50,000 Gallon Storage Tank:

As part of the company's Water Conservation and Prevention Program we are looking for ways to provide to our customers clean and protected water. A storage tank of 65,000 gallon capacity will better benefit the customers of Appaloosa Water Company.

An application to WIFA for a loan that was approved by the ACC for the procurement and placement of the tank was denied. The company cannot get other financing for this project. The company's initial request for the tank to provide its' customers with uninterrupted and quality service still remains its' top priority. If the loan was not denied then the company could have continued its' agenda of providing the customers with the cleanest water possible. The current 65,000 gal tank has no record that the company can find that pertains to the draining, cleaning, painting and inspection of it. The company cannot do the maintenance on the current tank without a 65,000 gal storage tank to be used in case the current tank has problems that are unforeseen. Upon consultation of a company that does this kind of work it is unknown as to the length of time that the company would be without water to its' customers in order to perform the maintenance of the current tank. The company has a 5,000 gal pressure tank that would not be able to provide water for the customers if the current tank is not available. At this time the company cannot go forward with the tank until it finds suitable financial assistance.

Emergency Generators:

The \$60,000 that was approved by the ACC for 2 generators is inadequate and other financing is not available. The company will have to refile a new financing application with the ACC for the changes from 2 generators to 1 and the additional amount needed that the company did not foresee on its' original request.

Sincerely,

A handwritten signature in black ink, appearing to read "Joe Cordovana", with a long horizontal flourish extending to the right.

Joe Cordovana
