Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering. I have installed over 10 kilowatts of solar panels on my home with the contractual expectation that excess power I generate will be available to my neighbors. For that I get the lowest rate (wholesale) for my generation. And even when I generate more electricity in a month than I use I still pay SRP a minimum fee for connectivity to the grid and servicing.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Dear Commissioner:

After spending \$40,000 of my own money to have solar panels installed now APS is pulling the rug out from under those of us who, in good faith, invested our money in solar power. At the very least those of us who already have solar installed should be at least be grandfathered in on the metering plan that was in place when we had our system installed.

The ACC has an opportunity to help Arizonans towards energy independence that is good for the environment and good for the economy as a whole.

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Dear Corporation Commissioner,

I am a voter and an APS customer. I am writing to urge you to protect net metering.

Net metering makes sense. If I have to buy electricity from APS at a certain rate, APS should be willing to pay me that same rate when my solar panels provide electricity to the grid. After all, APS just turns around and sells the power I produce to my neighbors.

APS is trying to make the case that Arizona should change its successful net metering program. If that happens, power bills for solar customers would go up. How often is APS allowed to raise rates?

I am concerned that changing net metering would stop my friends and neighbors from going solar. That would be bad for Arizona. We've got so much sunshine; we'd be fools not to harness it.

Sincerely,

Michael Pagliarulo

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to MANIPULATE and mke their case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

The May 2013 Technical Update of the Cost of Carbon under executive order 12866 indicates that likely cost of carbon to tax/ratepayers in 2020 will be 6.4c/kWh and as high as 21.6c/kwh(@1.5c/kwh for every 10 tons of carbon).

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

In TEP territory we are charged more than \$1B of surcharges each year to compensate for fossil fuel technologies; local solar would reduce those costs, reduce transmission and energy loss costs, and allow those revenues to be used to fund more solar and accelerate the transition to a less caustic generation technologyem to be used

I urge you to be a solar energy champion by protecting net metering.

Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Subject: Net Metering

Dear Commissioner:

As an Arizona utility customer, I urge you to protect net metering to ensure that customers with solar receive fair credit for the valuable clean power they deliver to the grid for others to use. The current policy is acceptable and fair, but utilities seem to be fudging the numbers to make a fallacious case we need to change it. We customers make serious investments in our solar installations. The utilities must, without question, fairly compensate us for the receipt of that energy - which they then resell to others. Anything else amounts to a customer subsidy for the for-profit utilities.

When we go solar everyone in Arizona benefits. Not only are we cleaning up the atmosphere, we are helping to provide jobs in a business sector that Arizona should dominate but, as yet, does not. We reduce grid costs and the costs for dirty conventional power sources. Each year, because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be an economic energy champion by protecting net metering.

I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

I invested in Solar for my home and produce power that gets passed to the grid, so I have every right to be compensated for that which I produce. The rules do not allow me to retain or store it, nor do they allow me to cut my connection to APS, so the only logical and fair solution is to allow proper and just compensation for the power I produce. This is a simple issue that the corporations want to make complicated. Please see through the smoke and mirrors and continue the Net Metering that exists now.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Subject: Protect Net Metering

Dear Corporation Commissioner,

I am a voter and an APS customer. I am writing to urge you to protect net metering.

Net metering makes sense. If I have to buy electricity from APS at a certain rate, APS should be willing to pay me that same rate when my solar panels provide electricity to the grid. After all, APS just turns around and sells the power I produce to my neighbors.

APS is trying to make the case that Arizona should change its successful net metering program. If that happens, power bills for solar customers would go up. How often is APS allowed to raise rates?

I am concerned that changing net metering would stop my friends and neighbors from going solar. That would be bad for Arizona. We've got so much sunshine; we'd be fools not to harness it.

Sincerely,

Gary and Nancy Socha

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering. I lease solar and I do not want my solar produced power to go to someone else's use without being compensated fairly for that use. It is robbery for the utility companies and the Corporations Commission to suggest or act in any unfair ways.
