DOCKETED BY NR

Gentlemen. I am to understand this correctly that APS has made a decision that people have a quota of electricity that they have to use? After all they want to use discriminatory practices to raise the rates on people that use Solar energy to reduce their electric bill. Now, if they want to do this then I demand that a quota be applied to every person in their district that they will have to pay for a certain amount of electricity even if they don't use it.

What is this, people try to save money and they have to have a penalty applied to them? This happens all over the country, people put in LED lights and the power company demands a rate increase, people put added insulation in their homes, the utilities demand a raise. When will this stop. This is a right to work state. Not a right to receive a set amount of profit. If the Utility company cannot learn to deal with progress then just as the Smithy they can go out of business. May be the State can Condemn their property and buy it back at a discounted price.

Is it the people's fault that they decided they needed a Nuclear Plant for electricity, and the people that are using Solar are punishing them? No, they made a business decision and it was wrong. That is not the fault of the consumer. Already they charge people for the line going into their home, reading the meter (even when this is done electronically) and the bill even though again is automatic. All charges for utilities should be on a usage standard, not a what can we charge the customer. Does this mean that if a person that has a house goes off grid that the Utilities will pay them 8 dollars a month for having a line going into their home? Or will you as the commissioners demand that they pay a special tax for the CEO?
