**Subject:** Real Net Metering Reform

Dear Commissioner,

All Arizonans benefit from a reliable electrical grid that sustains our economic and population growth and powers our critical infrastructure, such as water facilities, hospitals, schools, and more. The successful adoption of solar in our community has not lessened the need for a reliable grid, and solar users continue to need access to the grid just like non-solar users. The challenge we now face is that the net metering subsidies designed to spur the adoption of solar are outstripping their benefits, and the situation is only going to get worse unless you vote to reform the system now.

If more individuals receive subsidized power, there will be fewer who remain to foot the bill for the grid. That is not sustainable.

In a free market, individuals should be able to choose solar, and many stand in support of preserving that choice. But utilities subject to the existing net metering policy are being forced to pay solar users more than five times the market price, and other Arizonans are left paying the bill.

This is NOT about solar. It is about fairness and ensuring reliable power. Solar has a bright future in Arizona. Arizona is number one in total installed solar capacity per capita, and ranks second, behind California, for total installed solar energy capacity. Updating the state's net metering policy will protect our commitment to solar, but not doing so would jeopardize our ability to provide a reliable power grid for future Arizonans.

I urge you to vote for net metering reform this year.

Sincerely,

leon Escalante

Dear Commissioner,

Those using solar panels deserve the rate breaks they are now getting stop trying to penalize them in order to prop up your shaky business model. Your efforts are hurting the solar industry, and stifle innovation. Stop.

**Subject:** Real Net Metering Reform

Dear Commissioner,

All Arizonans benefit from a reliable electrical grid that sustains our economic and population growth and powers our critical infrastructure, such as water facilities, hospitals, schools, and more. The successful adoption of solar in our community has not lessened the need for a reliable grid, and solar users continue to need access to the grid just like non-solar users. The challenge we now face is that the net metering subsidies designed to spur the adoption of solar are outstripping their benefits, and the situation is only going to get worse unless you vote to reform the system now.

If more individuals receive subsidized power, there will be fewer who remain to foot the bill for the grid. That is not sustainable.

In a free market, individuals should be able to choose solar, and many stand in support of preserving that choice. But utilities subject to the existing net metering policy are being forced to pay solar users more than five times the market price, and other Arizonans are left paying the bill.

This is NOT about solar. It is about fairness and ensuring reliable power. Solar has a bright future in Arizona. Arizona is number one in total installed solar capacity per capita, and ranks second, behind California, for total installed solar energy capacity. Updating the state's net metering policy will protect our commitment to solar, but not doing so would jeopardize our ability to provide a reliable power grid for future Arizonans.

I urge you to vote for net metering reform this year.

Sincerely,

Joel Ingham

Dear Commissioner,

Please don't be persuaded by this ridiculous anti-solar campaign. Stick to your guns and help bring Arizona into the 21st Century, with realistic approaches to the difficulties of adopting new technologies. Renewable energy and the smart grid are the wave of the future. Do not allow alarmist rhetoric like the Prosper campaign drag Arizona into the dark ages.

**Subject:** Real Net Metering Reform

Dear Commissioner,

All Arizonans will benefit if more people use solar power. Solar power can free us from needing an electrical grid. I am happy to subsidize solar panels for businesses and private individuals in any way I can. Please support subsidies for solar power. Thank you.

I urge you to vote AGAINST net metering reform this year.

Sincerely,

Celestial Sojourner

**Subject:** Real Net Metering Reform

Dear Commissioner,

All Arizonans benefit from a reliable electrical grid that sustains our economic and population growth and powers our critical infrastructure, such as water facilities, hospitals, schools, and more. The successful adoption of solar in our community has not lessened the need for a reliable grid, and solar users continue to need access to the grid just like non-solar users.

The challenge we now face is that the net metering subsidies designed to spur the adoption of solar are outstripping their benefits, and the situation is only going to get worse unless you vote to reform the system now.

If more individuals receive subsidized power, there will be fewer who remain to foot the bill for the grid. That is not sustainable.

In a free market, individuals should be able to choose solar, and many stand in support of preserving that choice. But utilities subject to the existing net metering policy are being forced to pay solar users more than five times the market price, and other Arizonans are left paying the bill.

This is NOT about solar. It is about fairness and ensuring reliable power.

Solar has a bright future in Arizona. Arizona is number one in total installed solar capacity per capita, and ranks second, behind California, for total installed solar energy capacity. Updating the state's net metering policy will protect our commitment to solar, but not doing so would jeopardize our ability to provide a reliable power grid for future Arizonans.

I urge you to vote for net metering reform this year.

Sincerely,

Larry Phelps
