Jul 24, 2013

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation via residential roof-top systems. This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Thank you for considering my comments.

Sincerely,

Dr. Marc and Norma Brown

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

I am writing because I am astounded by what I am hearing about. Our state should be leading the nation (really, the world) in our development of rooftop solar electricity generation. Instead decision makers are making plans to hold us back even longer !?

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation via residential roof-top systems. This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Our resource (abundant sunshine) should be fully utilized by allowing individual residents the ability to produce electricity from it and receive the fair market value for it. That would be the truest expression of the term "public utility".

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights and the interests of the citizens of our state by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Thank you for considering my comments.

Subject: Protect Solar Rights in Arizona

Jul 24, 2013

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation via residential roof-top systems. This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Thank you for considering my comments.

Sincerely,

Ms. Karen Kravcov Malcolm

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Thank you for considering my comments.

Jul 24, 2013

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation via residential roof-top systems. This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. This power is generated right in the neighborhood where it can be used, so APS doesn't incur the loss of power when it is transmitted long distances. It is, therefore, worth more than energy sold at wholesale rates. It is also worth far more than the cost of fuel used to run generators, since that infrastructure has already been paid for by users. Solar power generators pay for their own equipment. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Thank you for considering my comments.

Sincerely,

Mr. Jeffrey Miller

Commissioner Bob Stump
1200 W. Washington St.
Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation via residential roof-top systems. This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.

These benefits range from delaying the need for additional grid infrastructure and power plants, which saves a substantial amount of money, as well as reducing pollution and the associated impacts on public health and the environment.

Solar is a win-win for Arizona, and net metering is an important part of that. Please stand up for Arizona's solar rights by protecting and promoting net metering and rejecting the two proposals being offered by APS.

We happen to be an SRP customer. We went solar in March because we wanted to decrease our carbon footprint and in doing so make our environment a friendlier place to call home. We're poor so my only option was a 20-year solar lease. In the short term we're paying a little more for electricity; in the long run we'll save money on electricity as well as being good global citizens. Anything that changes this delicate balance, which makes it difficult if not impossible for everyday homeowners, has got to be closely investigated.

The more households with their own solar PV systems, the better it is in the long term for all of us. Shame on APS for suggesting that the electricity produced by our solar power plant is less valuable than those monstrosities which burn dirty coal or create radioactive waste which have to be contained for too many half lives. Especially in Arizona, solar makes so much sense and needs to be encouraged at every turn.

Thank you for considering my comments.

Sincerely,

Ms. Elaine Joyal

Phoenix, AZ 85007

Dear Commissioner Stump,

I am writing to urge you to protect solar rights in Arizona.

With more than 300 days of sunshine each year, Arizona should be a leader in solar energy. An important component of this solar energy is distributed generation via residential roof-top systems. This assists consumers by powering their energy needs with clean, renewable energy, but any excess energy can also be sent back into the grid, reducing the need for the utility company to produce extra energy while benefiting other customers.

Net metering is one of the most important issues with regards to distributed generation. Net metering ensures that solar customers get fair credit for any energy that is sent back into the grid from their systems. It would not be fair, and it doesn't make sense, not to pay these generators the fair market value for the energy they generate.

A recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year, starting in 2015.
