Dear Commissioners:

Dr. Deitrich Klinghardt earned his PhD in Freiburg, Germany, and has won Physician of the Year awards twice within the last six years. On the subsequent two pages I call your attention to the work of Dr. Klinghardt MD, PhD, in the United States. He has been a main speaker for at least two autism conferences held in Arizona.

When the family of an autistic patient comes to Dr. Klinghardt, he gives the family three must-dos as a prerequisite for him to address the autism. The second one is to flip the master electrical switch on their living space every night to create a neutral zone in terms of electromagnetic radiation. This is done so that the potential patient and the family members may experience relief from exposure and experience repair during sleep. With a smart meter sending to the network throughout the 24 hour period, the family cannot gain a neutral zone throughout the night to provide a baseline for addressing the autism.

Talks by Dr. Klinghardt are available at Youtube and other sites on the internet. I was pleased to find this content breakdown of his presentation, Smart Meters & EMR: The Health Crisis of Our Time. Besides 'Solutions for autistic patients' there are two sections on 'Smart meters: observed health symptoms.'

While Dr. Klinghardt is not the only practitioner to prepare to make a difference for an autistic patient by neutralizing electromagnetic fields, he has an Arizona connection and I could find the website with this outline of his talk on smart meters!

Thank you for seeking additional information on the possibility of health impacts of smart meters.

Sincerely,

Helen S Pierce

**"Past 80 years have over 6,000 studies published - majority show biological damage being done"**

**Greek Study Shows Crucial Regions of the Brain Related to Learning, Memory, Alzheimer's Impacted by Whole Body EMF Exposure  
Brain proteome response following whole body exposure of mice to mobile phone or wireless DECT base station - 2012 University of Athens Greece, by Adamantia Fragopoulou**

**RESULT: The data showed that long-term exposure over a period of 8 months to both electromagnetic field sources altered significantly the expression of 143 proteins in total (neural function related proteins, heat shock**

proteins, cytoskeletal proteins, proteins of the brain metabolism). Most of these changes occurred in the hippocampus and the majority of the changes was induced by mobile phone exposure. Western blot analysis confirmed the differential expression of two upregulated proteins (apoE and GFAP) and one downregulated protein (GMF).
