YES on Track and Record

Dear Commissioners,

I, as a rate payer, have comments on Track & Record, as it pertains to the Renewable Energy Standard. I would like to first request that REC purchases be continued by utilities. However if the funding for the incentives do not continue, then I favor Track and Record, which allows solar system owners to keep their renewable energy credits or sell them, yet allows utilities to see if renewable energy development in their territory is proceeding at the pace set by the Corporation Commission's Renewable Energy Standard.

One last consideration is that if the utilities COULD CONTINUE the policy of purchasing REC, this offers the advantage of protecting utilities from potential national carbon tax programs.

Thank you for your time,

Sonya Norman
