DOCKETED BY

Dear Commissioners

Reference Docket number E-01345A-13-0140. The Department of Defense, the United States Air Forces, and Luke Air Force Base have a significant commitment to renewable energy.

In their 2014 RES Implementation Plan, APS outlined plans that will help us move forward toward meeting those goals through their AZ Sun program. Included in the program is an approximate 10 MW solar energy facility at Luke Air Force Base. APS and Luke have been working together for almost 4 years to make this project a reality. Together, we have addressed many challenges along the way and we are actively working together on the final agreements necessary to proceed.

We are excited by the possibility of having such a significant solar project at Luke Air Force Base that demonstrates the Air Force's commitment to increased energy security, sustainability, and commitment to the environment. We encourage you to support this request.

Sincerely

MICHAEL D. ROTHSTEIN  
Brigadier General, USAF
