Subject: Protect Net Metering and Jobs

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

Deb and Tom Spirito

Subject: Protect Net Metering and Jobs

Dear Corporation Commissioner,

I am an Arizona voter, small businessmen, and utility customer and I am writing to urge you to protect net-metering.

Solar homeowners like myself have made a large investment and we still pay our electric utility for there administration and maintenance on the infrastructure. If we produce extra energy we are credited that at a much lower rate and the utilities use our money (credit) for a significant period of time meanwhile we are still paying the utility. What a cash flow program I wish I could get away with it in my business.

Net metering ensures that solar customers like me receive fair credit that is already at a discount for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Subject: Protect Net Metering and Jobs

Dear Corporation Commission,

I am writing you, as an Arizona voter and utility customer, to urge you to protect net-metering.

Being a solar customer, net metering guarantees I will receive fair credit for the valuable clean power I supply to the grid for other utility customers to use throughout the day. This is a very powerful policy tool for the Commission to use in encouraging schools, homes, businesses, and public agencies to go solar...thus helping to drive the growth of an effective Arizona industry.

I am concerned, if the utility companies in the state of Arizona succeed in changing the net metering program, that the investment customers have made in their valuable clean power system will go without proper compensation.

I should have the right to choose where I get my electricity, what type of electricity I use, and how much it costs me. Net metering allows me this freedom. After all, I, like other home and business owners, have paid to have my solar system installed, which provides benefits to the grid and other utility customers.

I ask you to please protect net metering.

Thank you, Vivian

It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

I've invested my personal income in a solar system. It has raised my property value, home resale value, and stimulated the local economy. I've contributed to the state utilities meeting federal renewable energy standards.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments. My break-even point is 15 years with the current net-metering. Changing net metering to benefit the utility companies would push that back to the 25 year range. This would encourage me to consider retiring in another state.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I was with the understanding that especially during the hot summer we needed the extra power. So some of us started having solar installed now the benefits are in question. How can the Utility companies possibly expect to sell the power they make but take the extra power my system makes for free? Please stop them in their tracks.

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Dear Corporation Commissioner,

I am an Arizona voter and utility customer and I am writing to urge you to protect net-metering.

Net metering ensures that solar customers like me receive fair credit for the valuable clean power we deliver to the grid for others to use during the day. It is one of the most important policy tools the Commission has for empowering homes, businesses, schools and public agencies to go solar, and to drive the growth of a successful Arizona industry.

Utilities in the state want Arizona to change its successful net metering program and I am highly concerned that this could result in not properly compensating customers for their valuable energy investments.

Home and business owners spend their own money to install systems that provide many benefits to the grid and other ratepayers. Net-metering also allows utility customers to make their own choices about where they get their electricity, what type of electricity they want and how much they're willing to pay for it.

I urge you to protect net metering.

Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Mitch Colletto
