrong department, please forward on to all who may be involved.

I read the article in the Daily Star this AM by Rep. Ron Barber about the ACC's plans to make changes in the state's renewable energy program. This is disturbing on many levels. We have the incredible opportunity to be an industry leader in the field of solar and wind energy. We will always have a growing need for energy as more and more people find the sun belt the place to relocate. (myself included!) What better way to promote our faith in the future than by supporting renewable energy?! I was quite proud of the vigorous requirement of 15% of our power coming from renewable resources by 2025. This should not include the solar panels installed at a home owners expense, private industry or any federally funded projects on military bases.

My analogy is to compare this to buying a toddler clothing that fits today and expecting them to fit a year later. Or 10 years later. A visionary looks to the future and makes decisions based on trends. We know our trend in Arizona is for continued growth. Why not put our faith and money behind that trend by producing renewable, clean energy.

Thanks for listening,

Sara Hein

**Subject:** Renewable Energy

If you destroy the incentives for renewable energy in this state, it means only one thing. You've been paid off by big oil and gas. Why else would anyone who cared about the future of this state and this country do what you're doing. You should be giving incentives for me and everyone else to put solar panels on their roof tops. Quite pandering to the mega glob corporations, who's only interest is \$\$\$\$\$\$\$\$\$\$ and start caring about getting our country free of polluting oil, coal and gas.

Dear Commission Members

Your actions to take away solar electric generation incentives in Arizona show exceptionally poor judgement and extraordinary short sightedness.

Arizona needs to become a dominant leader in solar electric provider. We have an extraordinary amount of sunshine and must use it to develop economically. Your actions have reduced development and increased unemployment at a time when we need it most.

Why do you act so stupidly?

Why do you act against the interests of Arizona citizens?

Are you in the pockets of lobbyists?

Please rescind your actions and reinstate solar electric generation incentive programs.

Sincerely

Anthony Nitko

**Subject:** Fw: Solar Energy

This is a complaint. This body had taken giant steps backwards by eliminating financial incentives for businesses and residents to install solar power energy systems to their buildings and home. The Arizona Corporation Commission also voted to reduce the percentage of alternative energy our state power generators must produce by 2025. Such acts are not beneficial to the general welfare and benefit to the State. This is terrible behavior on the part of an elected body that is supposed to act in a manner to improve Arizona. This vote should be rescinded. As a voting citizen of Arizona, I shall be watching your activities and complaining when I think it is appropriate. In the meanwhile it is my hope that you gain enlightenment about the world around us and develop an understanding of how injurious our current coal-produced energy is harmful.

Respectfully,  
Joan M Kurath  
Tucson Arizona

Honorable Commissioners,

Arizona's greatest natural resources are our days of sun and our latitude on the Earth.

As stewards of our future energy sources, please look forward and not backward.

Continuing to use fossil fuel fouls our atmosphere and promotes Global Climate Disruption.

The science is clear; for our survival we must turn to renewable energy.

Arizona is in a position to LEAD. Back tracking will lead us BACKWARD.

I AGREE with Ron Barber's AZ Daily Star Editorial, 3/5/2013.

Sincerely,

Patsy Stewart

**Chairman Stump**

Arizona is a sunshine state!

I was shocked to read the changes the AZCC has made in regards to solar energy.

Owners who buy their own solar should get all the credit, utilities should not be able to bank it.

Fossil fuels, highways and lots of other things get subsidies. until all those subsidies are ended, renewable energy should get subsidies until, and it will, run fossil fuels out of business. Should citizens without children not have to pay for schools?

A goal of 35% or more percent solar for Arizona by 2025 is do-able and it enhances the economy with jobs and progress in technology.

Please dont cater to politics.

**Subject:** Please represent Arizona's solar potential!

Arizona Corporation Commission Chairpersons,

I am very disappointed to read in the AZ Daily Star this morning news that you are making changes to Arizona's renewable energy programs that move us backward instead of forward. (Ron Barber's editorial, p. A11)

In our state where the sun shines almost every day, it is so hard for me to understand why you would choose to make it harder, instead of easier, to increase use of solar energy.

Please make decisions that are motivators for companies to provide jobs in solar energy, and for households like ours to invest in solar energy. We must not continue reliance on fossil fuels that contribute to climate change. Our children and grandchildren are counting on us to clean up, not to continue to pollute our air in "same old, same old" ways of working.

Please make Arizona a showcase state for solar energy, instead of a regressive state for solar energy!

Members of the AZ Corporation Commission,

I wanted to comment on the information provided to the AZ Daily Star by US Representative Ron Barber on March 5, 2013. I fully support his perspective on renewable energy and I would expect the state of AZ to match or exceed the standards set by California and Colorado. As members of the Corporation Commission, you have the opportunity to establish forward moving goals for AZ for energy efficiency, strong financial incentives for installation of solar panels and support of renewable energy overall. Once your terms are completed, you can reflect back on the progress made by our state and feel fortunate that you had the opportunity to play a part in such progress. Anything less and your reputation with the voting public will be tarnished.

Your decisions in regards to solar power in our sunny state are sad and short sighted. I'm 60 years old and raised three kids, working class all my life, if I had to borrow off of a credit card for the good of my family ,I would. A balanced budget has only so much worth on paper , the realities of day to day life and taking care of our "families" should trump our economical philosophies, especially in this time of recovery..... I agree with Ron Barber that removing incentives for solar power installations is regressive and damaging to Arizona economy.

Please reconsider this action. We need to keep and increase solar energy industry here. Don't make Arizona a bad example.

thank you, elizabeth brizard, tucson
