DOCKETED BY NR

7 IN THE MATTER OF THE APPLICATION OF  
8 ARIZONA WATER COMPANY, AN ARIZONA  
9 CORPORATION, FOR A DETERMINATION OF  
10 THE FAIR VALUE OF ITS UTILITY PLANT AND  
PROPERTY AND FOR ADJUSTMENTS TO ITS  
RATES AND CHARGES FOR UTILITY SERVICE  
FURNISHED BY ITS EASTERN GROUP AND  
FOR CERTAIN RELATED APPROVALS.

DOCKET NO. W-01445A-11-0310

DECISION NO. 73938

PHASE 2  
OPINION AND ORDER

11 DATE OF HEARING:

April 8 and 11, 2013

12 PLACE OF HEARING:

Phoenix, Arizona

13 ADMINISTRATIVE LAW JUDGE:

Dwight D. Nodes

14 APPEARANCES:

Mr. Steven A. Hirsch, BRYAN CAVE LLP, on behalf  
of Arizona Water Company;

Mr. Timothy J. Sabo, ROSHKA DEWULF & PATTEN,  
PLC, on behalf of Global Water Utilities;

Mr. Michael T. Hallam, LEWIS AND ROCA LLP, on  
behalf of EPCOR Water Arizona, Inc.;

Mr. Michael M. Grant, GALLAGHER & KENNEDY,  
P.A., on behalf of Arizona Investment Council;

Mr. Jay L. Shapiro, FENNEMORE CRAIG, P.C., on  
behalf of Rio Rico Utilities, Inc. dba Liberty Utilities;

Mr. Garry Hays, LAW OFFICES OF GARRY HAYS,  
on behalf of the City of Globe;

Mr. Greg Patterson, on behalf of the Water Utilities  
Association of Arizona;

Mr. Daniel W. Pozefsky, Chief Counsel, on behalf of  
the Residential Utility Consumer Office; and

Ms. Bridget A. Humphrey and Mr. Wesley Van Cleve,  
Staff Attorneys, Legal Division, on behalf of the  
Utilities Division of the Arizona Corporation  
Commission.

1 **BY THE COMMISSION:**

2 **Procedural History**

3 On August 5, 2011, Arizona Water Company ("AWC" or "Company") filed with the Arizona  
4 Corporation Commission ("Commission") an application requesting adjustments to its rates and  
5 charges for utility service provided by its Eastern Group water systems, including its Superstition  
6 (Apache Junction, Superior, and Miami); Cochise (Bisbee and Sierra Vista); San Manuel; Oracle;  
7 SaddleBrooke Ranch; and Winkelman water systems. AWC also requested several other  
8 authorizations in the application.

9 On February 20, 2013, the Commission issued Decision No. 73736 in Phase 1 of this matter,  
10 granting AWC a rate increase for its Eastern Group systems and, among other things, keeping the  
11 docket open for purposes of further consideration of AWC's proposed Distribution System  
12 Improvement Charge ("DSIC"). Decision No. 73736 also set specific deadlines for: intervention;  
13 ruling on intervention requests;<sup>1</sup> commencement of settlement discussions; the latest date for a  
14 procedural conference; an update by the Commission's Utilities Division ("Staff") on settlement  
15 discussions; and consideration of a "Phase 2" DSIC Recommended Order (June 11 and 12, 2013  
16 Open Meeting).

17 By Procedural Order issued February 21, 2013, as modified by Procedural Order issued  
18 February 25, 2013, this matter was scheduled for hearing commencing April 8, 2013, other  
19 procedural deadlines were established, and a procedural conference was scheduled for March 4,  
20 2013.

21 On March 4, 2013, the procedural conference was conducted as scheduled during which the  
22 parties discussed various procedural matters.

23 On March 21, 2013, a Procedural Order was issued modifying certain filing deadlines  
24 established in the procedural schedule.

25 ...

26 \_\_\_\_\_  
27 <sup>1</sup> In addition to the Residential Utility Consumer Office ("RUCO"), which participated in Phase 1 of the proceeding,  
28 intervention in Phase 2 was granted to Rio Rico Utilities, Inc. dba Liberty Utilities ("Liberty Utilities"); EPCOR Water  
Arizona, Inc. ("EPCOR"); Global Water Utilities ("Global Water"); Arizona Investment Council ("AIC"); the Water  
Utility Association of Arizona ("WUAA"); and the City of Globe ("Globe").

1 On April 1, 2013, Staff filed a Settlement Agreement signed by all parties except RUCO and  
2 Globe.

3 On April 2, 2013, RUCO filed a Motion for Clarification or in the Alternative Request to  
4 Take Judicial Notice of the Underlying Record. RUCO requested clarification as to whether the  
5 Commission intended to leave the record open from Phase 1 of this case.

6 On April 2, 2013, AWC filed a Joinder in RUCO's Motion for Clarification. AWC agreed  
7 with RUCO that the entire underlying record should be held open for citation and reference and that  
8 Phase 1 DSIC issues should not be re-litigated at the April 8, 2013 hearing.

9 On April 2, 2013, testimony in support of the Settlement Agreement was filed by Joel M.  
10 Reiker on behalf of AWC; by Steven M. Olea on behalf of Staff; by Greg Sorenson<sup>2</sup> on behalf of  
11 Liberty Utilities; by Ron Fleming and Paul Walker on behalf of Global Water; by Thomas M.  
12 Broderick on behalf of EPCOR; and by Gary Yaquinto on behalf of AIC.

13 On April 2, 2013, testimony in opposition to the Settlement Agreement was filed by Patrick J.  
14 Quinn and William A. Rigsby on behalf of RUCO.<sup>3</sup>

15 On April 4, 2013, a Procedural Order was issued stating that the evidentiary record in Phase 1  
16 would be held open and incorporated into the Phase 2 record.

17 On April 4, 2013, Staff filed a Motion to Strike Portions of the Direct Settlement Testimony  
18 of William A. Rigsby.

19 On April 5, 2013, RUCO filed a Response to Staff's Motion to Strike.<sup>4</sup>

20 On April 8, 2013, an evidentiary hearing commenced before a duly authorized Administrative  
21 Law Judge ("ALJ"). The hearing continued and concluded on April 11, 2013. AWC, RUCO,  
22 Liberty Utilities, Global Water, EPCOR, AIC, WUAA, Globe, and Staff appeared through counsel.<sup>5</sup>

23 ...

24 \_\_\_\_\_  
25 <sup>2</sup> Due to Mr. Sorenson's unavailability, his pre-filed testimony was adopted and sponsored by Christopher D. Krygier at  
the hearing. (Tr. 195-196.) [All citations are to the Phase 2 record unless otherwise indicated.]

26 <sup>3</sup> WUAA did not file testimony but its Director, Greg Patterson, filed a letter in the docket on April 2, 2013, expressing  
support of DSIC mechanisms generally, and for the System Improvement Benefits ("SIB") mechanism specifically, that  
is part of the Settlement Agreement. Globe did not file testimony and indicated on the first day of the hearing that its  
27 position regarding the Settlement Agreement was one of "neutrality." (Tr. 31.)

<sup>4</sup> Staff's Motion to Strike was denied on the first day of the hearing. (Tr. 8-11.)

28 <sup>5</sup> Although Kathie Wyatt, an AWC customer, was granted intervention in Phase 1, she did not appear or participate in the  
Phase 1 or Phase 2 hearings.

1 On April 15, 2013, AWC filed revised SIB Schedules A through D in accordance with Mr.  
2 Reiker's testimony at the hearing. (*See* Tr. 214-239.)

3 On April 29, 2013, post-hearing briefs were filed by AWC, RUCO, EPCOR, AIC, Staff, and  
4 jointly by Liberty Utilities and Global Water.

### 5 **Overview of DSIC Mechanisms**

6 As described in the Phase 1 Order in this proceeding (Decision No. 73736), AWC originally  
7 proposed implementation of a DSIC mechanism that would "allow it to recover, through abbreviated  
8 proceedings between general rate cases, the costs of the infrastructure necessary to replace its aging  
9 infrastructure, thereby ensuring the continued reliability of its service in the Eastern Group."  
10 (Decision No. 73736, at 84.) AWC claimed that a substantial investment in replacement of  
11 infrastructure was necessary to enable the Company to comply with Commission directives to reduce  
12 water losses on various systems to acceptable levels. (*Id.* at 84-85.)

13 In order to provide a contextual background for the DSIC issue in this Phase 2 Order, and for  
14 ease of reference to the Phase 1 record, we are reciting the following description of the parties'  
15 arguments and testimony that were set forth in Decision No. 73736.

### 16 **DSIC Study and Proposed DSIC**

17 As described in Decision No. 73736, AWC's DSIC Study, completed as a compliance item  
18 for AWC's prior company-wide rate case<sup>6</sup> and provided in an amended form as an exhibit in this  
19 case, asserted that both the United States as a whole, and AWC's Eastern Group in particular, are  
20 approaching a crisis because of the need for capital improvements to aging drinking water  
21 infrastructure. (*Id.* at 90.) The DSIC Study recounts that the American Society of Civil Engineers  
22 has given the country's drinking water system infrastructure a grade of D- and that the United States  
23 Environmental Protection Agency ("USEPA") has projected a 20-year capital improvement funding  
24 need for U.S. drinking water infrastructure of \$334.8 billion and for Arizona drinking water  
25 infrastructure of \$7.4 billion. (*Id.*)

26 ...

27  
28 <sup>6</sup> *See* Decision No. 71845 (August 25, 2010), at 95.

1                                    AWC's Phase 1 Arguments

2            AWC asserted that the concept of the DSIC grew out of the approaching crisis, first having  
3 been approved by the Pennsylvania Public Utility Commission ("PPUC") in 1996 in the face of  
4 Philadelphia Suburban Water Company's ("PSWC's") need to replace more than 3,100 miles of  
5 transmission and distribution mains, estimated otherwise to take approximately 212 years at PSWC's  
6 established infrastructure replacement pace. (*Id.*) The PPUC described the DSIC as a "proposed  
7 automatic adjustment clause." (*Id.*) In conceptually approving a DSIC, the PPUC stated:

8                                    [W]ater companies face the daunting challenge of rehabilitating their  
9 existing distribution infrastructure before the property reaches the end of  
its service life to avoid serious public health and safety risks.

10                                   In the Commission's judgment, the establishment of a DSIC along the  
11 lines proposed by PSWC can substantially aid the water company in  
meeting these challenges on behalf of the water consuming public. We  
12 agree with the company that the establishment of a DSIC would enable the  
company to address, in an orderly and comprehensive manner, the  
13 problems presented by its aging water distribution system, and would have  
a direct and positive effect upon water quality, water pressure and service  
14 reliability. For these reasons, we endorse the concept of using an  
automatic adjustment clause to address this regulatory problem for the  
15 water industry in Pennsylvania and, in particular, the type of DSIC  
proposed by PSWC.

16            The PPUC determined that the DSIC was "appropriately limited and narrowly tailored to  
17 recover a specific category of utility costs—the incremental fixed costs (depreciation and pre-tax  
18 return) associated with nonrevenue producing, nonexpense reducing distribution system improvement  
19 projects completed and placed in service between base rate cases" and further that the DSIC would  
20 not "'disassemble' the traditional ratemaking process" because it would recover only a narrow subset  
21 of total cost of service, would be capped to prevent "long-term evasion" of review of the plant costs  
22 recovered in rate base; and would reflect only the costs of used and useful plant placed into service  
23 during the three-month period before each DSIC surcharge update. (*Id.* at 91.)

24            AWC stated that the public utility commissions of California, Connecticut, Delaware, Illinois,  
25 Indiana, Missouri, New Hampshire, New Jersey, New York, and Ohio have also adopted DSIC-type  
26 mechanisms and that the National Association of Regulatory Utility Commissioners ("NARUC") has  
27 endorsed DSIC mechanisms (in 1999) and adopted a resolution identifying DSIC mechanisms as a  
28 Regulatory Policy Best Practice (in 2005). (*Id.*) According to AWC, PPUC Commissioners have

1 characterized the DSIC as an important regulatory tool that includes numerous consumer safeguards  
 2 and that has resulted in increased infrastructure investment. (*Id.*) Additionally, AWC claimed that  
 3 both Moody's and Standard & Poors consider DSIC mechanisms to be credit supportive. (*Id.*) AWC  
 4 also cited a recent survey concluding that two-thirds of American voters would be willing to pay an  
 5 average of \$6.20 more per month toward water system upgrades to ensure long-term access to clean  
 6 water. (*Id.* at 92.) AWC estimated that the surcharge from its proposed DSIC would be  
 7 approximately \$1.00 per customer per month. (*Id.*)

8 Decision No. 73736 recounted that, according to AWC, the Commission has never approved a  
 9 DSIC mechanism, although it has previously adopted a surcharge to provide funding for the  
 10 replacement of undersized and inadequate water mains in the Town of Paradise Valley, in the form of  
 11 a Public Safety Surcharge approved for Arizona-American Water Company ("Arizona-American") in  
 12 Docket No. W-01303A-05-0405. (*Id.*) AWC acknowledged, however, that the Public Safety  
 13 Surcharge was used to collect funds in advance of construction, whereas the DSIC is more similar to  
 14 an Arsenic Cost Recovery Mechanism ("ACRM") in that the funds would be collected after  
 15 construction. (*Id.*)

16 In Phase 1 of this case, AWC originally proposed a DSIC that would:

- 17 • Allow recovery of fixed costs associated with DSIC-eligible utility plant additions (net of  
 18 retirements) placed in service between rate cases;
- 19 • Limit eligible plant additions to the following NARUC Uniform System of Accounts  
 20 ("USOA") classifications:
  - 21 ○ 343 Transmission and Distribution Mains,
  - 22 ○ 344 Fire Mains,
  - 23 ○ 345 Services,
  - 24 ○ 346 Meters,
  - 25 ○ 347 Meter Installations,
  - 26 ○ 348 Hydrants, and
  - 27 ○ 398 Miscellaneous Equipment (Leak Detection Equipment);
- 28 • Require AWC to file with the Commission semi-annual DSIC updates (for step increases)  
 reflecting the eligible plant placed in service during the six-month periods of November 1  
 through April 30 and May 1 through October 31, with the updates (step increases) to  
 become effective, respectively, on July 1 and January 1;
- Require AWC to file, at least 30 days before the effective date of each DSIC update,  
 supporting data for the update, to include the following for each system affected:
  - A balance sheet;
  - An income statement;
  - An earnings test schedule;
  - A rate review schedule showing the effects of the step increase on the income

statement and earnings test;

- A revenue requirement schedule showing the calculation of the required increase;
  - A schedule showing the surcharge calculation, which would be broken down 50/50 between monthly fixed surcharge and volumetric surcharge and would be scaled to meter size based on equivalent capacity ratio;
  - A rate base schedule;
  - A Construction Work in Progress ledger showing monthly charges for construction of eligible DSIC facilities;
  - A schedule showing the calculation of the general plant allocation methodology; and
  - A typical bill analysis for 5/8" x 3/4" meter customers;
- Require AWC to show the DSIC surcharge as a separate line item on each customer bill and, at least twice each year, to print a message on each customer bill explaining the DSIC surcharge and indicating the progress made in replacing aging infrastructure;
  - Cap the DSIC at 7.5 percent of the annual amount billed to customers under otherwise applicable rates and charges;
  - Require the DSIC to be reset to zero on the effective date of each new general rate case by including the DSIC-eligible plant in rate base; and
  - Prohibit AWC from making a DSIC update filing for any system for which the rate of return earned in the applicable six-month period exceeded the rate of return that would be used to calculate the revenue requirement under the DSIC.<sup>7</sup>

AWC's proposal for the DSIC evolved over the course of the Phase 1 proceeding, with AWC accepting most of Staff's recommendations for any DSIC that would be adopted by the Commission (although Staff in Phase 1 continued to oppose the adoption of any DSIC). (*Id.* at 93.) Ultimately in Phase 1, AWC proposed a DSIC that differed from its original proposal in that the DSIC would:

- Be reviewed and modified annually rather than semi-annually;
- Require a Staff prudence and cost review before any plant costs could be included in the DSIC calculation;
- Require full Commission approval for the initial DSIC to take effect;
- Limit any annual DSIC adjustment to two percent of system revenues;
- Cap the total DSIC surcharge at six percent of system revenues;
- Require a second prudence review before DSIC-related plant costs could be included in rate base during a subsequent permanent rate case; and
- Require a true-up with refund (and interest) payments to ratepayers if it were determined during the subsequent rate case that over-collection had occurred.<sup>8</sup>

AWC contended that applicability of any DSIC or DSIC-like mechanism should not be limited to water systems that have water loss in excess of 10 percent because water loss can be attributable to factors other than failing infrastructure, and a system with significant infrastructure replacement needs can still have water loss lower than 10 percent due to the volume of water sold

<sup>7</sup> *Id.* at 92-93.

<sup>8</sup> *Id.*

1 (such as in Superior, which has historically had water loss in excess of 10 percent but did not for the  
2 test year due to increased sales, and Apache Junction, which had water loss below 10 percent during  
3 the test year but has lost in excess of 200 million gallons of water each year from 1998 through  
4 2009). (*Id.* at 93-94.) AWC also suggested that having excessive water loss as a prerequisite for  
5 DSIC eligibility could incentivize companies to ignore increasing water loss so that they could  
6 become eligible for DSIC treatment. (*Id.* at 94.)

7 AWC acknowledged in Phase 1 that its need to replace its aged infrastructure is not due to a  
8 legal mandate such as the revised USEPA maximum contaminant level (“MCL”) for arsenic, but the  
9 Company drew a parallel between the USEPA MCL for arsenic and the Commission’s order for  
10 AWC to reduce its water loss below 10 percent.<sup>9</sup> (*Id.*) AWC also asserted similarities between the  
11 DSIC and the ACRM, after which AWC ultimately modeled its proposed DSIC and without which,  
12 according to Mr. Garfield, AWC would not have been able to complete its arsenic remediation  
13 infrastructure. (*Id.*)

14 AWC also conceded that its infrastructure replacement needs have been developing for a long  
15 time (for example, in Bisbee, since AWC took over the system approximately 60 years ago) and that  
16 AWC has not been “ambushed” by the need to replace its aging infrastructure, but maintains that  
17 AWC has been replacing infrastructure as it has been able to do so, limited by its ability to fund  
18 capital improvements each year, by the increasing costs of infrastructure (from only \$1 per foot to  
19 more than \$100 per foot), and by considerations of the rate shock that would occur due to the  
20 “lumpy” nature of the replacement needs (*i.e.*, much infrastructure to be replaced at a time). (*Id.*)  
21 AWC did not argue that its need, as a water utility, to replace mains and other infrastructure is  
22 unusual, but did argue that the extent to which it needs to replace its aging infrastructure, *i.e.*, the  
23 sheer volume of replacement needed, is extraordinary.<sup>10</sup> (*Id.*) While implementation of a DSIC

24  
25 <sup>9</sup> Mr. Garfield acknowledged that the Commission did not order AWC to reduce its water loss to below 10 percent  
even if it would not be cost-effective to do so. (Phase 1 Tr. at 115-16.)

26 <sup>10</sup> When asked what made AWC’s situation extraordinary and warranted an adjustor mechanism, Mr. Reiker responded:

27 From my perspective, I'm a finance person. The extraordinary nature is the sheer [sic]  
28 magnitude of the investment. We've put evidence in the record, in Mr. Schneider's direct  
testimony, of massive amounts of investment that need to occur. That's extraordinary. We  
can't go out tomorrow and find an insurance company that will loan us \$60 million.  
That's not going to happen.

1 would not alleviate AWC's need to fund the costs of the infrastructure replacement up front, AWC  
 2 claimed that the DSIC would enable AWC to seek recovery of those costs in between rate cases and  
 3 thus would strengthen AWC's ability to obtain the financing necessary to cover those up-front costs.  
 4 (*Id.* at 95.) Mr. Garfield dismissed RUCO's characterization of the DSIC as an incentive for AWC to  
 5 replace infrastructure that it is already responsible to replace in order to provide service, asserting that  
 6 the DSIC is not an incentive, just a means to allow AWC to replace more of the infrastructure that it  
 7 could not otherwise currently replace. (*Id.*) AWC also asserted in Phase 1 that in the absence of a  
 8 DSIC, it would take AWC more than several hundred years (longer than the life of new  
 9 infrastructure) to replace the infrastructure that needs to be replaced. (*Id.*) Mr. Garfield also pointed  
 10 out in Phase 1 that the approximately \$66 million in infrastructure replacements now needed is  
 11 almost twice as much as the entire arsenic treatment remediation program that AWC had to undertake  
 12 and for which it was able to obtain authorization of an ACRM. (*Id.*)

13 AWC acknowledged that it would benefit from a DSIC mechanism, but denied that its desire  
 14 for a DSIC was motivated by a belief that the DSIC will ensure AWC's long-term profitability. (*Id.*)  
 15 Mr. Harris testified in Phase 1 that the ACRM has not made AWC profitable, so he is not convinced  
 16 that a DSIC will either. (*Id.*) According to AWC, ratepayers would be benefitted by DSIC because  
 17 AWC will be able to accelerate its infrastructure replacement program, thereby improving service,  
 18 reliability, safety,<sup>11</sup> and, in some cases, flows. (*Id.*) AWC disagreed that ratepayers have  
 19 experienced any more risk as a result of the ACRM process and does not believe that ratepayers  
 20 would experience any more risk as a result of the proposed DSIC process. (*Id.*) Mr. Garfield  
 21 testified that ratepayers will benefit more from the DSIC—and ensuing rate gradualism—than they  
 22 would from having a utility, “flush with cash,” make a \$38 million investment in one of AWC's

23 ...

24 \_\_\_\_\_  
 25 (Phase 1 Tr. at 276.) Mr. Reiker also acknowledged, however, that the need to replace the infrastructure was not a  
 26 surprise, that AWC knew that it was going to have to be done at some point. (*Id.*)

27 <sup>11</sup> Mr. Garfield testified that AWC's water is safe, but that each main break and disruption causes a breach in the  
 28 antiseptic barrier protecting the water supply, potentially exposing the water to soil and whatever else is in the  
 environment. (Phase 1 Tr. at 166-67.) Mr. Garfield also testified that main breaks are almost a daily occurrence,  
 something that could be changed through the authorization of a DSIC to allow recovery of the costs of infrastructure  
 replacement. (*Id.* at 168.)

1 water systems and then file a rate case after the infrastructure is completed, as that would result in a  
2 very large increase in rate base and rates. (*Id.* at 95-96)

3 Although AWC did not factor into its Phase 1 DSIC proposal any reduction in operating  
4 expenses to reflect increased operating efficiencies, Mr. Garfield allowed that “there’s some room for  
5 that to be considered . . . and probably some merit to that,”<sup>12</sup> although he also asserted that no other  
6 states have made such reductions in their DSIC mechanisms and suggested that operating and  
7 maintenance expenses could actually increase due to the level of replacements. (*Id.* at 96.) AWC  
8 characterized as arbitrary and unsupported the 15 percent reduction in operating and maintenance  
9 expenses proposed by RUCO in Phase 1 for any approved DSIC, suggesting that any such expense  
10 offset should be based on an objective standard such as the amount of main replaced. (*Id.*)

11 AWC also objected to Staff’s proposed Sustainable Water Improvement Program (“SWIP”),  
12 presented as an alternative to the DSIC in Phase 1, which would have allowed deferral of costs and  
13 applied an Allowance for Funds Used During Construction (“AFUDC”) component. (*Id.*) Mr.  
14 Garfield stated in Phase 1 that the SWIP would “negate the benefits of a DSIC by not having gradual  
15 changes in rates,” would effectively raise the costs of the projects,<sup>13</sup> and would result in higher rates  
16 and even rate shock. (*Id.*) Mr. Garfield agreed that Staff’s original SWIP proposal would subject the  
17 deferred amounts to full regulatory scrutiny, but asserted that the SWIP would not be effective:

18 Sure, and it wouldn’t give the utility any revenues to support – it’s like a –  
19 it’s not even an IOU. It’s a promise that at a future proceeding the  
20 Commission will review, in a full regulatory rate setting, the investments;  
21 were they necessary, was it reasonable, what are the impacts, and that  
22 doesn’t provide the utility with any revenues prior to a Commission  
23 decision after the fact. That would not have worked under an ACRM and  
24 it won’t work under a DSIC.<sup>14</sup>

22 Mr. Garfield also disagreed with characterization of a proposed DSIC proceeding as a mini rate case,  
23 stating that an ACRM filing is not a mini rate case because more limited supporting data is provided,  
24 and there is not as much scrutiny. (*Id.*)

25 <sup>12</sup> Mr. Garfield compared an old piece of pipe to a 1962 dump truck, which he believed would require much more  
26 maintenance than a 2012 dump truck. (Phase 1 Tr. at 109-10.) But Mr. Garfield could not say how the replacement of  
27 infrastructure would impact the cost of operating and maintaining a whole system, particularly a system like Bisbee that  
28 needs a great deal of infrastructure replaced. (*Id.* at 109-11.)

<sup>13</sup> According to Mr. Garfield, applying an AFUDC to the capital investments would effectively increase the cost of the  
projects and thus the rate base, which would result in increased rates. (Phase 1 Tr. at 118.)

<sup>14</sup> Phase 1 Tr. at 118-19.

1 AWC Phase 1 witness Ms. Ahern asserted that both a DSIC and a sufficient ROE are  
2 necessary to enable AWC to improve its cash flow, its creditworthiness, and its ability to improve its  
3 retained earnings balance, thereby allowing it to issue less long-term debt than would otherwise be  
4 needed. (*Id.* at 97.) Ms. Ahern asserted that AWC would be unable to undertake its infrastructure  
5 replacement program unless it gets both a sufficient ROE and the requested DSIC. (*Id.*) According  
6 to AWC, the revenues generated by the DSIC would enable AWC to satisfy the interest coverage  
7 requirements of its bond indenture and thus to issue long-term debt to fund its infrastructure  
8 replacement program, and AWC would not be able to complete the infrastructure replacements  
9 needed unless the DSIC is granted because the capital investment necessary cannot be supported fully  
10 without a DSIC.<sup>15</sup> (*Id.*)

#### 11 RUCO's Phase 1 Arguments

12 RUCO opposed the DSIC because it considers the proposed infrastructure replacement  
13 projects to be routine in nature and appropriately recovered through a general rate case; considers the  
14 DSIC to be a one-sided mechanism that works to the advantage of only the shareholder; believes that  
15 there is no federal or state requirement mandating the infrastructure replacement projects proposed by  
16 AWC; believes that AWC has not proven that it cannot ensure safe and reliable water service or cost  
17 recovery unless the DSIC is approved; and believes that the DSIC raises "legal concerns." (*Id.*)  
18 RUCO's position is that the infrastructure replacements needed should be covered through normal  
19 regulatory procedures allowing cost recovery because they are "routine plant improvements" rather  
20 than something extraordinary. (*Id.*) RUCO asserted that, unlike with the ACRM, there is no federal  
21 or state mandate for the infrastructure improvements to be made, and it is not appropriate to create an  
22 exception for regular ratemaking methodologies in the absence of extraordinary circumstances. (*Id.*)

23 <sup>15</sup> Mr. Garfield stated in Phase 1:

24 The company is a tightly held company. The stock is tightly held. We are not publicly traded. The investors  
25 of the company infused just over \$10 million of equity into the company before the end of 2010. Our  
26 equity component of our capital structure had dropped from 75 percent to 45 percent, and at a time that we  
27 were not recovering our cost of service, we were not making our return, the shareholders are sort of the last  
28 one to get paid. The bondholders get paid. They want their interest payment. You have to make the interest  
29 payment. So the stockholders wait to see what is left after all of those payments have been made. So to  
30 answer your question, \$10 million was infused into the company that helped shore up the company's capital  
31 structure, but I don't think you can count on the shareholders, if the returns aren't high enough, to continue  
32 making those types of infusions of capital to the company.

(Phase 1 Tr. at 153-54.)

1 at 97-98.) Mr. Rigsby asserted in Phase 1 that the plant degradation “isn’t something that just  
2 happens overnight,” and that AWC can plan for the necessary line replacements and come to the  
3 Commission every few years to obtain recovery through the regular ratemaking process. (*Id.* at 98.)  
4 Mr. Rigsby also expressed skepticism about AWC’s asserted inability to attract the capital needed to  
5 make the infrastructure improvements and replacements that AWC has identified as necessary. (*Id.*)  
6 In addition, Mr. Rigsby testified that the costs of the repairs and replacements may go down with  
7 time, through the development of more cost-effective methodologies. (*Id.*) Mr. Rigsby also claimed  
8 that AWC is fortunate in that it is a regulated monopoly that can come to the Commission for a rate  
9 increase when needed, rather than a participant in a competitive environment, and that “sometimes  
10 you got to do what you got to do; and so it’s up to the company’s management to take the steps  
11 necessary to make sure that the company is a viable entity.” (*Id.*) According to RUCO, it would be  
12 especially inappropriate to grant a DSIC without taking into account savings in operating expenses  
13 that RUCO believes would result from replacing aging plant with new plant. (*Id.*)

14 RUCO provided in Phase 1 a copy of a June 1999 National Association of State Utility  
15 Consumer Advocates (“NASUCA”) Resolution “Discouraging State Regulatory Commissions from  
16 Adopting Automatic Adjustment Charges for Water Company Infrastructure Costs.” (*Id.*) NASUCA  
17 “strongly recommended[ed]” that DSIC-type mechanisms not be authorized because NASUCA  
18 believes that the DSIC-type mechanisms (1) contradict sound rate of return ratemaking principles,  
19 including the matching principle; (2) circumvent regulatory review of rate base items for prudence  
20 and reasonableness; (3) create bad public policy by eliminating the incentive to control costs between  
21 rate cases and incentivizing increased spending; (4) reduce rate stability and distort proper price  
22 signals by causing frequent rate increases; (5) are unnecessary to ensure adequate water quality,  
23 pressure, and continuity of service; (6) inappropriately reward water companies that imprudently fall  
24 behind in infrastructure improvements; and (7) shift business risk away from water companies and  
25 toward consumers. (*Id.*) RUCO also cited a report on cost trackers published in September 2009 by  
26 a principal with the National Regulatory Research Institute, which asserted that cost trackers result in  
27 higher utility costs and undercut the positive effects of regulatory lag, and April 2009 testimony  
28 opposing a DSIC-type mechanism made by the Consumer Advocate for the Commonwealth of

1 Pennsylvania before the Pennsylvania House Consumer Affairs Committee. (*Id.* at 98-99.) In  
2 addition, RUCO stated that the Commission had recently rejected a DSIC-type mechanism for  
3 Arizona-American (in Decision No. 72047 (January 6, 2011)) because it would have covered routine  
4 investments in plant and thus “d[id] not warrant the extraordinary ratemaking device of an adjuster  
5 mechanism.” (*Id.* at 99.)

6 Although RUCO opposes adoption of a DSIC, RUCO asserted in Phase 1 that any DSIC  
7 approved by the Commission should:

- 8 • Only apply to those Eastern Group systems that have water loss in excess of 10.00  
percent—specifically Miami, Oracle/SaddleBrooke Ranch, and Bisbee;
- 9 • Be limited to one filing per year;
- 10 • Include an Operations & Maintenance (“O&M”) expense offset of 15.00 percent, to  
11 ensure that ratepayers benefit from reductions in O&M expense resulting from the  
replacement of aging infrastructure; and
- 12 • Be capped at 4.00 percent over three years subject to an annual earnings test.<sup>16</sup>

13 Mr. Rigsby explained in Phase 1 that the O&M expense offset would be a proxy for his original  
14 recommendation that a specified monetary credit be applied to each foot of replacement line  
15 recovered through the DSIC, which would be difficult to apply because certain of the plant assets  
16 proposed to be included in a DSIC cannot be measured in linear feet. (*Id.*) RUCO asserted that the  
17 O&M offset would address RUCO’s concerns that ratepayers will not benefit from the DSIC even  
18 though replacement of aging infrastructure should result in reduced O&M expenses. (*Id.*)

#### 19 Staff’s Phase 1 Arguments

20 Staff also opposed AWC’s proposed DSIC in Phase 1, for reasons similar to those described  
21 by RUCO. Specifically, Staff expressed concern that a DSIC alters the balance of ratemaking lag by  
22 reducing lag time for recovery of depreciation and return on plant investments, to the benefit of AWC  
23 and the detriment of its ratepayers; that allowing recovery of capital improvement costs between  
24 regular rate cases results in less scrutiny of plant investments both as to prudence and the used and  
25 usefulness of the plant; and that the DSIC, like the ACRM, may “consume significant regulatory  
26 resources” because of the guidelines that will need to be established regarding the capital  
27

28 <sup>16</sup> Decision No. 73736 at 99.

1 improvements to which the DSIC would apply, the frequency and limitations on rate modifications,  
2 and requirements for customer notice and reporting. (*Id.* at 99-100.) Staff acknowledged that the  
3 DSIC would present benefits as well—to AWC in the form of quicker recovery of depreciation and  
4 returns on capital improvements as well as improved cash flow, and to ratepayers in the form of  
5 gradualism, potentially fewer future rate cases, and improved service and reliability (resulting from  
6 AWC’s increased replacement of aging and deteriorating plant and reductions in water loss). (*Id.*)  
7 Staff also acknowledged that the benefits of the DSIC “may offset any disruption to the balance of  
8 regulatory lags and imposition on regulatory resources,” but ultimately recommended denial of the  
9 DSIC because its particulars and consequences had not been sufficiently resolved and needed further  
10 consideration. (*Id.*)

11 Staff viewed the DSIC as an adjustor mechanism, the use of which should be limited to  
12 “extraordinary circumstance[s],” and asserted that AWC’s proposed use of the DSIC is for routine  
13 expenditures and therefore unjustified. (*Id.*) Staff did not consider AWC’s Eastern Group  
14 infrastructure replacement needs, even assuming a \$67 million cost estimate, to be extraordinary.  
15 (*Id.*)

16 In response to AWC’s evidence supporting the DSIC in Phase 1, Staff observed that the  
17 DSIC’s adoption in only 11 states suggested that its costs outweigh its benefits. (*Id.*) Staff also cited  
18 NASUCA’s opposition to DSIC-type mechanisms and an advocacy organization’s October 2011  
19 “Fact Sheet” describing the DSIC as a “Rip-Off for Consumers.”<sup>17</sup> (*Id.*) In addition, Staff pointed  
20 out that Arizona water utilities are all obligated to provide safe and reliable drinking water, with or  
21 without a DSIC, and that the proposed DSIC raised the element of single issue ratemaking. (*Id.* at  
22 100-101.)

23 Staff recommended in Phase 1 that instead of approving a DSIC, the Commission could  
24 approve a SWIP that would:

- 25 • Apply only to the Miami and Bisbee systems;
- 26 • Apply only to replacements of transmission and distribution mains;

27 \_\_\_\_\_  
28 <sup>17</sup> The “Fact Sheet” was published by Food & Water Watch, a non-profit organization that promotes, among other things, “clean, publicly controlled water.” (*See* Phase 1 Ex. S-4 at att. A; Phase 1 Ex. A-37.)

- 1 • Allow deferral of depreciation expense on qualified plant for 24 months after placed into  
service or until rates take effect for which the plant is included in rate base, whichever  
2 comes sooner;
- 3 • Allow recording and deferral of cost of money using the AFUDC rate on qualified plant  
for 24 months after placed into service or until rates take effect for which the plant is  
4 included in rate base, whichever comes sooner;
- 5 • Require full regulatory review of depreciation and cost of money deferrals for compliance  
with traditional ratemaking conditions (e.g., prudence, used and usefulness, excess  
6 capacity) in the rate case following the plant in-service date;
- 7 • Require amortization of allowed combined depreciation and cost of money deferrals over  
a 10-year period;
- 8 • Condition depreciation and cost of money deferrals during the amortization period upon  
(1) AWC's maintenance of records correlating depreciation and cost of money deferrals  
with associated plant and (2) AWC's demonstrating (during rate cases) that the plant  
9 replacements contributed to reduced water loss; and
- 10 • Disallow depreciation and cost of money deferrals, wholly or in part, for deficiencies in  
records or deficiencies in demonstrating reduced water loss tied to plant replacements.<sup>18</sup>

11 In spite of its primary recommendation in Phase 1 to deny the DSIC and approve the SWIP,

12 Staff also recommended conditions to be imposed for any DSIC that the Commission may decide to  
13 approve for AWC's Eastern Group. (*Id.*) Specifically, Staff recommended that:

- 14 • The DSIC be limited to Eastern Group subsystems with water loss over 10 percent (i.e.,  
Oracle/SaddleBrooke, Bisbee, and Miami);
- 15 • AWC be required to submit quarterly filings for the first year, semi-annual filings  
thereafter, and cumulative annual reports;
- 16 • DSIC charges be revised and become effective on a yearly basis, 30 days after each  
annual filing;
- 17 • Staff be required to review AWC's initial annual filing and to prepare a memorandum and  
18 recommended order to be approved by the Commission before the initial DSIC surcharge  
can be implemented;
- 19 • Staff be permitted to review subsequent DSIC filings at Staff's discretion (no later than  
20 AWC's next rate case);
- 21 • Any over-collections of surcharges (for improperly calculated DSICs after the initial year)  
22 be refunded with interest at the weighted average cost of capital ("WACC") authorized in  
AWC's most recent rate case, with the refund to be implemented as determined by the  
Commission in a future rate case;
- 23 • Each annual increase (initial and subsequent) in DSIC charges be limited to 2 percent of  
the Commission-authorized revenue by subsystem;
- 24 • Cumulative annualized DSIC revenue by subsystem be limited to 6 percent;
- 25 • Plant items eligible for the DSIC be restricted to the following NARUC USOA plant  
accounts:
  - 26 ○ 343—Transmission and Distribution Mains,
  - 27 ○ 344—Fire Mains,

28 <sup>18</sup> Phase 1 Ex. S-3 at 36.

- 1           ○ 345—Services,
- 2           ○ 346—Meters,
- 3           ○ 347—Meter Installations, and
- 4           ○ 348—Hydrants;
- 5       ● AWC be required to record replacement of plant items in accordance with the NARUC
- 6       Uniform System of Accounts (“USOA”);
- 7       ● AWC be required to include in each DSIC filing the total amount of plant built during the
- 8       applicable period, reconciled to the amounts recorded by USOA plant account, along with
- 9       supporting documentation and any required regulatory permits;
- 10       ● DSIC revenue be reduced by 10 percent to account for any cost savings (such as reduced
- 11       operating expenses due to plant improvements);
- 12       ● DSIC revenue be subjected to an earnings test, performed each time Staff reviews an
- 13       AWC DSIC filing, to limit DSIC revenue when operating income (rate base x WACC)
- 14       exceeds authorized WACC, with the earnings test to be:
  - 15           ○ Based on the most recent available operating income adjusted for any
  - 16           operating revenue and expense adjustments adopted in this rate case, and
  - 17           ○ Based on the rate base adopted in this rate case, updated to recognize changes
  - 18           in plant, accumulated depreciation, contributions in aid of construction
  - 19           (“CIAC”), advances in aid of construction (“AIAC”), and accumulated
  - 20           deferred income taxes (“ADIT”) through the most recently available financial
  - 21           statements (no less than quarterly);
- 22       ● AWC be required to notify customers of changes in the DSIC by including appropriate
- 23       explanatory information on the first bill to be received following any change in the DSIC
- 24       rate and on the first bill to be received following the effective date of the rates established
- 25       in this rate case;
- 26       ● DSIC eligibility be restricted to replacement facility costs (from prescribed USOA
- 27       accounts) to serve existing customers;
- 28       ● Plant projects funded through federal, state, and other non-investor sources be ineligible
- for DSIC treatment;
- The DSIC charge for each customer be calculated as a percentage (carried to two decimal
- places) of the total amount billed to the customer under AWC’s otherwise applicable rates
- and charges; and
- DSIC charges collected be subject to refund to customers if AWC cannot demonstrate a
- reduction in water loss.<sup>19</sup>

Staff disagreed in Phase 1 with AWC’s characterization of the DSIC as equivalent to an ACRM, not because of distinctions in how the DSIC would operate in practice as compared to an ACRM, but because of the justification for and plant additions that would be supported by the DSIC as opposed to the ACRM. (*Id.* at 103.) Staff witness Mr. Michlik pointed out in Phase 1 that while a water company has no control over the amount of arsenic in its ground water supply, it can impact its

<sup>19</sup> Decision No. 73736 at 101-103.

1 water loss and, further, that the ACRM was implemented both to address the “extraordinary financial  
2 burden” that utilities would face as a result of the new arsenic MCL and the “overwhelming  
3 regulatory burden” to the Commission expected to result from receiving many nearly simultaneous  
4 urgent filings caused by the arsenic MCL. (*Id.*) Staff also recounted the history of the Commission’s  
5 adoption of the ACRM, which included numerous meetings over approximately a two-year period.  
6 (*Id.*)

7 Staff witness Mr. Fox testified in Phase 1 concerning the similarities and distinctions among  
8 the ACRM, AWC’s proposed DSIC, and Staff’s recommended SWIP. Mr. Fox observed that Staff’s  
9 review of ACRM filings generally involves at least three distinct members of Staff, generally takes  
10 longer than the originally anticipated 60 days, occasionally takes up to or even more than a year, and  
11 is limited to the two steps prescribed for each approved ACRM. (*Id.*) Mr. Fox testified that the  
12 DSIC review process would be virtually the same.<sup>20</sup> (*Id.*) Mr. Fox also stated that Staff resources are  
13 one reason for Staff’s recommendation of a SWIP rather than a DSIC in Phase 1 because Staff  
14 currently has very limited personnel available in general and also specifically with any experience  
15 reviewing ACRM filings. (*Id.*) Staff believed that the DSIC could result in numerous filings for  
16 increases, although it is likely (due to the overall cap proposed in the Phase 1 DSIC proposal) that  
17 there would have been only three distinct filings in between rate cases, each resulting in a relatively  
18 minimal rate increase. (*Id.* at 103-104.) Additionally, Mr. Fox pointed out in Phase 1 that the DSIC  
19 proposal did not require a full permanent rate case application within a specified brief period of time,  
20 while the ACRM does. (*Id.* at 104.) Mr. Fox also confirmed that the schedules AWC proposed to  
21 include in its DSIC filing are the same schedules required in an ACRM application. (*Id.*) Mr. Fox  
22 added that any DSIC should include deduction of ADIT from the cost of plant additions included in  
23 the DSIC, something that Staff now believes should have been required for the ACRM. (*Id.*)

---

24 <sup>20</sup> Mr. Fox stated:

25 So I think the process is essentially the same. I have an engineer do an evaluation of whether or not  
26 the plant went into service and whether it's used and useful. We'll review the supporting  
27 documentation, the invoices, the contracts, overheads, et cetera, accumulate the cost, and any - - and,  
28 you know, calculate a revenue requirement and use whatever rate design is approved and look at what  
the impact is on the typical customer and prepare a recommendation, and, of course, if RUCO submits  
a report, we would include that analysis in preparing our memorandum and recommended opinion and  
order.

(Phase 1 Tr. at 1456.)

1 In Phase 1, Mr. Fox explained that if the SWIP were adopted there would have been no rate  
 2 changes or rate proceedings in between rate cases. (*Id.*) In addition, Mr. Fox stated, recovery under  
 3 the SWIP would be slightly higher than recovery under the DSIC because the SWIP would have  
 4 involved AFUDC and the need to compensate AWC for the time value of money.<sup>21</sup> (*Id.*) Staff  
 5 asserted in Phase 1 that the SWIP would permit AWC to realize all the financial benefits of new  
 6 plant, such as depreciation, until its next rate case while maintaining balance in regulatory lag and the  
 7 principles of the historical test year. (*Id.*)

### 8 Summary of Settlement Agreement<sup>22</sup>

9 The signatory parties assert that the Phase 2 settlement process was open, transparent and  
 10 inclusive of all parties. According to AWC witness Reiker, there were three formal negotiation  
 11 sessions over a period of weeks involving the Company, Staff, and RUCO, with many of the  
 12 intervenors attending two of the sessions. (Tr. 48-52.) Staff witness Olea stated that the negotiations  
 13 were “transparent, professional and open to all parties in this docket. All parties were allowed to  
 14 openly express their views and opinions on all issues.” (Ex. S-1, at 9.) RUCO witness Mr. Quinn  
 15 agreed that RUCO participated vigorously in the settlement discussions and was given the  
 16 opportunity to express its views during negotiations, although RUCO ultimately did not sign the  
 17 Agreement. (Tr. 392-396.)

### 18 Key Provisions of SIB Mechanism

19 The Settlement Agreement includes a number of provisions related to the SIB mechanism and  
 20 surcharge that the signatory parties claim contains significant compromises compared to AWC’s  
 21 Phase 1 DSIC proposal, as revised during the course of the Phase 1 proceedings.

22 The Settlement provides, among other things for: Commission pre-approval of SIB-eligible  
 23 projects; SIB project eligibility criteria; a limit on SIB surcharge recovery to the pre-tax rate of return  
 24 and depreciation expense associated with SIB-eligible projects; an “efficiency credit” of five percent;  
 25 a cap on the SIB surcharge of five percent of the Phase 1 revenue requirement; separate line items on  
 26 customer bills reflecting the SIB surcharge and the efficiency credit; Commission approval of the SIB

27 <sup>21</sup> The analogy provided was that with the DSIC, a customer would pay a dollar today, versus instead paying a dollar  
 28 and ten cents a year from today with the SWIP. (*See* Phase 1 Tr. at 1464.)

<sup>22</sup> The Settlement Agreement (admitted at the Phase 2 hearing as Ex. A-1) is attached hereto as “Attachment A.”

1 surcharge prior to implementation and adjustments; a limit of five SIB surcharge filings between  
2 general rate cases; an annual true-up of the SIB surcharge; and notice to customers at least 30 days  
3 prior to SIB surcharge adjustments. (Ex. A-1.)

#### 4 SIB Mechanism

5 As defined in the Settlement, the SIB mechanism “is a ratemaking device designed to provide  
6 for the timely recovery of the capital costs (depreciation expense and pre-tax return on investment)  
7 associated with distribution system improvement projects meeting the requirements contained herein  
8 and that have been completed and placed in service and where costs have not been included for  
9 recovery in Decision No. 73736.” (Ex.A-1, ¶2.3.)

10 The SIB surcharge would be applicable only for plant replacement investments to provide  
11 adequate and reliable service to existing customers and that “are not designed to serve or promote  
12 customer growth.” (*Id.* at ¶2.1.)

#### 13 Approval of SIB-Eligible Projects

14 Under the terms of the Settlement Agreement, all of the SIB-eligible projects must be  
15 reviewed by Staff and approved by the Commission prior to being included by AWC in the SIB  
16 surcharge. For purposes of eligibility in this case, the specific projects proposed for inclusion in the  
17 initial surcharge are described in Exhibit A to the Settlement, which, according to Mr. Reiker, Staff  
18 has now reviewed and approved. (Ex. A-2, at 11.) On a going-forward basis, all of the projects must  
19 be completed and placed into service prior to being included in the SIB surcharge. (Ex.A-1, ¶2.5.)  
20 AWC is also required to file a report with the Commission every six months summarizing the status  
21 of all SIB-eligible projects. (*Id.* at ¶4.8.)

#### 22 Costs Eligible for SIB Recovery

23 Cost recovery under the SIB mechanism is allowed for the pre-tax return on investment and  
24 depreciation expense for projects meeting the SIB-eligible criteria and for depreciation expense  
25 associated with those projects, net of associated plant retirements. (*Id.* at ¶3.2.) The Settlement  
26 provides that the rate of return, depreciation rates, gross revenue conversion factor and tax multiplier  
27 are to be the same as those approved in Phase 1 in Decision No. 73736. (*Id.* at ¶3.2.1, 3.2.2, 3.2.3.)  
28

1                   **Efficiency Credit**

2           The Settlement provides that the SIB surcharge will include an “Efficiency Credit” equal to  
3 five percent of the SIB revenue requirement. (*Id.* at ¶3.3.)

4                   **Surcharge Cap**

5           The Agreement caps the amount that is permitted to be collected annually by each SIB  
6 surcharge filing to five percent of the revenue requirement authorized in Decision No. 73736. (*Id.* at  
7 ¶3.4.)

8                   **Timing of SIB Surcharge Filings**

9           Under the Settlement, AWC: may file up to five SIB surcharge requests between rate case  
10 decisions; may make no more than one SIB surcharge filing every 12 months; may not make its  
11 initial SIB surcharge filing for the Eastern Group prior to 12 months following the effective date of  
12 Decision No. 73736 (*i.e.*, February 20, 2014); must make an annual SIB surcharge filing to true-up its  
13 surcharge collections; and must file a rate case application for its Eastern Group no later than August  
14 31, 2016, with a test year ending no later than December 31, 2015, at which time any SIB surcharges  
15 then in effect would be reviewed for inclusion in base rates in that proceeding and the surcharge  
16 would be reset to zero. (*Id.* at Sections 4.0 and 5.0.)

17                   **SIB Rate Design**

18           The Settlement Agreement states that the SIB surcharge will be a fixed monthly charge on  
19 customers’ bills, with the surcharge and the efficiency credit listed as separate line items. The  
20 surcharge will increase proportionately based on customer meter size. (*Id.* at Section 8.0.)

21                   **Commission Approval of SIB Surcharge**

22           The Agreement provides that each SIB surcharge filing must be approved by the Commission  
23 prior to implementation. Upon filing of the SIB surcharge application, Staff and RUCO would have  
24 30 days to review the filing and dispute and/or file a request for the Commission to alter the  
25 surcharge or true-up surcharge/credit.<sup>23</sup> AWC is also required to provide a proposed order with each  
26 SIB filing for the Commission’s consideration, and if no objection is filed to the SIB surcharge

27 \_\_\_\_\_  
28 <sup>23</sup> At the hearing, Mr. Olea clarified that because customer notice is required at least 30 days prior to the effective date of a surcharge adjustment (Ex. A-1, ¶7.2), any customer would have an opportunity to object to the Company’s surcharge request prior to the Commission scheduling the matter for consideration at an Open Meeting. (Tr. 310-311.)

1 request the request shall be placed on an Open Meeting agenda at the earliest practicable date. (*Id.* at  
2 Section 9.0.)

### 3 Public Notice

4 Under the terms of the Settlement, at least 30 days prior to a SIB surcharge becoming  
5 effective AWC is required to provide public notice to customers in the form of a bill insert or  
6 customer letter. The notice must include: the individual surcharge amount by meter size; the  
7 individual efficiency credit by meter size; the individual true-up surcharge/credit by meter size; and a  
8 summary of the projects included in the current surcharge filing, including a description of each  
9 project and its cost. (*Id.* at ¶7.2.)

### 10 Positions of the Parties Regarding Settlement Agreement

#### 11 Arizona Water Company

12 In Phase 1, AWC asserted that its proposed DSIC is modeled after and would operate in the  
13 same manner as an ACRM, which has been accepted by the Commission and others as being  
14 consistent with Arizona law. (Phase 1 AWC Br. at 23.) AWC also claimed that the Commission has  
15 substantial discretion to adopt ratemaking methodologies and approaches as necessary to address  
16 particular issues and that the Commission has used this discretion previously to include CWIP within  
17 rate base (to set rates for plant not yet completed at the end of a historical test year) because the  
18 public interest is served by rate stability, not by constant rate hearings. (*Id.* at 23-24.) AWC argued  
19 that the Court of Appeals' decision in *Scates v. Arizona Corp. Comm'n* acknowledged the  
20 Commission's ability to adjust rates outside of a general rate case setting in exceptional  
21 circumstances, but expressly did not decide whether the Commission could authorize a partial rate  
22 increase without requiring completely new submissions or "whether the Commission could have  
23 referred to previous submissions with some updating or whether it could have accepted summary  
24 financial information." (Phase 1 AWC Br. at 23-25 (quoting *Scates*, 118 Ariz 531, at 537, 578 P.2d  
25 612, at 618 (App. 1978).) In response to RUCO's arguments in Phase 1, AWC asserted that RUCO  
26 had ignored that the DSIC was modeled on the ACRM, which the Commission has determined to be  
27 constitutional. AWC also argued that the Arizona Supreme Court in *Arizona Cmty. Action Ass'n v.*  
28

1 *Arizona Corp. Comm'n* authorized step increases between rate cases under certain conditions. (Phase  
2 1 AWC Reply Br. at 14-15, *citing Arizona Cmty. Action*, 123 Ariz. 228, 599 P.2d 184 (1979).)

3 AWC contends in Phase 2 that the SIB is a necessary remedy for the Company's inability to  
4 recover its cost of service for the past 16 years, resulting in AWC's shareholders subsidizing the  
5 Company's operations by more than \$41 million since 1996. (Tr. 63-64.)<sup>24</sup> The Company asserts that  
6 its inability to earn authorized returns has undermined the ability to finance critical infrastructure  
7 replacement and improvement projects, resulting in detrimental impacts on customers due to frequent  
8 line breaks on aging distribution lines. (Phase 1 Tr. 329, 370.)

9 AWC claims that thousands of breaks occur every year in the Eastern Group systems but  
10 current ratemaking policies hinder the Company's ability to make necessary infrastructure  
11 replacements and improvements. The Company points out that its Eastern Group contains over 3.5  
12 million lineal feet (600 miles) of water mains and over 33,000 service connections, of which 371,000  
13 lineal feet and 4,915 service connections need to be replaced over the next ten years. (Water Loss  
14 Reduction Report, at 7, 18; Phase 1 Exs. A-10, at 8 and A-28, at 35.)

15 In response to criticisms from RUCO, AWC asserts that although it regularly replaces failing  
16 infrastructure, and has a rigorous water loss reduction program, those ongoing efforts are not  
17 sufficient to replace the large portions of infrastructure that are at or beyond their useful lives. (Phase  
18 1 Exs. A-9, at 14 and A-28, at 43-49.) According to AWC, the scale of the needed replacement  
19 program dwarfs the resources available to the Company, thereby requiring implementation of a  
20 ratemaking tool to assist in those efforts. (Phase 1 Exs. 9, at 15-16 and A-29, at FKS-RB8.) The  
21 Company argues that RUCO presented no evidence disputing the impending water infrastructure  
22 replacement crisis facing the Company; nor did RUCO present any credible evidence that a SIB  
23 mechanism is not fully justified under these circumstances.

24 AWC claims that its infrastructure replacement program would require the expenditure of  
25 approximately \$67 million over the next ten years, which is nearly twice the amount of capital that  
26 was required to comply with the federal arsenic standards. (Phase 1 Exs. A-9, at 14-25, A-10, at 4-5,

27 \_\_\_\_\_  
28 <sup>24</sup> Mr. Reiker conceded that AWC paid out to shareholders substantially more than \$41 million in dividends over the same period. (Tr.118-119.)

1 and A-28, at 73, 81.) The Company contends that spending \$67 million over the next ten years is an  
2 extraordinary expense that it does not have the resources to fund. (Phase 1 Ex. A-9, at 15-16; Phase 1  
3 Tr. at 370.) AWC asserts that its shareholders recently infused over \$10 million in equity, that the  
4 Company is not able to fund the needed replacements internally, and that its ability to finance those  
5 projects through issuance of additional long-term bonds is compromised by the Company's weakened  
6 financial state. (Phase 1 Tr. 332, 365-371.)

7 The Company argues that the SIB mechanism would provide credit support that will assist its  
8 efforts to attract capital to finance the infrastructure projects. AWC points out that the water industry  
9 is among the most capital intensive industries, and the SIB mechanism will help mitigate regulatory  
10 lag and add stability to cash flows, thereby helping to support the Company's credit quality, bond  
11 rating, and ability to attract capital. (Phase 1 Ex. A-34, at 21-22, 26; Phase 1 Tr. at 329-332.) AWC  
12 also contends that a DSIC-like mechanism, such as the SIB, would be viewed by credit rating  
13 agencies as credit supportive. (Phase 1 Ex. A-34, at 22-26.) AWC further claims that the SIB  
14 mechanism will help the Company's ability to recover its cost of service and will reduce regulatory  
15 lag for the critical replacement projects. (Tr. 64; Ex. A-2, at 22.)

16 AWC also argues that the SIB mechanism, like the ACRM that was approved previously,  
17 would provide significant benefits to customers by allowing the Company to replace and upgrade  
18 aging infrastructure while implementing more gradual and smaller rate increases. (Phase 1 Exs. A-5,  
19 at 4-5 and A-34, at 26-27.) The Company points out that the SIB-eligible projects would be limited  
20 to aging infrastructure used to serve existing customers, and for which there is no disagreement  
21 regarding the need for replacement. (Ex. A-1, at Ex. A; Tr. 72-73, 127-128; Phase 1 Exs. A-9, at 17-  
22 20 and A-28, FKS-13.)

23 AWC disputes RUCO's contention that a DSIC, or SIB as is now proposed, would shift risks  
24 to ratepayers because, according to the Company, absent approval of a SIB-like mechanism, the  
25 continued lag in recovery of infrastructure capital investment would leave the Company unable to  
26 recover its cost of service in a timely manner. (Phase 1 Exs. A-5 and A-34, at 6.) AWC contends that  
27 an ongoing inability to earn its authorized return on investment would ultimately result in higher rates  
28 to customers due to higher borrowing costs and more frequent rate cases. (Phase 1 Ex. A-5, at 6.)

1 The Company claims that rather than shifting risks to customers, the SIB would more closely align  
2 cost recovery with the customers that benefit from the infrastructure replacement projects. AWC also  
3 asserts that the SIB mechanism would promote rate stability by imposing more gradual, and smaller  
4 rate increases, while at the same time allowing the Company a better opportunity to recover its cost  
5 of service, resulting in a healthier company. (Tr. 64-65, 303; Ex. A-2, at 12-13.) AWC claims that  
6 RUCO's Director agreed that, overall, rate gradualism and a healthy utility company provide benefits  
7 to customers. (Tr. 423, 453-455.)

8 AWC also opposes RUCO's suggestion that if a DSIC-like or SIB mechanism is approved,  
9 the Commission should reduce the Company's return on equity ("ROE"). The Company's witness in  
10 Phase 1, Ms. Ahern, testified that it was important for purposes of raising capital that AWC receive a  
11 sufficient ROE in conjunction with a DSIC mechanism because even with such a mechanism  
12 investors' expected returns are not diminished. (Phase 1 Ex. A-34, at 29; Phase 1 Tr. 997-998.) Ms.  
13 Ahern stated that none of the other states that have adopted DSIC-like mechanisms have reduced the  
14 utility's ROE as a result. (*Id.*) The Company also cites to Staff witness Mr. Olea's testimony at the  
15 hearing that the 10.55 percent ROE authorized by the Commission in Phase 1 should not be reduced  
16 as a result of the SIB Settlement Agreement because of the five percent efficiency credit built into the  
17 Agreement. (Tr. 272-273, 275-276.) AWC points out that Mr. Olea added that because the SIB-  
18 eligible plant is only a small portion of AWC's rate base, the authorized ROE and SIB should be  
19 considered separately. (*Id.* at 317-319.) AWC asserts that RUCO did not present evidence as to what  
20 an appropriate ROE adjustment should be as a result of a SIB, and presented no studies to support its  
21 claim that a ROE adjustment should be made. (Tr. 427, 487-489.)

22 With respect to the issue of using depreciation expense as an offset to infrastructure  
23 replacement costs, AWC claims that the Commission's rules define depreciation expense as allowing  
24 for a utility's recovery of the original cost of plant investment, less salvage value. (Arizona  
25 Administrative Code ("A.A.C.") R14-2-102(A)(3).) The Company contends that allowed  
26 depreciation expense does not provide for extra funds, beyond the return of the capital investment in  
27 rate base, to fund plant replacements at many times the cost of the plant being replaced. AWC asserts  
28 that the Commission's rules, as well as its historic treatment of depreciation expense, entitle a utility

1 to recovery of its investment (through depreciation) and on its investment (through ROE). (AWC Br.  
2 at 24-25.)

3       Regarding the legal arguments associated with the SIB mechanism, AWC argues that  
4 although the Arizona Supreme Court requires that a utility's fair value rate base must be utilized  
5 when setting rates,<sup>25</sup> the Commission has substantial discretion to adopt methodologies and  
6 approaches necessary to address particular issues, such as the impending infrastructure crisis the  
7 Company claims is facing Arizona's investor owned water companies. (*Arizona Corp. Comm'n v.*  
8 *Arizona Pub. Serv. Co.*, 113 Ariz. 368, 370, 555 P.2d 326, 328 (1976).) AWC asserts that in *Arizona*  
9 *Public Service*, the Arizona Supreme Court found that the Commission has discretion to consider  
10 post-test year events and it is in the public interest to have stability in the rate structure rather than a  
11 constant series of rate cases. (*Id.*)

12       AWC also cites *Arizona Community Action* in support of its contention that approval of the  
13 SIB mechanism is within the Commission's ratemaking discretion. In *Arizona Community Action*,  
14 the Arizona Supreme Court found that a two-step process for including CWIP in rate base, and  
15 increasing rates accordingly, was reasonable. Although the court struck down the Commission's use  
16 of the utility's ROE as the sole criterion for adjusting rates, it found that adding CWIP to the  
17 determination of fair value was reasonable under constitutional requirements if used only for a  
18 limited period of time. (123 Ariz. at 230-231, 599 P.2d at 186-187.)

19       The Company also argues that the holding in *Scates* supports the Commission's ability to  
20 adjust rates outside of a general rate case if exceptional circumstances exist, such as the Company  
21 believes are presented in this proceeding. In *Scates*, the Arizona Court of Appeals held that the  
22 Commission was required to determine the utility's fair value prior to authorizing adjustments to a  
23 telephone provider's charges for all installation, moving and changing of telephones. The court  
24 struck down the Commission's approval of rate increases for those charges because the Commission  
25 had not inquired as to whether the increased revenues received by the company resulted in a rate of  
26 return greater or lesser than the return established during the prior rate case hearing. (*Id.* at 534, 578  
27

28 <sup>25</sup> *Simms v. Round Valley Light & Power Co.*, 80 Ariz. 145, 151, 294 P.2d 378, 382 (1956).

1 P.2d at 615.) However, the court in *Scates* stated that there may be exceptional circumstances in  
 2 which the Commission could authorize partial rate increases without the submission of an entirely  
 3 new rate case. (*Id.* at 537, 578 P.2d at 618.)

4 AWC asserts that the SIB mechanism is consistent with the cited court cases because the SIB  
 5 surcharges would be based on specific, identifiable, quantifiable plant additions that are reviewed by  
 6 Staff, and approved by the Commission, before they are implemented. The Company also claims that  
 7 it would be required to file annual summary schedules of infrastructure costs, and how those costs  
 8 would affect customer rates. AWC argues that the five percent annual revenue cap, the limit of five  
 9 SIB surcharge filings between rate cases, the requirement to file a rate case within five years to seek  
 10 recovery of all of the SIB surcharge infrastructure costs, as well as notice requirements and other  
 11 checks and approvals, are all factors that reflect consistency with the public interest, Arizona laws,  
 12 and court cases interpreting the Arizona Constitution and applicable statutes. (AWC Br. at 22.)

### 13 EPCOR

14 EPCOR argues that the Commission should adopt the proposed SIB mechanism as set forth in  
 15 the Settlement Agreement as a means of improving the fairness of water company regulation in  
 16 Arizona and encouraging water utilities to make necessary replacements of water infrastructure.  
 17 (EPCOR Ex. 1, at 2-3.) EPCOR witness Mr. Broderick stated that the SIB mechanism would reduce  
 18 regulatory lag and increase the likelihood that utilities will undertake “earlier, well-paced and  
 19 necessary improvements” to replace infrastructure in order to maintain or improve service to  
 20 customers. (*Id.* at 3.)

21 EPCOR claims that the open and transparent negotiation process that led to the Settlement  
 22 Agreement, and the diverse interests involved, required compromises that resulted in an agreement  
 23 that is in the public interest. EPCOR contends that the SIB mechanism provides benefits to utilities  
 24 and customers alike because it will allow surcharges only for replacement of existing plant and will  
 25 allow for smaller, more gradual increases for customers, as well as an efficiency credit. (EPCOR Br.  
 26 at 2.)

27 ...

28 ...

1                    **Arizona Investment Council**

2                    AIC witness Mr. Yaquinto testified in support of the Settlement Agreement, stating that the  
3 SIB mechanism would provide AWC with an important tool for acquiring the capital needed to  
4 finance needed repairs to, and replacement of, infrastructure in the Company's aging systems. (AIC  
5 Ex. 1, at 4.) He indicated that the SIB surcharge would be permitted only for narrowly defined  
6 criteria, but would allow AWC the opportunity for more timely recovery of plant investments thereby  
7 reducing regulatory lag that he believes penalizes investors. (*Id.*) Mr. Yaquinto stated that AIC  
8 supports SIB-like mechanisms for all water and wastewater companies and, as set forth in the  
9 Settlement, the SIB is expected to serve as a template for other companies. (*Id.*)

10                   AIC supports the Settlement Agreement because it believes the SIB mechanism will position  
11 AWC to compete for needed capital on better terms and conditions than would otherwise be available  
12 to replace critical infrastructure. (*Id.* at 5.) According to AIC, approval of ratemaking mechanisms  
13 like the SIB will signal to investors that there is an improved regulatory environment in Arizona,  
14 which will further enhance the ability of utilities in Arizona to compete for scarce capital. (*Id.*) Mr.  
15 Yaquinto claims that the SIB mechanism will also benefit customers by enabling water companies to  
16 make infrastructure improvements to ensure safe and reliable service, and due to efficiencies from  
17 those infrastructure investments that will flow to customers through the five percent efficiency credit.  
18 (*Id.* at 5-6.) Finally, AIC contends that customers will benefit from the SIB mechanism because there  
19 will be smaller rate increases associated with plant investments that will be spread more gradually.  
20 (*Id.* at 6.)

21                    **Liberty Utilities/Global Water**

22                   Liberty Utilities and Global Water (jointly "Liberty/Global")<sup>26</sup> contend that the SIB is in the  
23 public interest because it provides a needed mechanism for funding infrastructure replacements for  
24 aging facilities. They claim that the level of needed infrastructure investment is substantial and even  
25 if AWC and other water utilities were able to raise the necessary capital to fund such projects, the  
26 result for customers would be massive and sudden rate increases once those investments are

27 \_\_\_\_\_  
28 <sup>26</sup> Liberty/Global filed a joint brief in this case and their arguments in support of the Settlement will therefore be summarized together.

1 recognized in rate base. Liberty/Global state that the better way to address these infrastructure needs  
2 is to adopt a mechanism like the SIB, citing to the testimony of Mr. Olea that companies have to have  
3 the funds to provide adequate, safe, and reliable service – and the SIB will provide a better  
4 opportunity for the Company to do so. (Tr. 375.) Liberty/Global also refer to Mr. Olea’s claim that  
5 the SIB will benefit both the Company and customers by having a company that is capable of making  
6 necessary replacements and improvements so that customers can receive safe and reliable water  
7 service. (*Id.* at 304.)

8 Liberty/Global contend that a key benefit of the SIB is that smaller, more gradual rate  
9 increases are preferable to customers. (Global Ex. 2, at Attach. 2; EPCOR Ex. 1, at 3; RRUI Ex. 1, at  
10 2.) They claim that with more gradual rate increases it is likely that full, contested rate cases seeking  
11 large increases will become less frequent, and that gradualism is built into the Settlement by virtue of  
12 the five percent annual cap on SIB surcharge increases. (Global Ex. 2, at Attach. 2; Ex. A-1, at ¶3.4.)  
13 Another benefit cited by Liberty/Global is the five percent efficiency credit, which they claim has not  
14 been adopted in any other state that has approved a DSIC-like mechanism. (Global Ex. 2, at 3-4.)  
15 They point to Mr. Olea’s testimony that the efficiency credit represents an actual dollar benefit to  
16 ratepayers that the Company will never get back. (Tr. 265, 330.) Liberty/Global further contend that  
17 the SIB will enhance the Company’s financial stability by improving earnings and cash flow, and  
18 thereby its ability to raise funds. (Ex. A-2, at 11-12.)

19 Liberty/Global assert that the Settlement Agreement’s indication that it may be used as a  
20 template for other companies furthers the public interest by providing uniformity of administration,  
21 and potentially reduces Staff’s workload in reviewing SIB filings. (Tr. 208, 248.) Liberty/Global  
22 claim that the SIB was carefully designed because it is intended to be used as a template that would  
23 place more of the burden on utilities, rather than Staff, to allow for quicker processing. (*Id.* at 288,  
24 291-292.)

25 With respect to the issue of using depreciation expense for infrastructure replacements,  
26 Liberty/Global argue that A.R.S. § 40-222 is not a viable alternative to adoption of the SIB. That  
27 statute provides, in relevant part, that the Commission may:  
28

1 ascertain and fix the proper and adequate rates of depreciation of the  
2 several classes of property for each, and each [public service]  
3 corporation shall conform its depreciation accounts to the rates so  
4 ascertained and fixed, and shall set aside the money so provided for out  
5 of earnings and carry such money in a depreciation fund and expend  
6 the fund, and the income therefrom, only for the purposes and under  
7 rules and regulations, both as to original expenditure and subsequent  
8 replacement, as the commission prescribes.

9 Liberty/Global claim that the first part of the statute, relating to fixing depreciation rates, has been  
10 implemented through the Commission's rules and is applied to utilities in Arizona. (A.A.C. R14-2-  
11 102.) However, according to Liberty/Global, the second part of the statute, authorizing the  
12 Commission to require a depreciation fund, is an "obscure and long-dormant provision" that no  
13 witness in any case has advocated be adopted. (Liberty/Global Br. at 7.) They claim that the statute  
14 was enacted in 1912, that the Commission has never used the statute, and "if a special, restricted  
15 depreciation fund was in the public interest, it would have been used by now." (*Id.*)

16 Liberty/Global argue that mandating a depreciation fund would result in higher rates because  
17 if depreciation funds are restricted to infrastructure replacement, rates would need to be higher to  
18 provide sufficient cash flow to the Company. (Tr. 343.) They also claim that because depreciation  
19 expense is based on the original cost of the asset, and plant costs increase over time, a depreciation  
20 fund would not provide adequate capital to replace assets decades later. (*Id.* at 77, 113-114, 360-362.)  
21 Liberty/Global further argue that the statute itself does not allow the Commission to act by ad hoc  
22 orders on this issue, but requires action by "rules and regulations." (A.R.S. § 40-222.) Finally, they  
23 contend that application of the statute would raise serious constitutional issues, likely sparking  
24 litigation, because redirecting depreciation expense to a special restricted fund would not provide the  
25 required return of the utility's investment, thereby violating the "takings clause" of the United States  
26 Constitution, the takings clause of the Arizona Constitution (Article 2, § 17), and Article 15, §§ 3 and  
27 14 of the Arizona Constitution. (Liberty/Global Br. at 7-9.)

28 With respect to the legal arguments raised by RUCO, Liberty/Global claim that the SIB  
mechanism was specifically tailored to comply with all applicable legal requirements regarding  
ratemaking, including the fair value requirement of the Arizona Constitution. They assert that the  
SIB is a ratemaking adjuster mechanism that is designed to provide for the timely recovery of capital

1 costs invested for system improvement projects meeting specific defined criteria, within AWC's  
2 general rate proceeding. Liberty/Global contend that Arizona law does not prohibit use of a  
3 ratemaking adjuster mechanism as long as the mechanism is approved in a rate case and it comports  
4 with the fair value requirement in Article 15, § 14 of the Arizona Constitution. They claim that the  
5 SIB is nearly identical in nature to the Environmental Improvement Surcharge ("EIS") approved for  
6 Arizona Public Service Company ("APS") in Decision No. 73183 (May 24, 2012) pursuant to a  
7 settlement agreement in the last APS rate case. Liberty/Global point out that the APS settlement was  
8 signed by APS, Staff, RUCO and a number of other parties without challenge to the legality of the  
9 EIS. Liberty/Global contend that due to the similarities between the EIS and SIB, the Commission's  
10 approval of the EIS effectively approved the legality of the SIB as well. (Liberty/Global Br. at 10-  
11 11.)

12 Liberty/Global dispute RUCO's contention that approval of a DSIC (or SIB) is an  
13 extraordinary ratemaking scheme that is legally impermissible. They assert that approval of the SIB  
14 would be within the structure of AWC's base rate case, and the Commission has approved many  
15 types of adjusters and similar mechanisms in other dockets. Liberty/Global argue that although the  
16 SIB does not fall into the category of an automatic adjustment clause for specific expenses such as  
17 gas and electric fuel costs, it is intended to recover plant investment costs incurred by the utility for  
18 making necessary system improvements and is therefore consistent with the requirements of *Scates*.  
19 As described in the *Scates* decision, adjustment clauses are generally acceptable if done within the  
20 framework of a utility's rate structure, in accordance with all statutory and constitutional  
21 requirements, and are "designed to insure that, through the adoption of a set formula geared to a  
22 specific readily identifiable cost, the utility's profit or rate of return does not change." (*Scates, supra*,  
23 118 Ariz. 531, 535, 578 P.2d 612, 616 (App. 1978).) According to Liberty/Global, the SIB satisfies  
24 these requirements because the surcharge would apply only to projects meeting specific criteria, and  
25 applies a set formula to readily identifiable and defined plant, using the rate of return established in  
26 Phase 1, thereby ensuring the Company's authorized rate of return does not change. (Ex. A-1, at ¶¶  
27 3.0, 3.2, 6.3.)

28

1 Liberty/Global assert that even if the Commission were to determine that the SIB is not a  
2 ratemaking adjuster mechanism, it is still a lawful surcharge authorizing rate increases based on a  
3 determination of AWC's fair value rate base, pursuant to the holding in *Residential Utility Consumer*  
4 *Office v. Arizona Corp. Comm'n*, 199 Ariz. 588, 20 P.3d 1169 (App. 2001) ("*Rio Verde*").  
5 Liberty/Global claim that contrary to RUCO's contention (Tr. 501), the Arizona Constitution does  
6 not require that the Commission take all ratemaking elements into consideration as would be done in  
7 a general rate case, but rather only requires that the fair value of a utility's property be ascertained  
8 when setting rates. (Arizona Constitution, Article 15, § 14.) They contend that once fair value is  
9 ascertained, as would be done each time a SIB surcharge adjustment is approved, the Commission  
10 has ample discretion to use the fair value in setting rates or adjusting a surcharge.

11 Liberty/Global dispute RUCO witness Mr. Rigsby's claim that the Commission would not be  
12 making a new fair value determination as part of each surcharge filing. (RUCO Ex. 12, at 13.)  
13 Liberty/Global point out that the Settlement Agreement requires a FVRB finding for AWC as  
14 established in Decision No. 73736, plus the additional SIB plant, along with the rate of return as  
15 applied to that FVRB and related revenue. (Tr. 332-333.) Citing *Simms v. Round Valley Light &*  
16 *Power Co.*, 80 Ariz. 145, 294 P.2d 378 (1956), Liberty/Global argue that the SIB fully complies with  
17 the fair value standard because the SIB requires a determination of the fair value of the Company's  
18 rate base, as well as the SIB plant, at the time the surcharges are proposed. (80 Ariz. 145, 151, 294  
19 P.2d 378, 382.) Liberty/Global assert that all the Constitution requires is that the Commission  
20 determine and consider fair value in setting rates, as reinforced in the Arizona Supreme Court's  
21 decision in *US West Comm., Inc. v. Arizona Corp. Comm'n*, 201 Ariz. 242, 245-246, 34 P.3d 351,  
22 354-355 (2001) ("*US West II*") and the Court of Appeals' decision in *Phelps Dodge Corp. v. Arizona*  
23 *Elec. Power Co-op., Inc.*, 207 Ariz. 95, 106, 83 P.3d 573, 584 (App. 2004) ("*Phelps Dodge*").  
24 According to Liberty/Global, both *US West II* and *Phelps Dodge* confirm that the Commission has  
25 broad discretion in using the fair value determination, as long as the fair value is ascertained as part  
26 of the analysis. They claim that the Commission has the discretion to adopt mechanisms necessary to  
27 address particular ratemaking issues, including matters subsequent to a historic test year and  
28 construction projects contracted and commenced during the test year (*Arizona Public Service, supra*,

1 at 371, 555 P.2d at 329), as well as construction work in progress that is not yet in service (*Arizona*  
2 *Comty. Action, supra*, at 230, 599 P.2d at 186.) Liberty/Global also point to the Commission's  
3 adoption in prior cases of an ACRM, without a legal challenge, that enabled water utilities to comply  
4 with federal arsenic standards, as an example of a mechanism that supports approval of the SIB in  
5 this case.

6 Liberty/Global contend that, as a matter of law, the SIB mechanism falls within the  
7 Commission's broad discretion and is consistent with relevant court decisions. They assert that the  
8 Commission has already determined the fair value of AWC's rate base in Phase 1; that any SIB  
9 surcharge will be based on specific infrastructure added to the approved rate base; and that AWC will  
10 be required to file annual summary schedules of the actual plant addition costs, along with FVRB  
11 information that will enable the Commission to determine, in accordance with *Scates*, how the  
12 proposed surcharge would impact the Company's rate of return. Liberty/Global claim that, following  
13 that analysis, under the terms of the Settlement, the SIB surcharge would only be permitted to the  
14 extent that AWC's return on rate base for a particular system does not exceed the rate of return  
15 authorized by Decision No. 73736. (Liberty/Global Br. at 17-18.)

16 Liberty/Global also argue that the SIB mechanism satisfies all required ratemaking elements  
17 under Arizona law because the SIB revenue requirement is based on the established rate of return, as  
18 well as the Phase 1 authorized gross revenue conversion factor/tax multiplier and depreciation rates,  
19 less the five percent efficiency credit, which thereby effectively reduces the SIB plant return on  
20 equity and ensures that AWC's rate of return does not increase. Other requirements cited by  
21 Liberty/Global include: the limitation of SIB surcharge filings to once every 12 months, and no more  
22 than 5 filings between general rate cases; annual true-up filings; submission of detailed information  
23 showing an analysis of the effect of the SIB plant on FVRB, revenue, and the fair value rate of return  
24 approved in Decision No. 73736; and a 30-day review period for Staff and RUCO, as well as review  
25 and approval by the Commission. (*Id.* at 20-21.) Finally, Liberty/Global contend the EIS approved  
26 in the most recent APS rate case, pursuant to a settlement signed by RUCO and a number of other  
27 parties, is very similar to the proposed SIB and therefore if the EIS is legal, the SIB must likewise be  
28 legal.

1                    Staff

2                    In Phase 1, Staff asserted that the DSIC, as proposed by AWC, did not comply with the  
3 Arizona Constitution. (Phase 1 Staff Br. at 26.) Staff stated that the Arizona Constitution requires  
4 the Commission to determine the fair value of a utility's property in order to set just and reasonable  
5 rates, but allows the Commission to make adjustments to rates outside of a rate case through rate  
6 adjustors under very limited circumstances. (*Id.*) Staff added that this authority was limited to  
7 exceptional situations and that to remain in compliance with the Arizona Constitution, the  
8 Commission is still required to determine fair value and to consider the overall impact of the  
9 adjustment on the rate of return. (*Id.* (citing *Scates*, 118 Ariz. at 533.)) Staff also asserted in Phase 1  
10 that AWC had not provided sufficient detail to allow for a determination that the proposed DSIC  
11 would meet the constitutional requirements. (*Id.* at 26-27.) For example, Staff expressed doubt in  
12 Phase 1 concerning the extent or nature of Staff's evaluation of the new plant and its prudence,  
13 Staff's ability to evaluate the overall impact of the rate increase, whether the DSIC would apply only  
14 to projects specifically listed in the DSIC Study, and how due process would be ensured. (*Id.*) Staff  
15 concluded in Phase 1 that without all of these details, the constitutionality of the DSIC cannot be  
16 determined and, thus, the DSIC must be denied.

17                    Staff further asserted in Phase 1 that the scope of the DSIC was so broad that the "DSIC  
18 crosses over from the realm of an adjustor mechanism into a rate case." (*Id.* at 28.) Staff claimed in  
19 the prior phase that the DSIC would not be used to recover costs, but instead to increase rate base;  
20 that the increased rate base would be included for all future calculations of rates; and that the  
21 surcharge would continue for the life of the asset in question, with the revenue generated to be treated  
22 as income rather than as a separate fund to be used to acquire the plant or pay the cost of the plant.  
23 (*Id.*) Staff also argued in Phase 1 that there were no exceptional circumstances that would justify the  
24 DSIC because AWC always knew that the infrastructure would need to be replaced someday and  
25 could and should have prepared for that day but failed to do so. (*Id.* at 27.)

26                    However, Staff stated in its Phase 1 reply brief that: "Staff does not believe that a DSIC, per  
27 se, would violate the Arizona Constitution so long as its methodology meets the constitutional  
28 mandate," but that Staff was concerned that the proposed DSIC did not meet the mandate. (Phase 1

1 Staff Reply Br. at 19.) Staff agreed with AWC's contention that judicial interpretation of the Arizona  
2 Constitution is the origin of the requirement for a finding of fair value and the formula for ratemaking  
3 in which a rate of return is applied to that fair value. (*Id.* at 19-20 (citing *US West II*, 201 Ariz. 242,  
4 245-46, 34 P.2d 351, 354-355).) Staff acknowledged that exceptions have been created for matters  
5 after the historic test year, including construction projects commenced during the test year and CWIP;  
6 for interim rates and automatic adjustment clauses; and for the ACRM. (*Id.* at 20-21.) Staff asserted,  
7 however, that the DSIC proposed in Phase 1 did not qualify as any of these—that it could not be  
8 justified as an interim rate because there was no emergency, and it could not be justified as an  
9 adjuster mechanism because it was designed to pass on the cost of new plant rather than changes in  
10 specific and segregated costs. (*Id.* at 21-22.) Staff indicated that, unlike an ACRM, the proposed  
11 Phase 1 DSIC would apply to more than one plant, would not be limited to only two step increases,  
12 and would not impose a requirement for a rate case application to be filed by a specific date with a  
13 rate case (including a true-up) to follow. (*Id.* at 22.)

14 In Phase 2, Staff negotiated and signed the Settlement Agreement that Staff asserts remedies  
15 the issues identified by Staff in Phase 1 as being legally problematic. Staff contends that the record  
16 supports a finding that AWC's infrastructure replacement needs are extraordinary in scope, and that  
17 customers will benefit from timely replacement of aging plant through decreased water losses, fewer  
18 outages, and improved quality of service. (Phase 2 Staff Br. at 2.) Staff disputes RUCO's assertion  
19 that rate setting methods must be limited to those traditionally employed in general rate cases. Staff  
20 points to the ACRM as a mechanism initially employed by the Commission a decade ago, without  
21 legal challenge, to address an extraordinary situation presented by more stringent arsenic limits  
22 imposed by the USEPA, which adversely affected a number of water companies in Arizona. (*See*,  
23 *e.g.*, Decision No. 66400 (October 14, 2003).)

24 According to Staff, the SIB mechanism comports with the requirements of the Arizona  
25 Constitution because it would require the Commission to ascertain AWC's fair value rate base each  
26 time a surcharge adjustment is made. Staff points out that Section 7 of the Settlement specifically  
27 requires the Company to provide a schedule (Schedule D) with each adjustment filing that would  
28 enable the Commission to update the fair value rate base determined in Phase 1 to reflect additional

1 SIB-eligible plant, which updated fair value finding would be set forth in a Commission Order  
2 approving each surcharge request. Staff asserts that it is not reasonable to suggest that the  
3 Commission would not use the updated fair value information “to aid it in the proper discharge of its  
4 duties...” as required by the Constitution. (Arizona Constitution, Article 15, § 14.) Staff also notes  
5 that the Commission may terminate the SIB at any time. (Ex. A-1, at ¶10.1.)

6 Staff argues that the Commission has broad discretion in employing appropriate rate setting  
7 methodologies. Staff cites *Simms, supra*, wherein the Arizona Supreme Court stated that “[t]he  
8 commission in exercising its rate-making power of necessity has a range of legislative discretion and  
9 so long as that discretion is not abused, the court cannot substitute its judgment as to what is fair  
10 value or a just and reasonable rate.” (80 Ariz. 145, 154, 294 P.2d 378, 384, internal citation omitted.)  
11 Staff claims that the SIB would allow the Commission to implement a series of step rate increases,  
12 only after making an updated fair value finding, as a means of enabling AWC to undertake  
13 substantial infrastructure replacements without having to file a series of rate cases – which the courts  
14 have found would not be in the public interest. (*Arizona Public Service, supra*, 113 Ariz. 368, 371,  
15 555 P.2d 326, 329.) Staff also cites *Arizona Community Action*, wherein the Arizona Supreme Court  
16 upheld the Commission’s approval of step increases associated with CWIP additions (although the  
17 court rejected using APS’ ROE as the sole criterion for triggering an increase). (123 Ariz. 228, 229-  
18 231, 599 P.2d 184, 186-187.) In that case, the court stated that it did not find fault with the  
19 Commission’s attempt to avoid a constant series of extended rate hearings by allowing step increases  
20 based on the updated CWIP adjustments. (*Id.* at 230-231, 599 P.2d at 186-187.) Staff contends that  
21 the SIB does not suffer from the “sole criterion” deficiency rejected by the court because the SIB  
22 does not employ an earnings test, or any other test, that would be subject to control by the Company.

23 Staff points out that the SIB has a number of protections built in, including that: it was  
24 developed within the context of a full AWC rate case; it is limited to replacement projects used to  
25 serve existing customers, less retirements; each SIB surcharge would be capped at five percent of the  
26 Phase 1 revenue requirement, subject to true-up; AWC is required to file a full rate case by August  
27 31, 2016, thus ensuring that the SIB adjustments will be of limited duration; each step increase will  
28 be approved by Commission Order; the SIB may be suspended by the Commission; and the

1 Commission will make a fair value finding prior to approval of each SIB adjustment, based on  
2 detailed schedules verifying the plant additions that are SIB-eligible. (Staff Br. at 6-7.)

3 Staff disputes RUCO's "single issue ratemaking" arguments, claiming that contrary to  
4 RUCO's assertions, the Arizona Constitution does not include that terminology, and under the  
5 holding in *Scates* a full rate case is not required for every rate adjustment given the court's statement  
6 that "[t]here may well be exceptional situations in which the Commission may authorize partial rate  
7 increases without requiring entirely new submissions." (*Scates*, 118 Ariz. at 537, 578 P.2d at 618.)

8 The court in *Scates* stated that it was not deciding "whether the Commission could have referred to  
9 previous submissions with some updating or whether it could have accepted summary financial  
10 information." (*Id.*) Staff claims that the SIB requires updated information to be submitted by the  
11 Company and there is no reason to assume that the Commission would not consider that information  
12 in its evaluation of each SIB surcharge filing. Staff points to Mr. Olea's testimony that if objections  
13 were filed regarding the specific SIB schedules submitted by the Company, "Staff's expectations  
14 would be that the SIB would not go forward and such proceedings as the Commission or Hearing  
15 Division may order would ensue...." (Tr. 250.)

16 Staff also contends that, contrary to RUCO's claims, Staff's position regarding AWC's  
17 proposed DSIC in Phase 1 is not inconsistent with its support for the SIB in Phase 2. Staff asserts  
18 that its concerns in Phase 1 were that the DSIC provided benefits only to the Company, and that the  
19 DSIC lacked certain features that were necessary to comply with Arizona law. Staff claims that those  
20 issues are resolved by the Settlement Agreement because the SIB provides for a five percent  
21 efficiency credit that directly benefits ratepayers, and the SIB contains elements that comply with  
22 Arizona law regarding fair value, step increases, and the corresponding impact on rate of return.  
23 (Staff Br. at 9.)

24 According to Staff, the SIB provides an equitable balance between the interests of the  
25 Company and ratepayers because the SIB will enable AWC to attain timely recovery of capital  
26 investments for needed repairs and replacements while, at the same time, benefitting customers by:  
27 providing better service; imposing a five percent efficiency credit on SIB plant; and providing for  
28 smaller and more gradual rate increases. (*Id.* at 10.) With respect to RUCO's suggestion that AWC's

1 authorized ROE of 10.55 percent should be reduced, Staff contends that RUCO did not present  
2 evidence in either Phase 1 or 2 to support its arguments. Staff claims that “as part of a DSIC-type  
3 mechanism, the parties and the ALJ could consider an *adjustment* to the ROE set by the  
4 Commission.” (*Id.* at 11, emphasis original.) However, Staff argues that the 10.55 percent ROE  
5 approved in Decision No. 73736 should not be modified in Phase 2 because there is no evidence that  
6 AWC’s overall risk would be reduced by adoption of the SIB, and the negotiated five percent  
7 efficiency credit is effectively a surrogate for a ROE adjustment because it reduces the ROE on SIB-  
8 eligible plant by approximately 87 basis points (assuming adoption of AWC’s alternative proposal –  
9 *See* Tr. 233). (Staff Br. at 12-13.)

#### 10 RUCO

11 RUCO argued in Phase 1 that there was no legal basis for the proposed DSIC in Arizona.  
12 RUCO stated that the Arizona Constitution generally requires the Commission to ascertain the fair  
13 value of a utility’s property in Arizona when it engages in ratemaking, but that Arizona courts have  
14 allowed for two situations when the Commission may engage in ratemaking without making a fair  
15 value finding: (1) when the Commission has established an automatic adjuster mechanism, or (2)  
16 when the Commission approves interim rates. (Phase 1 RUCO Br. at 11-13 (citing, *inter alia*, *Scates*  
17 and AZ AG Op. 71-17).) RUCO asserted in Phase 1 that the DSIC was not an adjuster mechanism  
18 because it was not designed to be used to account for fluctuations in specified operating expenses  
19 caused by price volatility, but instead to recover the cost of replacing plant for which there is no  
20 allegation of price volatility. (*Id.* at 11-12.) RUCO further argued that the DSIC could not be  
21 authorized as an interim rate because AWC did not meet the criteria for obtaining interim rates (as  
22 provided in Arizona Attorney General Opinion No. 71-17) and the Company had not requested  
23 interim rates. (*Id.* at 13.) RUCO claimed in Phase 1 that the other states that have DSIC-type  
24 mechanisms have different laws than Arizona, and that Arizona law protects ratepayers from the  
25 piecemeal ratemaking and unfair rates that would result if the DSIC were approved. (*Id.* at 13-14.)

26 In its Phase 1 reply brief, RUCO addressed AWC’s assertion that the DSIC proposed in Phase  
27 1 must be constitutional because the ACRM is constitutional. RUCO claimed that the ACRM  
28 resulted from various stakeholders coming together to address a one-time event (the USEPA’s

1 adoption of a more stringent MCL for arsenic) that would impact dozens of Arizona water companies  
2 simultaneously; that the ACRM has been and is now treated as an adjuster mechanism, which is one  
3 of the limited exceptions to the constitutional fair value requirement as per Arizona case law; that the  
4 legality of the ACRM had never been called into question or reviewed by any Arizona court; and that  
5 whether the ACRM would satisfy the legal standard for an adjuster mechanism is “questionable and  
6 should not be presumed.” (Phase 1 RUCO Reply Br. at 2.) RUCO added that the constitutionality of  
7 the ACRM was not at issue in this case and was irrelevant in considering the legality of the Phase 1  
8 DSIC. (*Id.* at 2-3.) RUCO reiterated that the Commission must find fair value when setting rates  
9 except in limited circumstances, which were not satisfied by the DSIC, and that the proposed DSIC  
10 was therefore not authorized under Arizona law. (*Id.* at 5.)

11 With respect to the Phase 2 Settlement Agreement, RUCO argues that the Agreement and  
12 proposed SIB are not in the public interest because they do not provide sufficient benefits and  
13 protections for ratepayers. RUCO also reiterates many of the same legal arguments it made in Phase  
14 1 contending that like AWC’s proposed DSIC, the SIB would violate Arizona law.

15 RUCO does not appear to dispute AWC’s substantial infrastructure replacement needs;  
16 however RUCO contends that those needs have long been known to the Company; that the  
17 Commission in Decision No. 73736 granted AWC an increase to its ROE to compensate the  
18 Company for those infrastructure needs; that the SIB fails to adequately recognize reduced operating  
19 expenses associated with the replacement plant; that ratepayers will pay more in the long run under  
20 the SIB; and that the five percent efficiency credit on SIB plant is inadequate compensation for the  
21 shifting of risk to ratepayers associated with reduced regulatory lag. (RUCO Br. at 1-3.)

22 RUCO argues that the SIB is not an adjuster mechanism or an interim rate, which it claims are  
23 the only exceptions recognized by the courts to the constitutional requirement of ascertaining and  
24 employing a company’s fair value rate base in setting rates. RUCO cites the *Scates* and *Rio Verde*  
25 decisions by the Court of Appeals to support its contention that adjuster mechanisms may only be  
26 used to adjust narrowly defined operating expenses, such as fuel costs, and that an adjuster clause  
27 may only be implemented as part of a full rate hearing. (*Scates*, 118 Ariz. 531, 535, 578 P.2d 612,  
28 616; *Rio Verde*, 199 Ariz. 588, 592, 20 P.3d 1169, 1173.) RUCO claims that the proposed SIB

1 mechanism is not an adjuster mechanism because its purpose is not to make automatic adjustments  
2 for fluctuating operating expenses, but instead only serves to increase the Company's rate base and  
3 thus its operating income. RUCO asserts that the SIB only allows rates to adjust upwards as a result  
4 of permitting recovery of SIB-eligible plant costs, and that the SIB is not the type of adjustment  
5 mechanism contemplated by the court in *Scates*.

6         According to RUCO, the only other exception to a fair value finding in a full rate case is when  
7 interim rates are implemented, which would require that the Commission find the existence of an  
8 emergency; the posting of a bond by the utility; and an undertaking by the Commission to determine  
9 final rates after a valuation of the utility's property. (*Rio Verde, supra*, at 591, 20 P.3d at 1172.)  
10 RUCO states that AWC has not asserted that an emergency exists; nor has the Company requested  
11 implementation of interim rates. RUCO cites Arizona Attorney General Opinion No. 71-17 which  
12 defined an emergency as when "sudden change brings hardship to a company, when a company is  
13 insolvent, or when the condition of the company is such that its ability to maintain service pending a  
14 formal rate determination is in serious doubt." RUCO claims that AWC has not presented evidence  
15 that it would meet any of the criteria to satisfy an emergency finding under that definition.

16         RUCO asserts that the Arizona Constitution's fair value requirement would not be satisfied if  
17 rate increases were granted under the proposed SIB mechanism. According to RUCO, the SIB is not  
18 an adjuster mechanism but is simply a method to enable AWC to recover additional revenue based on  
19 capital investments made between rate cases. (RUCO Br. at 8.) RUCO contends that there are no  
20 exceptional circumstances presented in this case that would warrant approving the SIB. RUCO  
21 points to Mr. Olea's testimony at the hearing wherein he stated that the only extraordinary  
22 circumstance that developed between Phase 1, when Staff opposed the DSIC, and Phase 2, in which  
23 Staff supports the SIB, is the Commission's directive to the parties to negotiate regarding the DSIC  
24 issue. (Tr. 301.) RUCO claims that a directive from the Commission is not the type of event that  
25 would constitute an extraordinary or exceptional situation.

26         RUCO argues that the Commission would not be making a new fair value finding each time  
27 the Company applies for a surcharge adjustment, citing to Mr. Rigsby's testimony. (RUCO Ex. 12, at  
28 13.) Therefore, RUCO claims, the SIB would not meet the constitutional fair value requirements

1 under Arizona law. In its brief, RUCO quotes a passage from *Simms*, wherein the Arizona Supreme  
2 Court stated:

3           It is clear, therefore, that under our constitution as interpreted by this  
4           court, the commission is required to find the fair value of the  
5           company's property and use such finding as a rate base for the purpose  
6           of calculating what are just and reasonable rates....While our  
7           constitution does not establish a formula for arriving at fair value, it  
8           does require such value to be found and used as the base in fixing rates.  
9           The reasonableness and justness of the rates must be related to this  
10          finding of fair value.

11 (*Simms, supra*, 80 Ariz. at 151, 294 P.2d at 382.) RUCO contends that the Schedule D analysis that  
12 the Company would be required to file with each SIB adjustment request, and which would show the  
13 impact of plant additions on the Company's fair value rate base, revenue, and fair value rate of return  
14 established in Decision No. 73736, "does not go far enough." (RUCO Br. at 10.)

15           Citing the claims made in Mr. Rigsby's testimony (RUCO Ex. 12, at 13-15), RUCO suggests  
16 that although the Schedule D analysis was included in order to satisfy *Scates*, "the Commission will  
17 not, as required by law, make a meaningful finding of fair value and use that finding as a rate base for  
18 the purpose of establishing rates." (RUCO Br. at 11.) RUCO contends that *Scates* requires that all  
19 parts of the ratemaking equation must be evaluated – "at least a mini-type rate case" – before rate  
20 adjustments could be made, and the SIB is deficient because it examines only one part of the  
21 equation. (*Id.*) Therefore, according to RUCO, the SIB would constitute "single issue ratemaking"  
22 and would render the fair value requirement "meaningless." (*Id.*)

23           RUCO asserts that there are a number of other problems with the Settlement Agreement, and  
24 the SIB mechanism, including: the five percent efficiency credit is insufficient to compensate  
25 ratepayers for shifting of risk; the Settlement does not explain what happens to the SIB after the next  
26 rate case; the SIB expands eligibility of recoverable costs to almost every kind of plant; the 10  
27 percent water loss criterion could be gamed and would create an incentive for the Company to  
28 neglect certain systems near the 10 percent threshold so that plant replacements would become SIB-  
eligible; the SIB does not address the relationship between infrastructure replacement needs and use  
of depreciation expense funds or dividend payouts; the Settlement is unclear as to what will happen if

1 a party objects to a SIB surcharge filing within the allotted 30-day period; the SIB does not include  
2 an earnings test; the SIB could generate revenues by serving new customers, despite language to the  
3 contrary in the Settlement; and there is no provision in the Settlement for adjusting the ROE to reflect  
4 adoption of the SIB. (RUCO Br. at 13-17.)

5 RUCO concludes that there are numerous reasons why the Settlement Agreement is not in the  
6 public interest. According to RUCO, the SIB is illegal under Arizona law; there is no tying of the  
7 SIB and authorized ROE; and the Commission specifically granted AWC a higher ROE in Phase 1 to  
8 address the Company's infrastructure needs. RUCO claims that adoption of the Settlement will  
9 establish a dangerous precedent and encourage companies to seek both a SIB and higher ROE to  
10 address infrastructure needs, resulting effectively in double recovery for the same purposes.  
11 Therefore, RUCO requests that the Commission reject the Settlement Agreement. (*Id.* at 18-19.)

#### 12 Discussion

13 AWC provided compelling evidence in Phase 1 that its Eastern Group systems, most notably  
14 the Miami and Bisbee systems, have areas in which the pipes have corroded or otherwise degraded so  
15 as to become very fragile and to have leaks and breaks occurring at an excessive rate. In addition,  
16 AWC established that the frequency of leaks and breaks in Eastern Group systems is generally  
17 increasing. No party has presented evidence effectively refuting AWC's assertion that it needs to  
18 begin replacing large amounts of infrastructure in its Eastern Group systems in an attempt to ensure  
19 system reliability and reduce excessive water loss. Nor has any party effectively refuted AWC's  
20 assertion that its proposed three-year plan is a reasonable and appropriate plan to initiate the  
21 replacement of infrastructure on a much larger scale than has historically been performed, or AWC's  
22 position that it currently lacks the financial means to complete the infrastructure replacements in the  
23 timeframe it is proposing without obtaining additional funding in some manner.

24 The Commission generally must determine a fair value rate base and apply a rate of return to  
25 that rate base when it develops rates. The case law interpreting the Commission's constitutional  
26 duties state that the Commission may diverge from this ratemaking method when authorizing interim  
27 rates in the event of an emergency (*i.e.*, interim rates), and when the Commission authorizes (in a rate  
28 case) an automatic adjuster mechanism to address specific costs occurring subsequent to the rate case.

1 *Scates* suggests that there may be exceptional situations that warrant a departure from the usual  
2 method. RUCO takes issue with AWC's comparison of its current situation to its need to construct  
3 arsenic treatment plants to come into compliance with the USEPA MCL standard for arsenic, and  
4 asserted that AWC's current infrastructure replacement needs do not rise to the level of an  
5 exceptional situation.

### 6 Legal Issues

7 In both Phase 1 and Phase 2, the parties discussed in their post-hearing briefs the legality of a  
8 DSIC (and in Phase 2 the SIB) under Arizona law. Arizona Constitution, Article XV, § 14 provides:  
9 "The Corporation Commission shall, to aid it in the proper discharge of its duties, ascertain the fair  
10 value of the property within the State of every public service corporation doing business therein . . ."  
11 This language has been interpreted to require the Commission to establish a utility's authorized rates  
12 by applying a fair rate of return to the fair value of the utility's property devoted to the public use at  
13 the time of the inquiry (or as near as possible thereto), as determined by the Commission based upon  
14 all available relevant evidence. (*See, e.g., Arizona Corp. Comm'n v. Arizona Water Co.*, 85 Ariz.  
15 198, 203-04, 335 P.2d 412, 415 (Ariz. 1959)).

16 The Arizona Supreme Court has clarified that "the Commission in its discretion can consider  
17 matters subsequent to the historic year" when establishing fair value rate base in a rate case. (*Arizona*  
18 *Public Service*, 113 Ariz. 368, 371, 555 P.2d 326, 328-29 (1976)), and has specifically approved the  
19 portion of a Commission decision that allowed inclusion of CWIP for plant that was under  
20 construction during the test year and would go into service within two years after the effective date of  
21 a Step II increase, when the step increase methodology had been created in a full permanent rate case  
22 that included a determination of fair value. (*Arizona Cmty. Action*, 123 Ariz. 228, 230, 599 P.2d 184,  
23 186.)

24 In *Arizona Public Service*, the Arizona Supreme Court held that although the Commission  
25 must ascertain fair value, it was not prohibited from taking into consideration in its fair value  
26 determination the addition of CWIP after the end of the test year. In so finding, the court stated:  
27  
28

1 A plant under construction is at least a relevant factor which the  
 2 Commission could consider in determining fair value. The attorney  
 3 general's opinion would cut off consideration of any facts subsequent  
 4 to the historic year. In *Simms v. Round Valley*, supra, we said: 'Fair  
 5 value means the value of properties at the time of inquiry (citing  
 6 cases),' and '(t)his is necessary for the reason that the company is  
 7 entitled to a reasonable return upon the fair value of its properties at the  
 8 time the rate is fixed (citing cases).' From the foregoing, it is obvious  
 9 that the Commission in its discretion can consider matters subsequent  
 10 to the test year, bearing in mind that all parties are entitled to a  
 11 reasonable opportunity to rebut evidence presented. Construction  
 12 projects contracted for and commenced during the historical year may  
 13 certainly be considered by the Commission upon the cutoff time  
 14 previously indicated. We would not presume to instruct the  
 15 Commission as to how it should exercise its legislative functions.  
 16 However, it appears to be in the public interest to have stability in the  
 17 rate structure within the bounds of fairness and equity rather than a  
 18 constant series of rate hearings.

11 (113 Ariz. at 371, 555 P.2d at 329 (internal citations omitted).) The Arizona Supreme Court  
 12 reinforced this view in *Arizona Community Action*, by affirming the Commission's decision to allow  
 13 inclusion of CWIP in APS' rate base within two years of a Step II rate increase. (123 Ariz. 228, 230-  
 14 231, 599 P. 2d 184, 186-187.) In that case, the court considered whether it was permissible for the  
 15 Commission to authorize a rate of return based on plant construction in progress but not yet in  
 16 service, which would result in five percent step increases over a three-year time period (1977-1979).  
 17 Although the court struck down the tying of step increases solely to APS' return on equity, it found  
 18 the Commission's inclusion of funds expended on CWIP to be "entirely reasonable." (*Id.*) With  
 19 respect to the legality of the step increase approved by the Commission, the court stated:

20  
 21 In view of [*Arizona Public Service*], supra, we find entirely reasonable  
 22 that portion of the Commission's decision allowing the inclusion of  
 23 [CWIP] to go on line within two years from the effective date of the  
 24 Step II increase. Nor do we find fault with the Commission's attempt  
 25 to comply with our indication in [*Arizona Public Service*], supra, that a  
 26 constant series of rate hearings are not necessary to protect the public  
 27 interest. The hearing culminating in the order of August 1, 1977,  
 28 resulted in a determination of fair value. *The adjustments ordered by  
 the Commission in adding the CWIP to that determination of fair value  
 were adequate to maintain a reasonable compliance with the  
 constitutional requirements if used only for a limited period of time.*

27 ((*Id.*)(emphasis added.)

1 As a general proposition, we recognize that the courts have consistently required that the  
2 Commission find fair value before allowing an adjustment in rates. As indicated above, exceptions to  
3 the requirement to base rates on a monopolistic utility's fair value rate base have typically been  
4 recognized for interim rate increases when an emergency exists, and for rate increases caused by  
5 automatic adjustment clauses, when the automatic adjustment clause itself is created in a permanent  
6 rate case that meets all legal requirements and the clause is designed to ensure that the utility's profit  
7 or rate of return is unchanged by application of the clause. (*See Rio Verde, supra*, 199 Ariz. 588, 20  
8 P.3d 1169; *Scates, supra*, 118 Ariz. 531, 578 P.2d 612; Arizona Attorney General Opinion No. 71-  
9 17.)

10 However, in *Scates*, the Court of Appeals indicated that in exceptional circumstances the  
11 Commission may adjust rates outside of a full rate case. Although the court found the Commission  
12 did not have authority to allow increases between rate cases to certain of a telephone company's  
13 charges without a consideration of the impact on the company's rate of return and financial condition,  
14 the court suggested that updated submissions may be permitted to adjust rates between full rate cases.  
15 Thus, in *Scates*, the appellate court suggested a third exception to the general rule:

16 We do not need to decide in this case whether as a matter of law there  
17 must be a de novo compliance with all provisions of the order in  
18 connection with every increase in rates. The Commission here not only  
19 failed to require any submissions, but also failed to make any  
20 examination whatsoever of the company's financial condition, and to  
21 make any determination of whether the increase would affect the  
22 utility's rate of return. There may well be exceptional situations in  
23 which the Commission may authorize partial rate increases without  
24 requiring entirely new submissions. We do not decide in this case, for  
25 example, whether the Commission could have referred to previous  
26 submissions with some updating or whether it could have accepted  
27 summary financial information.

28 (118 Ariz. 531, at 537, 578 P.2d 612, at 618.)

In *Rio Verde*, the Court of Appeals addressed the issue of whether the Commission properly  
approved a surcharge to recover increased CAP water expenses between rate cases without  
ascertaining the utility company's fair value. The court, citing *Simms* and *Arizona Public Service*,  
held that the Arizona Constitution requires the Commission to determine the company's fair value,

1 and the justness and reasonableness of the rates must be related to this fair value. (199 Ariz. 588, at  
2 591, 20 P.3d 1169, at 1172.)

3       However, the courts have also consistently upheld the Commission's broad discretion to use  
4 fair value in a manner that recognizes changing regulatory circumstances. For example, in *US West*  
5 *II, supra*, the Arizona Supreme Court recognized that although a fair value finding is required under  
6 the Constitution, the Commission was not bound by a "rigid formula" in setting just and reasonable  
7 rates. (201 Ariz. at 246, 34 P.3d at 355.) Although the court in *US West II* was considering fair value  
8 in the context of competitive telecommunications services, and not for a monopoly water company  
9 such as AWC, the court's discussion of the fair value requirement is instructive.

10               Because neither this court nor the corporation commission possesses  
11 the power to ignore plain constitutional language, we hold that a  
12 determination of fair value is necessary with respect to a public service  
13 corporation. But what is to be done with such a finding? In the past,  
14 fair value has been the factor by which a reasonable rate of return was  
15 multiplied to yield, with the addition of operating expenses, the total  
16 revenue that a corporation could earn. That revenue figure was then  
17 used to set rates....But while the constitution clearly requires the  
18 Arizona Corporation Commission to perform a fair value  
19 determination, only our jurisprudence dictates that this finding be  
20 plugged into a rigid formula as part of the rate-setting process. Neither  
21 section 3 nor section 14 of the constitution requires the corporation  
22 commission to use fair value as the *exclusive* "rate basis."...We still  
23 believe that when a monopoly exists, the rate-of-return method is  
24 proper. Today, however, we must consider our case law interpreting  
25 the constitution against a backdrop of competition. In such a climate,  
26 there is no reason to rigidly link the fair value determination to the  
27 establishment of rates. We agree that our previous cases establishing  
28 fair value as the exclusive rate base are inappropriate for application in  
a competitive environment.... Thus, fair value, in conjunction with  
other information, may be used to insure that both the corporation and  
the consumer are treated fairly. In this and any other fashion that the  
corporation commission deems appropriate, the fair value  
determination should be considered. The commission has broad  
discretion, however, to determine the weight to be given this factor in  
any particular case.

(*Id.* at 245-246, 34 P.3d at 354-355.)(internal citations omitted, emphasis original.) The Court of  
Appeals reinforced this finding in *Phelps Dodge*, stating that:

1 ...our reading of the court's ruling [in *US West II*]...is consistent with  
2 the pronouncement...that the Commission should consider fair value  
3 when setting rates within a competitive market, although the  
Commission has broad discretion in determining the weight to be given  
that factor in any particular case.

4 (207 Ariz. 95, at 106, 83 P.3d 573, at 584.)

5 The Commission has also previously employed mechanisms such as the ACRM to address  
6 extraordinary regulatory challenges for which traditional ratemaking methods were deemed  
7 inadequate. In Decision No. 66400, in which the Commission first adopted the ACRM, the  
8 Commission determined that the proposed ACRM was within the Commission's constitutional and  
9 statutory authority and permitted under applicable case law. (See Decision No. 66400 at 17, 19-20,  
10 22.) AWC's ACRM included a requirement that the Company file with each adjustment filing:

11 (1)the most current balance sheet at the time of the filing; (2) the  
12 most current income statement; (3) an earnings test schedule; (4) a  
13 rate review schedule (including the incremental and pro forma  
14 effects of the proposed increase); (5) a revenue requirement  
15 calculation; (6) a surcharge calculation; (7) an adjusted rate base  
16 schedule; (8) a CWIP ledger (for each project showing  
accumulation of charges by month and paid vendor invoices); (9)  
calculation of the three factor formula; and (10) a typical bill  
analysis under present and proposed rates.

17 (Id. at 14.)

18 The Commission further agreed that the ACRM step increase procedure was based on the  
19 approach for CWIP discussed by the Arizona Supreme Court in both *Arizona Public Service* and  
20 *Arizona Community Action*. The Commission stated that in both cases the court acknowledged the  
21 Commission's authority to consider post-test year matters as long as the Commission complied with  
22 its constitutional duty to determine fair value. The Commission also cited *Scates* as supporting the  
23 Commission's authority to approve step rate increases, although only in "exceptional situations."  
24 The Commission found that the ACRM:

25  
26 specifically require[s] that [AWC] file updated financial information to  
27 verify the actual expenditures incurred for installing arsenic treatment  
28 plant, as well as schedules verifying that the requested step increase  
will not result in a return in excess of the Company's "fair value" rate

1 base return....We disagree with RUCO's contention that inclusion of  
 2 the recoverable O&M expenses violates the tenets of the *Scates*  
 3 decision.<sup>27</sup> As the Arizona court explained in that decision, automatic  
 4 adjustment mechanisms may be approved in the context of a general  
 5 rate proceeding as long as the expenses are specific and narrowly  
 6 defined. The modified ACRM proposed by Staff and Arizona Water  
 7 satisfies the *Arizona Community Action* and *Scates* requirements  
 8 because it is an automatic adjustment mechanism that is being  
 9 considered in a rate proceeding which includes a "fair value" analysis  
 10 of the Company's utility plant. Moreover, the expenses that are eligible  
 11 for recovery under the ACRM adjustor mechanism are narrowly  
 12 defined costs that will be incurred by direct payments to third party  
 13 contactors. We believe these components satisfy the requirements  
 14 delineated in both the *Scates* and *Arizona Community Action*  
 15 decisions.<sup>28</sup>

16 The Commission concluded that approval of step increases under the ACRM, as described in  
 17 Decision No. 66400, was consistent with the Commission's authority under the Arizona Constitution,  
 18 *ratemaking statutes, and applicable case law. (Id. at 22.)*

19 The Commission has also considered infrastructure surcharges in several additional dockets.  
 20 One of these was the docket cited by AWC in Phase 1 in which the Commission considered, in the  
 21 context of a permanent rate case for Arizona-American's Paradise Valley Water District, a requested  
 22 Public Safety Surcharge for investments to improve fire flow facilities.<sup>29</sup> In that docket, the  
 23 Commission approved, *inter alia*, Staff's alternative Public Safety Surcharge of \$1.00 per 1,000  
 24 gallons on both second-tier and third-tier residential commodity rates and on second-tier commercial  
 25 commodity rates, to be used to allow Arizona-American to recover its fire flow project costs, after  
 26 which time the surcharge would terminate.<sup>30</sup> (Decision No. 68858 at 31-32, 39-40, 44, ex. B.) In  
 27 the decision, the Commission stated that the fire-safety-related infrastructure improvements were  
 28 necessary to ensure the public health and safety of ratepayers and that the ratepayers were largely in  
 support of the improvements and willing to pay for them. (*Id. at 32.*) Following the implementation  
 of the new rates and the Public Safety Surcharge, however, the Town of Paradise Valley, several  
 affected resorts, and some homeowners' association members contacted the Commission to express

27 RUCO had objected to inclusion of O&M expense adjustments in the ACRM, arguing that *Arizona Community Action* had only authorized rate base updates and that the inclusion of O&M adjustments presented matching problems.

28 *Id.* at 19-20.

29 Docket No. W-01303A-05-0405 et al.

30 Official notice is taken of Decision No. 68858 (July 28, 2006).

1 concern regarding bill impacts. The Commission subsequently voted to reconsider the issue under  
 2 A.R.S. § 40-252 and, 11 months after the Public Safety surcharge had been implemented, reset the  
 3 Public Safety Surcharge to zero, stating that the issue should be addressed in Arizona-American's  
 4 then-pending permanent rate case.<sup>31</sup> (Decision No. 70488 at 11, 14.)

5 The Commission also considered an infrastructure improvement surcharge in a permanent rate  
 6 case for Arizona-American's Sun City Water District.<sup>32</sup> In that case, Arizona-American sought  
 7 approval of a Fire Flow Cost Recovery Mechanism ("FCRM") that it said would allow it to carry out  
 8 a fire flow improvement plan created by the Youngtown/Sun City Fire Flow Task Force formed  
 9 pursuant to an earlier Commission Decision.<sup>33</sup> (Decision No. 70351 (May 16, 2008).) Arizona-  
 10 American asserted that in the absence of a special funding mechanism, it lacked the financial ability  
 11 to make the recommended fire flow improvements, which had an estimated cost between \$2.6 and  
 12 \$5.1 million. (*Id.* at 5, 23, 24.) After accepting Staff recommendations, Arizona-American proposed  
 13 that the FCRM be structured like an ACRM, but with multiple phases, each of which would be  
 14 reviewed for prudence and reasonableness of costs and would necessitate a Commission Order before  
 15 an increase in the FCRM. (*Id.* at 24-25.) RUCO opposed the FCRM, stating that the proposed fire  
 16 flow improvements were discretionary and that the FCRM represented single-issue ratemaking and  
 17 reminding the Commission of the problems experienced with the funding mechanism approved for  
 18 fire flow improvements in the Paradise Valley District. (*Id.* at 5, 26-27, 28.) Staff supported the  
 19 FCRM as necessary for public safety, stating that the FCRM should be adopted because the proposed  
 20 project costs were significant and not a normal system upgrade. (*Id.* at 33.) The Commission denied  
 21 the FCRM, stating the following:

22 Our experience with considering major construction projects outside the  
 23 context of a rate case teaches us that often substantial unintended adverse  
 24 consequences can result from implementing surcharges such as the  
 25 FCRM. Cost recovery mechanisms such as the FCRM should only be  
 26 implemented in extraordinary circumstances. We do not find that the  
 proposed fire flow improvement project warrants the extraordinary rate  
 making treatment being proposed by the Company, Staff and Youngtown.  
 Consequently, we deny the request to implement the FCRM. Our finding

27 <sup>31</sup> Official notice is taken of Decision No. 70488 (September 3, 2008).

28 <sup>32</sup> Docket No. W-01303A-07-0209.

<sup>33</sup> Official notice is taken of Decision No. 70351 (May 16, 2008). The Decision creating the Youngtown/Sun City Fire Flow Task Force was identified as Decision No. 67093 (June 30, 2004). (Decision No. 70351 at 5.)

1 on the merits of the FCRM, however, does not affect how the Commission  
 2 would treat the capital improvements if the Company constructed them  
 voluntarily and seeks their inclusion in rate base in a rate case.<sup>34</sup>

3 The Commission also considered and denied a request by Global Water to implement a  
 4 Distributed Energy Recovery Tariff ("DERT") that would operate like an ACRM and allow Global  
 5 Water to recover the costs of constructing renewable energy facilities built at wastewater facilities, as  
 6 those renewable energy facilities were completed.<sup>35</sup> (Decision No. 71878 (September 15, 2010)).  
 7 The initial phase of construction proposed to be covered under the DERT was a photovoltaic  
 8 installation with an estimated cost of \$1.5 to \$2.0 million. (*Id.* at 43.) Both RUCO and Staff opposed  
 9 the DERT, asserting that any such renewable energy plant costs incurred should be recovered through  
 10 a rate case rather than through a special mechanism such as an ACRM-like surcharge. (*Id.* at 43-45.)

11 The Commission agreed, stating:

12 We applaud Applicants' initiatives in conservation and environmental  
 13 stewardship. We also agree that in some cases, adjustors that support  
 14 policy objectives are appropriate. However, the proposed plant additions  
 15 not only are not required to meet government mandated standards, but  
 16 they are also not essential to the provision of utility service by Applicants,  
 17 and would come at the expense of increased costs to customers at a time  
 when some customers are already finding it difficult to meet their  
 household expenses. We find that in today's economic climate, the  
 benefits of the proposed adjustor do not outweigh the costs to customers,  
 which costs include having them bear the risk of Applicants' plant  
 investments. The proposed adjustor will therefore not be approved.<sup>36</sup>

18 The Commission again considered an Infrastructure Improvement Surcharge ("IIS") requested  
 19 by Arizona-American for its Sun City Water district to replace aging mains, hydrants, meters, tanks,  
 20 and booster stations.<sup>37</sup> (Decision No. 72047 (January 6, 2011).) Arizona-American acknowledged  
 21 that the type of plant to be replaced was ordinary, but asserted that the replacement costs were  
 22 projected to be quite large.<sup>38</sup> (*Id.* at 91.) Staff and RUCO both opposed the IIS, arguing that the use  
 23 of an adjustor mechanism, an extraordinary ratemaking device, was not warranted. (*Id.* at 91-92.)

24  
 25 <sup>34</sup> Decision No. 70351 at 36.

26 <sup>35</sup> Official notice is taken of Decision No. 71878 (September 15, 2010).

27 <sup>36</sup> Decision No. 71878 at 45-46.

28 <sup>37</sup> Official notice is taken of Decision No. 72047 (January 6, 2011).

<sup>38</sup> The estimated cost of the necessary plant replacements was not included in the Decision, but was asserted in Arizona-American's post-hearing brief to be \$7.5 million for the next five years. Official notice is taken of this statement made on page 40 of Arizona-American's post-hearing brief filed in Docket Nos. W-01303A-09-0343 et al. on July 16, 2010.

1 The Commission denied the IIS, “agree[ing] with RUCO and Staff that the recovery of expenditures  
2 for plant additions and improvements does not warrant the extraordinary ratemaking device of an  
3 adjustor mechanism.” (*Id.* at 92.)

4 Most recently, however, in Phase 1 of this proceeding, we indicated that due to the evidence  
5 presented regarding the substantial infrastructure replacement needs faced by AWC, “we are  
6 supportive of the DSIC type mechanism” and kept the record open to allow additional discussions  
7 between the parties regarding the DSIC issue. (Decision No. 73736, at 104.) As discussed herein, the  
8 Settlement Agreement was the product of those discussions and was opposed only by RUCO.

### 9 Conclusion

10 After reviewing the court decisions interpreting the constitutional requirements imposed on  
11 the Commission’s ratemaking authority, we believe that the Settlement Agreement, and the SIB  
12 mechanism incorporated therein, together with the financial information and analysis required herein,  
13 satisfies the fair value concerns addressed by various court decisions. Although RUCO asserts that  
14 the Settlement does not require a fair value finding by the Commission when the SIB surcharge is  
15 adjusted, the Schedule D information that is required to be filed at the time a surcharge adjustment  
16 request is made requires “an analysis of the impact of the SIB Plant on the fair value rate base,  
17 revenue, and the fair value rate of return as set forth in Decision No. 73736.” (Ex. A-1 at ¶7.1.7.)  
18 Moreover, Mr. Olea testified that any Order would “include a finding of – a determination of fair  
19 value or a consideration of fair value.” (Tr. 333.)

20 From a practical perspective, the SIB would operate very similarly to the existing ACRM,  
21 with which the Commission now has extensive experience, and which the Commission has  
22 determined to be lawful. However, unlike the ACRM, the SIB does not require the Company to  
23 include with its surcharge adjustment filings information regarding earnings. We will therefore  
24 require AWC to include in each of its surcharge adjustment filings similar financial information  
25 required for ACRM adjustments, as described in Decision No. 66400. To the extent that the  
26 Settlement Agreement does not require the filing of the following information with each SIB  
27 adjustment, AWC shall file the following information: (1) the most current balance sheet at the time  
28 of the filing; (2) the most current income statement; (3) an earnings test schedule; (4) a rate review

1 schedule (including the incremental and pro forma effects of the proposed increase); (5) a revenue  
2 requirement calculation; (6) a surcharge calculation; (7) an adjusted rate base schedule; (8) a CWIP  
3 ledger (for each project showing accumulation of charges by month and paid vendor invoices); (9)  
4 calculation of the three factor formula (as requested by Staff); and (10) a typical bill analysis under  
5 present and proposed rates.

6         The Company shall also be required to perform an earnings test calculation for each initial  
7 filing and annual report filing to determine whether the actual rate of return reflected by the operating  
8 income for the affected system or division for the relevant 12-month period exceeded the most  
9 recently authorized fair value rate of return for the affected system or division, with the earnings test  
10 to be: based on the most recent available operating income, adjusted for any operating revenue and  
11 expense adjustments adopted in the most recent general rate case; and based on the rate base adopted  
12 in the most recent general rate case, updated to recognize changes in plant, accumulated depreciation,  
13 contributions in aid of construction, advances in aid of construction, and accumulated deferred  
14 income taxes through the most recent available financial statement (quarterly or longer). The  
15 earnings test results will be considered in the following manner. If the earnings test calculation  
16 described herein shows that the Company will not exceed its authorized rate of return with the  
17 implementation of the SIB surcharge, the surcharge for the year may go into effect upon issuance of  
18 the surcharge approval order and subject to the conditions described herein. But if the earnings test  
19 calculation described herein shows that the Company will exceed its authorized rate of return with the  
20 implementation of any part of the SIB surcharge, the surcharge for that year may not go into effect.  
21 Lastly, if the earnings test calculation described herein shows that the Company will exceed its  
22 authorized rate of return with the implementation of the full surcharge, but a portion of the surcharge  
23 may be implemented without exceeding the authorized rate of return, then the surcharge may be  
24 authorized up to that amount, again upon issuance of the surcharge approval order and subject to the  
25 conditions described herein. We reiterate that the proposed SIB surcharges shall be evaluated by the  
26 Commission according to all relevant factors, including the results of the earnings test. In any event,  
27 the earnings test shall not impact the approval of the SIB mechanism or the possibility of SIB  
28 surcharges in future years where authorized in accordance with the SIB mechanism.

1 With this additional information, the SIB allows for a consideration of all of AWC's costs at  
2 the time a surcharge adjustment is made, and is therefore permissible under *Scates*. The SIB  
3 mechanism also addresses the concerns cited in *Scates* in that the SIB: is an adjustment mechanism  
4 established within a rate case as part of a company's rate structure;<sup>39</sup> adopts a set formula that would  
5 allow only readily identifiable and narrowly defined plant to be recovered through the surcharge; and  
6 applies the rate of return authorized in Decision 73736 to SIB plant (less the five percent efficiency  
7 credit).

8 In accordance with the court's holding in *Simms*, which states that the Commission must find  
9 and use the fair value of the utility company's property at the time of the inquiry, and the  
10 reasonableness and justness of rates established by the Commission "must be related to this finding of  
11 fair value" (80 Ariz. at 151, 294 P.2d at 382), the SIB mechanism requires a determination of the  
12 Company's fair value rate base, including the SIB plant, at the time the surcharges are proposed and  
13 approved.

14 As discussed above, the applicable court decisions have found that the express language in  
15 Article 15, §14 of the Arizona Constitution requires the Commission to ascertain "fair value." The  
16 courts have consistently recognized, however, that the Commission has broad discretion in the rate  
17 setting formulas and techniques that it employs, and the courts will not disturb the Commission's  
18 findings absent an abuse of that discretion. (*See, Simms, supra*, at 154; *Arizona Public Service, supra*,  
19 at 370.) A line of decisions establishes that, as long as fair value is determined, the Commission does  
20 not abuse its discretion in adopting varying ratemaking mechanisms that allow rate recovery for:  
21 post-test year plant (*Arizona Public Service*); CWIP that is not yet in service (*Arizona Community*  
22 *Action*); interim rates or adjuster mechanisms without a fair value finding (*Rio Verde*); and use of fair  
23 value as only one factor to be considered in setting rates in a competitive regulatory environment (*US*  
24 *West II; Phelps Dodge*). An examination of these cases suggests that courts have understood that  
25 while a fair value determination is always required under the plain constitutional language of Article

---

26 <sup>39</sup> The SIB is a different type of adjuster mechanism than has previously been reviewed by the courts because it allows  
27 recovery of plant costs associated with AWC's substantial distribution system improvement needs, rather than fuel costs.  
28 However, even if the SIB is not considered an "adjustment mechanism" under *Scates*, we believe that it is an exceptional  
circumstance given the significant capital investment requirements for infrastructure replacements demonstrated by  
AWC.

1 15, §14, the Commission must have wide latitude to fashion ratemaking methods necessary to  
2 address a number of circumstances that may not have been anticipated when the Arizona Constitution  
3 was enacted. As long as the fair value finding is related to the rates set by the Commission, and that  
4 “just and reasonable rates” result from the methodologies employed (Article 15, §3), the courts have  
5 found that the Commission does not abuse its discretion in regard to its ratemaking powers.

6 We believe that the SIB mechanism embodied in the Settlement Agreement, together with the  
7 additional financial information and analysis required herein, is compliant with the Commission’s  
8 constitutional requirements, as well as the case law interpreting the Commission’s authority and  
9 discretion in setting rates. As described in the Settlement Agreement, the SIB surcharge would be  
10 based on specific, verified, and in-service plant additions that are reviewed by Staff and approved by  
11 the Commission prior to being implemented. AWC would be required to submit annual summary  
12 schedules showing the actual cost of the infrastructure, and supporting documentation that will enable  
13 Staff and the Commission to determine how the proposed surcharge adjustments would impact the  
14 fair value rate of return for each affected system. The SIB mechanism is analogous to the step  
15 increases for CWIP plant that the court found to be a reasonable ratemaking device in *Arizona*  
16 *Community Action* (except for tying the increases solely to return on equity). Although the SIB-  
17 eligible plant differs from CWIP to the extent that the SIB would not necessarily be under  
18 construction during the historical test year in the rate case, the requirement that the SIB plant must be  
19 fully constructed, and used in the provision of utility service (with verification that such is the case)  
20 prior to inclusion in a surcharge, provides the Commission with an even greater assurance (compared  
21 with CWIP) that the SIB plant is used and useful and therefore serves as a proper basis for approving  
22 just and reasonable rates. And, by allowing up to five surcharge adjustments between full rate case  
23 applications, the SIB takes into account the court’s observation in the same case that a constant series  
24 of rate hearings is not necessary to protect the public interest. (*Id.* at 230-231, 599 P.2d at 186-187.)  
25 By requiring the filing of a full rate case at least every five years (with a review in the subsequent  
26 case of all SIB plant that was included in the surcharge during the interim between rate cases), the  
27 SIB also addresses the concern that the interim rate adjustments would only be in place for a limited  
28 period of time. In addition to the five percent efficiency credit, the SIB mechanism also includes

1 notice requirements to customers, a review period for Staff and RUCO (and an opportunity for other  
2 parties or customers to express opposition (*See* Tr. 310-311)), and an Order by the Commission  
3 evaluating and approving the appropriateness of the SIB-eligible plant, including AWC's fair value  
4 rate base and rate of return.

5 Although a DSIC-like mechanism could result in much greater resource demands upon the  
6 Commission and Staff than would the current regulatory structure, efforts were made by the parties in  
7 structuring the SIB to place more of the informational filing burdens on the Company, thus mitigating  
8 many of the resource concerns that had previously existed with the original DSC proposal.

9 With these provisions and protections, as well as others discussed herein, we find that the  
10 Settlement Agreement represents a reasonable compromise of contested issues, is in accord with  
11 Arizona law and, as a whole, is consistent with the public interest. The Settlement is therefore  
12 approved.<sup>40</sup>

### 13 Segregation of Depreciation Expense

14 As discussed above, the issue of requiring the Company to set aside depreciation expense in a  
15 separate fund to finance infrastructure replacements and improvements was raised during the hearing.  
16 (*See, e.g.*, Tr. 111-116.) Although we do not concede, as suggested by Liberty/Global, that A.R.S. §  
17 40-222 is legally deficient or that the United States and Arizona Constitutions would prohibit the  
18 Commission from acting under that statute or its constitutional authority, we will not require the  
19 Company to set aside depreciation expense in a separate fund for infrastructure replacement needs, at  
20 this time. However, we may reconsider this issue at a future date.

### 21 Return on Equity Adjustment

22 Another issue raised during the hearing was whether the 10.55 percent ROE authorized in  
23 Decision No. 73736 should be modified if a DSIC or DSIC-like mechanism were to be adopted by  
24 the Commission. The signatory parties have agreed that the rate of return, and thus the ROE,  
25 authorized in Phase 1 (Decision No. 73736) should be applied to the SIB-eligible plant when  
26

27 \_\_\_\_\_  
28 <sup>40</sup> As described by Mr. Reiker at the hearing, we will adopt AWC's alternative schedules as the basis for calculating the  
SIB, as set forth in Ex. A-3 (*See* Tr. 232-233). Ex. A-3 is attached as "Attachment B."

1 calculating the surcharge mechanism.<sup>41</sup> (Ex. A-1, ¶3.2.1.)

2 RUCO asserted that it was foreclosed in Phase 2 from seeking an adjustment to the  
3 Company's ROE if the Company received approval of a DSIC, based on Commissioner statements  
4 during the February 12, 2013 Open Meeting in which Phase 1 deliberations occurred resulting in  
5 Decision No. 73736. (Tr. 385.) This view was apparently shared by some other parties. (Tr. 174,  
6 270-272; RUCO Exs. 5 and 6.) However, RUCO asserted during the Phase 2 proceeding that if a  
7 company is granted a DSIC mechanism the ROE should be adjusted downward to account for the  
8 Company's decreased risk (RUCO Ex. 11, at 4). RUCO also argued that the Commission granted  
9 AWC a higher ROE in Phase 1 in recognition of the Company's infrastructure replacement needs.  
10 (RUCO Ex. 12, at 15.)

11 We disagree with RUCO. As Mr. Olea testified, the existence or lack of a DSIC does not  
12 change the risk of the utility, and therefore the existence or lack of a DSIC should not change the  
13 utility's ROE. (Tr. at 275 to 276). As Mr. Olea explained, the efficiency credit is a more appropriate  
14 means to provide a financial benefit to the ratepayers. (Tr. at 276 to 277). Moreover, we find  
15 RUCO's argument ironic; while today RUCO argues that adding a DSIC reduces risk, we do not  
16 recall RUCO ever arguing that the absence of a DSIC results in higher risk. In addition, RUCO's  
17 witness Mr. Rigsby conceded that some of the "sample" group of companies used to determine ROE  
18 have DSICs. (Tr. at 485). Logically, to the extent (if any) that a DSIC impacts risk, the reduced risk  
19 would be reflected in the sample companies used to set the ROE, and we are not persuaded that any  
20 adjustment to the ROE is warranted.

21 \* \* \* \* \*

22 Having considered the entire record herein and being fully advised in the premises, the  
23 Commission finds, concludes, and orders that:

24 **FINDINGS OF FACT**

25 1. On August 5, 2011, AWC filed with the Commission an application requesting  
26 adjustments to its rates and charges for utility service provided by its Eastern Group water systems,

27 <sup>41</sup> Decision No. 73736 authorized a cost of debt of 6.82 percent and a cost of equity of 10.55 percent which, when applied  
28 to a capital structure of 49.03 percent debt and 50.97 percent equity, results in an overall weighted average cost of capital  
of 8.72 percent. (*Id.* at 60-62.)

1 including its Superstition (Apache Junction, Superior, and Miami); Cochise (Bisbee and Sierra  
2 Vista); San Manuel; Oracle; SaddleBrooke Ranch; and Winkelman water systems. AWC also  
3 requested several other authorizations in the application.

4       2.       On February 20, 2013, the Commission issued Decision No. 73736 in Phase 1 of this  
5 matter, granting AWC a rate increase for its Eastern Group systems and, among other things, keeping  
6 the docket open for purposes of further consideration of AWC's proposed Distribution System  
7 Improvement Charge.

8       3.       By Procedural Order issued February 21, 2013, as modified by Procedural Order  
9 issued February 25, 2013, this matter was scheduled for hearing commencing April 8, 2013, other  
10 procedural deadlines were established, and a procedural conference was scheduled for March 4,  
11 2013.

12       4.       On March 4, 2013, a procedural conference was conducted during which the parties  
13 discussed various procedural matters.

14       5.       On March 21, 2013, a Procedural Order was issued modifying certain filing deadlines  
15 established in the procedural schedule.

16       6.       On April 1, 2013, Staff filed a Settlement Agreement signed by all parties except  
17 RUCO and Globe.

18       7.       On April 2, 2013, RUCO filed a Motion for Clarification or in the Alternative Request  
19 to Take Judicial Notice of the Underlying Record. RUCO requested clarification as to whether the  
20 Commission intended to leave the record open from Phase 1 of this case.

21       8.       On April 2, 2013, AWC filed a Joinder in RUCO's Motion for Clarification. AWC  
22 agreed with RUCO that the entire underlying record should be held open for citation and reference  
23 and that DSIC issues should not be re-litigated at the April 8, 2013 *hearing*.

24       9.       On April 2, 2013, testimony in support of the Settlement Agreement was filed by Joel  
25 M. Reiker on behalf of AWC; by Steven M. Olea on behalf of Staff; by Greg Sorenson on behalf of  
26 Liberty Utilities; by Ron Fleming and Paul Walker on behalf of Global Water; by Thomas M.  
27 Broderick on behalf of EPCOR; and by Gary Yaquinto on behalf of AIC.

28       10.       On April 2, 2013, testimony in opposition to the Settlement Agreement was filed by

1 Patrick J. Quinn and William A. Rigsby on behalf of RUCO.

2 11. On April 4, 2013, a Procedural Order was issued stating that the evidentiary record in  
3 Phase 1 would be held open and incorporated into the Phase 2 record.

4 12. On April 8, 2013, an evidentiary hearing commenced before a duly authorized  
5 Administrative Law Judge. The hearing continued on April 11, 2013. AWC, RUCO, Liberty  
6 Utilities, Global Water, EPCOR, AIC, WUAA, Globe, and Staff appeared through counsel.

7 13. On April 15, 2013, AWC filed revised SIB Schedules A through D in accordance with  
8 Mr. Reiker's testimony at the hearing.

9 14. On April 29, 2013, post-hearing briefs were filed by AWC, RUCO, EPCOR, AIC,  
10 Staff, and jointly by Liberty Utilities and Global Water.

11 15. The Settlement provides, among other things for: Commission pre-approval of SIB-  
12 eligible projects; SIB project eligibility criteria; a limit on SIB surcharge recovery to the pre-tax rate  
13 of return and depreciation expense associated with SIB-eligible projects; an "efficiency credit" of five  
14 percent; a cap on the SIB surcharge of five percent of the Phase 1 revenue requirement; separate line  
15 items on customer bills reflecting the SIB surcharge and the efficiency credit; Commission approval  
16 of the SIB surcharge prior to implementation and adjustments; a limit of five SIB surcharge filings  
17 between general rate cases; an annual true-up of the SIB surcharge; and notice to customers at least  
18 30 days prior to SIB surcharge adjustments.

19 16. The SIB mechanism "is a ratemaking device designed to provide for the timely  
20 recovery of the capital costs (depreciation expense and pre-tax return on investment) associated with  
21 distribution system improvement projects meeting the requirements contained herein and that have  
22 been completed and placed in service and where costs have not been included for recovery in  
23 Decision No. 73736." (Ex.A-1, ¶2.3.)

24 17. Cost recovery under the SIB mechanism is allowed for the pre-tax return on  
25 investment and depreciation expense for projects meeting the SIB-eligible criteria and for  
26 depreciation expense associated with those projects, net of associated plant retirements. The rate of  
27 return, depreciation rates, gross revenue conversion factor and tax multiplier are to be the same as  
28 those approved in Phase 1 by Decision No. 73736.

1           18.     The SIB surcharge will include an “Efficiency Credit” equal to five percent of the SIB  
2 revenue requirement.

3           19.     The Agreement caps the amount that is permitted to be collected annually by each SIB  
4 surcharge filing to five percent of the revenue requirement authorized in Decision No. 73736.

5           20.     The SIB surcharge will be applicable only for plant replacement investments to  
6 provide adequate and reliable service to existing customers and that “are not designed to serve or  
7 promote customer growth.”

8           21.     Under the Settlement, AWC: may file up to five SIB surcharge requests between rate  
9 case decisions; may make no more than one SIB surcharge filing every 12 months; may not make its  
10 initial SIB surcharge filing for the Eastern Group prior to 12 months following the effective date of  
11 Decision No. 73736 (*i.e.*, February 20, 2014); must make an annual SIB surcharge filing to true-up its  
12 surcharge collections; and must file a rate case application for its Eastern Group no later than August  
13 31, 2016, with a test year ending no later than December 31, 2015, at which time any SIB surcharges  
14 then in effect would be included in base rates in that proceeding and the surcharge would be reset to  
15 zero.

16           22.     The SIB surcharge will be a fixed monthly charge on customers’ bills, with the  
17 surcharge and the efficiency credit listed as separate line items. The surcharge will increase  
18 proportionately based on customer meter size.

19           23.     Each SIB surcharge filing must be approved by the Commission prior to  
20 implementation. Upon filing of the SIB surcharge application, Staff and RUCO would have 30 days  
21 to review the filing and dispute and/or file a request for the Commission to alter the surcharge or true-  
22 up surcharge/credit. Although AWC is also required to provide a proposed order with each SIB filing  
23 for the Commission’s consideration, and if no objection is filed to the SIB surcharge request the  
24 request shall be placed on an Open Meeting agenda at the earliest practicable date, in order to protect  
25 the public interest we believe that Staff should prepare its own Staff Report and Proposed Order for  
26 the Commission’s consideration.

27           24.     At least 30 days prior to a SIB surcharge becoming effective AWC is required to  
28 provide public notice to customers in the form of a bill insert or customer letter. The notice must

1 include: the individual surcharge amount by meter size; the individual efficiency credit by meter size;  
2 the individual true-up surcharge/credit by meter size; and a summary of the projects included in the  
3 current surcharge filing, including a description of each project and its cost.

4 25. The Settlement Agreement, with the modifications discussed above regarding  
5 financial information filing requirements, represents a reasonable compromise of contested issues, is  
6 in accord with Arizona law and, as a whole, is consistent with the public interest.

7 **CONCLUSIONS OF LAW**

8 1. AWC is a public service corporation within the meaning of Article XV of the Arizona  
9 Constitution and A.R.S. §§ 40-250, 40-251, and 40-367.

10 2. The Commission has jurisdiction over AWC and the subject matter of the application.

11 3. Notice of the proceeding was provided in accordance with the law.

12 4. The SIB mechanism embodied in the Settlement Agreement is compliant with the  
13 Commission's constitutional requirements, as well as the case law interpreting the Commission's  
14 authority and discretion in setting rates. The Commission has the constitutional ratemaking authority  
15 to approve adjustment mechanisms in a general rate case.

16 5. The Settlement Agreement, and the SIB mechanism incorporated therein, with the  
17 modifications discussed above, satisfies the fair value concerns addressed by various court decisions.

**ORDER**

IT IS THEREFORE ORDERED the Settlement Agreement filed on April 1, 2013, and the SIB mechanism incorporated therein, with the modifications discussed above, are reasonable and in the public interest, and shall be approved, as discussed herein.

IT IS FURTHER ORDERED that this Decision shall become effective immediately.

BY ORDER OF THE ARIZONA CORPORATION COMMISSION.

		
CHAIRMAN		COMMISSIONER
		
COMMISSIONER	COMMISSIONER	COMMISSIONER

IN WITNESS WHEREOF, I, JODI JERICH, Executive Director of the Arizona Corporation Commission, have hereunto set my hand and caused the official seal of the Commission to be affixed at the Capitol, in the City of Phoenix, this 27<sup>th</sup> day of June 2013.

ATTACHMENT A

Docket No, W-01445A-11-0310

ARIZONA WATER COMPANY

PHASE 2--EASTERN GROUP GENERAL RATE CASE

SETTLEMENT AGREEMENT  
REGARDING DISTRIBUTION SYSTEM IMPROVEMENT CHARGE ("DSIC")  
AND OTHER DSIC-LIKE PROPOSALS

Docket No. W-01445A-11-0310

DECISION NO. 73938

SETTLEMENT AGREEMENT ON DSIC AND DSIC-LIKE PROPOSALS  
AND  
LIST OF SIGNATORY PARTIES

The purpose of this Settlement Agreement ("Agreement") is to settle specific, identified remaining issues related to Phase 2 of Docket No. W-01445A-11-0310, Arizona Water Company's ("AWC" or "Company") application to increase rates for its Eastern Group of systems as identified in its August 5, 2011 application ("Rate Case"). These remaining issues relate to a DSIC proposal presented by AWC in the Rate Case and the parties' responses to that proposal, including presentation of DSIC-like proposals. This Agreement is entered into by the following entities:

Arizona Water Company

Arizona Corporation Commission Utilities Division ("Staff")

Global Water – Palo Verde Utilities Company, Global Water – Santa Cruz Water Company, Valencia Water Company- Town Division, Valencia Water Company – Greater Buckeye Division, Water Utility of Greater Tonopah, Willow Valley Water Co. and Water Utility of Northern Scottsdale (collectively the "Global Utilities")

EPCOR Water Arizona Inc.

Rio Rico Utilities, Inc. dba Liberty Utilities ("Liberty Utilities")

The Water Utility Association of Arizona ("WUAA")

Arizona Investment Council ("AIC")

These entities shall be referred to collectively as the "Signatory Parties."

## TERMS AND CONDITIONS

In consideration of the promises and agreements contained in this Agreement, the Signatory Parties agree that the following numbered sections and subsections, including attached exhibits and schedules, comprise the Signatory Parties' Agreement.

### 1.0 RECITALS

1.1 Docket No. W-01445A-11-0310 was commenced by the filing of a rate application by AWC on August 5, 2011. AWC's application ("Application"), among other relief, proposed that the Arizona Corporation Commission ("ACC" or "Commission") adopt a Distribution System Improvement Charge ("DSIC").

1.2 Following a sufficiency finding by Staff on September 6, 2011, RUCO filed an Application to Intervene on September 14, 2011. Kathie Wyatt filed an Application to Intervene on October 20, 2011.

1.3 The Administrative Law Judge granted the applications to intervene filed by RUCO and Kathie Wyatt. No other persons or entities intervened in the Rate Case or participated in the proceedings until after the Commission entered its Decision No. 73736 on February 20, 2013.

1.4 The Administrative Law Judge scheduled an evidentiary hearing on the Application to commence on May 14, 2012. The evidentiary hearing closed on May 24, 2012. Testimony and exhibits were presented by AWC, RUCO, and Staff. Kathie Wyatt did not appear.

1.5 Following post-hearing briefing, the Administrative Law Judge issued a Recommended Opinion and Order ("ROO") on January 30, 2013. AWC and RUCO filed exceptions to the ROO and Staff responded to AWC's exceptions. In addition, amendments to the ROO were presented at the Open Meeting at which the Commission considered the ROO on February 12, 2013. At the Open Meeting on that date, the Commission voted 5-0 to adopt Decision No. 73736, and reopened intervention for the limited purpose of discussing AWC's DSIC proposal, other DSIC-like proposals, and the possibility of achieving a settlement or compromise on the two. On February 21, 2013, the Administrative Law Judge issued a Procedural Order setting forth a schedule for the determination of the remaining issues in Phase 2 of the Rate Case (the "Phase 2 Proceedings").

1.6 The Global Utilities, EPCOR Water Arizona Inc., Liberty Utilities, WUAA, Arizona Investment Council and the City of Globe moved to intervene and were granted intervention in the Phase 2 Proceedings. Staff filed a notice of settlement discussions on February 21, 2013, setting settlement discussions in the Phase 2 Proceedings for March 4, 2013. The Signatory Parties and Kathie Wyatt were notified of the settlement discussion process, were encouraged to participate in the negotiations, and were provided with an equal opportunity to participate. Formal settlement discussions between the Signatory Parties began on the scheduled date of March 4, 2013. Kathie Wyatt did not appear or participate. A settlement was reached on all issues in the Phase 2 Proceedings by the participating Signatory Parties.

1.7 The Signatory Parties agree that the negotiation process undertaken in this matter was open, transparent and inclusive of all Signatory Parties, with each such party having an equal opportunity to participate. All Signatory Parties attended and actively participated in the settlement discussions. This Agreement is a result of those meetings and the Signatory Parties' good faith efforts to settle all of the issues presented in the Phase 2 Proceedings.

1.8 The purpose of this Agreement is to document the settlement of all issues presented in the Phase 2 Proceedings in a manner that will promote the public interest and provide for a prompt resolution of the issues on the schedule ordered by the Commission.

1.9 The Signatory Parties agree that the terms of this Agreement will serve the public interest by providing a just and reasonable resolution of the issues presented in the Phase 2 Proceedings and promoting the health, welfare and safety of customers. Commission approval of this Agreement will further serve the public interest by allowing the Signatory Parties to avoid the expense and delay associated with continued litigation of the Phase 2 Proceedings.

1.10 The Signatory Parties agree to ask the Commission to (1) find that the terms and conditions of this Agreement are just and reasonable and in the public interest, along with all other necessary findings, and (2) approve the Agreement and order that the Agreement and the System Improvement Benefits ("SIB") mechanism contained herein shall become effective at the earliest practicable date.

## 2.0 SYSTEM IMPROVEMENT BENEFITS ("SIB") MECHANISM

2.1 It is necessary for AWC to undertake a variety of system improvements in order to maintain adequate and reliable service to existing customers. AWC is also required to complete certain system improvements in order to comply with requirements imposed by law. The Signatory Parties acknowledge that these projects are necessary to provide proper, adequate and reliable service to existing customers; are not designed to serve or promote customer growth; and will not comprise an upgrade or expansion of existing plant unless justified for existing customers per Section 6.3.3.

2.2 Both the cost of these projects and the timing of their proposed completion and other factors set forth in the record create a circumstance for AWC that justifies the implementation of a SIB mechanism.

2.3 For ratemaking purposes and for the purposes of this Agreement, the Signatory Parties agree that the Commission may authorize a SIB mechanism for AWC in Docket W-01455A-11-0310. The SIB mechanism is a ratemaking device designed to provide for the timely recovery of the capital costs (depreciation expense and pre-tax return on investment) associated with distribution system improvement projects meeting the requirements contained herein and that have been completed and placed in service and where costs have not been included for recovery in Decision No. 73736.

2.4 A list of these projects and an estimation of the capital costs of each is set forth in SIB Plant Table I, attached hereto as Exhibit A

2.5 AWC may seek a SIB surcharge for projects on SIB Plant Table I that have been completed and placed into service, per SIB Plant Table II (Exhibit C).

### 3.0 CALCULATION OF AMOUNTS TO BE COLLECTED BY THE SIB SURCHARGE

3.1 The amount to be collected by the SIB surcharge ("SIB Authorized Revenue") shall be equal to the SIB revenue requirement minus the SIB efficiency credit.

3.2 The SIB revenue requirement is equal to the required pre-tax return on investment and depreciation expense associated with SIB-eligible projects that have been completed and placed into service, per SIB Plant Table II (Exhibit C), net of associated retirements. For such calculation:

3.2.1 The required rate of return is equal to the overall rate of return authorized in Decision No. 73736.

3.2.2 The gross revenue conversion factor/tax multiplier is equal to the gross revenue conversion factor/tax multiplier approved in Decision No. 73736 and;

3.2.3 The applicable depreciation rate(s) is equal to the depreciation rate(s) approved in Decision No. 73736.

3.3 The SIB Efficiency Credit shall be equal to five percent of the SIB revenue requirement.

3.4 The amount to be collected by each SIB surcharge filing shall be capped annually at five percent of the revenue requirement authorized in Decision No. 73736.

### 4.0 TIMING AND FREQUENCY OF SIB FILINGS

4.1 For ratemaking purposes and for purposes of this Agreement, the Signatory Parties agree that:

4.2 AWC may make its initial SIB surcharge filing no earlier than twelve months after the entry of Decision No. 73736.

4.3 Any subsequent SIB surcharge filings shall be made within sixty (60) days of the end of the previous twelve (12)-month SIB surcharge period.

4.4 AWC may make no more than one (1) SIB surcharge filing every twelve (12) months.

4.5 AWC is permitted no more than five (5) SIB surcharge filings between rate case decisions.

4.6 Unless otherwise authorized by the Commission, AWC (Eastern Group) shall be required to file its next general rate case no later than August 31, 2016 with a test year ending no later than December 31, 2015.

4.7 Any SIB surcharges that are in effect shall be reset to zero upon the date new rates become effective in AWC's next general rate case.

4.8 Every six (6) months AWC shall file a report with Docket Control delineating the status of all SIB eligible projects listed per SIB Plant Table I above, and may include modifications to that list for approval by the Commission using the process referenced in Section 6.0.

4.9 AWC shall make an annual SIB surcharge filing to true-up its collections under the SIB surcharge and establish the surcharge for the new surcharge period. A new SIB surcharge may be combined with an existing SIB surcharge such that a single SIB surcharge and SIB efficiency credit are shown on a customer's bill.

## 5.0 RECONCILIATION AND TRUE-UPS

5.1 The revenue collected by the SIB surcharge over the preceding twelve months shall be trued-up and reconciled with the SIB Authorized Revenue for that period.

5.2 For each twelve (12) month period that a SIB surcharge is in effect, AWC shall reconcile the amounts collected by the SIB surcharge with the SIB Authorized Revenue, for that twelve (12)-month period, consistent with Schedule B, attached hereto as Exhibit B.

5.3 Any under- or over-collected SIB revenues shall be recovered or refunded, without interest, over a twelve-month period by means of a fixed monthly true-up surcharge or credit.

5.4 Starting with the second annual SIB surcharge, where there are over/under-collected balances related to the previous annual SIB surcharge, such over/under-collected balances shall be carried over to the next year, and capped to the extent annual revenues do not exceed the five percent cap. If, after the five year period there remains an over/under-collected balance, such balance shall be reset to zero, and any over/under-collected balance shall be addressed in the Company's next rate case for the Eastern Group.

## 6.0 ADDING PROJECTS TO SIB PLANT TABLE I

6.1 For ratemaking purposes and for purposes of this Agreement, the Signatory Parties agree that AWC, during the period to which the SIB applies, may request Commission authorization to modify or add other projects to SIB Plant Table I. Such additional projects may be added to SIB Plant Table I if they satisfy the criteria set forth in Paragraphs 6.2, 6.3, and 6.4.

6.2 To be eligible for SIB recovery, an asset must be utility plant investment that represents expenditures made by the Company to maintain or improve existing customer service and system reliability, integrity and safety. Eligible plant additions are limited to replacement projects. The costs of extending facilities or capacity to serve new customers are not recoverable through the SIB mechanism.

6.3 To be eligible for SIB recovery, a project must be a distribution system improvement that satisfies at least one of the following criteria:

6.3.1 Water loss for the system exceeds ten (10) percent, as calculated by the following formula:

6.3.1.1  $((\text{Volume of Water Produced} - (\text{Volume of Water Sold} + \text{Volume of Water Put to Beneficial Use})) / (\text{Volume of Water Produced}))$ . If the Volume of Water Put to Beneficial Use is not metered, it shall be established in a reliable, verifiable manner;

6.3.2 Water Utility plant assets have remained in service beyond their useful service lives (based on that system's authorized utility plant depreciation rates) and are in need of replacement due to being worn out or in a deteriorating condition through no fault of the Company;

6.3.3 Any other engineering, operational or financial justification supporting the need for a plant asset replacement, other than AWC's negligence or improper maintenance, including, but not limited to:

6.3.3.1 A documented increasing level of repairs to, or failures of, a plant asset justifying its replacement prior to reaching the end of its useful service life (e.g. black poly pipe);

6.3.3.2 Meter replacements for systems that have implemented a meter testing and maintenance program in compliance with A.A.C. R14-2-408 (E);

6.3.3.3 Meters replaced in a system for the purpose of complying with the U.S. Environmental Protection Agency's Reduction of Lead in Drinking Water Act of 2010; and

6.3.3.4 Assets that are required to be moved, replaced or abandoned by a governmental agency or political subdivision if AWC can show that it has made a good faith effort to seek reimbursement for all or part of the costs incurred.

6.4 To be eligible for SIB treatment, a project must be a distribution system improvement with assets to be classified in the following plant categories:

6.4.1 Transmission and Distribution Mains;

6.4.2 Fire Mains;

6.4.3 Services, including Service Connections;

6.4.4 Valves and Valve Structures;

6.4.5 Meters and Meter Installations;

6.4.6 Hydrants

6.5 With a request to modify or add projects to SIB Plant Table I, AWC shall provide a proposed order for Commission consideration. Staff and RUCO shall have 30 days to object to the projects AWC is seeking to include in its revised SIB Plant Table I. Staff shall promptly process AWC's request and shall docket any Staff recommendations to the Commission within thirty days after AWC has filed its request. If there is no objection to AWC's request, that request shall be placed on an open meeting agenda at the earliest practical date.

## 7.0 SIB SURCHARGE FILING REQUIREMENTS

7.1 For ratemaking purposes and for all purposes of this Agreement, the Signatory Parties agree that AWC shall include the following information with each SIB surcharge filing:

7.1.1 A schedule (an example of which is attached hereto as Exhibit C, SIB Plant Table II) showing the SIB eligible projects completed for which AWC seeks cost recovery. Such projects must 1) be projects set forth in AWC's initial SIB Plant Table I or have been added to said SIB Plant Table I pursuant to Section 6.0 of this agreement; 2) have been completed by AWC; and 3) be actually serving customers.

7.1.2 SIB Schedule A (an example of which is attached hereto as Exhibit D), showing a calculation of the SIB revenue requirement and SIB efficiency credit, as well as the individual SIB fixed surcharge calculation;

7.1.3 SIB Schedule B (an example of which is attached hereto as Exhibit B), showing the overall SIB revenue true-up calculation for the prior twelve-month SIB surcharge period, as well as the individual SIB fixed true-up surcharge or credit calculation;

7.1.4 SIB Schedule C (an example of which is attached hereto as Exhibit E) showing the effect of the SIB surcharge on a typical residential customer bill;

7.1.5 SIB Plant Table II, summarizing SIB-eligible projects completed and included in the current SIB surcharge filing.

7.1.6 SIB Plant Table I (an example of which is attached hereto as Exhibit A), summarizing SIB-eligible projects contemplated for the next twelve (12)-month SIB surcharge period.

7.1.7 SIB Schedule D (an example of which is attached as Exhibit F) showing an analysis of the impact of the SIB Plant on the fair value rate base, revenue, and the fair value rate of return as set forth in Decision No. 73736.

7.1.8 A proposed order for the Commission's consideration.

7.2 At least 30 days prior to the SIB surcharge becoming effective, AWC shall provide public notice in the form of a billing insert or customer letter which includes the following information:

7.2.1 The individual SIB surcharge amount, by meter size;

7.2.2 The individual SIB efficiency credit, by meter size;

7.2.3 Any individual SIB true-up surcharge or credit, by meter size; and

7.2.4 A summary of the projects included in the current SIB surcharge filing, including a description of each project and its cost.

## 8.0 RATE DESIGN

8.1 The SIB fixed surcharge/rate design shall be calculated as follows:

8.1.1 The SIB surcharge shall be a fixed monthly surcharge containing a SIB fixed surcharge and the SIB efficiency credit as its two components.

8.1.2 The SIB surcharge shall be calculated by dividing the overall SIB revenue requirement by the number of 5/8-inch equivalent meters serving active customers at the end of the most recent twelve (12) month period, and shall increase with meter size based on the following meter capacity multipliers:

8.1.2.1	5/8-inch x 3/4-inch	1.0 times
8.1.2.2	1-inch	2.5 times
8.1.2.3	1 1/2-inch	5 times
8.1.2.4	2-inch	8 times
8.1.2.5	3-inch	16 times
8.1.2.6	4-inch	25 times

8.1.2.7	6-inch	50 times
8.1.2.8	8-inch	80 times
8.1.2.9	10-inch & above	115 times

8.2 The SIB surcharge shall apply to all of AWC's metered general service customers, including private fire service customers.

## 9.0 SIB SURCHARGE IMPLEMENTATION

9.1 For ratemaking purposes and for all purposes of this Agreement, the Signatory Parties agree that:

9.2 AWC's SIB surcharges and SIB true-up surcharges/credits shall not become effective unless approved by the Commission.

9.3 AWC shall provide a proposed order with each SIB surcharge filing for the Commission's consideration.

9.4 Staff and RUCO shall have thirty (30) days from the date a SIB surcharge filing is made by AWC to review the amount of the SIB surcharge or SIB true-up surcharge or credit, and dispute and/or file a request for the Commission to alter the SIB surcharge or SIB true-up surcharge/credit. If no objection is filed to AWC's request within the thirty-day timeframe, the request shall be placed on an open meeting agenda at the earliest practicable date.

## 10.0 COMMISSION REVIEW OF SIB MECHANISM

10.1 For ratemaking purposes and for all purposes of this Agreement, the Signatory Parties agree that the Commission may determine that good cause exists to suspend, terminate or modify AWC's SIB mechanism, after the affected parties are afforded due process and an opportunity to be heard prior to any suspension, termination, or modification of the SIB mechanism.

10.2 The Signatory Parties agree that, although the SIB mechanism discussed in this agreement may be used as a template in other rate proceedings, it is specific to AWC in Docket W-01455A-11-0310. The Signatory Parties further agree that Staff may recommend and/or that any utility may apply to the Commission for a similar SIB mechanism for projects meeting the criteria outlined herein in a full rate case application.

## 11.0 COMMISSION EVALUATION OF PROPOSED SETTLEMENT

11.1 This Agreement shall serve as the procedural device by which the Signatory Parties will submit their proposed settlement of the Phase 2 Rate Proceeding to the Commission. Nothing herein is intended to amend or supersede Decision No. 73736, which Decision is final in every respect.

11.2 All currently-filed testimony and exhibits, as well as the testimony in support of this Agreement anticipated by the Commission's February 21, 2013 Procedural Order, shall be offered into the Commission's record as evidence. All Signatory Parties waive the filing and submission of surrebuttal testimony and exhibits from Staff and Intervenors, and the filing and submission of rejoinder testimony and exhibits from AWC.

11.3 The Signatory Parties recognize that the Commission will independently consider and evaluate the terms of this Agreement.

11.4 If the Commission issues an order adopting all material terms of this Agreement, such action shall constitute Commission approval of the Agreement. Thereafter, the Signatory Parties shall abide by the terms of this Agreement, as approved by the Commission.

11.5 The Signatory Parties agree to support and defend this Agreement, including filing testimony in support of the Agreement and presenting evidence in support of the Agreement at the hearing in the Phase 2 Proceedings scheduled to begin on April 8, 2013, and will not oppose any provision of the Agreement in pre-filed or live testimony. The parties agree to waive their rights to appeal a Commission Decision approving the same, provided that the Commission approves all material provisions of the Agreement. The Signatory Parties shall take reasonable steps to expedite consideration of the settlement, entry of a Decision adopting the settlement, and implementation of the mechanism anticipated in this Agreement, and shall not seek any delay in the schedules set for consideration of the Agreement or for the Administrative Law Judge's or Commission's consideration of the settlement embodied in the Agreement. If the Commission adopts an order approving all material terms of this Agreement, the Signatory Parties will support and defend the Commission's order before any court or regulatory agency in which it may be at issue.

11.6 If the Commission fails to issue an order adopting all material terms of this Agreement or adds new or different material terms to this Agreement, any or all of the Signatory Parties may withdraw from this Agreement, and such Signatory Party or Parties may pursue without prejudice their respective remedies at law. For the purposes of this Agreement, whether a term is material shall be left to the discretion of the Signatory Party choosing to withdraw from the Agreement. If a Signatory Party files an application for rehearing before the Commission, Staff shall not be obligated to file any document or take any position regarding the withdrawing Signatory Party's application for rehearing.

11.7 The Signatory parties recognize that Staff does not have the power to bind the Commission. For purposes of proposing a settlement agreement, Staff acts in the same manner as any party to a Commission proceeding.

## 12.0 MISCELLANEOUS PROVISIONS

12.1 The provisions set forth in the Agreement are made for purposes of settlement only and shall not be construed as admissions against interest or waivers of litigation positions of the Signatory parties in this proceeding or related to other or future rate cases.

12.2 This Agreement represents the Signatory Parties' mutual desire to settle disputed issues in a manner consistent with the public interest. None of the positions taken in this Agreement by any of the Signatory Parties may be relied upon as precedent in any proceeding before the Commission, any other regulatory agency, or any court for any purpose except in furtherance of this Agreement.

12.3 This case presents a unique set of circumstances and to achieve consensus for settlement, participants may be accepting positions that, in other circumstances, they would be unwilling to accept. They are doing so because the Agreement, as a whole, with its various provisions for settling the unique issues presented by this case, is consistent with their long-term interests and with the broad public interest. The acceptance by any Signatory Party of a specific element of this Agreement shall not be considered as precedent for acceptance of that element in any other context.

12.4 No Signatory Party is bound by any position asserted in negotiations, except as expressly stated otherwise in this Agreement. No Signatory Party shall offer evidence of conduct or statements made in the course of negotiating this Agreement before this Commission, or any other regulatory agency, or any court.

12.5 Each of the terms and conditions of the Agreement is in consideration and support of all other terms. Accordingly, the terms are not severable.

11.6 The Signatory Parties warrant and represent that each person whose signature appears below is fully authorized and empowered to execute this Agreement.

12.7 The Signatory Parties acknowledge that they are represented by competent legal counsel and that they understand all of the terms of this Agreement and have had an opportunity to participate in the drafting of this Agreement and to fully review it with their counsel before signing, and that they execute this Agreement with full knowledge of the terms of the Agreement.

12.8 This Agreement may be executed in any number of counterparts and by each individual Signatory Party on separate counterparts, each of which when so executed and delivered shall be deemed an original and all of which taken together shall constitute one and the same instrument. This Agreement may also be executed electronically or by facsimile.

12.9 To the extent any provision of this Agreement is inconsistent with any existing Commission order, rule or regulation, this Agreement shall control.

Install approximately 1,350 LF of 6-inch DI replacement pipe with polywrap, replace 88 service connections and replace 88 meters between Boise Street and Avalon Street. This project will replace approximately 800 LF of 4-inch CA water main installed in 1970 in an alley between 113<sup>th</sup> Way and 114<sup>th</sup> Street. The existing water main and service connections to be replaced have 22 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.

Install approximately 650 LF of 6-inch DI replacement pipe with polywrap, replace 102 service connections, replace 102 meters, and replace 1 fire hydrant between 114<sup>th</sup> Street and Meridian Road. The existing water mains and service connections to be replaced have 22 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.

18	345	21	1-inch	Copper	3,946.08	11-004	Hideaway Lane	2015	\$82,868	Replace 21 service connections and replace 21 meters along Hideaway Lane, Lazy Lane, and Breathless Drive. The existing water mains have 14 recorded service line leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
25	345	48	1-inch	Copper	3,959.74	11-004	Mountain Rd.	2015	\$190,068	Replace 48 service connections and replace 48 meters along Mountain Road, Elmont Drive, and Matchless Drive. The existing water mains have 11 recorded service line leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
27	345	8	1-inch	Copper	4,146.89	11-004	Emerald Dr.	2014	\$33,175	Install approximately 500 LF of 8-inch DI replacement pipe with polywrap, replace 8 service connections and replace 8 meters along South Emerald Drive. This project will replace approximately 500 LF of 2-inch ST water main installed in 1955 along South Emerald Drive. The existing water mains and service connections to be replaced has 10 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
28	345	30	1-inch	Copper	3,963.58	11-004	Sleepy Hollow Trail, Breathless Dr	2014	\$118,907	Replace 30 service connections and replace 30 meters along Sleepy Hollow Trail, Breathless Drive and Tum Tum Court. The existing water mains have 10 recorded service line leaks over the last 7 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
31	345	14	1-inch	Copper	4,055.48	11-004	Hummingbird Lane	2015	\$56,777	Replace 14 service connections and replace 14 meters along Hummingbird Lane. The existing water main has 7 recorded service line leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
32	345	3	1-inch	Copper	4,491.60	11-004	Broadway Ave.	2014	\$13,475	Install approximately 600 LF of 6-inch DI replacement pipe with polywrap, replace 3 service connections, replace 3 meters, and replace 1 fire hydrant along Broadway Avenue from Tomahawk Road to Vista Road. This project will replace approximately 600 LF of 6-inch CA water main installed in 1960 and 1984 along Broadway Avenue. The existing water mains and service connections to be replaced has 7 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.

45	343	2,450	6	DI	92.37	02-001	Ledge Avenue	2014	\$226,307	Install approximately 2,450 LF of 6-inch DI replacement pipe with polywrap, replace 41 service connections, and replace 41 meters along Ledge Avenue and Quality Road. This project will replace approximately 1,050 LF of 1-inch GS water main installed in 1937, 1939, 1958, and 1962; approximately 100 LF of 2-inch ST water main installed in 2002; approximately 1,000 LF of 2-inch GS water main installed in 1932 and 1947; and approximately 200 LF of 3-inch GS water main installed in 1947. The existing water mains and service connections to be replaced have 35 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
46	343	900	6	DI	92.09	02-001	Highway 80	2014	\$82,881	Install approximately 900 LF of 6-inch DI replacement pipe with polywrap, replace 1 service connection, and replace 1 meter along Highway 80 and Winwood Road. This project will replace approximately 900 LF of 1-inch PVC water main installed in 1980 on Winwood Road. The existing water mains and service connections to be replaced have 22 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
47	343	1,650	6	DI	91.98	02-001	Ledge Avenue	2014	\$151,767	Install approximately 1,650 LF of 6-inch DI replacement pipe with polywrap, replace 20 service connections, and replace 20 meters along Ledge Avenue, Quality Road and Alleys. This project will replace approximately 150 LF of 1-inch GS water main installed in 1939, approximately 100 LF of 1-inch PVC water main installed in 1976, approximately 750 LF of 2-inch GS water main installed in 1939 and 1947; and approximately 350 LF of 3-inch GS water main installed in 1932 and 1952. The existing water mains and service connections to be replaced have 21 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
48	343	2,900	6	DI	91.66	02-001	Teran Street	2013	\$265,814	Install approximately 2,900 LF of 6-inch DI replacement pipe with polywrap, replace 22 service connections, and replace 22 meters along Teran Street, Aruizu Street, Carbejal Street, and Vargas Street. This project will replace approximately 700 LF of 1-inch GS water main installed in 1938; approximately 800 LF of 2-inch GS water main installed in 1938, and approximately 1,300 LF of 6-inch ST water main installed in 1908 and 1976. The existing water mains and service connections to be replaced have 20 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.

**Information to be included with SIB-Eligible Project Notification**

45	345	41	1-inch	Copper	2,178.15	02-001	Ledge Avenue	2014	\$89,304	Install approximately 2,450 LF of 6-inch DI replacement pipe with polywrap, replace 41 service connections, and replace 41 meters along Ledge Avenue and Quality Road. This project will replace approximately 1,050 LF of 1-inch GS water main installed in 1937, 1939, 1958, and 1962; approximately 100 LF of 2-inch ST water main installed in 2002; approximately 1,000 LF of 2-inch GS water main installed in 1932 and 1947; and approximately 200 LF of 3-inch GS water main installed in 1947. The existing water mains and service connections to be replaced have 35 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
46	345	1	1-inch	Copper	1,717.75	02-001	Highway 80	2014	\$1,718	Install approximately 900 LF of 6-inch DI replacement pipe with polywrap, replace 1 service connection, and replace 1 meter along Highway 80 and Winwood Road. This project will replace approximately 900 LF of 1-inch PVC water main installed in 1980 on Winwood Road. The existing water mains and service connections to be replaced have 22 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
47	345	20	1-inch	Copper	1,954.85	02-001	Ledge Avenue	2014	\$39,097	Install approximately 1,650 LF of 6-inch DI replacement pipe with polywrap, replace 20 service connections, and replace 20 meters along Ledge Avenue, Quality Road and Alleys. This project will replace approximately 150 LF of 1-inch GS water main installed in 1939, approximately 100 LF of 1-inch PVC water main installed in 1976, approximately 750 LF of 2-inch GS water main installed in 1939 and 1947, and approximately 350 LF of 3-inch GS water main installed in 1932 and 1952. The existing water mains and service connections to be replaced have 21 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
48	345	22	1-inch	Copper	2,052.15	02-001	Teran Street	2013	\$45,147	Install approximately 2,900 LF of 6-inch DI replacement pipe with polywrap, replace 22 service connections, and replace 22 meters along Teran Street, Aruizu Street, Carbajal Street, and Vargas Street. This project will replace approximately 700 LF of 1-inch GS water main installed in 1938, approximately 800 LF of 2-inch GS water main installed in 1938, and approximately 1,300 LF of 6-inch ST water main installed in 1908 and 1976. The existing water mains and service connections to be replaced have 20 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.

COCHISE/BISBEE  
 TABLE I (Page 3 of 6) cont.  
 Information to be included with SIB-Eligible Project Notification

49	345	12	1-inch	Copper	2,698.67	02-001	Park Avenue	2013	\$32,384	Install approximately 700 LF of 6-inch DI replacement pipe with polywrap, replace 12 service connections, replace 12 meters, and replace 1 fire hydrant along Park Avenue. This project will replace approximately 650 LF of 2-inch GS water main installed in 1920 and 1967; approximately 300 LF of 4-inch GS water main installed in 1922; and approximately 250 LF of 6-inch ST water main installed in 1922 on Second Street. The existing water mains and service connections to be replaced have 16 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
50	345	11	1-inch	Copper	1,875.09	02-001	Brophy Avenue	2014	\$20,626	Install approximately 600 LF of 6-inch DI replacement pipe with polywrap, replace 11 service connections, and replace 11 meters along Brophy Avenue. This project will replace approximately 400 LF of 1-inch GS water main installed in 1944 and approximately 200 LF of 2-inch CU water main installed in 1980 on Brophy Avenue. The existing water mains and service connections to be replaced have 15 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
51	345	7	1-inch	Copper	2,985.16	02-001	Cole Avenue	2014	\$20,896	Install approximately 1,000 LF of 6-inch DI replacement pipe with polywrap, replace 7 service connections, replace 7 meters, and replace 2 fire hydrants along Cole Avenue. This project will replace approximately 800 LF of 6-inch ST water main installed in 1908 and approximately 150 LF of 8-inch ST water main installed in 1908 on Cole Avenue. The existing water mains and service connections to be replaced have 14 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
52	345	7	1-inch	Copper	2,507.04	02-001	Church Street	2012	\$17,549	Install approximately 400 LF of 6-inch DI replacement pipe with polywrap, replace 7 service connections, replace 7 meters, and replace 1 fire hydrant along Church Street from Clawson Avenue to Sowell's Avenue. This project will replace approximately 300 LF of 4-inch ST water main installed in 1930, 1975, and 1978 and approximately 100 LF of 6-inch ST water main installed in 1908 on Church Street. The existing water mains and service connections to be replaced have 12 recorded leaks over the last 10 years. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
									\$352,359	
<b>Subtotal Cost (estimate)</b>										

**COCHISE/BISBEE**  
**TABLE I (Page 4 of 6)**  
**Information to be included with SIB-Eligible Project Notification**

Project No.	NARUC Acct No. (SIB-eligible plant)	Replacement Plant Description (SIB-eligible plant)			PWSID No.	Site (location description)	Replacement Plant		1. Provide narrative why Replacement Plant is necessary - replacement of existing plant that has exceeded its designated useful life and has worn out or is in deteriorating condition due to no fault of the utility - replacement of existing plant to address excessive water loss (10% or more) - replacement of existing plant for other reasons supported by persuasive showing by utility  2. Provide narrative explaining why this segment of plant is a priority.  3. Provide narrative explaining how replacing this plant will benefit existing customers.  4. Provide affirmation that Replacement Plant does not include the costs for extending or expanding facilities to serve new customers.
		Size	Quantity	Cost/Unit			Expected In-Service Date	Cost (estimated)	
43	346 Meters	5/8-inch	22	80.00	02-001	Bowers Street	2012	\$1,760	Replace 22 meters along Bowers Street from Marie Street to McDonald Street. The existing meters have reached the end of their useful life. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
44	346	5/8-inch	11	80.00	02-001	Ocotillo Avenue	2012	\$880	Replace 11 meters along Ocotillo Street. The existing meters have reached the end of their useful life. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
45	346	5/8-inch	41	80.00	02-001	Ledge Avenue	2014	\$3,280	Replace 41 meters along Ledge Avenue and Quality Road. In 2014 the existing meters are no longer NSF approved due to the new lead free brass requirements. Once a meter is removed from service, a new NSF approved meter must be installed in its place for compliance. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
46	346	5/8-inch	1	80.00	02-001	Highway 80	2014	\$80	Replace 1 meter along Highway 80 and Winwood Road. In 2014 the existing meters are no longer NSF approved due to the new lead free brass requirements. Once a meter is removed from service, a new NSF approved meter must be installed in its place for compliance. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.
47	346	5/8-inch	20	80.00	02-001	Ledge Avenue	2014	\$1,600	Replace 20 meters along Ledge Avenue, Quality Road and Alleys. In 2014 the existing meters are no longer NSF approved due to the new lead free brass requirements. Once a meter is removed from service, a new NSF approved meter must be installed in its place for compliance. This replacement project is not being constructed to serve new customers. Project further described and documented in Exhibit FKS-13.

**ARIZONA CORPORATION  
COMMISSION**

June 17, 2013

RE: Arizona Water Company (Rates Phase 2) Docket No. W-01445A-11-0310

**Dissent by Commissioner Brenda Burns**

Decision #73736 did not grant DSIC. Instead, the Decision stated:

[W]e conclude that the Eastern Group, due to the age of some of its systems and the resulting increased need for infrastructure replacement and improvement, necessitates a somewhat higher COE (page 61, lines 15-17)

However, this Decision allows for a different mechanism to fund that infrastructure replacement and improvement (SIB) and preserves the same ROE from Decision #73736, thereby authorizing double recovery.

In this case:

AWC proposed a cost of common equity of 12.5%  
RUCO proposed a cost of common equity of 9.4%  
Staff proposed a cost of common equity of 9.4%

Decisions, since 2010, have granted the following ROEs, for Class A and Class B companies (not including this AWC case):

Class A: 9.37% (average, of seven companies)

Class A: 9.50% (median)

Class B: 9.52% (average, of six companies)

Class B: 9.50% (median)

The results, reflected above, are remarkably consistent. Therefore, if we had awarded 10.0% to AWC, in this Decision, we still would have granted an ROE that is fifty basis points higher than recent history's median. It must also be noted that current interest rates have been at historic lows. On top of that, we awarded SIB.

During my tenure, I have been receptive to and advocated for crucial water reforms. This Commission, over the last two-plus years, has done an admirable job of meeting the challenges

of adopting new policies by doing so in a prudent and cogent manner. Due to years of workshops, meetings with stakeholders, evidence presented in various rate cases and discussions in Open Meetings I have been persuaded that a DSIC-like mechanism is a reform proposal worth executing. I believe, when appropriate, a properly implemented DSIC/SIB mechanism can help ensure infrastructure integrity, provide stability for a water company and lessen rate shock for customers.

If AWC had originally been awarded a 10.0% ROE, in tandem with this Commission's first ever DSIC-like mechanism, as suggested by the ROO, it would have been a fair outcome. The AWC ratepayers should not be asked to pay for an elevated ROE while also being the test case for a newly approved SIB.

This Decision is not in the best interest of the ratepayers and now potentially exposes the Commission to litigation that could jeopardize the worthy features of SIB. I would hate to see a lot of good work, performed by stakeholders and ACC staff, fall by the wayside because of this action. For the reasons stated above, I must dissent.

Sincerely,

Brenda Burns  
Commissioner

1 **INTRODUCTION**

2 **Q. Please state your name, occupation, and business address.**

3 A. My Name is Patrick J. Quinn. I am the Director of the Residential Utility  
4 Consumer Office ("RUCO") located at 1110 W. Washington, Suite 220,  
5 Phoenix, Arizona 85007.

6

7 **Q. Have you filed any prior testimony in this case on behalf of RUCO?**

8 A. No.

9

10 **Q. What is the purpose of your testimony in this proceeding?**

11 A. The purpose of my testimony is to present RUCO's reasons for opposing  
12 a System Improvement Benefit mechanism ("SIB") which was developed  
13 through a settlement process that was ordered by the Arizona Corporation  
14 Commission ("ACC" or "Commission") in Decision No. 73736, dated  
15 February 20, 2013. The SIB was adopted in the proposed settlement  
16 agreement ("Settlement Agreement") that was filed with the Commission  
17 on April 1, 2013. My testimony will address the public interest issues  
18 associated with the SIB mechanism and explain why the Settlement  
19 Agreement should not be approved by the Commission.

20

21

22 ...

23

1 **Q. Why not?**

2 A. While there were many parts of the Settlement Agreement that were well  
3 thought out and many compromises where agreed to, in the final  
4 document there are still areas that RUCO believes are not fully addressed.  
5 There are some protections for the rate payer like a cap on annual SIB  
6 charges; however the only real financial benefit for the residential  
7 consumer is the efficiency credit equal to 5.00 percent of the SIB  
8 surcharge cap. This credit and other benefits were insufficient to offset  
9 what the residential consumer would be giving up if RUCO signed the  
10 agreement. Therefore I could not sign the Agreement because I believed  
11 it was not in the best interest of the residential consumer.

12

13 **Q. What makes the Settlement Agreement unacceptable?**

14 A. The original idea of a SIB surcharge was to allow a company to recover  
15 the cost of replacing fully depreciated facilities between rate cases when  
16 those facilities through no fault of the company failed and/or were  
17 operating inefficiently. In this Agreement the definition of what facilities  
18 would qualify for a SIB surcharge expanded beyond the original intent of  
19 the SIB.

20 There should be language in the Settlement which does not limit the  
21 Commission but allows the Commission to consider the circumstances of  
22 each case when considering a SIB surcharge. This is important, as now  
23 the Agreement creates perverse incentives. For example, under section

1 6.3, the Agreement provides that all a utility needs to qualify for the SIB is  
2 to meet one of the numerous criteria. If a utility has an eight percent water  
3 loss, the utility may create circumstances that allow a greater water loss to  
4 meet the eligibility. Another example would include the circumstances of  
5 this case. In the ROO, the Judge was concerned with the Company's  
6 payment of dividends over the years when it could have used the money  
7 to address its infrastructure needs. Under the Agreement concerns such  
8 as this are not part of the eligibility criteria.

9  
10 Perhaps RUCO's greatest concern is its belief that when a company  
11 qualifies for a SIB surcharge that the company shifts risk to the consumer  
12 and therefore the authorized return on equity ("ROE") should be adjusted  
13 downward. While it was not possible to make the ROE argument in this  
14 case, RUCO did not want to limit its ability to argue that in future cases  
15 since this Agreement may be used as a template in future filings.

16 Also RUCO by signing this agreement would have given up its rights to  
17 challenge the legality of the SIB mechanism in the future. These were the  
18 main reasons RUCO chose not to sign.

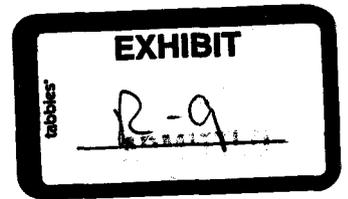

19  
20 **Q. Does your silence on any other issues, matters or findings**  
21 **addressed in the testimony of the parties who support the SIB**  
22 **mechanism constitute your acceptance of the Company's positions**  
23 **on such issues, matters or findings?**

24 **A. No, it does not.**

1

2 **Q. Does this conclude your testimony on the proposed SIB**  
3 **mechanism?**

4 **A. Yes, it does.**

1 **INTRODUCTION**

2 **Q. Please state your name, occupation, and business address.**

3 A. My Name is William A. Rigsby. I am the Chief of Accounting and Rates  
4 for the Residential Utility Consumer Office ("RUCO") located at 1110 W.  
5 Washington, Suite 220, Phoenix, Arizona 85007.

6  
7 **Q. Have you filed any prior testimony in this case on behalf of RUCO?**

8 A. Yes, I filed direct and surrebuttal testimony presenting RUCO's  
9 recommendations on cost of capital and on the Company's request for a  
10 Distribution System Improvement Charge ("DSIC") mechanism in Phase 1  
11 of this proceeding.

12  
13 **Q. Is RUCO a signatory to the proposed settlement agreement that is  
14 the subject of this phase of the proceeding?**

15 A. No. RUCO is not a signatory to the proposed settlement agreement  
16 ("Settlement Agreement").

17  
18 **Q. Please state the purpose of your testimony.**

19 A. The purpose of my testimony is to present RUCO's reasons for opposing  
20 a System Improvement Benefit mechanism ("SIB") which was developed  
21 through a settlement process that was ordered by the Arizona Corporation  
22 Commission ("ACC" or "Commission") in Decision No. 73736, dated  
23 February 20, 2013. The SIB was adopted in the Settlement Agreement

1 that was filed with the Commission on April 1, 2013. My testimony will  
2 address RUCO's concerns with the proposed SIB and why RUCO  
3 believes the Settlement Agreement should not be approved by the  
4 Commission.

5  
6 **Q. Will RUCO offer a policy witness who will address the public interest**  
7 **issues in this phase of the proceeding?**

8 A. Yes. The public interest issues in this matter will be addressed by RUCO  
9 Director Patrick J. Quinn who is also filing direct testimony on the  
10 Settlement Agreement.

11  
12 **Q. How is your testimony organized?**

13 A. My testimony contains three parts: the introduction that I've just presented;  
14 a section on the background of this proceeding, and a section on the SIB  
15 that has been adopted in the Settlement Agreement.

16  
17 **BACKGROUND**

18 **Q. What is the background of this proceeding?**

19 A. On August 5, 2011, AWC filed an application with the Commission  
20 requesting a permanent rate increase for the Company's Eastern Group  
21 systems. In addition to the requested rate increase, AWC sought  
22 approval of a DSIC mechanism that would allow the Company to

1           implement annual surcharges to recover the costs of specific plant items  
2           placed into service between general rate case proceedings.

3  
4           During what is now being referred to as Phase 1 of this proceeding, expert  
5           witnesses for both ACC Staff and RUCO testified against the DSIC  
6           mechanism and recommended that the Commission reject it. After  
7           weighing the evidence presented in the case, the Administrative Law  
8           Judge assigned to hear the matter issued a Recommended Opinion and  
9           Order ("ROO") on Wednesday, January 30, 2013. The Administrative Law  
10          Judge adopted ACC Staff's and RUCO's positions and recommended that  
11          the Commission deny AWC's request for a DSIC.

12  
13          At the Regular Open Meeting held on Tuesday, February 12, 2013, the  
14          Commission voted 5-0 to adopt an amended ROO that approved an  
15          increase in rates for AWC's Eastern Group Systems, but left the docket  
16          open for the purpose of allowing the Company, ACC Staff, RUCO and  
17          other interested parties to engage in settlement discussions for the  
18          purpose of developing a DSIC-like mechanism. Decision No. 73736,  
19          dated February 20, 2013, ordered a procedural schedule that would result  
20          in a tentative vote on a settlement agreement reached by any of the  
21          parties to the case.

22

1 Settlement talks were conducted on Monday, March 4, 2013 immediately  
2 following a Procedural Conference on the Phase 2 procedural schedule  
3 and the admission of the City of Globe as an intervenor in the proceeding.  
4 Participants in the settlement meetings included AWC, ACC Staff, RUCO,  
5 On February 13, 2013, Rio Rico Utilities, Inc. dba Liberty Utilities ("Liberty  
6 Utilities"), EPCOR Water Arizona, Inc., Global Water – Palo Verde Utilities  
7 Company, Santa Cruz Water Company, Valencia Water Company – Town  
8 Division, Valencia Water Company – Greater Buckeye Division, Water  
9 Utility of Greater Tonopah, Willow Valley Water Co. and Water Utility of  
10 Northern Scottsdale ("collectively the Global Utilities"), the Water Utility  
11 Association of Arizona ("WUAA"), whose representative was not in  
12 attendance, the Arizona Investment Council ("AIC"), and the City of Globe.  
13 At the conclusion of the settlement meeting, an agreement in principle had  
14 been reached on the SIB mechanism which was to be reduced to writing  
15 and reviewed by settling parties.

16  
17 After three weeks of revisions to the first draft of the Settlement  
18 Agreement, a final draft, which adopts the SIB mechanism, was approved  
19 on Monday, March 25, 2013. The signatories to the Settlement  
20 Agreement include AWC, ACC Staff, Global Water, EPCOR Water  
21 Arizona Inc., Liberty Utilities, WUAA, and AIC. On Monday, April 1, 2013,  
22 a copy of the Settlement Agreement was filed with the Commission.

1 **Q. Was RUCO a signatory to the Settlement Agreement?**

2 A. No. RUCO chose not to sign the Settlement Agreement because of its  
3 concerns with the SIB mechanism that was developed by the signatories.

4

5 **Q. Does RUCO believe that the Agreement itself is a good Agreement?**

6 A. Legal and Policy considerations aside, the Agreement viewed alone has a  
7 lot of good points. There are still areas that the Agreement does not cover  
8 or covers inadequately that RUCO believes must be addressed if the  
9 Commission intends to approve a SIB mechanism.

10

11 **Q. What areas need to be addressed?**

12 A. First, the Settlement Agreement does not exclude improvements for fire  
13 flow in the surcharge. The Commission has determined that utilities  
14 should not recover improvements for fire flow. (See the Youngtown case  
15 – Decision No. 70351, dated May 16, 2008). Under the terms of the  
16 Settlement Agreement there is nothing from stopping a utility from running  
17 fire flow improvements through the surcharge. It is a contract and there  
18 should be a provision which directly addresses this issue so that there is  
19 no question in the future.

20

21 Second, the eligibility requirements could result in perverse incentives.

22 For example, to be eligible for a SIB, a Company need only experience

23 water loss for the system that exceeds ten percent (Settlement Agreement

1 Section 6.3.1). A utility that is experiencing only eight or nine percent  
2 water loss and does not meet eligibility under the other criteria would have  
3 incentive to take action which brings its water loss above the criteria.  
4 Inappropriate conduct or malfeasance in that case would be awarded by  
5 the approval of a SIB mechanism. There should be language in the  
6 Settlement which does not limit the Commission but allows the  
7 Commission to consider the circumstances of the case when considering  
8 a SIB.

9  
10 Third, the Settlement Agreement does not address what will happen to the  
11 SIB beyond the next general rate case. The understanding is that the  
12 Company will have to apply for a new SIB but it is not stated in the  
13 Settlement.

14  
15 Fourth, an earnings test requirement would protect the ratepayers better  
16 than a Schedule D filing which would show the impact of the SIB plant on  
17 FVRB (Settlement Agreement Section 7.17).

18  
19 **SYSTEM IMPROVEMENT BETTERMENT MECHANISM**

20 **Q. Have you reviewed the Settlement Agreement that adopts the SIB**  
21 **mechanism?**

22 **A. Yes.**  
23

1 **Q. Please describe the SIB mechanism.**

2 A. The SIB mechanism will allow AWC to implement a surcharge on the  
3 Company's ratepayers that will allow AWC to recover a return on, and a  
4 return of the capital costs of certain eligible utility plant items that are  
5 placed into service between general rate case proceedings.

6  
7 **Q. When would the SIB surcharge go into effect?**

8 A. The Settlement Agreement requires ACC Staff to promptly process AWC's  
9 request and docket any Staff recommendations to the Commission within  
10 thirty days after AWC has filed its request for an SIB surcharge. If there is  
11 no objection to AWC's request, the request shall be placed on an open  
12 meeting agenda at the earliest practical date for approval by ACC  
13 Commissioners. If AWC's SIB filing is approved by the Commissioners,  
14 AWC will begin recovering the SIB related costs through a surcharge  
15 placed on the Company's ratepayers.

16  
17 **Q. How will the SIB mechanism operate if the Settlement Agreement is  
18 approved by the ACC?**

19 A. Under the terms of the Settlement Agreement, AWC will be able to, within  
20 twelve months from the date of the ACC's final decision on the Company's  
21 general rate case application, file a request with the Commission to  
22 implement the SIB surcharge to be collected from AWC's ratepayers.  
23 AWC would be able to file for additional SIB surcharges in subsequent

1 years as long as the surcharges do not exceed a 5 percent cap of total  
2 authorized revenues. AWC would be required to file a rate case after five  
3 years after the prior rate case in which the SIB mechanism was approved.  
4

5 **Q. What criteria must be met before eligible plant items can be placed**  
6 **into service and be granted cost recovery under the SIB mechanism?**

7 **A.** Under the terms of the Settlement Agreement, AWC would first have to  
8 meet one of the following criteria prior to requesting cost recovery of  
9 eligible plant items. The three conditions are as follows:  
10

- 11 1. Water loss for the system exceeds ten (10) percent, as  
12 calculated by the following formula:  
13

14 
$$\frac{(\text{Volume of Water Produced} - (\text{Volume of Water Sold} + \text{Volume of Water Put to Beneficial Use}))}{(\text{Volume of Water Produced})}$$
 If the Volume of  
15 Water Put to Beneficial Use is not metered, it shall  
16 be established in a reliable, verifiable manner;  
17  
18

- 19  
20 2. Water Utility plant assets have remained in service beyond  
21 their useful service lives (based on that system's authorized  
22 utility plant depreciation rates) and are in need of  
23 replacement due to being worn out or in a deteriorating  
24 condition through no fault of the Company; and,  
25

- 26 3. Any other engineering, operational or financial justification  
27 supporting the need for a plant asset replacement, other  
28 than AWC's negligence or improper maintenance, including,  
29 but not limited to:  
30

31 Any other engineering, operational or financial  
32 justification supporting the need for a plant asset  
33 replacement, other than utility negligence or improper  
34 maintenance, including, but not limited to:  
35

36 A documented increasing level of repairs to, or  
37 failures of, an asset justifying its replacement prior to

reaching the end of its useful service life (e.g. black poly pipe);

Meter replacements for systems that have implemented a meter testing and maintenance program in compliance with A.A.C. R14-2-408 (E);

Meters replaced in a system for the purpose of complying with the U.S. Environmental Protection Agency's Reduction of Lead in Drinking Water Act of 2010;

Assets that are required to be moved, replaced or abandoned by a governmental agency or political subdivision if AWC can show that it has made a good faith effort to seek reimbursement for all or part of the costs incurred.

**Q. What types of plant items would be eligible for cost recovery under the SIB?**

**A. Distribution system items that must be classified in the following plant categories:**

- Transmission and Distribution Mains;
- Fire Mains;
- Services, including Service Connections;
- Valves and Valve Structures;
- Meters and Meter Installations;
- Hydrants

In addition to the plant categories listed above, AWC may also include a request to modify or add projects. The Settlement Agreement contains a provision that allows AWC to provide a proposed order for Commission

1 consideration that would list such projects. Under the Settlement  
2 Agreement, ACC Staff and RUCO would have thirty days to object to the  
3 projects that AWC is seeking.

4  
5 **Q. Does RUCO agree with the SIB mechanism?**

6 **A. No.**

7  
8 **Q. Please explain why RUCO does not agree with the SIB mechanism.**

9 **A. RUCO does not agree with the SIB mechanism for several reasons. First,**  
10 **and perhaps most important, the SIB shifts risk from the Company to**  
11 **ratepayers adequate financial consideration to the ratepayers. Second,**  
12 **RUCO believes that the SIB is not legal in Arizona. Third, there are a**  
13 **number of flaws with the SIB as proposed. Fourth, the SIB is not in the**  
14 **public interest.**

15  
16 **Q. Please elaborate on each of the four reasons stated above beginning**  
17 **with RUCO's view that the SIB shifts risk from the Company to**  
18 **ratepayers.**

19 **A. In RUCO's view, the SIB mechanism reduces regulatory lag for AWC**  
20 **because the Company will not have to wait until new rates go into effect to**  
21 **recover a return on SIB eligible plant or the depreciation expense**  
22 **associated with it. However, any actual cost savings, such as lower**  
23 **operating and maintenance expense, attributable to the new plant are not**

1 captured by the mechanism and flowed through to ratepayers. Unlike a  
2 typical adjustor mechanism for purchased fuel or natural gas which  
3 operates on a two way street basis by flowing both increases and  
4 decreases in costs to ratepayers the SIB operates on a one way street  
5 basis and only provides cost recovery to AWC. Ratepayers on the other  
6 hand see no actual cost savings that might be realized and will no longer  
7 benefit from the rate stability that exists under the present ratemaking  
8 procedure.

9  
10 **Q. What is regulatory lag?**

11 A. Regulatory lag is the time that it takes for a utility to recover the costs of  
12 plant additions placed into service between general rate case proceedings  
13 through new rates.

14  
15 **Q. Please explain how regulatory lag works to the benefit of both**  
16 **utilities, such as AWC, and ratepayers.**

17 A. In my direct testimony I cited a report authored by Ken Costello of the  
18 National Regulatory Research Institute who stated that mechanisms such  
19 as the proposed SIB "undercut the positive effects of regulatory lag on a  
20 utility's costs." According to Mr. Costello, "economic theory predicts that  
21 the longer the regulatory lag, the more a utility has to control its costs."  
22 Regulatory lag acts as a surrogate for the competitive pressures that force  
23 unregulated companies to keep their costs low. Under this scenario, both

1 utilities and ratepayers see the benefits that come from higher earnings  
2 and lower rates.

3

4 **Q. Doesn't the SIB incorporate a 5.00 percent efficiency credit to**  
5 **recognize the types of cost savings that you noted above?**

6 A. Yes, it does.

7

8 **Q. Didn't RUCO state in its underlying testimony that it could accept an**  
9 **operations & maintenance expense offset of 15.00 percent?**

10 A. Yes. RUCO did state that. However, that is not what the Settlement  
11 Agreement provides and RUCO would also have to consider the terms of  
12 any proposal.

13

14 **Q. Why does RUCO believe that the SIB mechanism is not legal in**  
15 **Arizona?**

16 A. Of course, this question suggests a legal analysis. I am not an attorney  
17 and not testifying as one. RUCO presented its legal analysis regarding  
18 the Company's proposed DSIC in its Briefs in this docket. While the SIB  
19 here is not the same as the Company's proposed DSIC, the underlying  
20 legal objections are for the most part the same. The legal points regarding  
21 the DSIC, and similarly the SIB, are attached in the relevant portions of  
22 RUCO and ACC Staff's Briefs (the relevant excerpts are attached as  
23 Exhibits 1 through 4).

1 **Q. From a layman's perspective, can you summarize the legal**  
2 **argument?**

3 A. Again, I would defer to the attorneys for the legal interpretation but the  
4 controversy centers on Arizona's fair value requirement and RUCO's  
5 belief that the SIB violates the Constitutional requirement of finding fair  
6 value when establishing rates. Perhaps Staff, who also believed the  
7 Company's proposed DSIC was unconstitutional (See Staff Opening Brief  
8 at page 26), summed it up best when it said "The DSIC in this case does  
9 far more than simply pass on increasing and decreasing costs to AWC. It  
10 allows surcharges based on the cost of the new plant, effectively  
11 increasing the fair value rate base without any determination by the  
12 Commission of what that fair value is." (Staff Reply Brief at 22).

13  
14 **Q. Does the SIB increase the fair value rate base without any**  
15 **determination by the Commission of what fair value is?**

16 A. Yes. The Company will be able to file for the SIB surcharge no more than  
17 five times between rate case decisions (Settlement Agreement, section  
18 4.4). The Commission will ultimately consider and then may approve each  
19 surcharge filing. The Commission, however, will not be making a new  
20 FVRB finding as part of each surcharge filing.

21

22 ...

23

1 **Q. What will be the result of the Commission's findings?**

2 A. Among other things, the result will be rates based on a fair value finding  
3 for a period different than the period in which the Company's operating  
4 expenses were incurred.

5  
6 **Q. Are there other aspects to the legal argument that you have not**  
7 **discussed?**

8 A. Yes. Again I would refer the reader to the Briefs submitted by both  
9 RUCO and ACC Staff on the legality of the DSIC. RUCO believes that the  
10 SIB has not overcome the legal hurdles raised by ACC Staff and RUCO in  
11 their respective Briefs. While it is true that the SIB mechanism would be  
12 authorized by the ACC in a general rate case proceeding, the SIB  
13 mechanism would recover new plant placed into service in the years  
14 between general rate case proceedings. Because a SIB surcharge could  
15 be established within thirty days of the Company's request, the same level  
16 of scrutiny that occurs in a general rate case proceeding would not exist to  
17 insure that a real finding of fair value is accomplished. Furthermore, the  
18 SIB surcharge would represent piecemeal ratemaking since it would only  
19 recover capital expenditures associated with the type of plant items that a  
20 regulated water utility, such as AWC, would replace under normal  
21 circumstances and seek rate base treatment for in a general rate case  
22 proceeding.

23

1 For a more detailed explanation of why RUCO believes that a DSIC-like  
2 mechanism such as the SIB is not legal in Arizona, see the excerpts of  
3 RUCO's and ACC Staff's Briefs that are attached as exhibits. While I am  
4 not an attorney I cannot vouch for the legal arguments but I provide the  
5 exhibits only to present the Commission with a better understanding of  
6 RUCO's legal position.

7

8 **Q. Does RUCO believe that the SIB appears to be a template for future**  
9 **cases?**

10 A. Yes. RUCO believes that the SIB appears to be a template for future rate  
11 cases. The circumstances of each case are different and providing  
12 specific eligibility requirements is one of the flaws of the Settlement  
13 Agreement as it leaves the Commission no flexibility to consider the  
14 circumstances of each case.

15

16 **Q. Please discuss some of the other flaws with the proposed SIB.**

17 A. The 5.00 percent efficiency credit is inadequate to compensate ratepayers  
18 for the shift in risk. The Commission awarded AWC a higher cost of  
19 common equity because of the infrastructure issue presented in the  
20 Company's rate application. Now the Commission is considering a SIB to  
21 address the same infrastructure issue. In exchange, the only financial  
22 benefit to the Company's ratepayers is the 5.00 percent efficiency credit.

1 RUCO believes that the Settlement Agreement is woefully inadequate  
2 here, at the ratepayer's expense.

3  
4 In RUCO's view, none of the plant items are extraordinary in nature and  
5 none of the plant is being replaced under extraordinary circumstances,  
6 such as a government mandate. In addition to the failure of taking into  
7 consideration all of the ratemaking elements that are reflected in rates  
8 approved by the Commission in a general rate case proceeding, the SIB  
9 has been tied to the Commission's policy of keeping water loss under  
10 10.00 percent. While this might seem laudable, given the fact that much  
11 of Arizona is in an arid climate, the SIB could have the unintended effect  
12 of encouraging utilities to exceed the 10.00 percent threshold just to  
13 qualify for a SIB surcharge in order to get faster recovery of routine plant  
14 additions. As noted earlier, the short period of time in which the request  
15 for a SIB surcharge is filed and the time it is approved circumvents a  
16 proper regulatory review for prudence and reasonableness.

17  
18 The settlement also does not specifically address the issue of fire flow  
19 upgrades that have been problematic in the past. Finally, there is no  
20 reason to believe that AWC would not be able to ensure safe and reliable  
21 water service or achieve cost recovery absent the SIB. Therefore, there is  
22 no need for the Commission to adopt a special surcharge for routine plant  
23 additions.

1 **Q. Please explain why RUCO believes the SIB mechanism is not in the**  
2 **public interest.**

3 A. My direct testimony contains a resolution adopted by National Association  
4 of State Utility Advocates ("NASUCA") in 1999 that states a number of  
5 reasons why the SIB mechanism is not in the public interest. In addition to  
6 the reasons I've cited in my testimony, NASUCA's Ad Hoc Water  
7 Committee stated that rate stability is reduced and proper price signals are  
8 distorted by frequent rate increases. According to the NASUCA  
9 resolution, no convincing evidence has been shown to support the claim  
10 that the frequency of rate case proceedings is reduced by mechanisms  
11 such as the SIB. NASUCA's findings are consistent with the recent  
12 findings of the Regulatory Affairs and Public Advocacy ("RAPA") section of  
13 the Alaska Attorney General's Office. RAPA found that, among other  
14 things, that a review of ten states that have implemented some sort of  
15 DSIC-type mechanism, there does not appear to be support for the  
16 conclusion that DSIC adoption reduces rate case frequency.<sup>1</sup>  
17 Furthermore, special incentives are not needed in order ensure adequate  
18 water quality, pressure, and a proper reduction of service interruptions. In  
19 NASUCA's view, SIB-like mechanisms can inappropriately reward water  
20 companies that have imprudently fallen behind in infrastructure  
21 improvements. Finally, the NASUCA resolution expressed the belief that it  
22 is inappropriate to tilt the regulatory balance against consumers and shift

---

<sup>1</sup> See RUCO's Closing Brief at 8-10.

1 business risk away from water companies simply for the purpose of  
2 creating an incentive for those companies to fulfill their basic obligation to  
3 provide safe and adequate service.

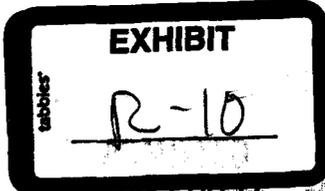

4  
5 For the various reasons cited above, RUCO believes that the Commission  
6 should reject the proposed SIB mechanism.

7  
8 **Q. Does your silence on any other issues, matters or findings**  
9 **addressed in the testimony of the parties who support the SIB**  
10 **mechanism constitute your acceptance of the Company's positions**  
11 **on such issues, matters or findings?**

12 **A. No, it does not.**

13  
14 **Q. Does this conclude your testimony on the proposed SIB**  
15 **mechanism?**

16 **A. Yes, it does.**

RUCO-4

RECEIVED  
By the Regulatory Commission of Alaska on May 31, 2012

STATE OF ALASKA

REGULATORY COMMISSION OF ALASKA

Before Commissioners:

Paul F. Lisankie  
Robert M. Pickett  
Janis W. Wilson

RUCO-4

In the Matter of the Consideration of a Plant )  
Replacement Surcharge Mechanism for Water )  
And Wastewater Utilities ) R-11-006

COMMENTS OF THE ATTORNEY GENERAL

The Attorney General (AG), under the authority of AS 44.23.020(e), offers the following comments in response to Order R-11-6(2), dated May 1, 2012.

INTRODUCTION

Order R-11-6(2) requests comments on a Utility Group's<sup>1</sup> position paper and suggested regulations for a surcharge that would allow water and wastewater utilities to recover costs associated with infrastructure investment outside of normal rate cases.<sup>2</sup> Because only a limited number of states have experimented with or implemented similar

<sup>1</sup> The Utility Group consists of AWWU, GHU/CUC, Doyon Utilities and David Kranich, a small utility consultant. Order R-11-6(2) at 2.

<sup>2</sup> Order U-11-6(2) refers to the surcharge as a Plant Replacement and Improvement Surcharge Mechanism or a "PRISM." These surcharges are given different names in different jurisdictions. In Delaware, Indiana, New York, Maine and Pennsylvania the surcharge is called a Distribution System Improvement Surcharge (DSIC). In California it is called an Infrastructure Investment Surcharge Mechanism (IISM). In Connecticut and New Hampshire it is called a Water Infrastructure and Conservation Act (WICA) surcharge. In Illinois it is called a Qualifying Infrastructure Plant (QIP) surcharge. In Missouri it is called an Infrastructure System Replacement Surcharge (ISRS), and in Ohio it is called a System Improvement Surcharge (SIC).

Regulatory Affairs & Public Advocacy

Anchorage, Alaska 99501  
(907) 263-2166, (907) 269-5187, (907) 375-8282 Fax

1 surcharge mechanisms, these AG Comments will first track the evolution of the  
2 surcharge mechanisms, and their success at addressing many of the same issues identified  
3 by the Commission as support for possible PRISM (or "DSIC") implementation in  
4 Alaska.<sup>3</sup> These Comments will then address the Utility Group's proposed regulation.

5 The AG Comments presented below represent the culmination of a  
6 substantial research project conducted by RAPA staff on the issues presented in Order  
7 R-11-6(2). RAPA staff research included, but was not necessarily limited to:

- 8 • Review of statutes and regulations of other jurisdictions  
9 implementing DSIC-type surcharges;
- 10 • Review of orders from other state commissions, and utility and  
11 intervener testimonies relating to the implementation of DSIC-type  
12 surcharges;
- 13 • Review of other state commission websites;
- 14 • Review of National Regulatory Research Institute (NRRI) white  
15 papers;
- 16 • Participation in NRRI *Webinars* on water utility issues;
- 17 • Discussions with the National Association of State Utility Consumer  
18 Advocates (NASUCA) Water Committee;

19  
20  
21  
22  
23  
24 <sup>3</sup> The infrastructure investment surcharge programs are referred to in these Comments  
25 using the generic term "DSIC."  
Comments of the Attorney General  
R-11-006  
May 31, 2012  
Page 2 of 36

- Discussion with at least one utility representative, Commission staff member and/or consumer advocate from each jurisdiction where a DSIC-type surcharge has been allowed; and
- Communications with National Association of Water Companies (NAWC).

### SUMMARY OF COMMENTS

The results of DSIC surcharge adoption in other jurisdictions in improving quality of service or decreasing rate case frequency are largely mixed or inconclusive. Where measurement is possible, there is little if any evidence showing DSIC adoption has led to a reduction in rate case frequency or rate case expense. Instead, the surcharge's availability generally subjects ratepayers to more frequent rate increases at the expense of rate stability, while at the same time jeopardizing assurances that infrastructure costs rolled into rates are prudently incurred.

The vast majority of DSIC-eligible utilities also do not use the surcharge. Its use has instead been largely relegated to a handful of large multi-state utilities. And even though a DSIC program (much like any utility's capital improvement plan) allows for infrastructure improvements which can improve service quality, it is difficult or impossible to track whether DSIC adoption has increased the rate of infrastructure investment.

1 Based on the experience of other jurisdictions, only two large water and  
2 wastewater utilities can be expected to use the surcharge in Alaska with any regularity.<sup>4</sup>  
3 Such limited use suggests a "one-size fits all" regulation might not be a good fit for  
4 Alaskan utilities of different sizes, facing different issues and having different levels of  
5 sophistication. It would appear prudent instead to address the necessity of implementing  
6 a surcharge in individual adjudicatory dockets rather than in a rulemaking.<sup>5</sup>

7 Adopting the Utility Group's proposed surcharge is questionable for added  
8 reasons. DSIC adoption circumvents numerous ratemaking safeguards, interjecting a  
9 substantial degree of uncertainty into the ratemaking process to the likely detriment of  
10 ratepayers. In addition, substantial commission resources appear to have been devoted to  
11 implementing and administering DSIC-type surcharges in other jurisdictions.<sup>6</sup> To the  
12 extent added Commission resources will be required to administer this surcharge in  
13

14  
15  
16 <sup>4</sup> Anchorage Water & Wastewater Utility (AWWU) and Golden Heart Utilities/College  
Utilities Corp. (GHU/CUC).

17 <sup>5</sup> See *Amerada Hess Pipeline Corp. v. APUC*, 711 P.2d 1170, 1178 (Alaska  
18 1985)("[A]bsent statutory restrictions and due process limitations, administrative agencies have the  
discretion to set policy by adjudication instead of rulemaking.")

19 <sup>6</sup> For example, Connecticut regulates approximately 20 water utilities. Of the 20,  
20 approximately 5 participate in its DSIC program. The Connecticut review process requires the  
21 commission staff and the advocate to look at utility systems closely. Utilities are required to show  
22 replacement projects are incremental to an ongoing replacement program for eligibility. The Connecticut  
23 Commission has approximately 2 or 3 staff qualified to conduct these reviews. The state's consumer  
advocate generally accompanies staff on their assessments. In Delaware, all DSIC rates are subject to  
24 later review, audit or revision. Illinois, Indiana and Ohio require substantial filings to justify initial  
eligibility and ongoing review. And in Pennsylvania, Commission staff performs periodic management  
and operations audits or management efficiency investigations in addition to administering a program to  
25 aid in monitoring lost and unaccounted for water.

1 Alaska, it is unclear how the Commission will be able to ensure that consumers will be  
2 adequately protected from unreasonable surcharge requests without added resources.<sup>7</sup>

3 Finally, the Utility Group's proposed regulation is seriously flawed. It is  
4 over-inclusive as to the scope of items allowed without imposing any cap or other limit, it  
5 allows for use of a state rate of return (ROR) at odds with case law and fails to account  
6 for reduced risk in the proposed DSIC formula, it is unsynchronized because it fails to  
7 require updated plant accounts and accumulated depreciation, it appears to violate state  
8 law by allowing the use of cost estimates without any true-up to actual cost at the time of  
9 assessment, it employs an impossible-to-use test for eligibility, and it is structured in a  
10 way that will deprive the Commission and any interested person from testing included  
11 cost items in a meaningful way.  
12

13  
14  
15  
16  
17  
18  
19  
20  
21 <sup>7</sup> Under AS 44.62.195, agencies are required to evaluate if adopting a new regulation  
22 would require increased state appropriations. The Commission should therefore comprehensively  
23 evaluate what added resources it would need (and the Attorney General might need as well) to administer  
24 any new surcharge mechanism in order to ensure consumers are protected from unreasonable rates. The  
25 Commission is mandated by law to provide consumers this protection. AS 42.05.381(a). It also appears  
unlikely a DSIC could be administered in Alaska without increased administrative costs, particularly  
given the Commission's existing duties under AS 42.05.175.

## USE OF DSIC-TYPE SURCHARGES IN OTHER JURISDICTIONS

Pennsylvania was the first state to implement a DSIC-type surcharge in 1997. Since then another seven states have authorized DSIC-type surcharges by statute<sup>8</sup>:

- Connecticut: C.G.S.A. § 16-262w<sup>9</sup>
- Delaware: 26 Del. C. § 314<sup>10</sup>
- Illinois: Ill. Stat. § 9-220.2<sup>11</sup>

<sup>8</sup> Copies of each state's statutes are attached in Appendix A.

<sup>9</sup> In Connecticut, before a utility is allowed to implement a DSIC (WICA), it must first file an initial assessment report addressing the condition of their system. Based on that report the Commission may find the utility eligible to participate in the WICA program. In order to participate in a WICA program a utility must show that the replacements projects included in the surcharge are incremental to the utilities ongoing replacement program.

Once a utility is found to be WICA eligible it must make a filing ranking the projects it intends to pursue. Projects are limited to the distribution system. (There is a separate mechanism for treatment plant projects). Once the ranked projects are placed into service the utility can file a WICA surcharge request. The Commission staff and the Connecticut Office of Consumer Counsel verify that the plant was approved and is in service. There is currently a 7.5 percent cap on the surcharge. Most WICA surcharges are currently about 2 percent.

<sup>10</sup> Under Delaware's DSIC, utilities are able to recover depreciation and pretax return on post-test year used and useful plant additions between rate cases. The DSIC is allowed to renew existing water mains, valves, services, meters and hydrants or to extend mains to eliminate "dead ends." DSIC projects must either be a water supply project identified as, or subsequently added as an "A list projects" in the December 1999 Governor's Task Force Report to resolve regional water supply concerns, or the project must be placed in service to meet new state or federal water quality standards rules or regulations.

The Delaware DSIC rate is capped at 7.5 percent of the amount billed to customers for all other rates and charges, but cannot increase more than 5 percent within any 12 month period. DSIC rates are implemented subject to later "review, audit or revision." The Delaware DSIC statute also allows Commission staff or the Public Advocate to revisit and, after a hearing (without the necessity of a general rate filing), reset a water utility's cost of capital to reflect its current cost of capital. The DSIC rate is adjusted back to the date of the motion to reflect any change in the cost of capital determined by the Commission.

<sup>11</sup> The Illinois DSIC is limited to a return on the investment in and depreciation expense on plant items which (1) are not included in base rates and (2) are not installed to serve new customers. An annual true-up of the revenues received through the surcharge is required.

- Ohio: O.R.C. §4909.1762<sup>15</sup>
- Pennsylvania: 66 Pa. C.S. § 1350 *et. seq.*<sup>16</sup>

<sup>12</sup> Indiana DSIC projects are limited to used and useful and non-revenue producing net plant necessary to transport treated water from the treatment facility to the point where it is delivered to customers which was not included in base rates. DSIC costs include depreciation and pre-tax return, adjusted for changes in the weighted average cost of capital on eligible projects. The surcharge is capped at 5 percent of revenues from the last rate case. Utilities are prohibited from filing a DSIC and a general rate case in the same year.

Indiana DSIC filing requirements include specified schedules and forms along with testimony describing the projects, identifying why projects are needed, how the projects benefit the utility and the ratepayers, and the age of plant being replaced. Utilities must also include a 5 year replacement plan and proposed tariff sheets. Annual reconciliation filings that include an offset for retired plant are also required.

<sup>13</sup> Maine will allow water utilities to implement infrastructure improvement surcharges subject to rules that are yet to be established by the Maine Public Utility Commission. New rules are to be modeled after the Connecticut rules, which among other things limit eligible plant and include a cap on the surcharge.

<sup>14</sup> The Missouri DSIC is limited to a single utility, Missouri-American. The DSIC may include estimated distribution plant subject to refund until the next rate case. The surcharge includes "bonus depreciation" property taxes, pre-tax return, a reconciliation factor and adjustments for plant retirements, and eligible plant additions. There is no preapproval process for what plant will be allowed into the surcharge, but the surcharge is subject to refund until after the subsequent rate case. Staff review generally includes work order inspection, discovery and discussions with utility personnel.

<sup>15</sup> Ohio DSIC filings must include testimony supporting the proposed surcharge. Eligible projects are limited to distribution or gathering plant or to main extensions that eliminate documented supply problems. Proposed projects must be listed by major property group, account and by month. Projects must be traceable to the general ledger and / or continuing property records and be used and useful at a date certain. Commission staff does a physical inspection of projects.

The surcharge calculation includes proposed rate base, pre-tax rate of return and net depreciation expense to arrive at a revenue requirement for the infrastructure improvement surcharge. Each surcharge is capped at 3 percent of revenues for each customer class however; the utility can have up to three surcharges at one time.

1 Indiana and Illinois enacted DSIC legislation in 2000. Delaware did so in  
2 2001, Missouri in 2002, Ohio and Connecticut in 2007, and Maine in 2012.

3 In addition to implementation by statute, a number of state commissions  
4 have authorized or rejected the use of DSIC-type surcharges administratively.<sup>17</sup>  
5 Beginning in 2002, the New York Public Utility Commission began accepting some  
6

---

7 <sup>16</sup> Pennsylvania's DSIC was originally limited to water systems when it was adopted in  
8 1997. 66 Pa.C.S.A. §1307(g). This statute was repealed in 2012. The new statute applies to water,  
9 wastewater, electric and gas distribution systems. 66 Pa. C.S.A. § 1350 *et. seq.* The Pennsylvania  
10 Commission regulates approximately 184 water and wastewater utilities – 73 of which are eligible for the  
11 DISC. Its staff conducts periodic management and operational audits, or management efficiency  
12 investigations. The results of these investigations are considered in general rate cases. It has a program  
13 to aid water utilities in monitoring Lost and Unaccounted for water (LAUF). Municipally-owned utilities  
14 like AWWU are not eligible for Pennsylvania's DSIC.

15 Commission staff and the Pennsylvania Department of Environmental Protection (DEP)  
16 communicate regularly regarding troubled infrastructure areas. Sometimes the DEP makes filings in  
17 various utility application proceedings asking the Commission to require utility compliance with DEP  
18 requirements.

19 The Pennsylvania Commission also has authority to prohibit utilities from filing general rate  
20 cases for set periods of time. At least some Pennsylvania water utility shareholders make voluntary  
21 contributions to the "H<sub>2</sub>O Help to Others Program" which provides grants, discounts and water saving  
22 devices and education to customers.

23 <sup>17</sup> At least one state court has concluded a public utility commission is without authority to  
24 implement a surcharge in the absence of express enabling legislation. *See Popowsky v. Pennsylvania*  
25 *Public Utility Commission*, 869 A.2d 1144, 1158 – 1160 (Pa. Commw. Ct. 2005). *Accord, State, Office of*  
*Public Counsel v. Missouri Pub. Serv. Comm'n.*, 331 S.W.3d 677, 685 (Missouri App. 2011)(finding the  
Missouri Commission had express statutory authority to implement regulations allowing periodic rate  
adjustments outside a general rate case). These AG Comments do not address this issue other than to note  
the RCA's broad enabling legislation (AS 42.05.141(a)(3)), and the APUC/RCA's long-standing  
approved use of surcharges first in tariffs, and later as permitted by regulation. *See Orders U-74-2(2), U-*  
*74-115(6), U-79-23(5)*(discussing the use of fuel adjustment clauses since 1974) and 3 AAC 52.501 -  
.519 (2004). *See also, MEA v. Chugach Electric Ass'n*, 53 P.3d 578, 581 (Alaska 2002)(discussing use of  
a COPA surcharge established in a utility's tariff in dicta). *Cf., MEA v. Chugach Electric Ass'n*, 58 P.3d  
491, 494 (Alaska 2002)(concluding the Commission had jurisdiction to adjudicate a dispute arising under  
a contract executed between Chugach and MEA that governed the preliminary method by which changes  
in rates to be imposed by Chugach on MEA would be noticed and developed. The Court reasoned that  
because the contract "expressly deals with issues lying within the Commission's core area of jurisdiction  
– changes in rates, charges or other tariff provisions" that the Commission had jurisdiction to adjudicate  
the dispute.)

Page 8 of 36

1 settlement agreements which allowed DSIC surcharge implementation in limited  
2 instances.<sup>18</sup> In August 2007, the California Public Utility Commission authorized one  
3 utility to implement a DSIC-type mechanism in a single service area, but this utility has  
4 since requested the surcharge be discontinued.<sup>19</sup> In 2009, the New Hampshire  
5

6  
7 <sup>18</sup> The New York settlements allowing a DSIC have limited it to expected distribution  
8 upgrades. The DSIC is limited to expenditures recorded in certain accounts. The DSIC can be  
9 implemented for any project that the settling parties agree is needed. No DSIC can be implemented until  
10 the project is used and useful.

11  
12 Settling parties generally review the utilities capital improvement plans, and projects that are in  
13 progress to determine what projects they are willing to agree should be included in a DSIC rate plan.  
14 When the utility files to actually implement an agreed DISC or rate plan increase, the Commission's staff  
15 conducts a review to ensure that the requested capital investment has actually been made or the agreed  
16 cost has been incurred.

17  
18 Many rate case settlement agreements include a 3 to 5 year rate plan, where the utility agrees not  
19 to file a new rate case for a set period of time. In exchange the utility is allowed to increase rates on an  
20 agreed timeframe, subject to refund. The rate plan rate increases are based on an understanding of what  
21 infrastructure improvements or cost increases the utility is expected to incur. DISC surcharges are  
22 sometimes a part of that process. During the next rate case, the utility's operations during the rate plan  
23 period are reviewed. If projected costs did not materialize then a downward revenue requirement  
24 adjustment is included in the next case. Over the last two years, DSIC use in settlements has decreased as  
25 utilities and advocates have turned to adding provisions to three year rate plans instead.

16  
17 <sup>19</sup> Docket No. D0708030. [http://docs.cpuc.ca.gov/PUBLISHED/FINAL\\_DECISION/71722.htm](http://docs.cpuc.ca.gov/PUBLISHED/FINAL_DECISION/71722.htm). On July 28, 2011, the utility requested that its DSIC be discontinued. See  
18 <http://docs.cpuc.ca.gov/efile/MOTION/141195.pdf> at page 305, Sec. 11.7 (where the utility, California-  
19 American, stated "the quarterly DSIC rate surcharges have resulted in frequent and confusing rate  
20 changes for customers.")

21  
22 The Cal-Am DSIC was initially approved in 2007 as a pilot project for the utility's Los Angeles  
23 district. In approving the pilot program, the CPUC stated, among other things that "We have carefully  
24 reviewed Cal-Am's capital investment plan and the underlying supporting cost determinations, and set a  
25 cap commensurate with this review. . . . We have strengthened Cal-Am's capital asset planning  
requirements and will fully review its planning and the results of the pilot program in the next GRC  
proceeding."

23  
24 The Cal-Am DSIC was subject to the following requirements: eligibility was limited to specific  
25 projects as determined in the prior general rate case, the program was capped at 7 percent of revenues,  
with a quarterly 4 percent cap, and revenues received under the DSIC were subject to true-up provisions  
with interest assessed at the 90 day commercial paper rate.

Page 9 of 36

1 Commission accepted the first of three settlement agreements that allowed DSIC-type  
2 surcharges to be implemented on a pilot project basis.<sup>20</sup> And in late 2011, the New Jersey  
3 Board of Public Utilities released a DSIC draft rule for public comment.<sup>21</sup>

4 In 2011 and 2012, the Iowa and West Virginia Commissions both denied  
5 utility requests to implement DSIC-type surcharges. The Iowa Commission found claims  
6 about regulatory lag inadequate to justify surcharge adoption.<sup>22</sup> The West Virginia  
7 Commission also found DSIC adoption unreasonable.<sup>23</sup> It instead concluded use of an  
8

9  
10  
11  
12 <sup>20</sup> Docket No. DW 08-098, Order 25,019. [http://www.puc.state.nh.us/Regulatory/  
13 CASEFILE/2008/08-098/ORDERS/08-098%202009-09-25%20ORDER%20NO.%2025%20019-%20  
14 ORDER%20APPROVING%20%20SETTLEMENT%20AGREEMENT%20AND%20PERMANENT%  
15 20RATE%20INCREASE.PDF](http://www.puc.state.nh.us/Regulatory/CASEFILE/2008/08-098/ORDERS/08-098%202009-09-25%20ORDER%20NO.%2025%20019-%20ORDER%20APPROVING%20%20SETTLEMENT%20AGREEMENT%20AND%20PERMANENT%20RATE%20INCREASE.PDF).

16 The New Hampshire DSIC (WICA) has been limited to projects which the Consumer Advocate  
17 agrees to in advance. The WICA is limited to distribution system projects. An initial infrastructure  
18 assessment report detailing the capital improvement projects eligible is required. The assessment takes  
19 into account asset management (break history, size of pipe, materials, water quality, soil type, age,  
20 location and, paving projects) hydraulic improvements and the need for redundancy.

21 <sup>21</sup> <http://nj.gov/bpu/newsroom/news/pdf/20111109.pdf>.

22 <sup>22</sup> See, <https://efs.iowa.gov/efiling/groups/external/documents/docket/094181.pdf> at pages 6  
23 - 14 (where the Iowa Commission concluded regulatory lag is not a sufficient justification for  
24 implementing the surcharge in part because of the utility's ready access to interim rate relief, and because  
25 the utility could not show how *ratepayers* would benefit "either in the form of increased time periods  
between general rate cases" or from "a reduction in the rate of return on the [surcharge] investment to  
reflect reduced regulatory lag.")

26 <sup>23</sup> [http://www.psc.state.wv.us/scripts/WebDocket/ViewDocument.cfm?CaseActivityID=  
27 319347&NotType='WebDocket'](http://www.psc.state.wv.us/scripts/WebDocket/ViewDocument.cfm?CaseActivityID=319347&NotType='WebDocket') at pages 7- 8 (where the West Virginia Commission stated that use of a  
28 DSIC-type surcharge would not be allowed, concluding approval of a DSIC would "inevitably be viewed  
29 by the public [and the utility] as automatic and additional rate increases that the DSIC will visit on [the  
30 utility's] customers.")

1 alternative ratemaking mechanism (an "AFFAC") would accomplish the same goals as a  
2 DSIC without creating a new and administratively burdensome surcharge methodology.<sup>24</sup>

3 Similar surcharges (or "riders") proposed by different types of utilities have  
4 been rejected by other state commissions. For example, in 2011 the Maryland  
5 Commission rejected a gas distribution utility's request to implement a surcharge for pipe  
6 replacement. The utility unsuccessfully claimed implementing a surcharge would allow  
7 it to improve service quality by permitting it more rapid cost recovery, and that consumer  
8 rates would be reduced because rate case frequency would fall.<sup>25</sup>

9  
10 The following table summarizes this DSIC-type surcharge history for water  
11 and wastewater utilities by jurisdiction over time:

12 1997	<b>Pennsylvania.</b> Legislation allowing a DSIC for water utilities is enacted with a 5 percent cap.
13 2000	<b>Indiana.</b> Legislation allowing a DSIC for water utilities is enacted with a 5 percent cap.
14 2000	<b>Illinois.</b> Legislation allowing a DSIC for water and wastewater utilities is enacted with a 5 percent cap.
15 2001	<b>Delaware.</b> Legislation allowing a DSIC for water utilities is enacted with a 7.5 percent cap.
16 2002	<b>Missouri.</b> Legislation allowing a DSIC for Missouri American Water Company is enacted with a 10 percent cap.

17  
18  
19 <sup>24</sup> "We believe that the income flowing from AFFAC accounting, although non-cash  
20 earnings, will provide relief for WVAWC between rate cases without the need for the quarterly rate  
21 adjustments required by the Company DSIC proposal. We will allow an accounting procedure that  
22 includes recording an AFFAC debit in a single account rather than to individual plant accounts. The  
23 accumulated AFFAC debits may be depreciated through the application of an average depreciation rate on  
24 the accumulated AFFAC balance. . . . The AFFAC should provide a current return on all qualified plant  
25 investment and will eliminate the current regulatory lag between the date that the qualified plant goes into  
service and the effective date of rates in the Company's next rate case."

23 <sup>25</sup> [http://webapp.psc.state.md.us/Intranet/Maillog/orders\\_new.cfm](http://webapp.psc.state.md.us/Intranet/Maillog/orders_new.cfm). Maryland Public Service  
24 Commission Docket No. 9267, Order 84475 (November 14, 2011) at 95 - 96, 106 - 108.

1	2002	<b>New York.</b> The NY Commission begins accepting settlement agreements that include DSIC surcharge provisions.
2	2005	<b>Pennsylvania.</b> Commonwealth Court reverses a Pennsylvania Commission decision allowing DSIC use by a wastewater utility because of the absence of enabling legislation. <i>Popowski v. Penn. P.U.C.</i> , 869 A.2d 1144 (Pa. Commw. Ct. 2005).
3	2007	<b>Ohio.</b> DSIC legislation enacted for water and wastewater utilities with a 3 percent cap for each filing.
4	2007	<b>Connecticut.</b> Legislation allowing a DSIC for water utilities enacted with a 7.5 percent cap.
5	2007	<b>California.</b> The California PUC allows California-American Water Company to implement a DSIC in one of its service districts, subject to a 4 percent cap.
6	2009-2010	<b>New Hampshire.</b> The NH Commission accepts a series of three settlement agreements that allow DSIC surcharges on a pilot basis.
7	2010	<b>California.</b> California American files a request to discontinue its DSIC surcharge effective December 2011.
8	2011	<b>California.</b> California American discontinues its DSIC.
9	2011	<b>West Virginia.</b> The Public Service Commission of West Virginia denies West Virginia-American's request to implement a DSIC.
10	2011	<b>New Jersey.</b> NJ Board of Public Utilities publishes draft DSIC rules for public comment. Draft rules include a 5 percent cap.
11	2012	<b>Iowa.</b> The Iowa Utilities Board denies Iowa-American's petition to implement a DSIC.
12	2012	<b>Maine.</b> Legislation allowing a DSIC for water utilities enacted.
13	2012	<b>Pennsylvania.</b> Legislation enacted expanding DSIC allowed use to wastewater utilities.

14 In all, eight states have enacted legislation allowing DSIC surcharges, three  
 15 states have accepted settlement agreements that have allowed utilities to implement DSIC  
 16 surcharges, one state has recently issued draft regulations for public comment regarding a  
 17 DSIC, and at least two state commissions have explicitly denied utility requests to use

18 Comments of the Attorney General

19 R-11-006

20 May 31, 2012

21 Page 12 of 36

1 DSIC surcharges. A total of approximately 693 utilities are eligible to implement a DSIC  
2 type surcharge,<sup>26</sup> but research to date shows only 34 (4.9%) have done so. Of the 34  
3 utilities that have implemented a surcharge, at least 20 are owned, in whole or in part by  
4 one the nation's four largest water companies: Aqua America, American Water Works,  
5 United Water Company and Utilities Inc.

#### 6 **WHAT ARE THE CLAIMED PURPOSES OF DSIC SURCHARGES?**

7 Utility goals in seeking DSIC surcharge adoption typically focus on  
8 reducing regulatory lag or difficulties utilities face reaching authorized returns.<sup>27</sup> These  
9 same objectives ("problems") are identified by the Utility Group in this Docket. At  
10 Appendix A to Order R-11-6(2), the Utility Group lists three basic complaints:  
11

- 12 • Regulatory lag creates a problem for utilities that are highly capital  
13 intensive and which need "robust" capital investment plans.
- 14 • Utilities are not earning their authorized returns and therefore must  
15 file "almost annual rate cases."
- 16 • Filing rate cases is costly which "creates a disincentive for utilities to  
17 invest capital into their aging systems."  
18

19 The National Association of Regulatory Utility Commissioners (NARUC)  
20 has also addressed DSIC-type surcharges in resolutions. But the focus of its DSIC  
21

---

22 <sup>26</sup> Excluding Maine.

23 <sup>27</sup> E.g., West Virginia (Order dated April 18, 2011 in Docket No. 10-0920-W-42T at 7);  
24 Iowa (Order dated February 23, 2012 in Docket No. RPU-2011-0001 at 11). Links for these orders are  
25 found above.

1 discussion is very different. NARUC makes no mention of reducing regulatory lag,  
2 improving utility achieved returns or any other utility-oriented benefit as a driver for  
3 DSIC adoption. NARUC instead focuses on perceived *ratepayer benefits* as the litmus  
4 test underlying its DSIC endorsement.<sup>28</sup>

5 In its February 1999 Resolution, NARUC lists six *ratepayer benefits* then  
6 thought to flow from use of a DSIC-type surcharge:

- 7 • “improved water quality”
- 8 • “increased pressure”
- 9 • “fewer main breaks”
- 10 • “fewer service interruptions”
- 11 • “lower levels of unaccounted for water”; and
- 12 • “more time between rate cases which leads to greater rate  
13 stability.”<sup>29</sup>

14  
15  
16 Other jurisdictions adopting a DSIC-type surcharge articulate similar  
17 ratepayer-oriented, rather than utility-oriented, goals. For example, the Pennsylvania  
18

---

19 <sup>28</sup> Appendix B. A subsequent 2005 NARUC Resolution referenced DSIC surcharges,  
20 among other tools, as having been identified by the National Association of Water Companies (NAWC)  
21 as a method state commissions could use to promote “capital investment and cost effective rates.” But no  
22 consensus was reached by those entities participating in the NAWC Forum (which did *not* include any  
23 consumer advocacy groups) on the tools NAWC’s Summary Report ultimately proposed – including the  
24 DSIC. *See* Appendix C. *See also* Order R-11-3(1), App. at 7 (“NAWC is a trade organization for private  
25 water companies, so it cannot be assumed that water utility customers or consumer advocates would  
necessarily concur that these practices are the best.”)

26 <sup>29</sup> Appendix B.  
27  
28 Comments of the Attorney General  
29 R-11-006  
30 May 31, 2012  
31 Page 14 of 36

1 Commission's 2009 Annual Report says its DSIC surcharge was designed to provide  
2 ratepayers with "improved water quality, greater rate stability, increased water pressure,  
3 fewer main breaks, fewer service interruptions, and lower levels of unaccounted for  
4 water."<sup>30</sup>

5 NASUCA has also addressed DSIC surcharges, disagreeing that DSIC  
6 adoption is appropriate. In a June 1999 resolution, NASUCA recommended state  
7 legislatures and state commissions avoid adopting DISC surcharges for numerous  
8 reasons, including:  
9

- 10 • prudence and reasonableness reviews are truncated or inadequate;
- 11 • regulatory incentives to control costs are reduced or eliminated;
- 12 • price stability is reduced;
- 13 • a lack of any "convincing evidence . . . to support the claim that the  
14 frequency of rate cases is reduced by such [surcharges]"; and
- 15 • creating an inappropriate shift in business risk away from utilities  
16 towards consumers for the purpose enticing utilities to perform  
17 obligations they are already required to perform by law.<sup>31</sup>

18  
19  
20 <sup>30</sup> [http://www.puc.state.pa.us/general/publications\\_reports/pdf/09-10\\_PUC\\_Ann\\_Rpt.pdf](http://www.puc.state.pa.us/general/publications_reports/pdf/09-10_PUC_Ann_Rpt.pdf).

21 <sup>31</sup> Appendix D. Other consumer organizations have criticized DSIC-type surcharges for  
22 reasons similar to those stated by NASUCA. Appendix E is a copy of an October 2011 *Food & Water*  
23 *Watch* publication detailing many objections to using DSIC-type surcharges, claiming their use: sidesteps  
24 adequate regulatory review, ignores offsetting decreases in operating expenses, unreasonably inflates a  
25 utility's return by failing to account for reduced risk, and creates "unnecessary consumer burden[s]" and  
"inflated water bills."

1 The competing leanings of these two associations (NARUC and NASUCA)  
2 show DSIC surcharge adoption is quite controversial. However, at a minimum, the  
3 gatekeeper for preliminary DSIC consideration should be as NARUC suggests – a  
4 demonstration of *actual ratepayer benefits*.

5 **DO DSIC SURCHARGES REDUCE RATE CASE FREQUENCY?**<sup>32</sup>

6 RAPA staff reviewed the rate case filing practices of water utilities using  
7 DSIC surcharges in 10 states. Thirty four utilities in 10 jurisdictions have implemented  
8 some sort of DSIC-type program since 1997. Where records were available, RAPA staff  
9 compared the number of rate cases the DSIC-using utilities filed before they began using  
10 a DISC with the number of rate cases they filed after implementing the DSIC:  
11

- 12 • California implemented a DSIC for a single utility in a single service  
13 district in 2007 which the utility asked to be discontinued in 2010. It is  
14 unclear what conclusions can be drawn from California's limited DSIC  
15 experiment.<sup>33</sup>  
16  
17

18  
19 <sup>32</sup> It cannot be claimed DSIC adoption has resulted in fewer wastewater utility rate cases  
20 because research has not shown any wastewater utility having taken advantage of DSIC surcharge  
21 availability where it is permitted. Wastewater utilities have been authorized to use a DSIC in Ohio (since  
22 2003) and Illinois (since 2000). No other jurisdictions appear to allow wastewater utilities to use a DSIC  
23 surcharge other than Pennsylvania which enacted legislation in 2012.

24 <sup>33</sup> A partial settlement filed in the utility's 2010 rate case included the utility's statement:  
25 "The current DISC structure, the quarterly and annual limitations and review process are preventing the  
26 program from operating in a beneficial manner. The quarterly DISC surcharges have resulted in frequent  
27 and confusing rate changes for customers." CPUC Docket No. A1007007.  
28 <http://docs.cpuc.ca.gov/efile/MOTION/141195.pdf> at page 305, Sec. 11.7.

- Connecticut's DSIC was adopted in 2008, and its impact on utility filing frequency is largely inconclusive. To the extent any preliminary conclusion can be reached it would be that rate case frequency is largely unchanged.<sup>34</sup>
- Delaware adopted a DSIC in 2001. Three utilities use the surcharge regularly; two others have used it on a single occasion.<sup>35</sup> RAPA staff

<sup>34</sup> Connecticut regulates approximately 20 water utilities, of which 5 participate in its DSIC (WICA) program. Since 2002, the five participating Connecticut water utilities have filed rate cases at the following frequency:

- Torrington Water filed a rate case in 2008, about the same time the WICA program became available.
- United Water of Connecticut filed a rate case in 2006 and one in 2009,
- Aquarian Water Company filed rate cases in 2004, 2007 and 2010,
- Connecticut Water Company filed rate cases in 2006, 2007 and 2010, and
- Avon Water Company filed rate cases in 2005 and 2009.

<sup>35</sup> There are 12 regulated water utilities in Delaware. All are DSIC eligible. Three have made regular DSIC filings. These three utilities are: United Water of Delaware (serving 110,000 customers), Tidewater Utilities (serving approximately 32,700 customers), and Artesian Water Company, Inc. (serving approximately 76,000 customers). Two other utilities have each made a single DSIC filing. These two utilities are: Prime Hook Water Company (serving 440 customers), and Sussex Shores Water Co. (serving approximately 1,200 customers). All three utilities regularly filing a DSIC have filed rate cases since 2005 (which is the time limit on electronic access to Delaware Commission records):

- United Water – Delaware filed rate cases in 2006, 2009, and 2010,
- Tidewater Water Company filed rate cases in 2006, 2009 and 2011, and
- Artesian Water Company filed rate cases in 2006, 2008 and 2011.

During the same timeframe one of the two utilities that filed a single DSIC filed a rate case (Sussex Shore Water Co. in 2007), and two non-DSIC participating utilities filed rate cases in 2005, 2007 and 2010.

1 was not able to access pre-2001 electronic records to determine if utility  
2 rate case frequency decreased since Delaware's DSIC was implemented.

- 3 • Illinois adopted a DSIC in 2000. Its adoption has had mixed results in  
4 rate case frequency for two participating utilities. One utility filed one  
5 less rate case in ten-year block comparisons, while the other filed the  
6 same number of rates cases in the same ten-year block comparisons.<sup>36</sup>
- 7 • Indiana's DSIC was adopted in 2000. Four utilities participate. Rate  
8 case frequency has either increased or remained the same for each since  
9 DSIC adoption.<sup>37</sup>

12 <sup>36</sup> Illinois regulates approximately 33 water, 5 sewer and 14 combined water/sewer utilities.  
13 Only Illinois-American Water Company and Aqua Illinois, Inc., the state's two largest utilities, have used  
14 the Illinois DSIC (QIP).

15 Prior to QIP implementation, Illinois-American/Citizens Utilities filed rate cases for its water  
16 utility in 1990, 1992, 1994, 1995, and 1997. After the QIP was implemented, Illinois-America filed rate  
17 cases in 2000, 2002, 2007, and 2009.

18 Prior to QIP implementation, Aqua Illinois (f/k/a Consumer Illinois), filed rate cases for its water  
19 and/or sewer utilities in 1990, 1991, 1993, 1995, 1997, 1998, and 1999. After QIP implementation, Aqua  
20 Illinois filed rate cases in 2000, 2003, 2004, 2005, 2006, 2007, 2008, 2010 and 2011.

21 <sup>37</sup> There are about 110 water utilities that are eligible to file a DSIC in Indiana. Four have  
22 participated in the program: Indiana America Water Company, Utility Center, Inc., Water Services  
23 Company of Indiana, and Indiana Water Service, Inc.

24 Indiana America Water Company serves 284,000 customers. It has made seven DISC filings  
25 since 2002 and has filed rate cases in 1991, 1996, 1999, 2001, 2003, 2006, 2009 and 2011.

Utility Center, Inc. serves 12,161 customers. It made five DSIC filings since 2003 and since  
1991 it filed rate cases in 2007, 2008 and 2010. Utility Center is owned by Aqua America.

Water Services Company of Indiana serves 184 customers. It filed one DSIC in 2004. Since  
1991 it has filed one rate case in 2005. Water Services of Indiana is owned by Utilities Inc.

- 1 • Maine's DSIC was just adopted in 2012. No data is available to draw  
2 conclusions.
- 3 • Missouri's DSIC was adopted in 2002. One utility uses the surcharge.<sup>38</sup>  
4 RAPA staff was not able to access pre-2002 electronic records to  
5 determine if this single utility's rate case frequency has decreased.
- 6 • New Hampshire has allowed a DSIC in pilot projects for three different  
7 utilities, one in 2009, and two in 2011.<sup>39</sup> Inadequate time has elapsed to  
8 evaluate rate case filing frequency for these three utilities.
- 9 • New York has allowed DSIC use in five settlement agreements.<sup>40</sup>  
10 Because some settlements bar the utility from filing rate cases for a set  
11 period, it is not possible to draw conclusions from New York's limited  
12 DSIC implementation.  
13  
14  
15  
16

---

17 Indiana Water Service Inc. serves 1,825 customers. It filed one DSIC in 2004 and since 1991 it  
has filed one rate case in 2011. Indiana Water Service Inc. is owned by Utilities, Inc.

18 <sup>38</sup> The one regulated utility allowed to use the surcharge is Missouri-American, which  
19 serves approximately 1.5 million customers. It filed general rate cases in 2003, 2007 and 2008. DSIC  
(ISRS) filings were made in 2003, 2006 (twice), 2008, 2009 and 2010.

20 <sup>39</sup> The New Hampshire Commission regulates 20 water utilities. The first DSIC (WICA)  
21 was approved for Aquarian Water Company in September 2009, the second was approved for Pennichuck  
22 Water Works in October 2011, and the third was approved for Pittsfield Aqueduct Company in October  
2011.

23 <sup>40</sup> Long Island American Water (serving 200,000 customers), United Water New Rochelle,  
24 Inc. (serving 143,000 customers), United Water New York Inc. (serving 70,240 customers), United Water  
Westchester Inc. (serving 44,000 customers), and New York Water Service Company (serving 152,000  
customers).

1 • Ohio's DSIC was enacted in 2003, and procedures implementing it in  
2 2004. Two utilities use the surcharge. One has filed more rate cases  
3 since DSIC implementation, and the other has filed rate cases at the  
4 same frequency.<sup>41</sup>

5 • Pennsylvania's DSIC was implemented in 1997. RAPA staff was not  
6 able to access pre-1997 electronic records to determine if rate case  
7 frequency has decreased for Pennsylvania utilities using the surcharge.

8  
9 The data available from other jurisdictions does not appear to support a  
10 conclusion that DSIC adoption reduces rate case frequency. At best, the results can be  
11 said to be mixed or inconclusive. Perhaps more accurately the same data can be said to  
12 show no reduction or an actual increase in rate case frequency among utilities using a  
13 DSIC.

14 Testimony filed in a West Virginia Public Service Commission docket  
15 supports the later:

16  
17 In the twelve years since the DSIC was first implemented,  
18 [Pennsylvania American Water Company] has filed six base rate

19  
20 <sup>41</sup> The Ohio Commission regulates 15 water utilities and seven wastewater utilities. Only  
21 two water utilities use the DSIC (SIC): Aqua Ohio (f/k/a Consumers Ohio Water) and Ohio American  
22 Water. No wastewater utilities have used the surcharge.

23 Aqua Ohio serves 88,000 customers. It has made nine SIC filings and four rate case filings since  
24 2003. From 1993 through 2002 it filed 2 rate cases.

25 Ohio American serves 200,000 customers. It has made three SIC filings and filed five rate cases  
since 2003. From 1993 through 2002 it filed five rate cases.

1 cases for its entire utility and three rate cases for selected districts. .  
2 . . . Over the same time period the DSIC has been in effect in  
3 Pennsylvania, [West Virginia American Water Company] has also  
4 filed six base rate cases. Of course, it is difficult to make  
5 comparisons between utilities operating in different states, but it  
6 does not appear that there is any evidentiary support for the idea that  
7 the DSIC will have an impact on how often general rate cases are  
8 filed.<sup>42</sup>

### 9 DO DSIC SURCHARGES IMPROVE QUALITY OF SERVICE?

10 Correlating a link between DSIC adoption and service quality  
11 improvements based on existing data is difficult. This is because some tie must be found  
12 between surcharge access and work that would not have been performed when it was  
13 performed but for the surcharge's availability. Since utilities must make capital  
14 investments necessary to meet safety and reliability duties as a condition of certification,  
15 some tie to the surcharge's use in expediting what would be done anyway must be found  
16 in order to judge surcharge effectiveness in improving service quality.<sup>43</sup>

17 In most jurisdictions finding any link between DSIC adoption and quicker  
18 necessary infrastructure investment is illusive. With one possible exception, RAPA staff  
19 was unable to find any link showing DSIC availability has speeded up necessary

---

20 <sup>42</sup> July 9, 2010 Supplemental Direct Testimony of Byron L. Harris on behalf of the  
21 Consumer Advocate Division of the Public Service Commission of West Virginia in Docket Number 08-  
22 0900-42T. <http://www.cad.state.wv.us/080900ByronSuppDirect.pdf>.

23 <sup>43</sup> See AS 42.05.241 ("A certificate may not be issued unless the commission finds that the  
24 applicant is fit, willing, and able to provide the utility services applied for and that the services are  
25 required for the convenience and necessity of the public.); AS 42.05.291(a) ("Each public utility shall  
furnish and maintain adequate, efficient, and safe service and facilities. This service shall be reasonably  
continuous and without unreasonable interruption or delay.") See also Order U-00-115(18) at 12 ("[T]he  
regulatory covenant does not promise utility owners that they will be able to 'sustain' a utility without  
supplying equity capital when the utility needs investment.")

Page 21 of 36

1 infrastructure investment. The possible exception is Connecticut which requires that a  
2 DSIC participant show replacement projects included for surcharge consideration are  
3 incremental to the utility's ongoing capital replacement program.

4 No link has been found in the remaining DSIC jurisdictions. For example,  
5 the Pennsylvania Commission's Water & Wastewater Staff were unaware of any  
6 documentation or study showing DSIC use correlates with improvements to water quality  
7 or quality of service.<sup>44</sup> But since the DSIC has been implemented in Pennsylvania,  
8 ratepayers of Pennsylvania's two largest water utilities (both DSIC participants) have  
9 added new DSIC surcharges each year, while also increasing base rates virtually every  
10 other year.<sup>45</sup> In other words, ratepayers of the two largest Pennsylvania utilities have  
11 experienced annual rate increases, but there has been no showing that water quality or  
12 quality of service has improved.<sup>46</sup>

#### 14 UTILITY USE OF DSIC SURCHARGES

15 Eligible utility use of an available DSIC surcharge shows little wide-spread  
16 penetration. As noted earlier, a total of approximately 693 utilities are eligible to use a  
17

---

18  
19 <sup>44</sup> RAPA Staff did receive information from the Pennsylvania Commission showing how  
20 many miles of pipe have been replaced for selected utilities. In one example, the Pennsylvania Water  
21 Company replaced 25 miles of pipe in 1995 and 81 miles of pipe in 2010. However, Pennsylvania  
22 American has 9,900 miles of pipe in its system, and the increase, which is not shown to be a direct result  
23 of the DSIC, is replacing less than one percent of its pipe each year.

24 <sup>45</sup> See Appendix F.

25 <sup>46</sup> RAPA Staff asked NAWC representatives and individuals in each jurisdiction with a  
DSIC if they were aware of any studies showing that DSIC implementation improved the quality of  
service and water quality. No one was aware of any study demonstrating such a link.

1 DSIC-type surcharge, but research shows only 34 (4.9%) have done so.<sup>47</sup> Of those using  
2 a DSIC, the bulk (about 60%) are owned, in whole or in part by one the nation's four  
3 largest water companies, Aqua America, American Water Works, United Water  
4 Company, and Utilities Inc.

### 5 REGULATORY LAG & REALIZING AUTHORIZED RETURNS

6 Concerns about regulatory lag and difficulties in reaching authorized  
7 returns are typical justifications offered by utilities in support of DSIC surcharge  
8 adoption. But while efficient ratemaking is an optimal goal, it must be carefully  
9 engineered.  
10

11 Regulatory lag performs an important public interest role in the ratemaking  
12 process. It provides an incentive for utilities to operate efficiently and contain costs and  
13 it is a necessary byproduct of comprehensive regulatory oversight which must be in place  
14 to protect captive consumers from public utility monopoly power.<sup>48</sup> As the Commission  
15 put it in 1986, “. . . a reasonable period of regulatory lag which works contrary to a  
16

---

17  
18  
19 <sup>47</sup> Excluding Maine.

20 <sup>48</sup> See Order U-83-74(7) at 13 (addressing the benefits of adhering to a normal rate review  
21 processes. The benefits mentioned include creating relatively stable consumer rates, adherence to the  
22 matching principle, creating effective opportunities for affected consumer participation in the rate review  
23 process, and “not to be minimized is that under the standard ratemaking approach utilities have a  
24 considerable incentive to minimize costs, either to maintain profits or offset other rising costs under  
25 existing rates and, thereby, to avoid the necessity of seeking rate relief in formal rate proceedings  
with their unlimited scope of review and uncertain results. Surcharges, on the contrary, are erratic  
whenever they are intended to recover on a monthly basis variable current expenses.” [Emphasis  
added].)

Page 23 of 36

1 utility's financial interests is proper to impose on a utility in exchange for the benefits of  
2 economic insulation . . .<sup>49</sup>

3 Surcharges (including a DSIC) can easily sidestep the safeguards of  
4 adequate regulatory oversight and create a substantial danger that consumers will be  
5 saddled with excessive rates:

6 [A]s a surcharge item, the situation would be lacking the typical  
7 dynamic for the utility to minimize costs . . . Indeed, there could be  
8 a disincentive to the utility's exploring larger reconfigurations in the  
9 event of a mandated reimbursement in order to avoid complications  
10 in determining proper allocations to the surcharge account. This is  
11 not to suggest that the utility's normal prudence or the Commission's  
12 own review efforts would be ineffective checks, or that some sort of  
13 notice provision could not be interwoven into an MFRCA surcharge.  
14 However, the added value of a utility's traditional incentive to  
15 minimize cost is not a factor that should be lightly removed. . . .  
16 Moreover, it should not be forgotten that surcharges even in fuel  
17 and wholesale power situations are not well received of late (if  
18 ever), principally because their presence reduces incentives to  
19 minimize or offset cost increases.<sup>50</sup> [Emphasis added].

20 Regulatory lag therefore plays a very important role in ratemaking, and it is  
21 part of the price tag associated with a grant of monopoly power. Other than an after-the-  
22 fact review for prudence,<sup>51</sup> regulatory lag is the only regulatory tool available to protect  
23

---

24 <sup>49</sup> Order U-86-20(3), reprinted at 7 APUC 514, 516 (Alaska P.U.C. 1986). This discussion  
25 occurred in the context of the Commission's review of a request for interim rate relief.

<sup>50</sup> Order U-83-74(7) at 15.

<sup>51</sup> Historically, utilities in Alaska do not seek a prudence predetermination for planned  
infrastructure investment. Instead, Alaska's Commission has generally relied on after-the-fact project  
reviews conducted in the context of a rate case. See, e.g., Order U-10-29(15). There have been  
exceptions. See Order U-10-41(5).

1 captive ratepayers because it creates an economic incentive for utilities to curtail  
2 unnecessary spending:

3 The delay in recovery between when a company incurs capital  
4 expenditures and when it recovers a return of and on such  
5 expenditures in its base rates is referred to as regulatory lag. In  
6 satisfying their obligation to provide safe and reliable service to their  
7 ratepayers, companies have the incentive to invest in capital  
8 improvements rather than O&M expenses, even if a capital  
9 improvement represents a sub-optimal solution as compared to non-  
10 capital production factors. Unlike O&M expenses, capital  
11 expenditures provide a return to their shareholders when ultimately  
12 included in rate base (as stated above, this bias toward capital  
13 investment is known as the Averch Johnson effect). The existence  
14 of regulatory lag provides an important counterbalance to the  
15 Averch Johnson effect because companies will not earn a return  
16 on their investments until their next rate case proceeding. As  
17 such, regulatory lag provides the incentive for companies to  
18 pursue a more balanced strategy between capital expenditures  
19 and O&M expenses in their provision of safe and reliable service  
20 to their ratepayers.<sup>52</sup> [Emphasis added].

21 <sup>52</sup> *Petition of Massachusetts Electric Co. and Nantucket Electric Co.*, 2009 WL 4543112  
22 (Mass. D.P.U. 2009). See also, *In re Southern Nevada Water Co.*, 1996 WL 304355 (Nev. P.S.C.  
23 1996) (“Among the potential sources of allocative inefficiencies Bonbright cites is the Averch Johnson  
24 effect (AJ). The AJ effect suggests that traditional rate base/rate of return regulation biases a regulated  
25 firm toward more capital intensive modes of production because of the ability to earn a return on capital  
investments included in rate base. For instance, in the electric utility industry, utilities are sometimes  
believed to be biased in favor of building their own generating capacity, rather than purchasing available  
capacity from other sources. To the extent that this bias has occurred, it would be consistent with the  
Averch Johnson effect.”); *Popowsky v. Pennsylvania Public Utility Commission*, 869 A.2d at 1160 (“The  
PUC’s belief that there is no limit on its authority to approve the use of a surcharge as the means for any  
utility to recover its costs for any facility addition is contrary to precedent and to sound principles of  
statutory construction. It means that utilities can recover their capital costs without any incentive to  
invest wisely and efficiently. Indeed, when recovery is allowed on a cost-plus basis, the incentive is  
otherwise because the return factor is calculated as a percentage of the capital cost.”)

1                   There can be a tension between regulatory lag and its impact on a utility's  
2 achieved return. But in evaluating this tension, two things should be remembered. First,  
3 Alaskan utilities have a largely unfettered right to interim rate relief usually implemented  
4 within 45 days of filing a request for rate relief.<sup>53</sup> Any discussion of regulatory lag  
5 should include interim rate relief's use in Alaska to mitigate its impact.<sup>54</sup> Second, a  
6 utility's authorized return is generally viewed as "a ceiling that utilities typically do not  
7 actually realize. In other words, although utilities are permitted to achieve a profit  
8 margin up to the statutorily authorized rate of return, they typically operate at a level of  
9 profitability below this figure."<sup>55</sup>

11                   Regulatory lag therefore serves two important functions. It serves as a  
12 protective shield for ratepayers, and it also functions as an economic driver used to incent  
13 utilities to make efficient economic decisions which helps utilities migrate towards their  
14 authorized returns.<sup>56</sup>

---

17                   <sup>53</sup> The Commission currently employs a "not frivolous or obviously without merit"  
18 standard. See Order U-10-101(7) at 4 - 5.

19                   <sup>54</sup> It is rare to see an Alaska utility rate case filing unaccompanied by a companion request  
for interim rate relief.

20                   <sup>55</sup> *Southern New England Telephone Co. v. Dep't of Public Utility Control*, 874 A.2d 776  
21 (Conn. 2005). See also, *Re West Virginia-American Water Co.*, Docket No. 10-0920-W-42T at 1 (W.Va.  
22 P.S.C., April 18, 2011)("The opportunity of earning a fair ROR is, however, not only a function of  
23 Commission approved rates, but also is dependent on the skill and efficiency of utility management.  
Utilities should stop viewing Commission revenue requirement decreases as an anchor, pulling their  
24 return on equity (ROE) down, and start viewing those decisions as a budget target that, if met, will buoy  
their ROE.") <http://www.psc.state.wv.us/scripts/WebDocket/ViewDocument.cfm?CaseActivityID=319347&NotType='WebDocket'>.

## AFFORDABILITY

Absent in the Utility Group's proposal is any discussion of consumer affordability. This is not a subject that should go unmentioned in review of the Utility Group's surcharge proposal. Even NAWC recognizes that making provision "to assist payment-troubled customers" is a best practice.<sup>57</sup>

Whether the Commission allows implementation of a DSIC or not, Alaskan water and wastewater utility ratepayers can expect steep rate increases in the coming years. For example, AWWU recently projected steep rate increases, even without a surcharge.<sup>58</sup>

Year	Water	Wastewater	Total	5 yr. Inc.
2012 (Actual)	\$45.85	\$37.35	\$83.20	
2017	\$67.82	\$56.89	\$124.71	49.89%
2022	\$85.82	\$67.30	\$153.12	22.78%
2026	\$102.64	87.73	\$190.37	24.33%

As the table shows, AWWU's residential customers can expect a near 50 percent rate increase in the next five years, which is over three times the 15.9 percent

<sup>56</sup> The Commission should also be wary about embracing utility claims of under-earning: "[I]n order to test [a utility's] assertion that it did not earn its revenue requirement in the prior years, it would be necessary for Staff to review each of those years and the Commission to resolve disputes for each of those years, essentially holding a complete rate case for each year. Clearly, such a procedure is not feasible." Order U-90-32(4) at 6. See also, *Re Washington Gas Light Co.*, Docket No. 1054, Order No. 14391 at ¶ 9-10 (D.C. P.S.C. 2007)(denying a utility's request for surcharge adoption to remedy the utility's claimed under-recovery of its authorized return.) [http://www.dcpsc.org/pdf\\_files/commorders/orderpdf/orderno\\_14391\\_FCI054.pdf](http://www.dcpsc.org/pdf_files/commorders/orderpdf/orderno_14391_FCI054.pdf).

Comments of the Attorney General

R-11-006

May 31, 2012

Page 27 of 36

1 total inflation used by the Municipality of Anchorage in its fiscal plans for the same five  
2 year period.<sup>59</sup> Affordability is clearly implicated under such circumstances.

3 Water utilities in many jurisdictions, including Pennsylvania, contribute to  
4 programs that help subsidize rates for low income water utility customers. No such  
5 protection is afforded to low income Alaskan water utility customers now, nor does the  
6 Utility Group propose such a program. Because DSIC adoption can accelerate AWWU's  
7 predicted rate increases, some consideration of affordability should accompany  
8 consideration of any new surcharge.  
9

#### 10 COMMENTS ON THE UTILITY GROUP'S PROPOSED REGULATION

11 There can be no dispute that allowing a DSIC, as a surcharge, would be an  
12 exception to the general ratemaking process. Accordingly, the Commission should avoid  
13 adopting regulations implementing a DSIC absent a showing of exceptional  
14 circumstances.<sup>60</sup> Exceptional circumstances are often best demonstrated in  
15 individualized circumstances. Thus, it may be more prudent for any DSIC consideration  
16 to be addressed by each utility individually in an adjudicatory docket, rather than in a  
17 generic rulemaking docket.  
18

19  
20  
21 <sup>59</sup> According to the Municipality of Anchorage's 2012-2017 Fiscal Program, the expected  
22 inflation rate for that period is 3.0 percent per year, which equates to a total inflation increase of 15.9  
23 percent over the next five years.

24 <sup>60</sup> *Madigan v. Illinois Commerce Comm'n*, 2011 WL 4580558 at \*8 (Ill. App.  
25 2011)( "[B]ecause a rider, by nature, is a method of single-issue ratemaking, it is not allowed absent a  
showing of exceptional circumstances.")

1 For example, as the Commission originally proposed and as the Utility  
2 Group suggests, DSIC access is to be limited to plant additions having no “significant  
3 impact on revenues or operating costs.”<sup>61</sup> This limitation is intended to avoid  
4 synchronization or matching problems which normally arise whenever single-issue  
5 ratemaking proposals, such as a DSIC, are presented.<sup>62</sup> But no litmus test is given to  
6 gauge what is or is not a material or “significant” impact on revenues or expenses. What  
7 might be considered *de minimus* to a large utility like AWWU with a larger customer  
8 base to spread costs might not be to a small utility like Potter Creek. Such determinations  
9 might best be made in individual adjudications, rather than by attempting to fit all water  
10 and wastewater utilities in the same regulation box.<sup>63</sup>

12 Testing claims about prudence or an absence of synchronization problems  
13 would also be challenging under the Utility Group’s proposed timelines. Under normal  
14

15 <sup>61</sup> Order R-11-6(1), App. B at 1, 2, 5.

16 <sup>62</sup> *Madigan v. Illinois Commerce Comm’n*, 2011 WL 4580558 at \*6 (“Single issue  
17 ratemaking is prohibited because it considers changes in particular portions of a utility’s revenue  
18 requirement in isolation, which ignores potentially offsetting considerations and risks understating or  
overstating the overall revenue requirement.”)

19 <sup>63</sup> Exceptional circumstances justifying surcharge adoption would also likely differ among  
20 Alaskan utilities. Unlike many small water utilities, AWWU’s capital improvement plan already lays out  
21 its timeline for infrastructure investment. AWWU is therefore already making infrastructure investment  
22 as it is required to do under AS 42.05.291(a). Surcharge access will not improve service quality because  
23 there is no claimed need for surcharge access to make needed improvements. See AWWU General  
24 Manager Craig Woodard’s Prefiled testimony, filed on November 11, 2011 in TA137-122/TA134-126, at  
25 Answers 13 – 18. GHU is in a somewhat different but analogous situation. It has already received  
extraordinary ratepayer subsidies outside of any surcharge to make infrastructure investments. In 2003,  
the Commission awarded GHU a \$5.3 million acquisition adjustment, and earlier an enhanced ROE, in  
large part because of the utility’s plans to upgrade degraded plant it inherited from the City of Fairbanks.  
See Order U-02-13(7) at 5 – 8, and Order U-05-43(15) at 48 – 50.

1 guidelines, prudence and synchronization issues are investigated in a rate case which  
2 ordinarily provides ample opportunity for discovery and the orderly progression of  
3 prefiled testimony. As proposed, this review will now be radically condensed into either  
4 60 or 180 days, and place the initial burden of proof on any party contesting particular  
5 cost item's inclusion.<sup>64</sup> Although a burden shift is appropriate in a case where prudence  
6 is challenged,<sup>65</sup> we are unaware of any authority that allows such a burden shift for  
7 synchronization issues.<sup>66</sup>

8  
9 The Utility Group's proposed procedure also appears unlikely to result in  
10 meaningful review. Within 60 days the Commission must make an initial assessment  
11 whether "costs of a specific project or projects qualify for inclusion in a utility's  
12 PRISM." But any interested member of the public will need to do so sooner – within 30  
13 days. AS 42.05.411(a). This presumably includes a review of prudence and  
14 synchronization matters, as well as a review to ensure all proposed plant addition are  
15  
16  
17

---

18 <sup>64</sup> Order R-11-6(2), App. B at 3, 5.

19 <sup>65</sup> A utility's request to include costs associated with new plant additions usually occurs in a  
20 rate case where a plant addition enjoys a presumption of reasonableness unless a "substantial showing" is  
21 made by another party challenging its inclusion in rates. Order U-10-29(15) at 8.

22 <sup>66</sup> The Utility Group's proposal is internally inconsistent on this point. At Order R-11-6(2),  
23 App. B page 3, the Utility Group suggests all initial burdens are placed on parties challenging cost  
24 inclusion, whether for prudence or synchronization. However, on App. B page 7, it appears the utility  
25 Group recognizes it bears the burden of making a *prima facie* showing that no synchronization issues will  
arise with the plant proposed to be included. Assuming the later – which is the correct burden placement –  
the Utility Group then invents a "clear showing" rebuttal standard that is unsupported by law.

1 “primarily” dedicated to replacement, improving quality, health or safety improvement.<sup>67</sup>

2 Any unchallenged portion of the surcharge is deemed approved and not subject to  
3 refund.<sup>68</sup>

4 As proposed, any prudence or synchronization challenge will therefore  
5 need to be presented by the public even before a right to discovery accrues. It would  
6 seem a misstatement to suggest any meaningful prudence or synchronization review can  
7 occur within such tight timelines and without discovery. Since AS 42.05.381(a) requires  
8 the Commission ensure rates demanded are just and reasonable, the Utility Group’s  
9 proposed procedure appears to work at cross purposes with the Commission’s statutory  
10 mandate.

12 There are five additional flaws with the Utility Group’s proposal. First, a  
13 cost estimate is used to set the surcharge. There is no true-up.<sup>69</sup> But under prudence and  
14 original cost ratemaking requirements, consumers cannot be charged in rates any more  
15 than actual cost for invested capital.<sup>70</sup> The Utility Group’s recommendation, by  
16

---

18 <sup>67</sup> The proposed regulation does not define or quantify what plant is or is not “primarily”  
19 dedicated to these services, or explain why anything that is not specifically dedicated to these services  
20 should be allowed in a surcharge at all.

21 <sup>68</sup> Order R-11-6(2), App. B at 5.

22 <sup>69</sup> Order R-11-6(2), App. B at 1, 7 (“Inclusion of projects and project costs in a finally  
23 approved PRISM surcharge constitutes final approval of the surcharge amounts which are no longer  
24 subject to refund to customers.”) Obviously if a true-up is used, it should be implemented with interest.

25 <sup>70</sup> *New England Power Co.*, Op. No. 231, 31 FERC ¶61,047 (1985) (“An elementary  
26 proposition of utility law and utility regulation, universally recognized, is that public utilities, in the  
27 interest of their customers as in their own interest, should be permitted to charge rates which are  
28 Comments of the Attorney General

1 definition, awards a windfall whenever actual plant costs amount to less than estimates  
2 provided. The law does not allow what the Utility Group requests. *See* AS 42.05.441(b).

3 Second, the Utility Group's proposal for demonstrating DSIC eligibility  
4 appears impossible to meet. A utility is required to demonstrate that it "did not over-earn  
5 its authorized return on rate base as calculated for the most current twelve month  
6 period."<sup>71</sup> The Commission has previously held such a test is nonsensical.<sup>72</sup>

7 Third, the Utility Group's DSIC formula is unsynchronized. The formula  
8 used makes no attempt to update rate base to account for plant retirements or  
9 accumulated depreciation accruing since a prior rate case.<sup>73</sup> For large utilities, up to three  
10 years of plant retirements and accumulated depreciation can be ignored while new plant  
11 additions are added. For small utilities, this lack of balance is exacerbated because DSIC  
12 eligibility is not tied to the length of time elapsed since a previous rate case. A small  
13 utility can be considered DSIC-eligible even though plant accounts and accumulated  
14 depreciation have not been reviewed for many years.<sup>74</sup> To the extent any DSIC  
15  
16  
17

---

18 compensatory for the full cost incurred by alert, efficient, and responsible management. It is equally  
19 elementary that customers should not be required to pay more than this cost.")

20 <sup>71</sup> Order R-11-6(2), App. B at 4.

21 <sup>72</sup> Order U-90-34(4) at 6 ("[I]n order to test [a utility's] assertion that it did not earn its  
22 revenue requirement in the prior years, it would be necessary for Staff to review each of those years and  
23 the Commission to resolve disputes for each of those years, essentially holding a complete rate case for  
24 each year. Clearly, such a procedure is not feasible.")

25 <sup>73</sup> Order R-11-6(2), App. B at 4.

<sup>74</sup> Order R-11-6(2), App. A at 2.

1 regulation is adopted, its initial use should be tied to a current rate case so all plant  
2 accounts are current.<sup>75</sup> It appears illogical to suggest otherwise.

3 Fourth, the Utility Group's proposed DSIC formula improperly uses a  
4 utility's previously approved ROR in setting a surcharge.<sup>76</sup> For a large utility, the ROR  
5 used in the surcharge formula can be three years old. For a small utility, it could be  
6 significantly older.<sup>77</sup> Alaska Supreme Court case law suggests this result would be  
7 improper.<sup>78</sup> The ROR used in the formula should instead be tied to the ROR set in a  
8 current rate case establishing an entitlement to first use the surcharge, and it should be  
9

10 \_\_\_\_\_  
11 <sup>75</sup> See April 28, 2011 Comments of Pennsylvania's Consumer Advocate, Sonny Popowsky,  
12 to the Pennsylvania House Consumer Affairs Committee, a copy of which is attached as Appendix G at 5  
13 ("A major reason that utilities are able to make new plant additions between rate cases without having to  
14 increase their rates is that traditional base rate making is a two-way street. That is, between rate cases,  
15 while a utility is adding new capital investment to the 'rate base' on which is allowed to earn a return, the  
16 utility's existing plant is depreciating, which has the effect of reducing the utility's rate base. In a rate  
17 case, the Commission looks at both the additions and the subtractions, and establishes a net rate base on  
18 which prospective rates are set. Under a distribution system improvement charge (DISC) . . .  
19 however, the Commission looks only at plant additions, without considering the offsetting plant  
20 reductions. The DISC thus becomes a one-way street, rather than a two-way street, and allows rate  
21 increases even if the utility's overall plant investment is actually declining over time." [Emphasis  
22 added].)

18 <sup>76</sup> A stale ROR can include both an outdated capital structure as well as an outdated return  
19 on equity component.

19 <sup>77</sup> Order R-11-6(2), App. B at 6.

20 <sup>78</sup> *Glacier State Telephone v. APUC*, 724 P.2d 1187, 1192 (Alaska 1986) ("The commission  
21 has a duty to set a reasonable rate of return for the utility. 'A rate of return may be reasonable at one time,  
22 and become too high or too low by changes affecting opportunities for investment, the money market, and  
23 business conditions generally.' [Citation omitted]. The APUC was obliged to consider the drop in  
24 interest rates in the two years since the tariff was filed; it would have done the public a disservice  
25 had it ignored the change." [Emphasis added].); see also Order U-08-157(10)/U-08-158(1) at 37 and 39  
(holding it proper to use more recent data to address the growth rate component in a DCF model, and the  
risk free rate for a CAPM analysis).

1 accompanied by an appropriate reduction to reflect reduced risk. Because surcharge  
2 availability reduces utility risk, it makes little sense to ignore a surcharge's risk reducing  
3 effect when creating a surcharge formula.<sup>79</sup>

4 Fifth, the Utility Group's proposal is over-inclusive in the plant allowed for  
5 surcharge purposes and because no cap is provided. As proposed, virtually any new plant  
6 addition would qualify for surcharge application.<sup>80</sup> This sweeping application is  
7 substantially greater than the targeted approach first suggested by the Commission.<sup>81</sup>  
8 Because surcharge use is an extreme exception to normal ratemaking, it would appear  
9 prudent that a cap be employed as is the case in most jurisdictions,<sup>82</sup> and that the  
10 surcharge's allowed scope be narrowly tailored to specifically achieve a legitimate  
11 *ratepayer benefit* oriented goal.<sup>83</sup>  
12  
13  
14

---

15 <sup>79</sup> See Order U-07-76(8) at 71, 80.

16 <sup>80</sup> R-11-6(2), App. B at 5 ("To qualify for inclusion in a PRISM, a plant addition must  
17 consist primarily of plant dedicated to providing service to customers that replaces existing plant,  
improves the quality of service, increases reliability or redundancy, or promotes public health or safety.")

18 <sup>81</sup> See Order R-11-6(1), App. B at 1 ("For water utilities eligible, property would be USOA  
19 Accounts 309 – supply mains, 311 – pumping equipment, 320 – water treatment equipment, 330 –  
distribution reservoirs and standpipes, 331 – transmission and distribution mains, 333 – services, 334 –  
20 meters and meter installations, 335 – hydrants, 336 – backflow prevention devices, and 339 – other plant  
and miscellaneous equipment. For wastewater utilities, eligible property would be USOA Accounts 360  
21 to 362 – collection sewers, 363 – services to customers, 364 and 365 – flow measuring, 366 and 367 –  
refuse services, 370 and 371 – receiving wells and pumping equipment, 374 and 375 – reuse, 380 –  
treatment and disposal equipment, 381 – plant sewers, and 382 – outfall sewer lines.")

22 <sup>82</sup> Most jurisdictions apply a 5 to a 7.5 percent cap on plant eligible for surcharges.

23 <sup>83</sup> *Madigan v. Illinois Commerce Comm'n*, 2011 WL 4580558 at \* 7 - 8. ("[R]iders should  
24 be closely scrutinized because of the issue of single-issue ratemaking. . . . [B]ecause a rider, by nature, is  
a method of single-issue ratemaking, it is not allowed absent a showing of exceptional circumstances.")

## CONCLUSION

There is little if any objective evidence supporting a conclusion that DSIC surcharge adoption advances the rate at which service quality or reliability improvements are made or that DSIC use reduces rate case frequency or expense. Nor has research disclosed the existence of any objective evidence supporting a conclusion that DSIC surcharge adoption provides any other ratepayer benefits. Instead, surcharge adoption appears to erode established consumer protections and degrade a commission's ability to ensure rates demanded are reasonable. Because DSIC surcharge adoption should be tied to showing an actual *ratepayer-benefit* link, there is little if any justification for employing this extraordinary regulatory tool.

If the Commission concludes otherwise, DSIC adoption creates numerous challenges. Given the magnitude of the matters to be addressed on a tight timeline, it appears that added Commission resources will be needed if a DSIC regulation is implemented. To do otherwise would amount to a surrender of the Commission's duty to ensure utility plant investments are prudent and rates demanded are reasonable. Public policy cannot support this result.

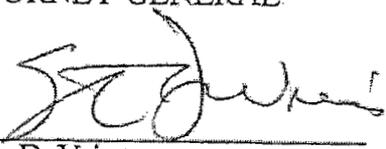

The Utility Group's proposed regulation is also seriously flawed. Its scope is over-inclusive on items allowed, it fails to provide any cap or other reasonable limit on the amount requested, it permits use of a stale ROR at odds with case law and fails to account for reduced risk in the DSIC formula proposed, it is unsynchronized because it fails to require updated plant accounts and accumulated depreciation, it impermissibly

1 allows use of cost estimates without any true-up, it employs an impossible-to-use test for  
2 eligibility, and it is structured in a way that will deprive the Commission and any  
3 interested person from testing the cost items included in a meaningful way.

4           Respectfully, the Utility Group's proposal for DSIC regulation adoption  
5 should be rejected, and this Docket closed.

6           DATED this 31st day of May, 2012, at Anchorage, Alaska.

1 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Greg Sorensen. My business address is 12725 W. Indian School Road,  
4 Suite D-101, Avondale, AZ 85392.

5 **Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

6 A. On behalf of the Applicant Litchfield Park Service Company (“LPSCO” or  
7 “Company”).

8 **Q. BY WHOM ARE YOU EMPLOYED?**

9 A. I am employed by Liberty Water dba Liberty Utilities as Vice President and  
10 General Manager.

11 **Q. I THOUGHT YOU WORKED FOR LIBERTY WATER. HAS THAT  
12 CHANGED?**

13 A. Liberty Utilities is the same entity as Liberty Water, the name we operated under in  
14 Arizona the past several years. We recently updated the name as our acquisitions  
15 in other states include gas and electric utilities in addition to water and sewer.  
16 We believed that this name change better reflects who we were becoming as a  
17 company. Also, in some states, like Missouri, we will have customers who will be  
18 both a water customer and a gas customer. It would have been very confusing for  
19 those customers to receive a bill for gas services from Liberty “Water.”

20 This is really just a natural extension of our growth, and an opportunity to  
21 bring high quality utility service to new types of customers. I also believe that our  
22 continued expansion will provide additional economies of scale, and enable us to  
23 continuously improve our service offerings to all our customers, including  
24 LPSCO’s customers. We have notified Staff and the Commissioners’ offices, as  
25 well as local politicians of this name change. We also sent communications to our  
26

1 customers on this subject during the month of June 2012, as well as publicized it in  
2 local newspapers.

3 **Q. THANK YOU, PLEASE CONTINUE.**

4 A. Liberty Utilities, like LPSCO and all of the other subsidiary utility providers and  
5 service companies, is ultimately owned by Algonquin Power & Utilities Corp.,  
6 or APUC, a publicly traded member of the Toronto Stock Exchange. Through its  
7 distinct operating subsidiaries, APUC owns and operates a diversified portfolio of  
8 \$0.8 billion of clean renewable electric generation and \$1.1 billion sustainable  
9 utility distribution businesses in North America. Liberty Utilities, APUC's  
10 regulated utility business, provides regulated water, gas and electric utility services  
11 to more than 350,000 customers with a portfolio of 26 water, gas and electric utility  
12 systems in Arizona, Texas, Missouri, Illinois, Iowa, California, New Hampshire,  
13 and Arkansas. Pursuant to previously announced agreements, Liberty Utilities is  
14 committed to acquiring certain regulated gas distribution utilities from Atmos  
15 Energy Corporation, which serves approximately 60,000 customers in the state of  
16 Georgia and 50,000 customers in the state of Massachusetts from The Laclede  
17 Group, Inc. Algonquin Power Co. (APCo), APUC's non-regulated electric  
18 generation subsidiary, owns or has interests in renewable energy and thermal  
19 energy facilities representing more than 1,100 MW of installed capacity. APUC's  
20 common shares and convertible debentures are traded on the Toronto Stock  
21 Exchange under the symbols AQN and AQN.DB.B. The APUC website is  
22 [www.AlgonquinPowerandUtilities.com](http://www.AlgonquinPowerandUtilities.com).

23 **Q. PLEASE DESCRIBE LIBERTY UTILITIES AND YOUR ROLE AS VICE**  
24 **PRESIDENT.**

25 A. I am currently responsible for Liberty Utilities' water and sewer operations in  
26 Texas, Missouri, Illinois, and Arizona.

In Arizona, I am responsible for the daily operations and administration of all the utilities, including LPSCO, for the financial and operating results for each utility, for capital and operating cost budgeting, for rate case planning and oversight, and rate setting policies and procedures as they relate to the operations under my responsibility. I also oversee customer and development services, human resources, engineering and conservation planning.

**Q. DID YOUR EDUCATION OR PRIOR EMPLOYMENT BACKGROUND PREPARE YOU FOR YOUR ROLE AS VP OF LIBERTY UTILITIES?**

A. Yes, significantly. I have a degree in accounting and I worked for Arthur Andersen in public accounting for 5 years, after which I was a Director of Financial Reporting & Analysis, Controller, and VP Finance for Excel Agent Services, an international call center company.

**Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE COMMISSION?**

A. Yes, I have testified in Commission proceedings for all of Liberty Utilities' affiliate entities, including several rate cases.

**Q. WHAT IS THE PURPOSE OF THIS DIRECT TESTIMONY?**

A. To support LPSCO's application for rate relief. Specifically, I will provide background on the Company and its operations. I will also summarize significant capital improvements completed by the Company and other operating cost changes since the last rate case that are now contributing to the need for this rate case. Finally, I will address certain aspects of the relief being requested in this case, including approval of certain changes to our tariff of rates and charges for water and wastewater service.

1 **II. OVERVIEW OF LITCHFIELD PARK SERVICE COMPANY**

2 **Q. PLEASE PROVIDE AN OVERVIEW OF LPSCO.**

3 A. The Company provides services to approximately 16,802 water and 16,161  
4 wastewater customers.<sup>1</sup> The Company's service area is located in Maricopa  
5 County, Arizona, encompassing the City of Litchfield Park, the City of Goodyear  
6 north of I-10, two commercial sites in Avondale including Estrella Mountain  
7 Community College, and certain unincorporated portions of Maricopa County.  
8 The Company's water and wastewater CC&Ns are primarily geographically the  
9 same, but we do have a portion of our sewer CCN that is served by another water  
10 provider, Valley Utilities Water Company, in the northeastern section of our CCN,  
11 and by EPCOR Aqua Fria district on the far western edge of our CCN.

12 The LPSCO service area is within the Phoenix Active Management Area,  
13 which has been created by the Arizona Groundwater Code. As a result, the  
14 Company is subject to certain water conservation requirements imposed by the  
15 Third Management Plan, adopted by the Arizona Department of Water Resources  
16 in order to reduce groundwater pumping. This area is also located within the  
17 Maricopa Association of Governments 208 Planning area, which subjects the  
18 location of wastewater treatment facilities to an additional layer of regulation.

19 In addition to our many residential customers, LPSCO serves a considerable  
20 number of commercial customers, a few light industrial and several irrigation  
21 customers, including several golf courses. We also provide water and sewer  
22 service to a large resort—The Wigwam—located in Litchfield Park. The majority  
23 of residential customers are served through ¾ and 1 inch meters. The average  
24

---

25 <sup>1</sup> These customer counts differ from the ACC annual report due to the counting of customers versus bills  
26 sent out each month. As an example, an HOA may represent 200 customers in our calculations but only  
one customer in Mr. Bourassa's bill count.

1 water use for residential customers is approximately 8,827 gallons per month,  
2 which is fairly high compared to other Arizona water utilities.

3 **Q. PLEASE DESCRIBE THE COMPANY'S WATER RESOURCES.**

4 A. The Company's water supply is comprised entirely of groundwater pumped from  
5 12 wells. The water from three of these wells is of sufficient quality that it is  
6 pumped, chlorinated, and transmitted directly to the distribution system. Eight of  
7 the wells pump to two reservoirs (Town Well (6.1MG) and Airline (4.0MG) with  
8 an approximate combined capacity of 10.1MG), where the water is blended,  
9 chlorinated, and treated for arsenic to meet the MCL. The final well, 20B, is  
10 pumped and treated for arsenic at or near the wellsite, and then transmitted into the  
11 distribution system.

12 **Q. CAN YOU PROVIDE SOME ADDITIONAL DETAIL REGARDING THE**  
13 **IRRIGATION CUSTOMERS?**

14 A. Yes. The Company does supply water to 10 school complexes. The Company also  
15 supplies water to the cities of Litchfield Park and Goodyear for use in irrigating  
16 medians and common areas, and provides separate irrigation water to a few  
17 residential customers who requested a dedicated irrigation line. Other than the  
18 Wigwam, there are eight golf courses in our service area, three of which may use  
19 effluent for irrigation, with the remainder using their own well water supply.  
20 LPSCO does not provide water for landscape irrigation to any golf courses at this  
21 time. The Company also serves the Wigwam Resort, although the resort has its  
22 own water rights and water source for its golf courses, and immediately prior to the  
23 test year eliminated its use of our irrigation water for the Wigwam grounds.

24  
25  
26

1 **Q. PLEASE DESCRIBE THE COMPANY'S PRIMARY WASTEWATER**  
2 **TREATMENT FACILITIES.**

3 A. The utility has a 4.1 million gallons per day (MGD) wastewater treatment plant, the  
4 Palm Valley Water Reclamation Facility or PVWRF, using Sequencing Batch  
5 Reactor (SBR) technology. The PVWRF was upgraded during the test year to  
6 achieve a capacity rating of 5.1MGD. The facility holds an Aquifer Protection  
7 Permit ("APP No. 100310") and Arizona Pollutant Discharge Elimination System  
8 Permit ("AZPDES" Permit No. AZ0025712) from Arizona Department of  
9 Environmental Quality ("ADEQ"). The plant currently produces A+ effluent and  
10 unclassified sludge which is hauled to a landfill. Effluent is sold to local golf  
11 courses, construction companies, and farms, with residual unsold effluent  
12 discharged to the RID canal and farm fields (when the RID is shut down for two  
13 weeks each year for maintenance). The Company also has two lift stations and a  
14 combination of gravity and force collection mains.

15 **Q. WHAT WERE THE COMPANY'S AVERAGE DAILY AND PEAK FLOWS**  
16 **DURING THE TEST YEAR AT THE PVWRF?**

17 A. During the test year, PVWRF received and treated wastewater in the following  
18 amounts:

- 19
- Approximately 3,344,000 gallons per day on an annual average basis;
  - 20 • A peak monthly flow of approximately 3,540,000 gpd in November 2012; and
  - 21 • A peak day flow of 4,273,000 gpd during October 2012.

22 For 2011, the comparable figures were 3,485,000, 3,932,000, and 4,459,000,  
23 respectively. Therefore, the plant reached 96% of its rated capacity in 2011, and  
24 86% of its rated capacity in 2012.

25  
26

1 **Q. CAN THE PVWRF BE EXPANDED FURTHER?**

2 A. Yes, the existing ADEQ permits contemplate a potential expansion to a total of  
3 8.2 MGD.

4 **Q. THANK YOU. WHEN DID LPSCO'S CURRENT RATES GO INTO**  
5 **EFFECT?**

6 A. The Company's current rates were approved in Decision No. 72026 (December 10,  
7 2010) and became effective on December 1, 2010. These rates were based on a  
8 test year ending September 30, 2008. The rates approved in that Decision were  
9 phased-in over a 12-month period, and the shortfall was accumulated and  
10 recovered via a surcharge mechanism over an estimated 18-month period of time.  
11 Because the Company is utilizing a test year ending December 31, 2012 in this  
12 filing, it will be just over four years between test years.

13 **Q. HAS THE COMPANY EXPERIENCED GROWTH SINCE THE LAST**  
14 **RATE CASE?**

15 A. Yes, there has been low to moderate growth of approximately 3% to 3.5% per year  
16 in the system since the last rate case. The service area was affected, like most of  
17 Arizona, by the recession after our last test year, although growth appears to have  
18 picked back up in the past year or so, but not to the levels we saw in 2001 – 2006.  
19 Since the last test year, we have not added any water capacity, but did expand our  
20 wastewater treatment capacity at the PVWRF.

21 **Q. WHY IS LPSCO FILING FOR NEW RATES AT THIS TIME?**

22 A. There are several reasons. First, some of our operating expenses have increased,  
23 including property taxes and depreciation. Second, the Commission has, in the  
24 past, expressed concern that some of Liberty's utilities waited too long to file rate  
25 cases, so we are trying to keep rates current and rate hikes manageable by  
26 following a fairly regular rate case cycle. Third, during the last rate case, we were

1 granted an 8.01% ROE, which to my knowledge was the lowest such ROE granted  
2 in the nation during that time period, and since Decision No. 72026 none has been  
3 lower. In the Company's research it could not find any other ROEs awarded lower  
4 than 8.01%.<sup>2</sup>

5 **Q. WHY IS THE 8.01% ROE GRANTED IN THE LAST CASE A PROBLEM**  
6 **FOR THE UTILITY?**

7 A. A return on equity issued by the Commission should represent a rate that is  
8 comparable to other similar investments in similar markets. In this case, it should  
9 be similar to other ROE's granted, adjusted for financial risk, to utilities throughout  
10 the United States. This is because capital markets look to invest in all states, not  
11 just Arizona. Therefore, utilities in Arizona must be attractive enough as an  
12 investment opportunity to attract capital. Capital doesn't just "show up" because  
13 you want it. Capital has to be "earned" or attracted. An 8.01% ROE was not  
14 comparable to other similar investments when authorized in December 2010.  
15 A low ROE makes it difficult to attract capital and make investments in utility  
16 infrastructure. One significant aspect of this case for LPSCO will be to get an ROE  
17 granted that is competitive in the US marketplace. Mr. Bourassa explains the  
18 Company's ROE request of 10.00% more thoroughly in his testimony.<sup>3</sup>

19 **Q. ANY OTHER REASONS FOR THE RATE CASE?**

20 A. Finally, we have seen an overall decline in water usage per residential customer  
21 since the last rate case. This decline was not anticipated in the rate design during  
22 the prior case, even though a tiered rate design was implemented to encourage  
23 water conservation, going from two to three tiers. I believe this tiered design did  
24 help reduce water usage, but that has had a negative impact on the Company's

25 <sup>2</sup> Indiana PUC Case No. 43114 and 43114-S1, November 20, 2007.

26 <sup>3</sup> Direct Testimony of Thomas J. Bourassa – Cost of Capital at 1 – 4.

1 revenue and, in turn, earnings. While this usage decline might have been offset by  
2 growth, that growth is not guaranteed to occur, and if it doesn't, it can put the  
3 Company in a position where it will be unable to earn its authorized rate of return.  
4 Mr. Bourassa addresses this usage decline in detail in his direct testimony.<sup>4</sup>

5 **Q. CAN YOU POINT TO A REASON OR REASONS FOR THIS REVENUE**  
6 **SHORTFALL?**

7 A. As I'm sure will be pointed out, a revenue requirement is an estimated target, not a  
8 guarantee, and revenues and expenses can move up or down after a test year.  
9 Admittedly, it is hard to express these events in precise numbers. Nevertheless,  
10 I believe we have experienced some degree of revenue erosion.

11 **Q. WHAT DO YOU MEAN, MR. SORENSEN?**

12 A. In our last decision, the Commission adopted Staff's rate design, a rate design that  
13 put approximately 69% of our revenue recovery in the commodity charge.  
14 By relying so heavily on volumetric charges, we were exposed to and did in fact  
15 suffer significant revenue erosion. This has helped leave the Company in the  
16 position of under-earning on its invested capital as Mr. Bourassa also addresses  
17 more completely in his testimony.<sup>5</sup>

18 **Q. DID ANYTHING ELSE COME OUT OF THE PRIOR RATE CASE?**

19 A. Yes, there were two compliance items that LPSCO was required to complete.  
20 First, LPSCO was required to file the Company's capitalization policy and update  
21 the Commission in its next general rate case.<sup>6</sup> The Company filed its capitalization  
22 policy with the Commission on February 7, 2011. Since then, LPSCO and its  
23 others sister companies have continued to strengthen internal controls and  
24

25 <sup>4</sup> Direct Testimony of Thomas J. Bourassa – Rate Base, Income Statement, and Rate Design at 12 – 13.

26 <sup>5</sup> *Id.*

<sup>6</sup> Decision 72026 at 82:19-23.

1 processes to assure continued compliance with the policy. Second, LPSCO was  
2 authorized to incur long-term debt from the Water Infrastructure Financing  
3 Authority (WIFA) to pursue a solar capital project.<sup>7</sup> For business reasons LPSCO  
4 has not pursued the project at this time and therefore has not incurred the long-term  
5 debt.

6 **Q. ANY OTHER REASON THIS RATE CASE IS IMPORTANT?**

7 A. LPSCO takes great pride in providing important services to the community with its  
8 water and wastewater services. We continue to strive to offer customers water  
9 service that even with the rate increase costs customers less than one penny per  
10 gallon for water that meets or exceeds all state and federal requirements. While no  
11 customers are ever excited for rate increases, Liberty Utilities takes seriously the  
12 feedback it received from customers and Commissioners during the last rate case;  
13 our stakeholders prefer smaller, more gradual rate increases rather than large,  
14 infrequent increases. The table below illustrates how drastic the differences are in  
15 this rate case compared to LPSCO's prior rate application.

16

17 LPSCO	Docket No. 09-0103, et al. Rate Increase Request	Instant Case Rate Increase Request
18 Water Percent Increase	116%	20%
19 Water 3/4" Customer Impact per month	\$23	\$5
20 Wastewater Percentage Increase	79%	7%
21 Wastewater Flat Customer Impact per month	\$22	\$3

22

26 <sup>7</sup> *Id.* at 82:24-28.

1 **III. SUMMARY OF SIGNIFICANT SYSTEM IMPROVEMENTS AND OTHER**  
2 **CHANGES SINCE THE LAST TEST YEAR**

3 **Q. CAN YOU DESCRIBE THE “SUBSTANTIAL INVESTMENT” YOU**  
4 **TESTIFIED HAS BEEN MADE SINCE THE LAST TEST YEAR?**

5 A. Yes. Since the last rate case, LPSCO has replaced the roof on our Town Well  
6 Reservoir, expanded the PVWRF from 4.1MGD to 5.1MGD, and continued to  
7 invest significant capital into the ongoing maintenance of the water and wastewater  
8 systems, including, but not limited to items such as collection and distribution  
9 mains, meter replacements, additional safety equipment, pump replacements and  
10 betterments, and SCADA improvements and expansion in coverage.

11 **A. TOWN WELL RESERVOIR**

12 **Q. YOU MENTIONED THAT THE COMPANY REPLACED THE ROOF ON**  
13 **THIS RESERVOIR. CAN YOU PLEASE EXPLAIN THE PROJECT?**

14 A. Our Town Well Reservoir has approximately 6.1MG of water storage capacity, and  
15 was originally constructed in 1966. This represents approximately 60% of the  
16 water storage for the LPSCO system. In late 2010, we had some preliminary visual  
17 inspections done on the reservoir due to its age. Until we completed the 4MG  
18 Airline reservoir in 2008, this was not possible because we couldn't take the Town  
19 Well Reservoir out of service and continue to provide water service to our  
20 customers.

21 In early 2011, we had an outside structural engineer inspect the reservoir  
22 roof for structural integrity, and that engineer's report said that the 45-year-old roof  
23 structure had reached the end of its useful life. It needed to be replaced.  
24 The challenge in doing this project was that we can only take the reservoir out of  
25 service during our low water use months of November through February.  
26 We performed the design and engineering for the project earlier in 2012, and

1 performed the construction during November and December 2012. The reservoir  
2 was back online providing service to customers on December 28, 2012. In addition  
3 to the roof replacement, we improved the ventilation, repaired the roof support  
4 structure, repaired cracks in the floor structure, and replaced hand rails. The total  
5 cost of the project was a little under \$1M

6 **Q. DID THIS PROJECT INCREASE CAPACITY OF THE SYSTEM?**

7 A. No, it did not affect the capacity of the system. It was necessary system  
8 rehabilitation of an asset that had reached the end of its functional life.

9 **Q. IS THE PROJECT AND THE ASSOCIATED RESERVOIR IN GENERAL  
10 PROVIDING SERVICE TO EXISTING CUSTOMERS?**

11 A. Yes. The rehabilitated Town Well Reservoir is now providing service to our  
12 customer base, and is used and useful in the provision of service.

13 **B. PALM VALLEY WATER RECLAMATION FACILITY**

14 **Q. YOU ALSO REFERENCED THAT THE COMPANY EXPANDED THE  
15 PALM VALLEY WATER RECLAMATION FACILITY (PVWRF). CAN  
16 YOU PLEASE EXPLAIN THE PROJECT AND THE NEED FOR THIS  
17 EXPANSION?**

18 A. As of the end of our last test year, our plant was permitted at 4.1MGD capacity.  
19 Since that time, we have operated as high as 3.9MGD during March 2011,  
20 exceeding 90% of our plant capacity, and during the test year had a peak month  
21 average flow of 3.54MG during November 2012, representing 86% of our rated  
22 plant capacity. As such, we needed to expand capacity. We engaged an engineer  
23 we'd worked closely with in the past and one who has a history of "value  
24 engineering." We worked with the County to arrive at a design that would allow us  
25 to expand by 1MGD to 5.1MGD by adding a disk filter, additional UV units, five  
26 blowers, a Salnes Unit, replacing the aeration system, and installing floating

1 decanters in the SBRs, among other system enhancements. The total cost for the  
2 project was approximately \$5.5M, including permitting, design, construction, and  
3 capitalized internal labor and overhead.

4 **Q. HOW WAS THIS EXPANSION FUNDED?**

5 A. The vast majority of the funding for this plant expansion was provided by  
6 developers, more specifically by Westcor, which is constructing a regional mall,  
7 with expected completion in 2016. In a complaint brought by the developer against  
8 LPSCO, the matter was settled before the Commission and Westcor paid LPSCO  
9 approximately \$4.9M for wastewater treatment capacity for its mall and related  
10 projects. These funds are included as AIAC in our application.

11 **Q. WHEN WAS THE PLANT COMPLETED?**

12 A. The plant was substantially complete at the end of December 2012. There were  
13 some outstanding punch list items to be completed, and the County will require  
14 some post implementation operational data and testing prior to issuing the final  
15 AOC. We expect these punch list items will be completed in the second quarter of  
16 2013.

17 **Q. IN YOUR OPINION, IS THIS PLANT PROPERLY INCLUDED IN THE**  
18 **COMPANY'S RATE BASE IN THIS CASE?**

19 A. Yes, given the historical flows of wastewater through the plant and the general  
20 planning guidelines of ADEQ, which I understand to be design/planning no later  
21 than reaching 80% capacity and construction commencing no later than 90%  
22 capacity, combined with a reasonable planning horizon of five years for a  
23 wastewater treatment plant, this plant is reasonably considered used and useful in  
24 the provision of service to customers and should be included in rate base in this  
25 case.

**C. PVWRF EQUALIZATION BASIN – POST TEST YEAR**

**Q. ARE THERE ANY OTHER SIGNIFICANT PROJECTS YOU WOULD LIKE TO DISCUSS?**

A. Yes, during the expansion project, we had to drain each of the SBRs to install the floating decanters and aeration systems. This provided us with an opportunity to do a thorough inspection of the SBR tanks for the first time since initial construction in 2002. During one of his inspections, our third party structural engineer noticed some signs of erosion in a connecting “tunnel” between the SBR tank and the equalization basin (EQ Tank). He crawled through that tunnel to further inspect it, and when he reached the opening into the EQ Tank, he noticed that there were visible signs of the concrete ceiling having eroded away, exposing the structural beams to the naked eye. The engineer was able to enter from another location after we lowered the levels of the EQ Tank, and observe more deterioration on the ceiling. However, until all punch list items are completed, the EQ Tank cannot be completely drained and bypassed, allowing the proper, thorough inspection of the EQ Tank that is needed to determine the full extent of the issue. This will be done in March 2013. Once that is done, we will quickly develop the action plan to rehabilitate the ceiling and any structural components that need replacing, and execute that project. We anticipate completing this in the third or fourth quarter of 2013, and are requesting in this application that this project be included as post test year plant. We have used a placeholder cost of \$1M for the project in our application in NARUC Account 380 with an associated retirement estimate of \$300,000, but until the full extent of the issue is known, a better estimate can’t be provided. We will update the parties as the case progresses.

**D. OPERATING EXPENSES**

**Q. HAVE THERE BEEN ANY SIGNIFICANT CHANGES IN OPERATING EXPENSES SINCE THE LAST TEST YEAR?**

A. First, property taxes have risen significantly compared with those costs authorized in our last case. Our last case had about \$460k included in operating expenses for property taxes, but we incurred \$1.2M during the year ended December 31, 2012, an increase of almost \$750,000. The property taxes are discussed further in Mr. Krygier's testimony as he proposes an accounting deferral mechanism related to property tax expense going-forward.<sup>8</sup> Second, as discussed earlier in my testimony, LPSCO made significant capital investments and those investments generated during greater depreciation expense than incurred during the Test Year.

**Q. WHAT STEPS HAVE BEEN TAKEN TO REDUCE OPERATING COSTS?**

A. At Liberty Utilities, we are always conscious of the cost of service we provide to our customers, and we remain constantly aware that our customers will eventually pay for every dollar we incur in operating costs and capital expenditures. As such, we constantly evaluate our operations to see if there are better and/or less expensive ways to do things, without sacrificing quality of service to our customers. Since the last test year, LPSCO made several significant cost savings changes to operations, and I'd like to highlight a couple of those.

First, beginning in mid-2009, LPSCO began injecting low levels of CO2 into the water during the arsenic removal process and installed an in-line PH analyzer, thus allowing us to monitor and adjust the PH levels and thus making our arsenic media more effective. In 2011 we also upsized the bowls on some of our airline wells, increasing pumping capacity at our associated wells. This allowed us more flexibility in utilizing lower cost wells first in delivering water during non-

---

<sup>8</sup> Direct Testimony of Christopher D. Krygier ("Krygier Dt.") at 16 – 19.

1 peak periods. These practices allowed the media in the Town Well arsenic  
2 treatment facility to be used for a much longer life and reduced the chemical costs  
3 for the water utility significantly.

4 Second, when we replaced the aforementioned pumps, we participated in an  
5 APS rebate program that partially paid for these pumps since they were much more  
6 efficient than their predecessors. The more efficient pumps reduced our power  
7 consumption, which resulted in reduced power costs for the utility when compared  
8 with our 2008 authorized costs.

9 Additionally, we have executed on several other cost savings initiatives, a  
10 few of which are briefly mentioned below:

- 11 • Expansion of SCADA system, reducing staff hours and overtime;
- 12 • Participated in APS Peak Solutions program, receiving a \$14k check in  
13 2012 for our ability to reduce power load during certain high-demand  
14 times at APS's request; and
- 15 • Expanded the operators' roles to include more repair work that previously  
16 had been done by outside contractors.

17 Finally, as I will more fully describe below, we changed our service  
18 disconnect program for non-payments. This allowed us to keep bad debt expense  
19 as a percent of test year revenues at or below 2008 figures even in a challenging  
20 economy, while simultaneously enhancing customer satisfaction, all due to the  
21 reduced number of actual disconnects.

22 **IV. COMPLIANCE, CONSERVATION, CUSTOMER SERVICE AND**  
23 **CUSTOMER SATISFACTION**

24 **Q. WHAT IS LPSCO'S COMPLIANCE STATUS?**

25 A. To the best of my knowledge, we are in compliance with all ADEQ, ADWR,  
26 ADOR, and ACC rules and regulations regarding the provision of water and

1 wastewater services in the State of Arizona. We take compliance with regulations  
2 very seriously and, if ever there is an issue, we will take immediate steps to correct  
3 the problem. Liberty Utilities has a strong compliance program led by our  
4 Operations staff and reviewed by our Environmental Health and Safety staff.  
5 We take our stated Company values of “Care, Quality, Responsibility, Service,  
6 Community and Family” very seriously, and regulatory compliance is a key aspect  
7 of adherence to those values.

8 **Q. WHAT IS THE LOST AND UNACCOUNTED FOR WATER RATE IN THE**  
9 **LPSCO SYSTEM?**

10 A. For the test year, the water loss rate was 9.2%, which is below the 10% guidance I  
11 am familiar with from both ADWR and ACC Staff. While we don’t appear to have  
12 a water loss “problem,” we have a diverse water distribution infrastructure in that  
13 many of the mains in the old sections of Litchfield Park are extremely old by  
14 Arizona standards, some dating back to the 1920s and 1930s. There are sections of  
15 water distribution mains, and sewer collection mains that would benefit from a  
16 more structured replacement program as Mr. Krygier will address in his testimony  
17 on DSIC/CSIC.<sup>9</sup>

18 **Q. WHAT STEPS HAS THE COMPANY TAKEN TO ADDRESS WATER**  
19 **CONSERVATION SINCE THE LAST RATE CASE?**

20 A. The Company voluntarily committed to 10 ADWR BMP’s before the last rate case  
21 as well as confirmed that commitment as part of our last rate case. We have  
22 complied with both ADWR and ACC requirements regarding those BMPs.  
23 Some examples of conservation efforts include the prominent display of  
24 conservation brochures and flyers in our customer accessible office, and quarterly  
25

---

26 <sup>9</sup> Krygier Dt. at 6 – 15.

1 conservation based newsletters that are sent to all customers as a bill insert.  
2 Customers who receive e-bills are provided a link which directs them to our  
3 website in order to view the quarterly conservation newsletter on-line. We also  
4 pride ourselves in getting out into the community and meeting with our customers  
5 to encourage conservation. Additionally, we offer and promote free landscape  
6 audits to our customers where we inspect their timers, landscaping, drop systems,  
7 etc. and counsel them on ways to conserve water.

8 **Q. SO THE COMPANY ENGAGES IN COMMUNITY OUTREACH**  
9 **PROGRAMS?**

10 A. Yes, as part of our Company Core Values, we encourage employees to be part of  
11 the community in which we serve, and embrace community programs and events  
12 that are of interest to them. For example, each year Liberty Water (now Liberty  
13 Utilities) sponsors and staffs a water booth at the Litchfield Park/Kiwanis Run, a  
14 1 mile, 5k and 10k race event held each March, where we hand out water to race  
15 participants. We also participate in the annual Litchfield Park Splash Bash, the  
16 Fall Carnival, and Christmas in the Park celebrations. At the Christmas in the Park  
17 celebration, we bring in snow for the local children to play in. At many of the  
18 events, we present people with conservation information, and tie it back to the  
19 theme by stating that we should conserve water to ensure we always have it in an  
20 emergency situation. We do these things not because we have to, but because we  
21 believe it provides better overall customer service and satisfaction, and increases  
22 the opportunities to gather feedback from our customers about our service and their  
23 perceptions. During 2012, in addition to the aforementioned annual events, we  
24 held a water conservation workshop, an irrigation workshop, an open house at our  
25 wastewater treatment plant, presented to children during their summer break library  
26 program, and had a booth at the 25 year anniversary for Litchfield Park.

1 Finally, community outreach and engaging with our customers is so important we  
2 track this as a metric and measure our success against various goals.

3 **Q. HOW DOES THE COMPANY MEASURE CUSTOMER SATISFACTION?**

4 A. We speak with our customers when they call or come into our office, or when our  
5 operators have the opportunity to chat with customers while in the field performing  
6 their duties, and, as highlighted above, through our involvement in community  
7 events. This is our “informal” way of soliciting feedback. We also take a more  
8 formalized approach of having a third party (Luth Research of San Diego, CA)  
9 conduct an annual customer satisfaction survey each August. This survey  
10 randomly selects about 1,000 customers from across our various Liberty utilities,  
11 and asks them approximately 22 questions in a 10 to 20 minute phone survey.  
12 These results are then analyzed by management, and are turned into an action plan  
13 to try to improve areas of need identified by the survey.

14 This survey was first conducted in August 2009, and each year since. I have  
15 attached the section of the 2012 survey related to LPSCO as **Exhibit GS-DT1**.  
16 For 2012 the overall satisfaction score was down. We believe that this was very  
17 much attributable to the rate increases, including phasing-in of rates and the  
18 subsequent/ongoing surcharge our customers experienced in 2011 through mid-  
19 2013.

20 Additionally, we have met each of the past three years with Commission  
21 Staff – Consumer Services group, not only to review the survey results, but also  
22 share other things we might be doing to provide excellent customer service.  
23 During these meetings, we also seek input from Staff as to how they believe we can  
24 better improve our service.

25  
26

1 **Q. CAN YOU PROVIDE AN EXAMPLE OF SOMETHING YOU SHARED**  
2 **WITH STAFF DURING THESE MEETINGS?**

3 A. Certainly. During our 2010 meeting, we mentioned to Staff that we were piloting a  
4 program at LPSCO to improve our disconnect process for non-payment of utility  
5 service. We explained to Staff that, if successful, this pilot would be rolled-out to  
6 our other utilities. Our view was that the worst experience of providing utility  
7 service, and being a customer of utility service, was the process of disconnecting  
8 utility service for non-payment. This takes a toll on both our employees in the field  
9 and the customer service offices, and has a significant impact on the customer  
10 whose service is being terminated. So, we decided there must be a better way and  
11 set out to improve the process and minimize the number of shutoffs that have to  
12 occur.

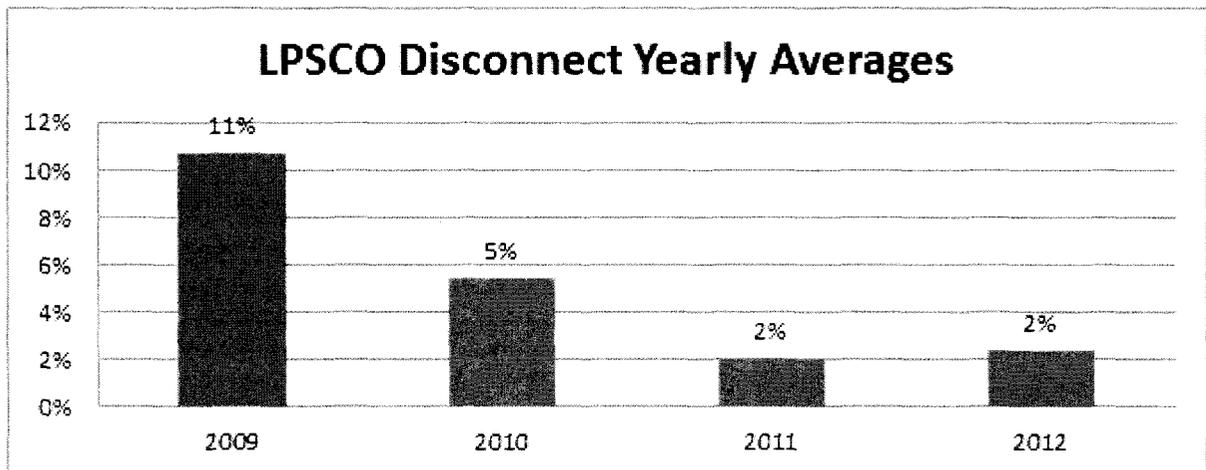

13 Our course of action was a simple one. We decided that, approximately  
14 five days after sending the required disconnect communication to our customers,  
15 we would personally call those customers who had not yet responded, as a  
16 courtesy, to explain the situation and their options. Also, for those customers we  
17 were unable to reach by telephone and resolve the non-payment matter,  
18 approximately two days before disconnect we placed door tags at their home as  
19 another way of reminding them payment was due and requesting that they contact  
20 our customer service representatives prior to the scheduled disconnect date.

21 **Q. WAS THIS SUCCESSFUL?**

22 A. Much more than we ever hoped. Before implementing the test process at LPSCO,  
23 we had some concerns about how customers would view our attempts and  
24 ultimately whether such simple gestures would really have a significant impact.  
25 We weren't sure if they'd view our reminder calls to them as "harassing" collection  
26 calls, or as they were intended – a courtesy call to avoid the disconnect from

1 occurring. Because of concerns such as this, our CSRs were instructed to be very  
2 courteous and accommodating in speaking with customers. I believe that because  
3 we took this type of approach, the pilot at LPSCO, and ultimately the rollout at our  
4 other utilities, was very successful.

5 Prior to this program commencing in March 2010, the 2009 average percent  
6 of disconnect notices that resulted in an actual service disconnection was 11%.  
7 After making a few fairly simple, courteous changes to our process, that figure has  
8 dropped to right around 2% during the 2012 test year.

18 **Q. WHAT IS YOUR ASSESSMENT OF THESE RESULTS?**

19 A. I find those to be amazing results, and I believe our customers appreciate the  
20 courteous, cooperative approach. Nobody wants their water shut off, so we work  
21 with customers to minimize the chances of that happening to them. I know that  
22 informally our CSRs have received many “thank you” comments and calls for the  
23 approach we have taken, and that helps LPSCO to avoid unnecessary negative  
24 interactions with our customers.

25 Finally, if a customer expresses that they are having difficulty in making  
26 payments, our CSRs are empowered to establish a work-out plan to catch them up,

and the customer is also made aware of our Low Income Tariff whereby they can receive reduced rates if eligible for the program. The great news is that not only do we provide our customers with improved and kinder service, but in the long run, this approach will reduce bad debt expense in our operating costs, and reduce the overtime our Operators incur as a result of disconnecting and then reconnecting services for non-payment issues.

**Q. HOW MANY COMPLAINTS HAS THE COMMISSION RECEIVED FROM LPSCO CUSTOMERS SINCE THE LAST TEST YEAR?**

A. We checked with Commission Staff, and during 2009 and 2010, when our last rate case was being prosecuted, we had seven and two complaints, respectively. During 2011 and 2012, we had four and zero complaints, respectively. I believe our Customer Service personnel, as well as the Company as a whole, do a great job of working with our customers, and we strive to maintain a positive working relationship with the Consumer Services department of Commission Staff as well, and appreciate their support in ensuring that our customers are provided excellent service.

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

A. Yes.

# OVERALL SERVICES AND COMPANY

# Matthew Garlick – Central AZ

## Company Evaluation – Overall Satisfaction with Services

Nearly half (45%) of the Central Arizona consumers were *Very satisfied* with the services they received. An additional 32% indicated that they were *Somewhat satisfied*.

Those who have lived in the area for less than 5 years gave a significantly higher top two box satisfaction score (85% *Very/somewhat satisfied*).

*NOTE: New question for 2012, tracking data unavailable.*

Q1. On a scale of 1 to 5, where 1 means "very dissatisfied" and 5 means "very satisfied", how satisfied are you with the services you are receiving from Liberty Utilities?

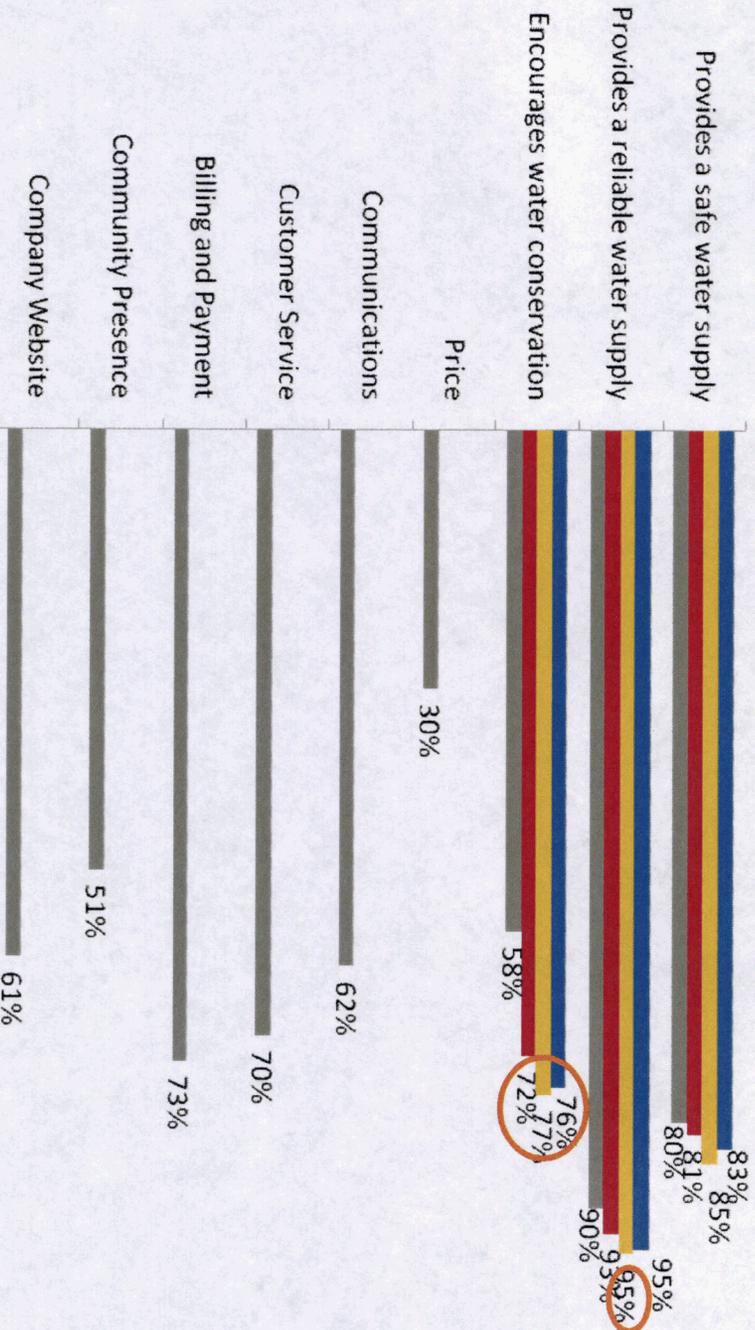

# Matthew Garlick – Central AZ

## Company Evaluation – Satisfaction

Respondents agreed that their water service facility *Provides a reliable water supply* (90%, top 2 box agree/strongly agree). However, this continued a downward trend and was significantly lower than the 2010 score. More than three-fourths (80%) felt Liberty Utilities *Provides a safe water supply*.

Areas of concern, meaning those factors with the lowest satisfaction scores, were *Price* at 30% and *Community Presence* at 51%.

**Top 2 Box Scores (4,5): 5 = Very Satisfied**

■ 2009 (N=250) ■ 2010 (N=251) ■ 2011 (N=253) ■ 2012 (N=210)

NOTE: 2012 survey offered 'NA' as a response option, a change from previous years. N/A was not included in the tables.

NOTE: Orange circled data indicates significant increases compared to other year(s).

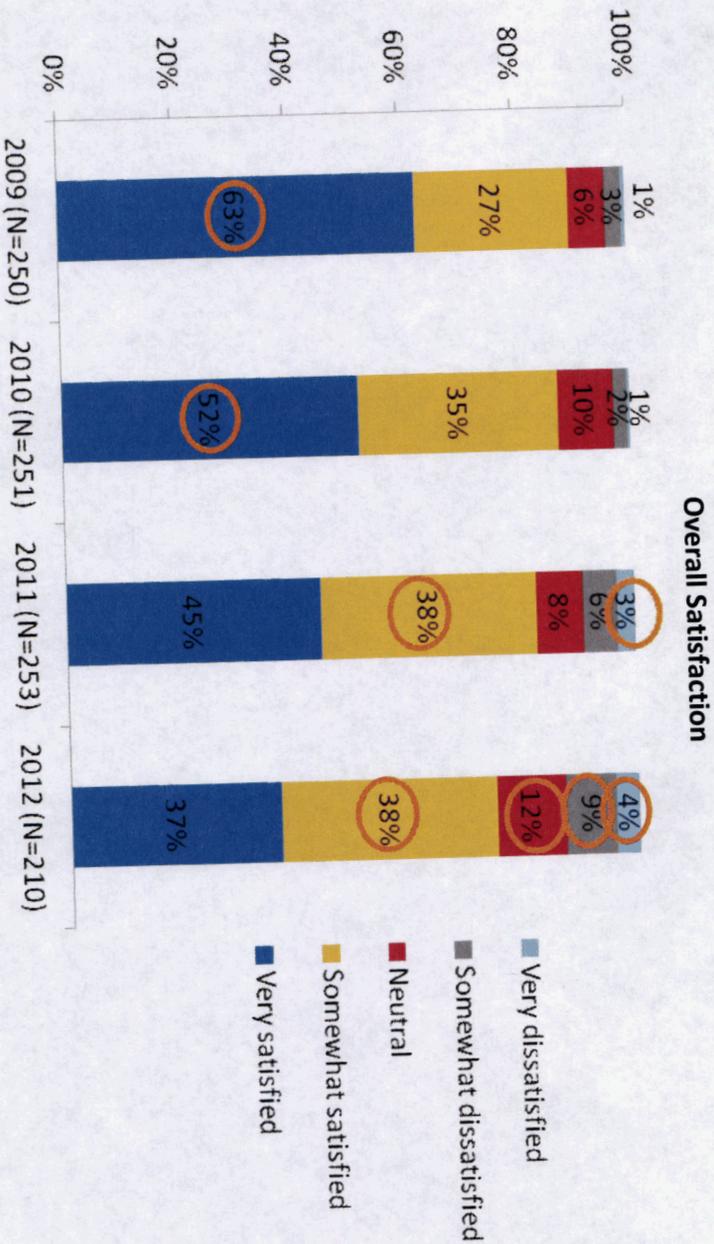

Q2. Please rate Liberty Utilities in the following areas by using a 5-point scale with 5 being "Very Satisfied" and 1 being "Very Dissatisfied".

# Matthew Garlick – Central AZ

## Company Evaluation – Overall Satisfaction

Satisfaction with Liberty Utilities overall was positive with 74% of respondents stating they were *Somewhat/Very satisfied*. However, this was down significantly from 2011 (83%), continuing a negative trend since 2009.

Five year or less residents reported a significantly higher satisfaction score (82%).

*NOTE: Orange circled data indicates significant increases compared to other year(s).*

Q3. Overall, how satisfied are you with Liberty Utilities?

# Matthew Garlick – Central AZ

## Company Evaluation – Overall Satisfaction

Those *Somewhat/Very satisfied* with the provider were so because they have *Never had a complaint* (32%) and *Reliable/Receive services paid for* (8%). However, 26% of satisfied respondents stated that they felt the *Cost is too high*. While no significant changes were found from 2011 to 2012, *Reliable/Receive services paid for* and *Service is satisfactory/good/excellent* remain significantly under their levels from 2009.

Not surprisingly, *Cost is too high* (89%) was the main reason why respondents were dissatisfied (*Not satisfied at all/Somewhat dissatisfied*).

Suggestions for Improvements – 2012	2009 Total	2010 Total	2011 Total	2012 Total	Difference from 2011
<b>Why Satisfied</b>	N=225	N=219	N=209	N=156	
Never had a problem/complaint	33%	39%	39%	32%	-7%
Cost is too high/rate increases	6%	14%	18%	26%	7%
Reliable/Receive services paid for/No service interruptions	20%	6%	6%	8%	2%
Service is satisfactory/good/excellent	14%	7%	8%	6%	-2%
Good/friendly/courteous customer service	5%	10%	4%	6%	2%
No problems with billings/payments	2%	0%	2%	5%	3%
Prompt, considerate repair service	4%	2%	2%	5%	3%
<b>Why Not Satisfied</b>	N=9*	N=8*	N=23*	N=28*	
Cost is too high/rate increases	0%	38%	83%	89%	7%
Poor/unfriendly/unbearing customer service	44%	13%	0%	11%	11%
Water is cloudy/contaminated/poor quality/hard	0%	13%	17%	7%	-10%
Billing is confusing/unclear/uninformative	0%	13%	0%	7%	7%
Poor community relations/communication/public relations	0%	0%	0%	4%	4%
Good/friendly/courteous customer service	0%	0%	0%	4%	4%

NOTE: Data in grey shaded cells are significantly higher than 2012.

\*Small sample size

Q3B. Being as specific as possible, why did you say you are [INSERT FROM Q3] with Liberty Utilities?

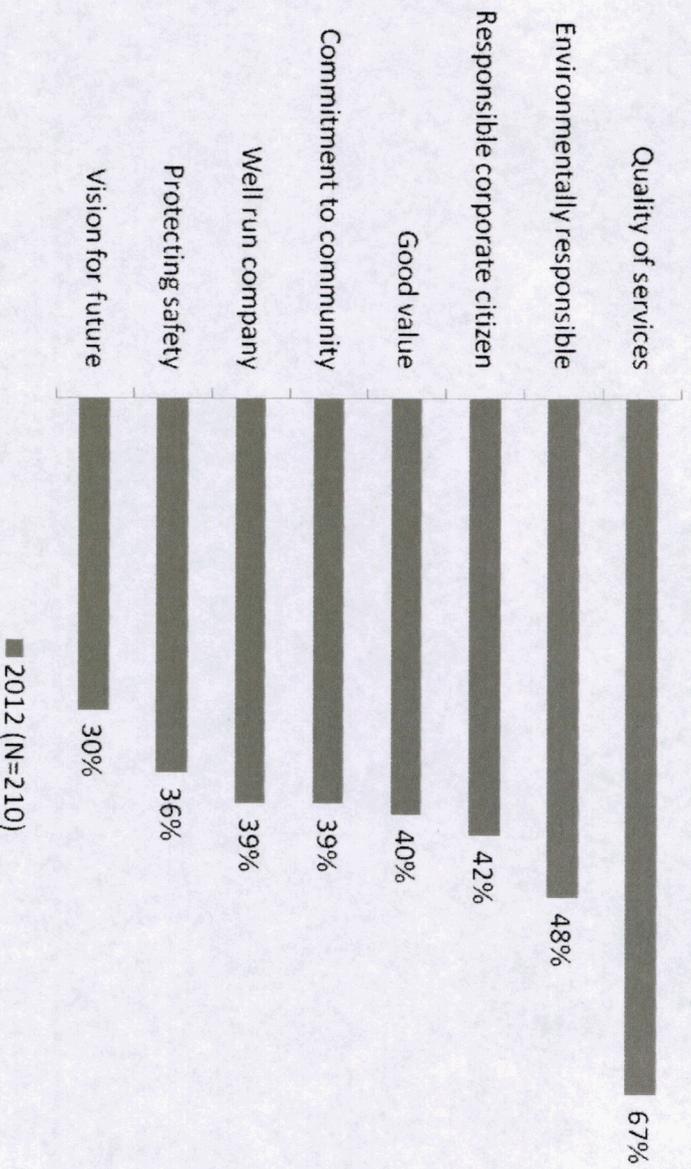

# Matthew Garlick – Central AZ

## Company Evaluation – Key Indicators

Two thirds (67%) of Central Arizona customers felt positively about the *Quality of services* Liberty Utilities is providing.

Respondent scores indicated that Liberty Utilities should look to improve many aspects of their services, especially in terms of *Vision of future* (30%) and *Protecting safety* (36%).

**Top 2 Box Scores (4,5): 5 = Excellent**

*NOTE: New question for 2012, tracking data unavailable.*

Q5A1-8. Based on a scale from 1 to 5 where 1 is "poor" and 5 is "Excellent", please rate how good a job Liberty Utilities does on each of the following items:

Matthew Garlick – Central AZ

**CUSTOMER SERVICE**

# Matthew Garlick – Central AZ

## Customer Service – Calls & Visits

Nearly half of respondents (49%) indicated they had called the business office at least once while, which was significantly higher than past years. In terms of visiting the office, only 21% indicated that they had done so at least once.

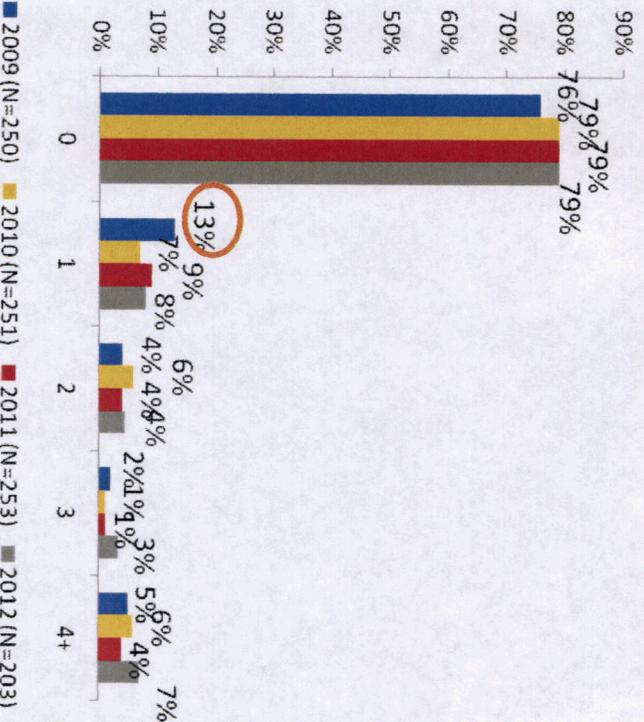

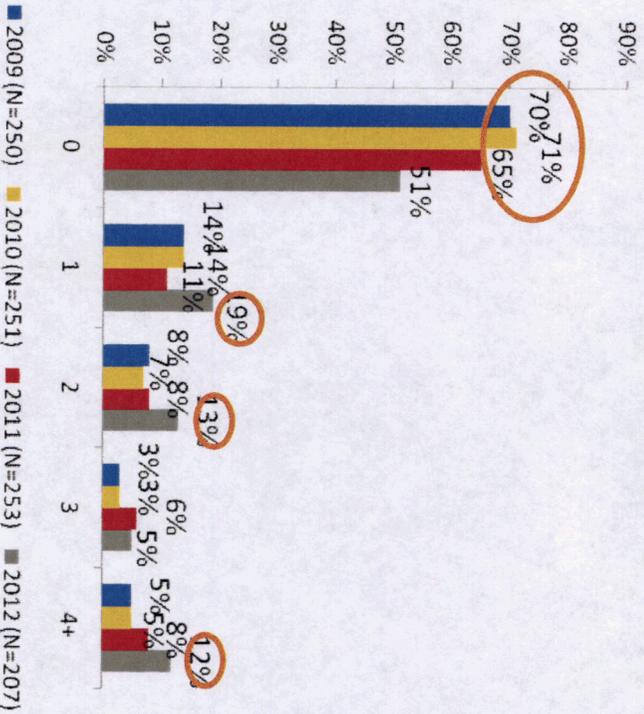

Among those who had contact, either by phone and/or office visit, the mean number of interactions did not change significantly from 2011 (2.19 calls in 2012 vs. 2.41; 2.28 office visits in 2012 vs. 1.83).

**Times Called Business Office**

Among Those Who Have Called Within Last Year	2009	2010	2011	2012
	1.97	2.03	2.41	2.19

**Times Visited Business Office**

Among Those Who Have Visited Within Last Year	2009	2010	2011	2012
	1.79	1.93	1.83	2.28

**NOTE: Orange circled data indicates significant increases compared to other year(s).**

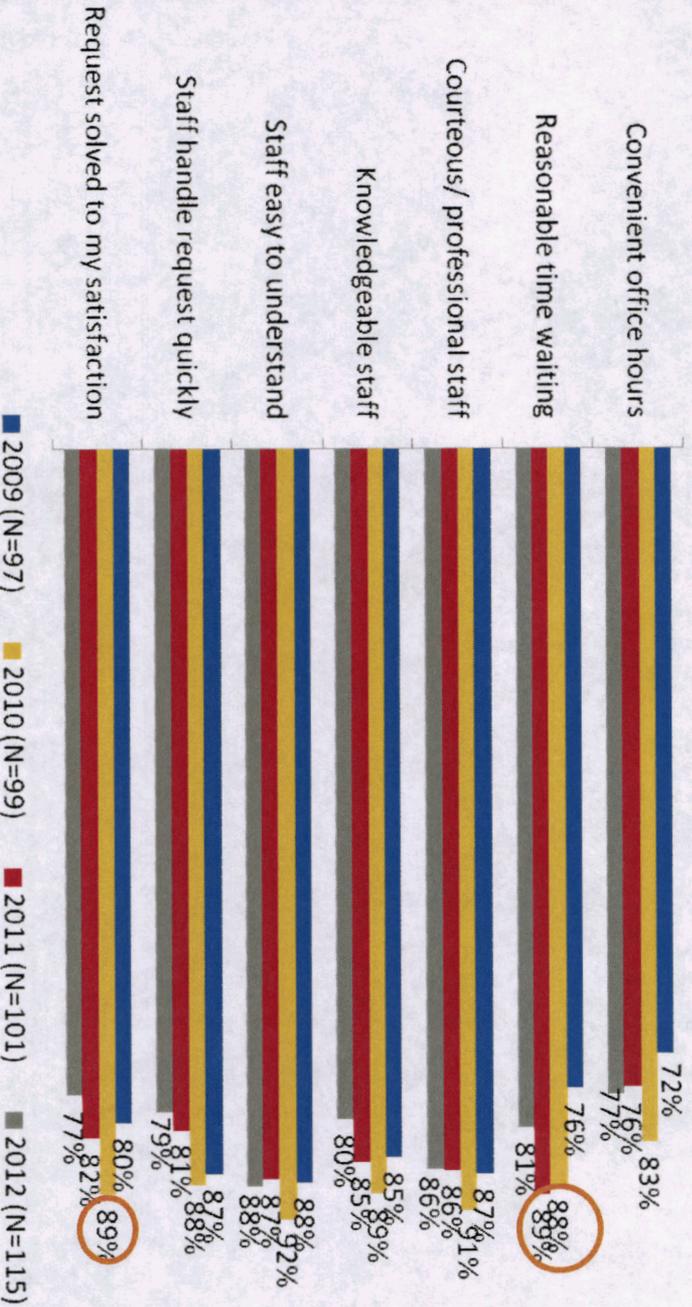

Q6. To the best of your recollection, how many times have you called or visited an office of Liberty Utilities within the last year?

# Matthew Garlick – Central AZ

## Customer Service – Satisfaction

Among those customers who reported they had contact with customer service in the last year, satisfaction was strong (77%+ top two box scores) and typically on par with 2011 scores. However, the score for *Reasonable time waiting* had fallen significantly in the past year.

Top 2 Box Scores (4,5): 5 = Strongly Agree

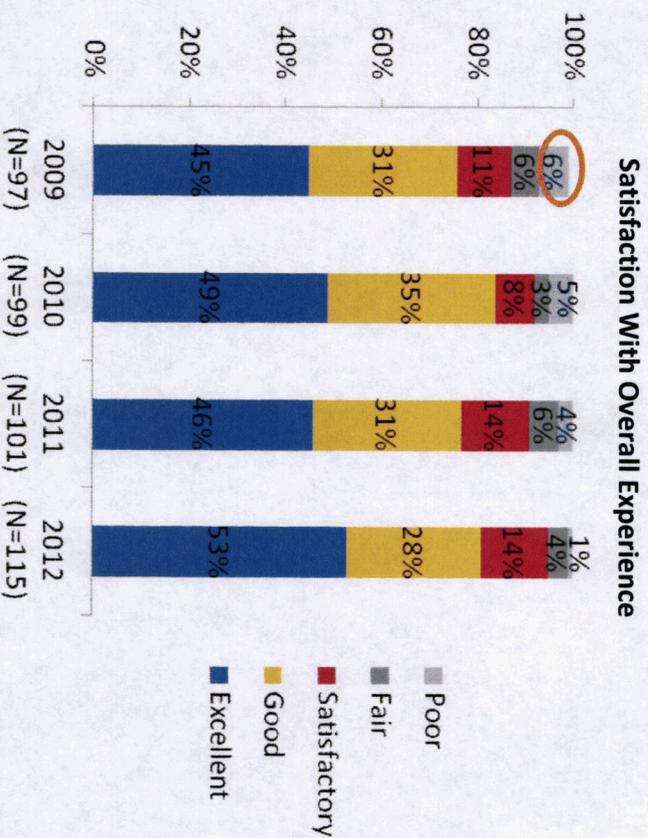

**NOTE:** Orange circled data indicates significant increases compared to other year(s).

Q7a-g. Using a 5-point scale where 5 is Strongly Agree and 1 is Strongly Disagree, please tell me how much you agree or disagree with each of the following statements about Liberty Utilities customer service. If you have called or visited an office more than once within the last year, please think only about your last contact with Liberty Utilities.

# Matthew Garlick – Central AZ

## Customer Services – Overall Experience

Most respondents (81%) rated the overall customer service experience as Good/Excellent.

*NOTE: Orange circled data indicates significant increases compared to other year(s).*

Q8. Overall, how would you rate your experience with the customer service you received? If you have called or visited the office more than once in the last year, please think only about your last contact with Liberty Utilities.

Matthew Garlick – Central AZ

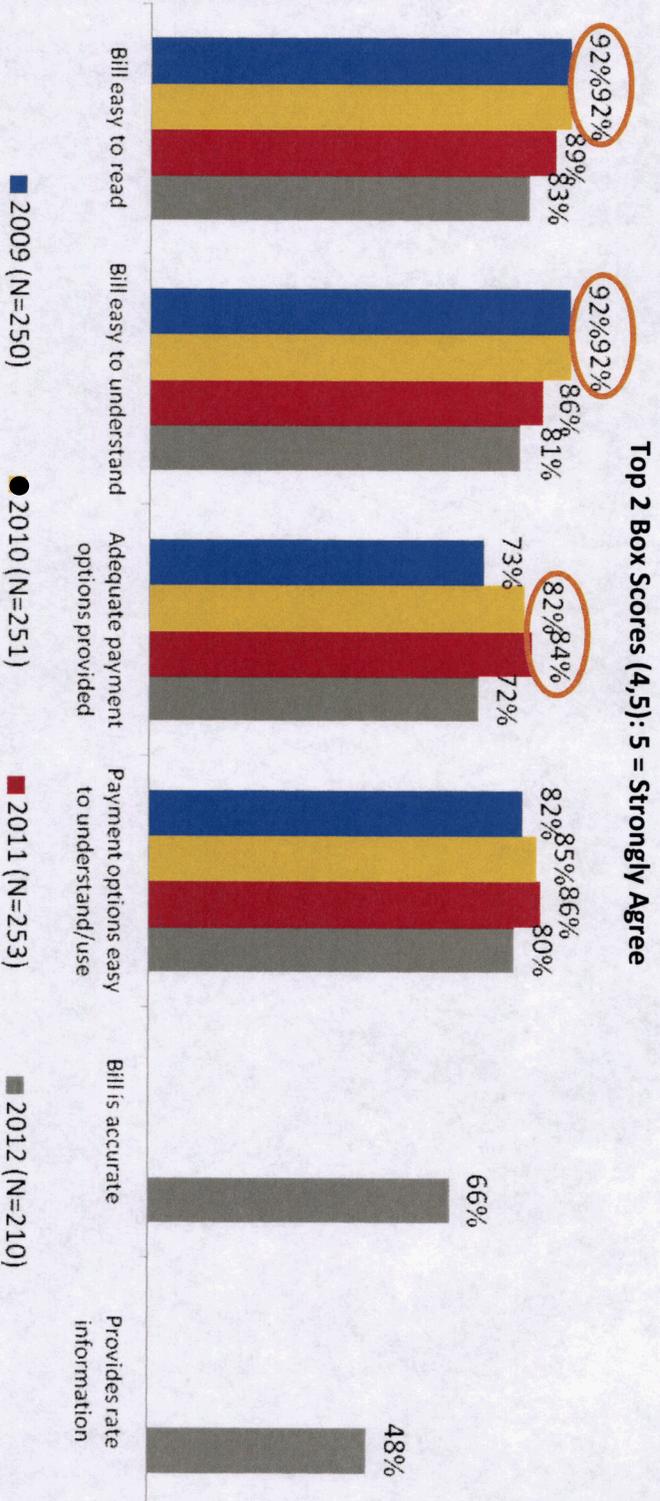

# **CUSTOMER BILLING**

# Matthew Garlick – Central AZ

## Customer Billing – Satisfaction

Despite slightly lower scores as compared to 2011, customer satisfaction with billing remained relatively strong for *Bill easy to read* (83%) and *Bill easy to understand* (81%). However, satisfaction with *Adequate payment options* (72%) fell significantly.

Less than half (48%) were satisfied with *Provides rate information*.

NOTE: New phrases for 2012, tracking data unavailable.

NOTE: Orange circled data indicates significant increases compared to other year(s).

Q9A-F. Using a 5-point scale where 5 is Strongly Agree and 1 is Strongly Disagree, please tell me how much you agree or disagree with each of the following statements.

Matthew Garlick – Central AZ

**WATER SERVICE METRICS**

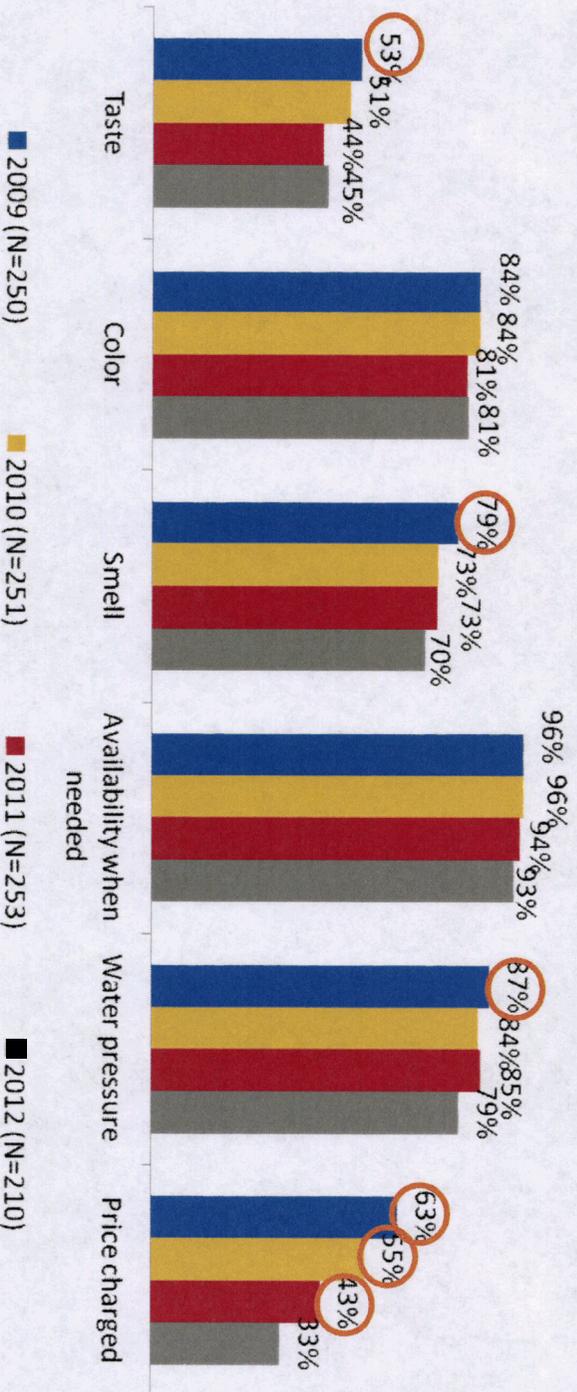

# Matthew Garlick – Central AZ

## Water Services – Satisfaction

Respondents continued to be most satisfied with the water *Availability when needed*, with 93% giving it a 4 or 5 (where 5 = Very satisfactory). Other highly rated aspects of water service were *Color* (81%) and *Water pressure* (79%).

Results for *Taste*, *Smell*, *Water pressure*, and *Price charged* all continued downward trends and were significantly lower than their 2009 scores. *Price charged* (33%) was especially low, down significantly from 2011.

**Top 2 Box Scores (4,5) : 5 = Very Satisfactory**

*NOTE: Orange circled data indicates significant increases compared to other year(s).*

OSOUTH01. Please rate your water services in the following areas by using a 5-point scale with 5 being "Very Satisfactory" and 1 being "Not Satisfactory At All".

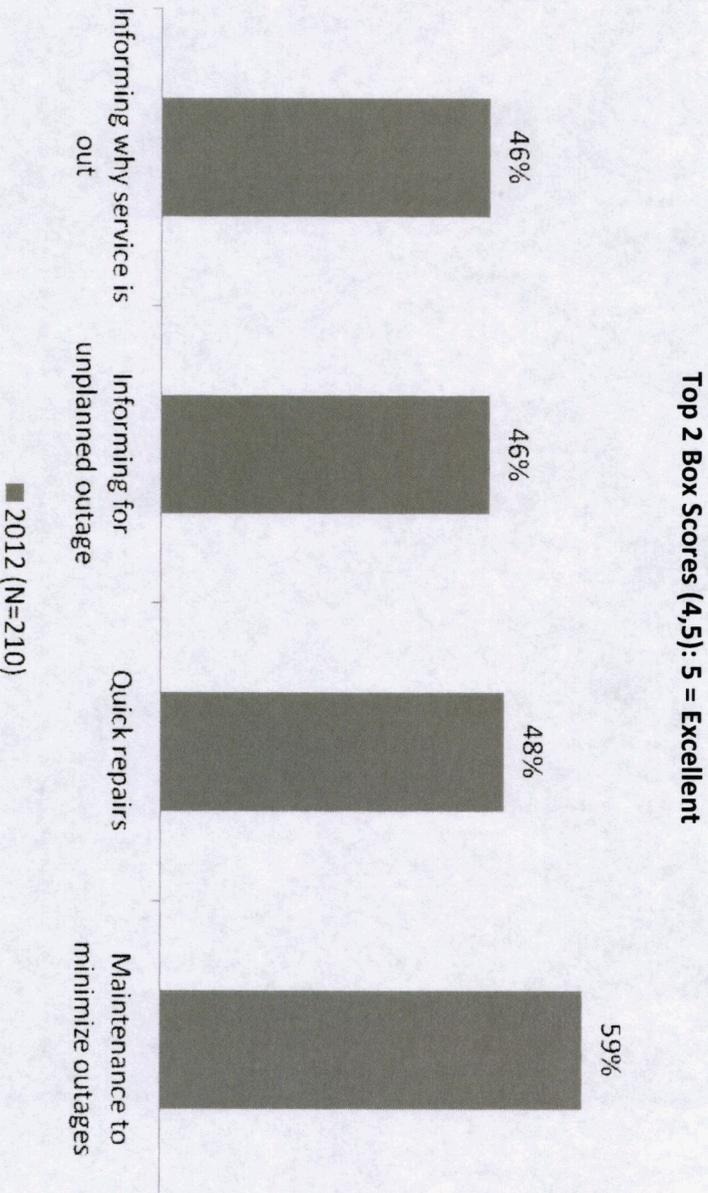

Matthew Garlick – Central AZ

**SERVICE OUTAGE**

# Matthew Garlick – Central AZ

## Water Services – Service Outage

While more than half (59%) were satisfied with *Maintenance to minimize outages*, far fewer were satisfied with *Informing why service is out* (46%), *Informing for unplanned outage* (46%), and *Quick repairs* (48%).

**NOTE: New question for 2012, tracking data unavailable.**

Q10. Thinking about all of your experiences with Liberty Utilities, please rate how good a job they do on each of these items on a scale from 1 to 5, where 1 is "Poor" and 5 is "Excellent".

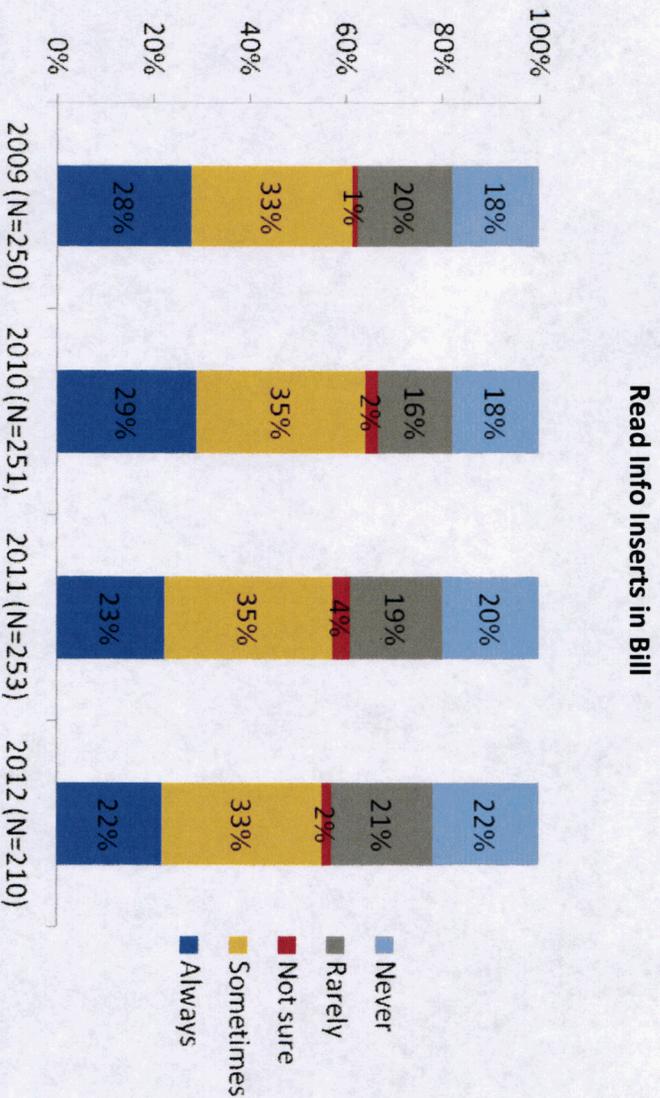

Matthew Garlick – Central AZ

# COMMUNICATION

# Matthew Garlick – Central AZ

## Customer Billing – Information/Services

Half of respondents (55%) stated they read the information inserts in their bill *Sometimes* or *Always*. A slight downward trend from 2010 can be seen.

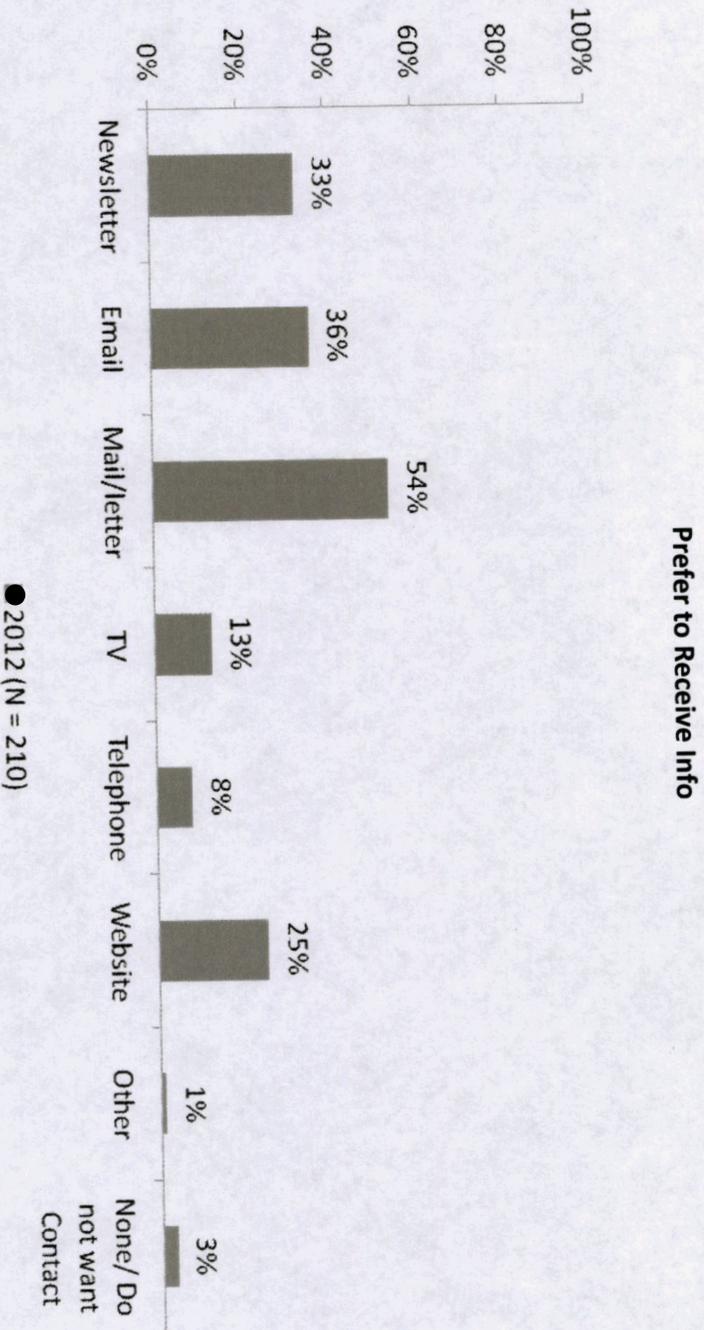

Q11. How often do you read the informational inserts included in your bill?

# Matthew Garlick – Central AZ

## Customer Billing – Information/Services

Central Arizona respondents would prefer to receive information from Liberty Utilities via *Mail/letter* (54%), *Email* (36%), and *Newsletter* (33%).

While *Mail/letter* was preferred more by *6+ year residents* (63%), *Email* was cited more by *Hispanics* (75%), *18-44 years* (48%), *45-64 years* (39%), and *resident 5 years or less* (44%).

*NOTE: New question for 2012, tracking data unavailable.*

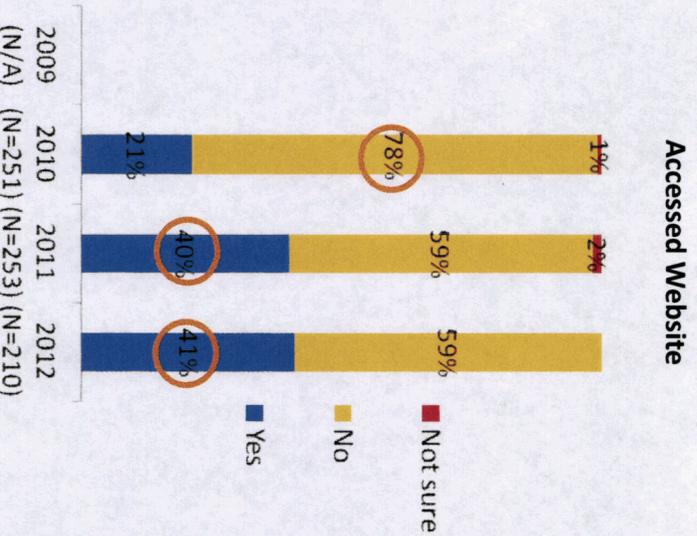

Q12. How would you like to receive information from Liberty Utilities? Please select all that apply.

# Matthew Garlick – Central AZ

## Website – Online Services

More than a third of respondents (41%) in Central Arizona indicated they had accessed the website. Website visitation levels were significantly higher for 18-44 years (63%), 45-64 years (40%), and resident 5 years or less (51%).

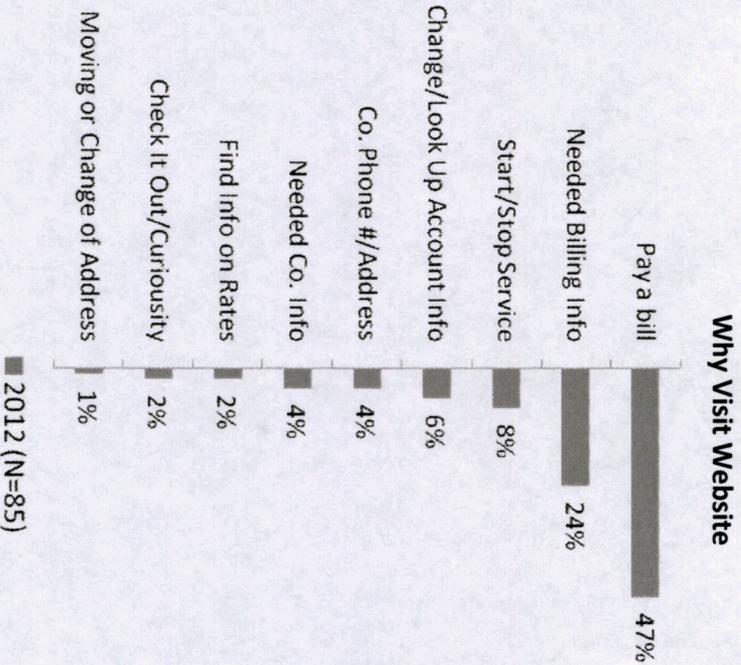

The website was visited primarily to *Pay a bill* (47%), followed distantly by *Needed billing info* (24%).

NOTE: Orange circled data indicates significant increases compared to other year(s).

Q13. Have you visited the Liberty Utilities website within the past year?

Q14. For what reasons did you visit the website?

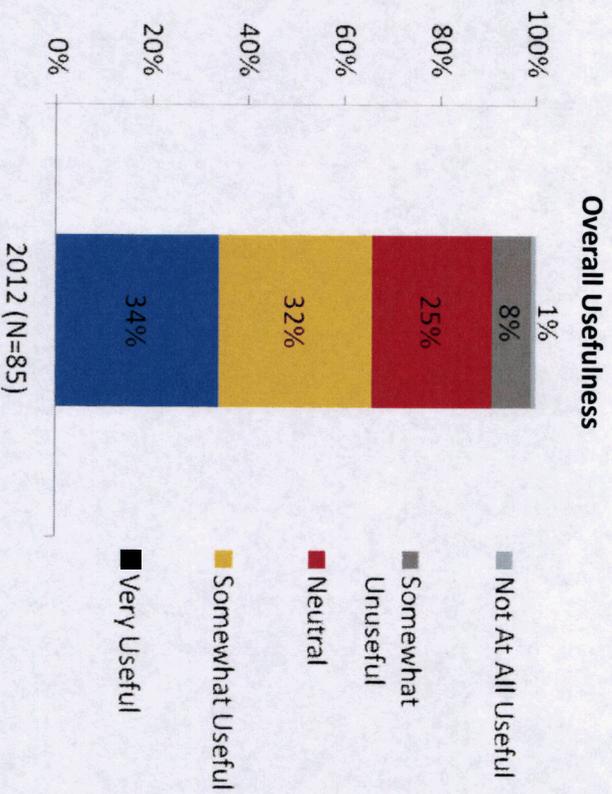

NOTE: New question for 2012, tracking data unavailable.

# Matthew Garlick – Central AZ

## Website – Overall Usefulness

Two-thirds (66%) of Central Arizona respondents indicated that the website was *Somewhat/Very useful*. There were no significant differences by sub-group.

*NOTE: New question for 2012, tracking data unavailable.*

Q15. Please rate the usefulness of Liberty Utilities website using a scale from 1 to 5, where 1 is "not at all useful" and 5 is "very useful".

1 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Christopher D. Krygier, and my business address is 12725 W. Indian  
4 School Road, Suite D101, Avondale, AZ 85392.

5 **Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

6 A. On behalf of applicant Litchfield Park Service Company, which is generally known  
7 as "LPSCO".

8 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

9 A. I am employed by Liberty Utilities, which is the parent company for LPSCO, as the  
10 Utility Rates and Regulatory Manager. To keep things simple, I will refer to the  
11 two entities as Liberty and LPSCO in my testimony.

12 **Q. WHAT ARE YOUR PRINCIPAL RESPONSIBILITIES AS THE UTILITY  
13 RATES AND REGULATORY MANAGER?**

14 A. I am responsible for the water and wastewater rate cases and public utility  
15 regulation for Liberty's utility holdings in Arizona, Texas, Arkansas and Missouri.

16 **Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.**

17 A. Before working for Liberty, I was employed by American Water Works, Inc. for  
18 approximately six years in a variety of capacities. Generally though, while at  
19 American Water, I worked in Financial Planning and Analysis, Rates, Regulatory  
20 Compliance and Capital Programs.

21 **Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.**

22 A. In 2006, I completed my Bachelor of Science in Economics from the W.P. Carey  
23 School of Business at Arizona State University. In 2010, I completed my Master  
24 of Business Administration with an emphasis in Finance also from ASU.

25 I also possess several utility related certifications. First, I am a Certified  
26 Rate of Return Analyst as designated by the Society of Utility and Regulatory

1 Financial Analysts. Second, I am a Level 1 Water Treatment Operator as  
2 designated by the Arizona Department of Environmental Quality. Third, I am  
3 designated a Level 1 Water Distribution Operator by the Arizona Department of  
4 Environmental Quality. I also attended the NARUC Water Utility Rate School in  
5 2008 and Center for Public Utilities Rate School in 2012.

6 Lastly, I am a Certified Management Accountant as designated by the  
7 Institute of Management Accountants (“IMA”). The IMA’s mission is to provide a  
8 forum for research, practice development, education, knowledge sharing, and the  
9 advocacy of the highest ethical and best business practices in management  
10 accounting and finance.

11 **Q. HAVE YOU TESTIFIED BEFORE THIS OR ANY OTHER PUC?**

12 A. Yes, my written testimony has been filed in Rio Rico Utilities Inc.’s rate case,  
13 Docket No. WS-02676A-12-0196, which is now pending before the Arizona  
14 Corporation Commission (“ACC” or “Commission”). I also provided written  
15 testimony in Docket No. 2010-0313 before the Hawaii Public Utilities Commission  
16 on behalf of my previous employer.

17 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS**  
18 **PROCEEDING?**

19 A. The primary purpose of my testimony is to introduce and discuss four separate  
20 proposals that Liberty requests approval of in this LPSCO rate case:

- 21 ○ A Distribution System Improvement Charge (“DSIC”) and a Collection  
22 System Improvement Charge (“CSIC”);
- 23 ○ a Purchased Power Adjustor Mechanism (“PPAM”);
- 24 ○ a Property Tax Accounting Deferral; and
- 25 ○ a Balanced Rate Design.

1 **Q. DO THESE PROPOSALS SHARE A COMMON THEME OR GOAL?**

2 A. Yes, absolutely – rate gradualism.

3 **Q. WHAT DO YOU MEAN BY “RATE GRADUALISM”, MR. KRYGIER?**

4 A. Rate gradualism is a goal of ratemaking. Rate gradualism focuses on the  
5 importance of price stability and minimization of unanticipated, dramatic changes  
6 in rates, the latter generally known as “rate shock”. Rate gradualism is premised  
7 on the notion that customers will benefit from small incremental increases in utility  
8 rates by avoiding and minimizing the impacts and economic consequences of  
9 periodic but unpredictable large increases in those rates. I will discuss this in more  
10 detail in the next section of my testimony before I discuss each of the specific  
11 proposals.

12 **Q. HOW DO THE FOUR PROPOSALS YOU ARE MAKING IN THIS CASE  
13 HELP PROMOTE RATE GRADUALISM?**

14 A. Approval of the requested ratemaking treatment will result in reasonable rates and  
15 a fair opportunity for LPSCO to achieve its authorized rate of return during the  
16 period the rates approved in this case will be in effect. Given a fair opportunity to  
17 earn our authorized return, customers benefit because we remain financially  
18 healthy and incented to invest, yet we should not have to rush in seeking large  
19 increases in LPSCO’s costs for utility service. I will discuss these benefits in more  
20 detail in my discussion of each of the four proposals.

21 **Q. WILL YOU BE ADDRESSING ANY OTHER AREAS?**

22 A. Yes, I will also support LPSCO’s request to make minor language modifications to  
23 its current water and wastewater tariffs.

24

25

26

1 **II. RATE GRADUALISM**

2 **Q. WHERE DID THE IDEA OF RATE GRADUALISM ORIGINATE?**

3 A. It seems to me to be the logical extension of the teachings of James C. Bonbright.  
4 Professor Bonbright wrote in “Principles of Public Utility Rates”:

5 By and large, the task of ratemaking or rate regulation is that  
6 of adapting utility rates to a larger economic environment,  
including a universe of non-utility prices and wages.<sup>1</sup>

7 In their everyday lives, customers do not generally see large increases in their  
8 income (whether from work or from retirement plans, Social Security, etc.) Rather,  
9 they see small, incremental changes in their income. The kind of rate gradualism  
10 underlying Professor Bonbright’s teachings matches utility rate changes to that  
11 larger economic reality. In other words, rate gradualism helps customers by  
12 allowing them to match gradual increases in water or sewer rates to expected  
13 gradual increases in prices and wages. That customers would prefer rate  
14 gradualism is not surprising.

15 **Q. DO YOU HAVE ANY EVIDENCE TO SHOW THE PREFERENCE OF**  
16 **CUSTOMERS?**

17 A. A 2012 poll showed that over 89 percent of respondents indicated they prefer  
18 smaller, more frequent rate increases instead of larger, less frequent increases.<sup>2</sup>  
19 As a simple example, rate gradualism would advocate for annual increases of two  
20 percent per year, versus a single rate increase at the end of the second year of six  
21 percent. The Commission can also take notice of the fact that it has heard the same  
22 thing at countless public meetings where customers state that they are better able to

23 \_\_\_\_\_  
24 <sup>1</sup> Principles of Public Utility Rates, James C. Bonbright, Columbia University Press (1961), Part One:  
25 “Basic Standards of Reasonable Rates,” Chapter II: “The Public Interest as the Assumed Goal of Rate  
26 Making,” Section: “Public-Interest or Social-Welfare Criteria of Reasonable Rates,” Paragraph 6, Page 29  
of the 1961 edition.

<sup>2</sup> “Poll Results: 9 out of 10 Arizonans Support Shift in Utility Rate Hike Approach”, October 3, 2012,  
copy attached hereto as **Exhibit CDK-DT1**.

1 adjust to smaller changes in their household budget. Ensuring that utility bills  
2 gradually change over time provides customers with the ability to adjust to the  
3 bills. This was certainly the message that the Commission sent Liberty in the last  
4 LPSCO rate case.

5 **Q. WHAT HAPPENED IN THE LAST RATE CASE?**

6 A. The Commission was very critical of LPSCO for having put too much plant in  
7 while staying out too long between rate cases, creating the need for a large  
8 increase. In fact, the Commission penalized LPSCO for it by reducing its return on  
9 equity at LPSCO's prior rate case: "[o]ur determination of LPSCO's authorized  
10 return on equity in this case reflects our concern with the overall magnitude of the  
11 requested increase, which is primarily due to the Company's unilateral decision to  
12 delay filing a rate application for approximately eight years..."<sup>3</sup>

13 **Q. IS THAT WHY LIBERTY IS NOW ESPOUSING "RATE GRADUALISM"?**

14 A. Not entirely. After Liberty's prior LPSCO rate case, Liberty received significant  
15 feedback from customers regarding the rate case process. The overwhelming  
16 feedback from customers was that they prefer small, more frequent rate increases  
17 rather than large, unpredictable rate increases. This, coupled with the reduced  
18 ROE, was certainly a clear reminder that rate gradualism is one of the many factors  
19 that should be considered when setting rates for a water or wastewater utility.  
20 Under these circumstances and for the reasons stated in my testimony, Liberty  
21 supports rate gradualism and the regulatory tools that promote such policy  
22 objectives. Liberty views the DSIC mechanism and other proposals set forth in my  
23 testimony as critical steps in achieving gradual changes in the Arizona regulated  
24  
25  
26

---

<sup>3</sup> Decision No. 72026 (December 10, 2010) at 61:10-12.

1 water/wastewater utility sector that would provide a mutual benefit to utilities,  
2 customers, and the Commission.

3 **Q. ANY OTHER REASONS LPSCO IS CONCERNED ABOUT RATE**  
4 **GRADUALISM?**

5 A. Yes. Customer care is a critical component of LPSCO and its parent company's  
6 business philosophy. Customers are the central focus of all business operations.  
7 Customer care is so important that several of our performance metrics for business  
8 success are defined by how Liberty works with customers, such as how quickly our  
9 customer service representatives answer phone calls and how many community  
10 events we are hosting. Good customer care should try to foresee and eliminate the  
11 potential for future rate shock on customers. However, that said, we can only do so  
12 much without the regulators. We can only present proposals that foster rate  
13 gradualism. It is up to the Commission to approve them.

14 **Q. BESIDES RATE GRADUALISM, WHAT OTHER BENEFITS DO**  
15 **CUSTOMERS DERIVE FROM LPSCO'S POLICY PROPOSALS?**

16 A. LPSCO's customers experience other benefits from the Company's policy  
17 proposals. As an example, continuing to replace infrastructure to ensure system  
18 reliability is a customer benefit. Additionally, ensuring that water continues to  
19 meet or exceed all state and federal mandates is important as customers want to  
20 feel confident that water and wastewater services are safe.

21 **III. LIBERTY'S POLICY PROPOSALS**

22 **A. Proposal Number 1 - DSIC AND CSIC**

23 **Q. IS LPSCO SEEKING APPROVAL OF A DSIC AND A CSIC?**

24 A. Yes. The Distribution System Improvement Charge or DSIC is a surcharge  
25 mechanism that promotes rate gradualism by encouraging utilities to replace water  
26 infrastructure. DSICs and Collection System Improvement Charge, or CSIC, the

1 wastewater version, originated in Pennsylvania where aged infrastructure led to  
2 increasing operational challenges that impacted system reliability. In turn, the  
3 large capital investments needed to repair and replace this aging infrastructure  
4 drove more frequent rate cases with larger rate increase requests.

5 **Q. EXCUSE ME MR. KRYGIER, BUT BEFORE WE GO ANY FURTHER,**  
6 **CAN YOU PROVIDE A LAYMAN'S DESCRIPTION OF ONE OF THESE**  
7 **SYSTEM IMPROVEMENT CHARGES?**

8 A. Certainly. In simple terms, under this surcharge mechanism, a return on  
9 investment in new plant that occurs between rates cases will be provided through a  
10 separate charge on the customer's bill. Now, before that return will be realized,  
11 there will be a review process by parties to the case to make sure that the new plant  
12 is complete and in service and to verify the cost of the plant. Additionally, only  
13 certain types of plant (identified by specific NARUC account) qualify for recovery.  
14 Finally, the additional revenue the Company can realize through this charge is  
15 capped.

16 **Q. THANK YOU. SO A DSIC IS HOW THE PENNSYLVANIA COMMISSION**  
17 **RESPONDED TO THE PROBLEM OF MORE FREQUENT RATE CASES**  
18 **SEEKING LARGE INCREASES?**

19 A. Yes, by approving a DSIC mechanism that balanced the needs and interests of  
20 customers and utility companies.<sup>4</sup> In referring to a DSIC surcharge mechanism, the  
21 Chairman of Pennsylvania's PUC testified that "[t]hese surcharges ensure the least  
22 possible rate impact on customers by spreading out over time the cost of replacing  
23 and enhancing Pennsylvania's utility infrastructure."<sup>5</sup>

---

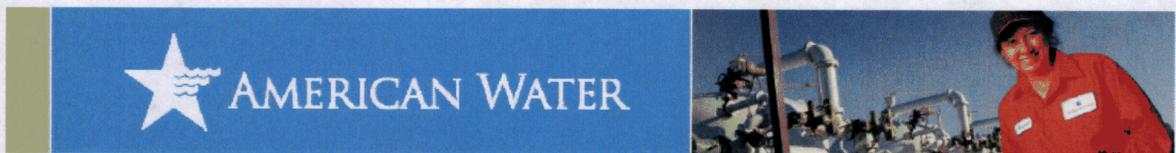

24  
25 <sup>4</sup> My discussion of the DSIC applies equally to the CSIC so I will not refer to both unless necessary.

26 <sup>5</sup> Pennsylvania Public Utility Chairman Robert F. Powelson testifying before the Pennsylvania House of Representatives Consumer Affairs Committee. 28 April 2011. (emphasis added).

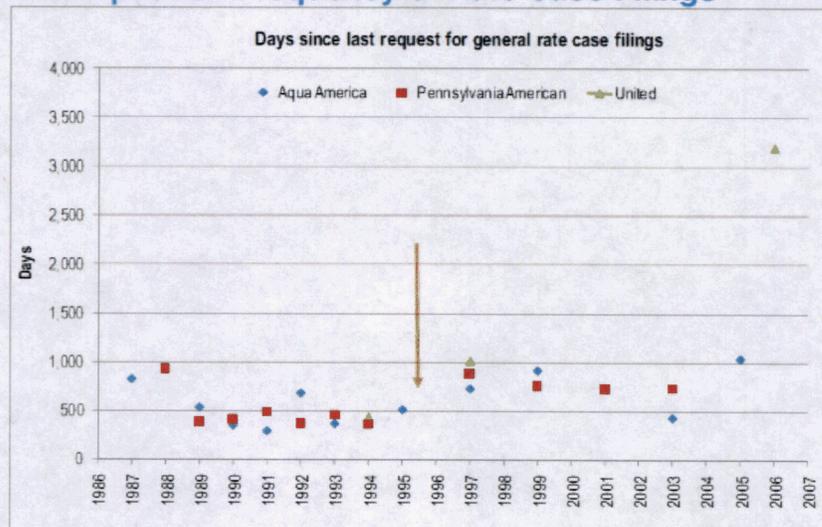

1 The DSIC was designed to allow utility customers to have not only the  
2 benefits of rate gradualism, but also improved system reliability, which means  
3 fewer failures and outages and a decreased risk of water quality issues, while at the  
4 same time providing the utilities sufficient rate recovery to make the investments  
5 required to ensure the continuous provision of safe, reliable, and adequate water  
6 and sewer service.

7 **Q. WAS THE DSIC A SUCCESS?**

8 **A.** Yes, it was an overwhelming success. As indicated in the graph below, after the  
9 DSIC was implemented, rate increase frequency for Pennsylvania's largest water  
10 utilities dropped dramatically.

11  
12 **Focus on Pennsylvania:**  
13 **Potential Impact on Frequency of Rate Case Filings**

17

1 **Q. WHY IS LIBERTY SEEKING A DSIC FOR LPSCO IN THIS RATE**  
2 **APPLICATION?**

3 A. For two reasons. The first reason is rate gradualism, which I have discussed in  
4 detail above. The DSIC mechanism is a tool that perfectly matches the philosophy  
5 that small incremental rate increases are better than irregular large increases.

6 Second, as outlined in a report by Keogh Engineering Inc. ("Keogh  
7 Report"), attached as **Exhibit CDK-DT2**, LPSCO will require substantial capital  
8 improvements in the near future, primarily concentrated around pipe replacements.  
9 The Keogh Report outlines over \$25M of improvements needed to ensure  
10 continued system reliability. In turn, these capital improvements will necessitate  
11 future rate increase requests. But the DSIC is something we can do now to lessen  
12 the amount of future rate increase requests.

13 **Q. MR. KRYGIER, HOW DO YOU RESPOND TO THOSE THAT SAY THIS**  
14 **IS ALL "NON-TRADITIONAL" RATEMAKING?**

15 A. The Commission has approved similar adjustment mechanisms for gas and electric  
16 companies. I do not see how something could be traditional for a public service  
17 corporation providing electricity but not for one providing water. It is also clear  
18 that customers desire utility rates to increase in reasonable levels from year to year.  
19 There is nothing more traditional than trying to give ratepayers what they want.

20 **Q. BUT DOESN'T THE COMMISSION NEED MORE ANALYSIS FIRST?**

21 A. No more so than will be done in this case. The Commission has been considering a  
22 DSIC-type mechanism since the water workshops in the late 1990's. Staff issued a  
23 report examining the issue over thirteen years ago and further Commission study  
24 occurred during the 2011 water workshop process. All of the stakeholders -  
25 industry, Utilities Division Staff, and RUCO participated and evaluated the merits  
26 of DSICs (among other things). Additionally, the Commission just sent Arizona

1 Water Company's ("AWC") request for a DSIC back for further analysis in a  
 2 second phase of the proceeding. That case is on a fast track, scheduled to be  
 3 decided in June 2013, just a few months after we file this case.<sup>6</sup> The time for  
 4 LPSCO to implement this proven, customer-friendly rate gradualism mechanism is  
 5 now – before the next construction cycle, before the next EPA-driven water quality  
 6 standards, and before the next rate case cycle.

7 **Q. YOU TESTIFIED THAT OTHER ARIZONA UTILITIES UTILIZE**  
 8 **SIMILAR MECHANISMS TO PROMOTE RATE GRADUALISM. CAN**  
 9 **YOU PROVIDE EXAMPLES?**

10 A. The best example is APS, which has at least seven separate DSIC-like surcharge  
 11 mechanisms. The APS surcharge mechanisms are listed in Table 1.

12

Company	Mechanism	Date Adopted	Description
APS	Power Supply Adjustor	April 2005	<ul style="list-style-type: none"> <li>• Recovers cost difference between actual power costs</li> <li>• Includes forward-looking and historical information</li> </ul>
APS	Renewable Energy Surcharge	May 2008	<ul style="list-style-type: none"> <li>• Recovers costs related to renewable initiatives</li> </ul>
APS	Demand-Side Management Adjustment Clause	April 2005	<ul style="list-style-type: none"> <li>• Recovers costs related to energy efficiency and DSM programs</li> </ul>
APS	Environmental Improvement Surcharge	July 2007	<ul style="list-style-type: none"> <li>• Recovers retroactively costs related to environmental upgrades not fully recovered through base rates</li> </ul>
APS	Retail Line Extension Fees	February 2008	<ul style="list-style-type: none"> <li>• Mechanism collects dollars spent for new distribution construction at beginning of project</li> </ul>
APS	Transmission Cost Adjustor	April 2005	<ul style="list-style-type: none"> <li>• Recovers FERC-approved transmission costs related to retail customers</li> </ul>
APS	FERC Formula Rates	2008	<ul style="list-style-type: none"> <li>• Recovers transition costs based on historical costs per FERC Form 1</li> </ul>

13

14

15

16

17

18

19

20

21

22 Similar approaches are in place for, at least, Unisource Energy, Tucson Electric Power,  
 23 Unisource Gas, and Southwest Gas, among others.

24

25

26 <sup>6</sup> See Docket No. W-01445A-11-0310.

1           Some of these have been in place since 2005. Four of the mechanisms are  
2 tied directly to infrastructure-driven costs (renewables, energy efficiency/DSM,  
3 environmental improvements, and retail line extensions). As detailed in the report  
4 written by Arizonans for Responsible Water Policy, these seven adjusters cover  
5 seven percent of total APS revenue.<sup>7</sup>

6 **Q. HAVE THESE ADJUSTERS HAD AN IMPACT ON THE MAGNITUDE OF**  
7 **RATE INCREASES FOR APS?**

8 A. It would appear so. APS's last rate case was filed in 2011 and requested an  
9 increase of only 3.3 percent. Water and sewer companies almost never seek such  
10 small increases, but then, water and sewer providers have not had similar adjuster  
11 mechanisms. Given that the benefits of rate gradualism can flow equally to water  
12 companies and our customers, it is hard to see why our industry should not also  
13 have these mechanisms in place.

14 **Q. HAS THE COMMISSION APPROVED SEPARATE SURCHARGE**  
15 **MECHANISMS FOR WATER/SEWER UTILITIES?**

16 A. Yes, on a number of occasions. Two notable and recent examples include the  
17 Arsenic Cost Recovery Mechanism ("ACRM") Surcharge and the Central Arizona  
18 Project ("CAP") Surcharge.

19 **Q. HAVE THE ACRM OR CAP SURCHARGES EVER BEEN A**  
20 **SIGNIFICANT POINT OF CONTENTION FOR CUSTOMERS?**

21 A. Not to my knowledge.

22 **Q. HOW WILL CUSTOMERS BENEFIT FROM A DSIC MECHANISM?**

23 A. The DSIC promotes rate gradualism and helps minimize customer rate shock.  
24 DSICs provide a means for the Commission to move Arizona utility rates in line  
25

---

26 <sup>7</sup> Exhibit CDK-DT4.

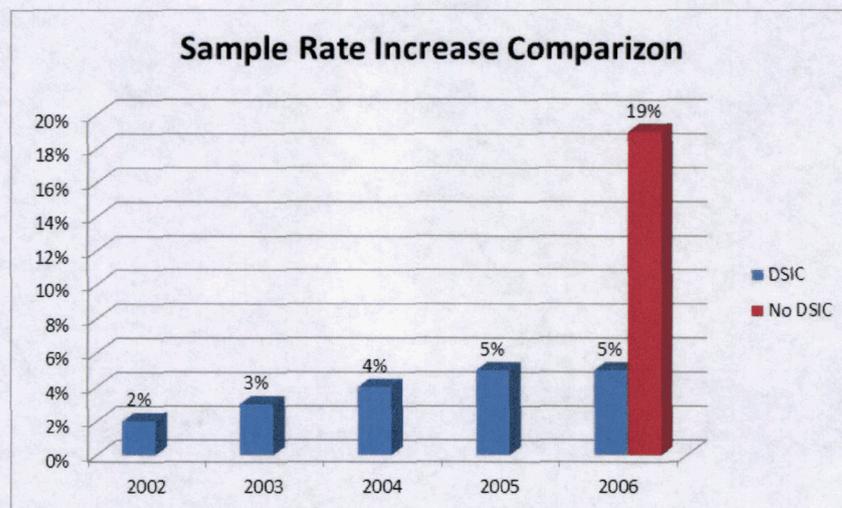

1 with the larger economic reality. Although most customers are unfamiliar with the  
2 intricacies of utility ratemaking, they know that gradualism better matches their  
3 reality.

4 Customers also benefit from the reduced chance of system outages caused  
5 by aging mains and pipes. A presentation outlining these risks was presented by  
6 Graham Symmonds of Global Water and is attached to my testimony as **Exhibit**  
7 **CDK-DT3**.<sup>8</sup> In sum, a DSIC maintains system reliability by replacing the oldest  
8 infrastructure in the water/sewer system sooner. Replacing aged infrastructure  
9 means customers will experience continued safe, reliable service.

10 Finally, healthy utilities with stable rates will better attract capital and be in  
11 a better position to provide adequate and reliable service at a reasonable cost.

12 **Q. CAN YOU PROVIDE AN EXAMPLE OF HOW DSIC WILL FACILITATE**  
13 **RATE GRADUALISM?**

14 A. Yes. Displayed below is a generic sample graph contemplating how a mechanism  
15 like the requested DSIC can facilitate gradual rate increases over a steady period of  
16 time.

26 <sup>8</sup> DSICs, Water Loss and Human Health, Graham Symmonds, January 2011.

1 The short columns represent a hypothetical rate increase with a DSIC mechanism  
2 in place. As I've discussed, the DSIC surcharge lends itself to small annual  
3 increases. The tall column indicates the current world of water utilities, coming in  
4 less frequently for larger rate hikes.

5 **Q. HOW WOULD THE PUBLIC INTEREST BE SERVED BY A DSIC**  
6 **MECHANISM?**

7 A. First, preservation of scarce resources. The Commission spends a great amount of  
8 time and resources processing and adjudicating water and wastewater rate cases.  
9 By reducing the magnitude of rate increases, the complex and contested nature of  
10 so many rate cases should decrease, making it easier to set new rates in a  
11 predictable manner.

12 Second, as I have discussed at length already, a DSIC helps avoid rate  
13 shock. As stated in the Arizonans for Responsible Water Policy letter:

14 These adjustor mechanisms...smooth out rate increases for  
15 Arizona's electricity customers and avoid 'rate shock'; and  
16 they allow those utilities to better manage their capital costs  
17 by engaging in smaller, routine investments rather than  
18 packing all such investments into test years.<sup>9</sup>

18 In fact, the Commission Staff urged adoption of the APS Rate Case Settlement in  
19 Docket No. 11-0224 using the exact same reasons:

20 APS's customers will have the benefit of rate stability...while  
21 also providing the Company with adequate revenue to enable  
22 it to provide safe and reliable electric service.<sup>10</sup>

24 <sup>9</sup> See Arizonans for Responsible Water Policy Reform Letter (filed July 30, 2012 in *ACC Generic*  
25 *Investigation*, Docket No. W-00000C-06-0149) at 3.

26 <sup>10</sup> See Staff's Opening Brief (filed February 29, 2012 in *APS Rate Case*, Docket No. E-01345A-11-0224)  
at 12:14-16.

1 **Q. YOU MENTIONED THAT THE DSIC IS LIMITED TO CERTAIN NARUC**  
2 **ACCOUNTS. WHICH ONES?**

3 A. Yes. The first step is to determine which NARUC plant accounts qualify for  
4 recovery. LPSCO proposes the following NARUC accounts for the water and  
5 sewer divisions.

	Water	Sewer
Mains	309, 331	360, 361, 375
Services	333	363, 366
Meters	334	364, 365, 367
Hydrants	335	N/A

6  
7  
8  
9  
10  
11  
12  
13 Second, the annual recovery cap on each customer bill has to be set.  
14 LPSCO proposes an annual cap of 3% of annual revenues. The 3% would be based  
15 on authorized revenue from the rate filing and essentially place a limit on the  
16 amount of capital investment that could be recovered through a DSIC filing.

17 Third, the actual paperwork forms to implement a filing have to be created.  
18 I will discuss this shortly.

19 Fourth and finally, annual deadlines for filing need to be established.  
20 LPSCO proposes the anniversary date of the latest general rate case.

21 **Q. MR. KRYGIER, YOU HAVE TESTIFIED AT SOME LENGTH**  
22 **CONCERNING THE CUSTOMER BENEFITS OF A DSIC MECHANISM,**  
23 **AND REGARDING THE PUBLIC INTEREST. HOW DOES THE DSIC**  
24 **BENEFIT LPSCO?**

25 A. A DSIC mechanism benefits LPSCO in several ways. First, as I have testified at  
26 length, a DSIC mechanism benefits our customers by smoothing out future rate

1 increase requests. Customers also benefit from a system that remains reliable at  
2 reasonable cost. Happy customers are good for business.

3 Second, LPSCO can implement a gradual capital expense program for  
4 needed pipe replacements. Under the normal, build-then-file a rate case approach,  
5 Liberty, like all utilities, invests capital in large chunks and then waits a very long  
6 time to begin recovery on and of its investment.

7 Third, LPSCO will have a more fair and adequate opportunity to earn its  
8 authorized rate of return. That's good for business too because it allows us to pay a  
9 fair return and continue to attract necessary capital. This is why we see a DSIC as  
10 a win-win for all stakeholders.

11 **Q. THANK YOU. YOU MENTIONED PAPERWORK INVOLVED WITH A**  
12 **DSIC FILING?**

13 **A. Yes, in a white paper entitled "Moving Beyond Rate Shock & Regulatory Lag,"**  
14 **Arizonans for Responsible Policy included a sample filing which included**  
15 **11 schedules that LPSCO would complete in any DSIC filing. Copies of those**  
16 **schedules are attached to my testimony as Exhibit CDK-DT4.**

17 **Q. DO YOU HAVE ANYTHING ELSE TO ADD REGARDING LIBERTY'S**  
18 **DSIC REQUEST FOR LPSCO?**

19 **A. In the simplest terms, for less than a cost of a Big Mac at McDonalds, customers**  
20 **can be ensured safe, reliable service and the avoidance of rate shock; the**  
21 **Commission can reduce the frequency of rate cases, thereby freeing up resources;**  
22 **and LPSCO can continue to replace its oldest infrastructure and promote more**  
23 **gradual rate increases in future rate applications.**

**B. Proposal Number 2 - Property Tax Accounting Deferral**

**Q. WHAT IS LPSCO PROPOSING IN REGARDS TO PROPERTY TAX REGULATORY ASSET DEFERRALS?**

A. LPSCO proposes a regulatory asset or liability to recover or refund property tax rates that are greater than property tax rates experienced in the test year. The creation of a regulatory asset and liability protects customers and the utility by ensuring this volatile cost is neither under-recovered nor over-recovered.

**Q. WHY IS LPSCO PROPOSING THE PROPERTY TAX DEFERRAL IN THIS CASE?**

A. As evidenced by comparing the property tax expense in this test year versus the prior test year, property taxes increased significantly. This significant increase contributed, in part, to LPSCO not recovering its cost of service during the test year.

**Q. HOW DOES A PROPERTY TAX DEFERRAL BENEFIT LIBERTY?**

A. The Company will have a greater chance to recover its cost of service.

**Q. WHAT ARE THE CUSTOMER BENEFITS OF A PROPERTY TAX ACCOUNTING DEFERRAL?**

A. Customers benefit because if the Company experiences a significant increase in property taxes as it has over the past few years, the Company can defer coming in for a rate increase sooner. Said differently, holding all other variables constant (operating expenses, rate base investment, etc.), a customer benefits because the Company can refrain from filing another rate case driven by systematic increases in property tax expense.

1 **Q. HAS THE COMMISSION APPROVED ACCOUNTING DEFERRALS FOR**  
2 **WATER OR SEWER UTILITIES IN THE PAST?**

3 A. Yes, the Commission has authorized numerous such accounting deferrals.  
4 A current example is LPSCO's accounting deferral for TCE costs. LPSCO defers  
5 these costs on the balance sheet and then requests recovery in subsequent rate  
6 cases. Two other examples at many utilities are the deferrals of rate case expense  
7 and debt financing costs.

8 **Q. WHY IS A PROPERTY TAX ACCOUNTING DEFERRAL GOOD**  
9 **COMMISSION POLICY?**

10 A. A property tax deferral is another tool in the toolbox to facilitate a utility having  
11 the opportunity to recover its cost of service while also protecting customers  
12 against more frequent rate cases.

13 **Q. ARE PROPERTY TAXES TYPICALLY REQUIRED TO BE PAID BY**  
14 **UTILITIES?**

15 A. Yes, any utility that owns property is required to pay property taxes. Property  
16 taxes are part of the utility ratemaking process in every rate application.

17 **Q. TO WHAT EXTENT CAN UTILITIES CONTROL PROPERTY TAX**  
18 **EXPENSE?**

19 A. Almost none. We could appeal any assessment, a costly and risky undertaking,  
20 but beyond that we have little recourse. In the last APS rate case,<sup>11</sup> property taxes  
21 were viewed as volatile expenses that put the utility at risk of not recovering its  
22 cost of service. In this rate case, as evidenced on LPSCO's E2 schedules attached  
23 to Mr. Bourassa's testimony, property tax increased over \$740k since the 2008 Test  
24 Year.

25  
26 <sup>11</sup> Docket No. E-01345A-11-0224.

1 **Q. WHAT DID THE COMMISSION DO TO HELP APS MITIGATE THE**  
2 **CHALLENGE OF RISING PROPERTY TAXES?**

3 A. The Commission recognized the challenges experienced by APS and granted APS  
4 a property tax deferral account.

5 **Q. WILL LPSCO CONSIDER OTHER OPTIONS BESIDES THE TYPE OF**  
6 **DEFERRAL GRANTED TO APS?**

7 A. Yes, LPSCO would consider another scenario of using a property tax pass through  
8 to more closely match the expenses to rate recovery but at this time is proposing  
9 the property tax deferral.

10 **Q. HOW DOES THE PROPERTY TAX DEFERRAL WORK?**

11 A. The property tax deferral has three primary conditions. First, LPSCO shall be  
12 allowed to defer for future recovery, in accordance with the provisions of  
13 Accounting Standards Codification 980 (formerly SFAS No. 71), the amounts of  
14 Arizona property tax expense above or below the test year levels ultimately  
15 authorized in the instant case.

16 **Q. ABOVE OR BELOW?**

17 A. Yes. There is no reason customers should not experience a decrease if property tax  
18 rates go down relative to the test year.

19 **Q. THANK YOU. WHAT IS THE SECOND CONDITION OF THE**  
20 **PROPERTY TAX DEFERRAL?**

21 A. In the next LPSCO general rate case, LPSCO will propose an amortization period  
22 to recover or refund the amount of property tax deferral that exists at the time of  
23 the next general rate case filing.

24

25

26

1 Q. WHAT IS THE THIRD CONDITION OF THE PROPERTY TAX  
2 DEFERRAL?

3 A. Staff and parties to future rate proceedings have the right to review the property tax  
4 deferrals for reasonableness and prudence.

5 Q. CAN YOU SUMMARIZE LPSCO'S REQUEST FOR A PROPERTY TAX  
6 ACCOUNTING DEFERRAL?

7 A. LPSCO proposes an accounting deferral to protect customers and the Company  
8 from continued increases in property taxes. Suggested ordering language follows:

9 It is ordered that LPSCO is authorized to defer as a  
10 regulatory asset (liability) on its balance sheet, incremental  
11 property tax expense greater (lesser) than the test year level  
12 expense authorized for the water and wastewater divisions of  
13 the utility. LPSCO shall file for recovery of these regulatory  
14 assets (liabilities) on its balance sheet in the next general rate  
15 case for each division.

16 It is further ordered that LPSCO shall annually docket  
17 by March 31 an update on the amount of the regulatory asset  
18 deferral.

19 C. Policy Proposal Number 3 - Purchased Power Pass Through  
20 Adjustment Mechanism ("PPAM")

21 Q. WHAT IS A PPAM?

22 A. A PPAM is another regulatory tool that furthers rate gradualism. It is designed to  
23 ensure that utilities have an opportunity to recover the cost of purchased power in  
24 rates. It is consistent with the desire to promote rate gradualism voiced by this  
25 Commission.

26 Q. HOW DOES A PPAM BENEFIT CUSTOMERS?

A. By gradually increasing rates as power costs increase rather than piling up large  
dollar increases and seeking recovery of all costs at once. Purchased power is,  
along with labor, one of LPSCO's top five largest expense items. However, the

1 cost is largely outside our control. In fact, to a great degree, the Commission  
2 decides what we pay for power as it sets the rates for the power providers, except  
3 SRP.

4 **Q. HAS A PPAM EVER BEEN USED BEFORE IN THE STATE OF**  
5 **ARIZONA?**

6 A. Yes, AWC used to have a PPAM for many of its utilities.<sup>12</sup> An example of the  
7 PPAM tariff is attached to my testimony as **Exhibit CDK-DT5**. Additionally,  
8 APS, Tucson Electric Power, and Unisource Energy have PPAMs. Each company  
9 is allowed to flow through increased costs annually. It is interesting to note that  
10 electric utilities have been granted this mechanism despite the following facts:

- 11 1. They own generating resources that allow them to mitigate the amount, and  
12 the time of day/year in which they purchase power;
- 13 2. They employ large, professional trading staffs whose sole purpose is to  
14 manage these costs; and
- 15 3. They actively trade in the power markets as both a buyer and a seller.

16 Water companies have none of these abilities, resources, staffs, or economic  
17 incentives and opportunities. We are captive customers whose rates are set by the  
18 Commission. In fact, the Commission approved APS Settlements in the past two  
19 rate cases that each included double-digit rate hikes for water pumping tariffs.  
20 For the Commission to allow electric utilities to have PPAMs (with the three  
21 organizational elements highlighted above) while denying PPAMs for water  
22 companies is, with all due respect, simply unfair.

23  
24  
25  
26 

---

<sup>12</sup> Decision No. 55069 (June 20, 1986).

1 Q. BUT HAVEN'T STAFF AND RUCO SUCCESSFULLY ARGUED THAT  
2 PURCHASED POWER IS NOT SUFFICIENTLY VOLATILE TO  
3 WARRANT AN ADJUSTER?

4 A. That's my understanding. However, and again, respectfully, that argument does  
5 not make sense given the Commission's history of adjustor mechanisms for electric  
6 utilities. If power is volatile enough for the power company to need an adjuster  
7 that adjusts the rates we pay them in the first place, that same volatility is just being  
8 passed on to us. We are just asking for the same thing the Commission gives the  
9 power companies so we can ameliorate the same impacts.

10 Q. WELL, WHAT ABOUT THE SINGLE ISSUE RATEMAKING  
11 ARGUMENT?

12 A. I am not a lawyer but if it is legal for the electric providers I can't imagine why it  
13 would not be for water and sewer. Besides, we are approving the PPAM in a rate  
14 case.

15 Q. HOW WOULD THE PPAM WORK?

16 A. Attached to my testimony is **Exhibit CDK-DT6**. This exhibit contains LPSCO's  
17 November 2012 Arizona Public Service Company bills and associated tariffs. We  
18 propose to provide the Commission with copies of the electric provider tariffs and  
19 with our monthly bills. This will allow the Commission to verify our power costs  
20 and develop an annualized power expense. If at any point thereafter the electric  
21 provider changes our rates, we will provide the Commission with copies of the new  
22 tariffs, a demonstration of the change in terms of actual dollars and percentage  
23 change, and with pro-forma and actual bills demonstrating the effect of the new  
24 tariffed rates. The Commission would then have 30 days to review that filing and  
25 adjust the power expense to reflect the new rates. Obviously, the power expense  
26

1 could increase or decrease based on the new tariffed rates and any conservation or  
2 power-shifting measures we have emplaced.

3 **Q. CAN YOU SUMMARIZE LPSCO'S REQUEST REGARDING THE PPAM?**

4 A. Yes. LPSCO requests the ability to implement a PPAM tariff to recover the  
5 increasing costs of purchased power in its utility systems.

6 **D. Proposal Number 4 – Balanced Rate Design**

7 **Q. WHAT IS LPSCO PROPOSING IN REGARDS TO RATE DESIGN?**

8 A. LPSCO proposes the Commission adopt a balanced rate design to benefit  
9 customers and the Company while ultimately achieving rate gradualism.  
10 In particular, LPSCO would like the Commission to adopt a fixed charge of  
11 approximately 40 percent of the revenue requirement, with the remaining revenue  
12 being spread in a more balanced manner across the rate tiers instead of being  
13 concentrated in the highest consumption tiers. Finally, the Commission should set  
14 a near-term goal through a policy statement of water and sewer utilities fixed  
15 charge ratio's reaching the 50 percent threshold of the revenue requirement with a  
16 reasonable balance between the volumetric tiers.

17 **Q. WHERE ARE THE SPECIFIC CALCULATIONS YOU PROPOSE?**

18 A. The specifics are covered in Mr. Bourassa's testimony. My discussion focuses on  
19 the policy reasons why a balanced rate design is critical.

20 **Q. WHY IS RATE DESIGN SO IMPORTANT?**

21 A. Rate design is an often misunderstood aspect of utility ratemaking. Rate design is  
22 the step after a revenue requirement has been determined. Think of the revenue  
23 requirement as the total balloon. Rate design is how the air in the balloon is  
24 allocated between different customer classes to ensure the utility recovers all of the  
25 revenue it is authorized, i.e., rate design. If the balloon doesn't fill up, the utility  
26 doesn't recoup all of the revenue it is authorized creating a revenue shortfall.

1 **Q. WHAT RISKS OCCUR IF A UTILITY EXPERIENCES A REVENUE**  
2 **SHORTFALL?**

3 A. If a utility continually under collects the amount of revenue it is authorized, it will  
4 have to return to the Commission more often for additional rate increases.  
5 The Commission even recognized this in a recent AWC matter.<sup>13</sup> In that case the  
6 Commission expressed its understanding “that a consistent pattern of declining  
7 usage, and the diminished revenues that follow, could jeopardize AWC’s ability to  
8 recover its cost of service, which is contrary to the best interests of AWC, AWC’s  
9 customers, and the Commission.”<sup>14</sup>

10 **Q. SO A PROPER RATE DESIGN CAN HELP AVOID A REVENUE**  
11 **SHORTFALL?**

12 A. Exactly.

13 **Q. WHAT HAS THE COMMISSION IMPLEMENTED TO AVOID REVENUE**  
14 **SHORTFALLS FOR UTILITIES IN ARIZONA?**

15 A. A few different tools have been implemented. One tool in use for APS and UNS  
16 Gas is an LFCR mechanism. Another tool in use at Southwest Gas is revenue  
17 decoupling.

18 **Q. DO OTHER TOOLS EXIST?**

19 A. Yes, another tool is to approve a balanced rate design. By balanced, I mean a rate  
20 design structured so the utility will have every reasonable chance to collect the  
21 revenue requirement approved by the Commission. The characteristics of a  
22 balanced rate design include setting a minimum fixed charge ratio of  
23 approximately 50 percent of the total revenue requirement and balancing the  
24 remaining 50 percent across the consumption tiers. The 50 percent of the revenue

25 <sup>13</sup> Decision No. 73736 (February 20, 2013).

26 <sup>14</sup> *Id.* at 71:3-5.

1 in the consumption tiers are also vitally important. If not designed reasonably, the  
2 revenue balloon won't fill up and the utility under collects its authorized revenue.

3 **Q. CAN YOU SUMMARIZE LPSCO'S REQUEST?**

4 A. The Commission should adopt a policy of fixed charges recovering 40 percent of  
5 the revenue requirement with the rest of the tiers being more evenly weighted  
6 versus being so dependent on the top tier. Finally, the Commission should set a  
7 near-term goal through a policy statement of water and sewer utilities fixed charge  
8 ratio's reaching the 50 percent threshold of the revenue requirement with a  
9 reasonable balance between the volumetric tiers. To the extent the Commission  
10 wants to trade away efficiency in pricing in order to achieve social objectives, it  
11 should do so in a more transparent and straightforward manner – by increasing the  
12 number of tiers in rate design, and directly changing the low income assistance  
13 program.

14 **IV. TARIFF LANGUAGE CLEAN-UP**

15 **Q. WHAT IS LPSCO PROPOSING IN THIS CASE REGARDING ITS**  
16 **CURRENT TARIFFS?**

17 A. LPSCO proposes a number of small language and cost “clean-ups” in this rate case  
18 to make LPSCO's tariff more consistent with other Liberty owned utility  
19 companies.

20 **Q. WHAT ARE THE CHANGES LPSCO PROPOSES?**

21 A. **Exhibit CDK-DT7** is a redlined version of the changes LPSCO proposes. Please  
22 note, these changes do not reflect the proposed rates. Please see Mr. Bourassa's  
23 H-Schedules. Exhibit CDK-DT7 only reflects the specific tariff language changes  
24 the Company proposes.

25 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

26 A. Yes.

**POLL RESULTS: 9 out of 10 Arizonans Support Shift in Utility Rate Hike Approach**  
*Democrats and Independents More Skeptical about Renewable Energy than Assumed*

October 3, 2012

(PHOENIX, AZ) In a statewide survey of more than 4,000 Arizonans; nine out of every ten people surveyed supported the use of small, annual hikes to utility bills instead of larger, but less frequent, rate hikes.

In the survey, people were asked the following question: “When utility bills have to be increased, would you prefer: a) small annual changes, or b) large changes every few years?” Nearly 90% preferred small annual changes. Arizonans for Responsible Water Policy, an Arizona-based trade group representing the companies which provide nearly 900,000 Arizonans water and sewer service, commissioned the poll which was conducted last week.

“A lot has been said about what customers ‘really want’ from the Corporation Commission,” explained Paul Walker, Chairman of Responsible Water. “In the current election, debate after debate centers on the perception that what Arizonans ‘want’ from the Commission is more solar and wind subsidies. So we evaluated that perspective against our idea; which is that what customers really want is that when rates have to go up customers they have smaller, annual utility rate hikes instead of the current system of large rate hikes every four or five years. The poll results are clear: Arizonans overwhelmingly agree with rate gradualism, and aren’t as completely pro-solar as many assumed.”

The poll evaluated support for rate gradualism against the most-talked about policy in the race: Solar energy. 4,000 likely voters were asked what they believed about solar energy – surprisingly, only 52% said solar energy is “currently practical and cost-effective,” 29% said that solar energy is “not currently practical and cost-effective,” and 18% were undecided on solar’s merits.

Mr. Walker explained, “what we found is that Arizonans want gradual, manageable changes to their utility bills instead of large, shocking increases every few years. And that view is more widespread and more impactful to people’s budgets and their lives than the topic most dominating the debate.”

Walker explained the overwhelming results, “The lowest level of support for rate gradualism, in any one county, was 82% support – solar’s best result, by county, was 77% support. On average, 89.4% of Arizonans agree with moving toward small, annual changes to utility bills instead of our current approach. Arizonans want a Commission that makes utility rate hikes more manageable – that’s the most important issue to our customers.”

Engineers Cost Estimate Summary  
Asset Management Plan  
Litchfield Park Service Area, Arizona  
Vs. Old Litchfield Park, Arizona

Executive Summary:

An Engineers Cost Estimate has been performed analyzing the cost to replace existing water and sewer infrastructure in Old Litchfield Park, Arizona. The analysis is based on the oldest improvements being removed and replaced first and then progresses to the most recent improvements. Current contractors cost were utilized for the cost estimates.

GLOBAL WATER

# 240,000 water main breaks 1.7 trillion gallons lost per year

## Drinking Water Distribution systems

- The number of breaks increases substantially near the end of the system's service life.
- Large utility breaks in the Midwest increased from 250 per year to 2,200 per year during a 19-year period.
- In 2003, Baltimore, Maryland, reported 1,190 water main breaks (> 3/day).
- National cost of \$2.6 billion per year.

USEPA, Addressing the Challenge Through INNOVATION, Office of Research and Development National Risk Management Research Laboratory

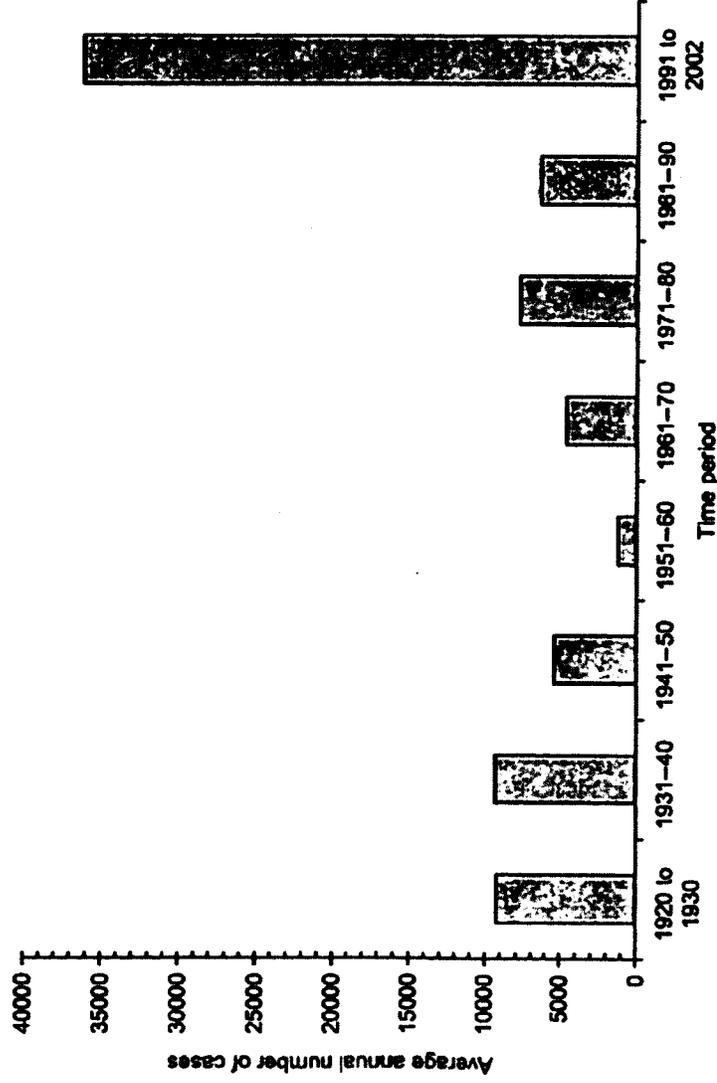

# Water Loss

- 1.7 trillion gallons per year (USGS)  
= 5.2 million acre-feet
- Lake Mead holds 28.537 million acre-feet  
(at elevation 1221.4 ft) (BOR)

Distribution systems lose the equivalent of  
Lake Mead every 5 years

# Water-Borne Disease Outbreaks

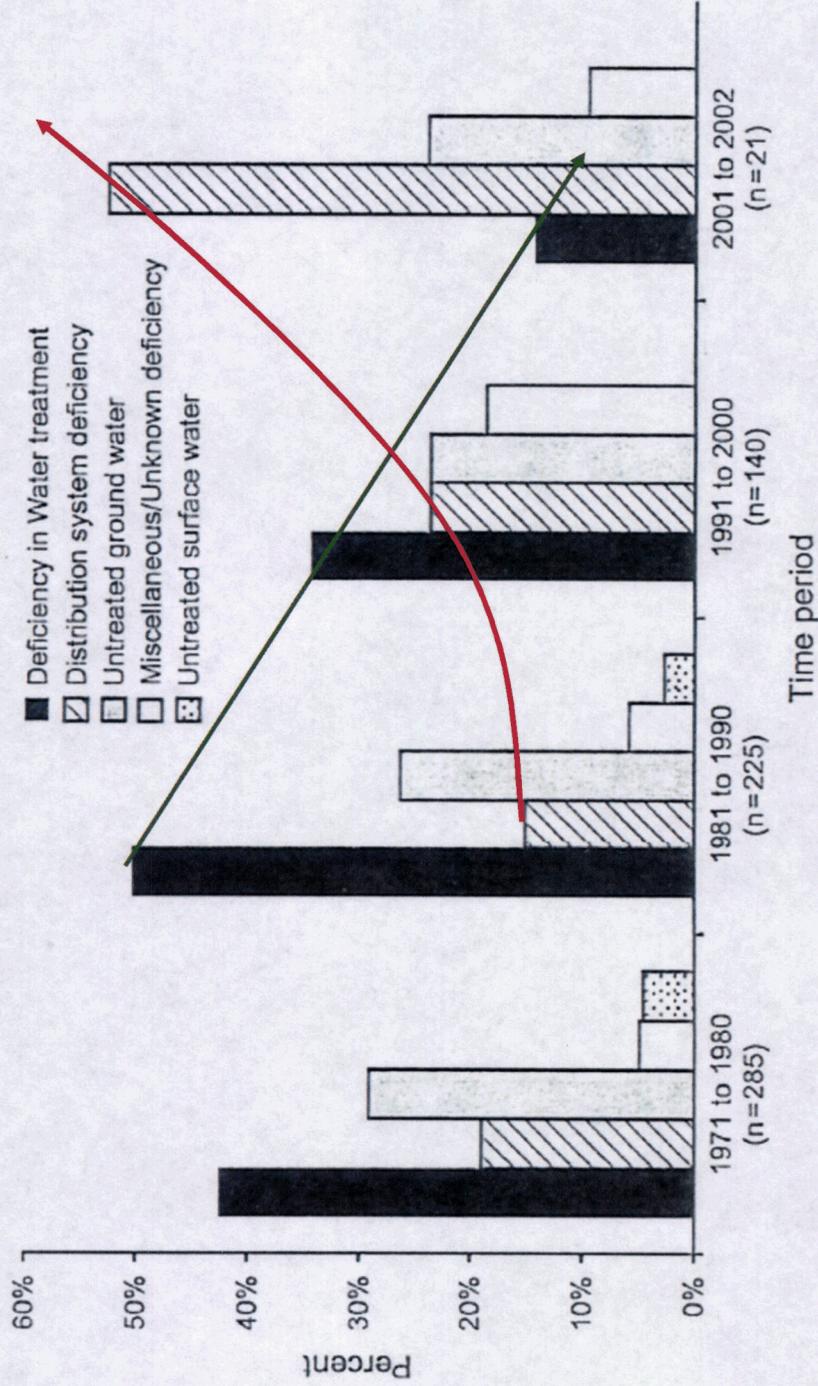

M.F. Craun, et al., Waterborne outbreaks reported in the United States, J. Wat. Health 4(Suppl. 2), 19-30, 2006.

# Distribution Systems

- Out of sight, out of mind
- SDWA regulates 91 contaminants
- SDWA is based on regulating water delivered to the distribution system (point of compliance is the EPDS)
  - Only 3 rules require monitoring in the distribution system:
    - LCR
    - TCR
    - D/DBPR

# Sources of Water-Borne Disease Outbreaks

M.F. Craun, et al., Waterborne outbreaks reported in the United States, J. Wat. Health 4(Suppl. 2), 19-30, 2006.

# Incidents of Water-Borne Disease Outbreaks

- Very strong association of water-borne disease outbreaks with reporting of loss of pressure at the home tap.
- Most of the reported episodes of pressure loss were associated with disruption of the water supply and are likely to be related to burst water mains.

Paul R. Hunter et al., Self-Reported Diarrhea in a Control Group: A Strong Association with Reporting of Low-Pressure Events in Tap Water, *Clinical Infectious Diseases* 2005; 40:e32-4

# Why?

# Why?

# Why?

- Fecal coliform bacteria were detected in 43% of water samples and 50% of the soil samples taken immediately adjacent to water mains.
- 56% of these samples were also positive for viruses.

**Moving Beyond Rate Shock & Regulatory Lag  
How Distribution and Collection System Improvement Charges benefit  
customers, investors, and regulators.**

October 2012

**Abstract**

Arizonans for Responsible Water Policy is a trade group whose members serve nearly one million people in Arizona. Our members operate water and wastewater systems in over 60 communities and have been actively involved in every water commission and study group in the state over the past 30 years.

In this paper, Responsible Water looks at the arguments used against DSICs and the wastewater form, the CSIC. We find that the arguments used against DSICs are often disingenuous, frequently hyperbolic, and in the end do not reflect the simple fact that well-regulated DSIC programs reduce rate case filings, streamline the regulatory process so that utility commissioners can focus on larger policy issues instead of “firefighting”, and DSICs provide customers with manageable rate adjustments that almost never exceed a few dollars a month.

We close the paper with a recommended process for implementing and regulating DSICs, and by providing sample schedules for utilities’ use in DSIC implementation.

**Authors**

Paul Walker, Chairman of Responsible Water, President at Insight Consulting, MBA, 12 years in utility regulation, analysis, and consulting

**Note: Throughout the paper we use the DSIC and “Distribution System Improvement Charge” to include the CSIC or “Collection System Improvement Charge” which is the wastewater utility version of the DSIC.**

**Distribution System Improvement Charges**

## ("DSIC")

For over 13 years, the Arizona Corporation Commission has considered and denied implementing Distribution System Improvement Charges (and the equivalent for sewer utilities, the Collection System Improvement Charge) for the water and wastewater utilities it regulates. DSICs and CSICs are used in a dozen other states, from California to Pennsylvania, and time and again have been proven to reduce the frequency of rate cases, lower the size of rate hikes, and incent a smoother and more consistent infrastructure replacement program that deals with aging and failing infrastructure.

Organizations like Food & Water Watch have attacked DSICs. RUCO and others have mischaracterized DSICs. Organizations like NARUC and the Council of State Governments have endorsed DSICs.<sup>1</sup> The Commission has supported the end goals of DSICs for the state’s largest utilities while denying them to the water industry.

The end goals of DSICs echo the Commission’s support for APS Settlements, i.e., “that APS’s customers will have the benefit of rate stability...while also providing the Company with adequate revenue to enable it to provide safe and reliable electric service.”<sup>2</sup> The end goals of a DSIC are:

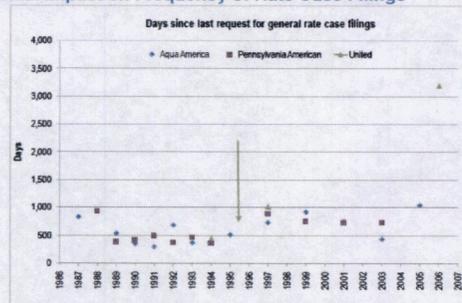

- Reduced rate case frequency and cost,
- Smaller rate hikes and increased rate stability,
- Improved infrastructure, and an
- Improved regulatory climate for investment.

This paper explores the benefits of DSICs and contrasts the Commission’s supportive positions with regard to energy utilities against its opposition to DSICs for water utilities and closes by recommending a procedural process for DSICs and a set of 11 schedules that the Commission could easily adopt as a template and begin moving Arizona towards a more reliable and sustainable water future.

**It is inarguably true that DSICs reduce the frequency of rate cases, and the size of rate hikes.**

The gold vertical arrow in the middle of the graph denotes the start of Pennsylvania’s DSIC era – as one can see, rate cases are less frequent. This means less rate case expense for the company, the customers, and the Commission; increased efficiency as the Commission deals with continuing staffing and budget pressures; and ultimately the customers benefit as rates become stable with gradual and manageable increases.

**Focus on Pennsylvania:  
Potential Impact on Frequency of Rate Case Filings**

(Source: Presentation of Dr. Jan Beecher, Executive Director, Institute for Public Utilities, Michigan State University, to the 2008 Eastern NARUC Water Committee Rate School)

<sup>1</sup> NARUC Resolution, February 24, 1999; NARUC Best Practice Resolution, July 27, 2005; Council of State Governments, Publications of Suggested State Legislation, 1999.

<sup>2</sup> See, e.g., Staff’s Opening Brief, APS Rate Case, 11-0224, Page 12, Lines 14-16

**Regulatory lag leads to larger rate hikes and creates “rate shock.”**

Some argue that regulatory lag is a “benefit” to customers because it provides them the use of infrastructure without them having to pay for that infrastructure. But that is only the ‘seen’ aspect of the economics of utility investment, the ‘unseen’ aspect is that there is no such thing as a free lunch: With lag, those assets will go into rate base in one fell swoop – and the customers are always shocked and upset when that bill comes due because it includes several years’ of plant investment. How many thousands of water customers have to ask the Commission the same question (“why does my bill have to go up by so much at one time?”) before it realizes that the supposed regulatory lag benefit is, in fact, worse for customers.

Under a DSIC approach, plant would not “stack up” for the next rate case – it would incrementally flow into rates, the model used by Arizona’s cities and municipal water providers. This incremental approach, which some call rate gradualism, is also the basis for APS, TEP, and Unisource recovering their investment in renewable energy, transmission, and pollution control flow through their adjustor mechanisms – each of which is based on utility plant.

**Customers overwhelmingly support small, annual rate adjustments instead of large, infrequent ones.**

Responsible Water commissioned a poll of 4,000 Arizonans in September of 2012 – in that poll we asked “when utility rates have to go up, would you prefer: 1) small annual changes, or b) large changes every few years?” **89.4% of Arizonans said they preferred rate gradualism – small annual changes.** This approach has the least impact on their household budget and allows them to adjust to cost increases as they occur instead of bundling several years’ of those increases into one large hike.

**The impact to customer rates from DSICs is small and manageable for customers, and reduces rate hike request size and frequency. Actual DSIC adjustor surcharges from around the nation:**

**DSIC Charges – Examples of Approximate Impact on Typical Customer Bill**

State	DSIC MAX (% of revenues)	Typical Avg. Monthly Residential Bill	MAX DSIC Surcharge Per Month	% Current Surcharge	Current Surcharge Per Month
IL	5%	\$48.33 (Peoria)	\$2.02	0.00%*	\$0.00
IN	5%	\$30.53	\$1.53	2.49%	\$0.76
OH	3%/filing 3 filings between rate cases	\$35.07 (Franklin Co)	\$1.05 (each yr for 3 yrs)	0.00%*	\$0.00
MO (St Louis Co)	10%	\$21.50	\$2.15	2.10%	\$0.45
NY	Capped at \$3 million over routine spend	\$48.99	X	X	\$0.35
PA	7.50%	\$42.64	\$3.20	2.44%	\$1.04

\* Surcharges worked into general rates pursuant to general rate cases

www.amwater.com

In particular, let’s focus on Pennsylvania; the state most aggressively trying to consolidate and reform its water industry. It has gone from regulating and overseeing 500 water companies to 125 in under a decade and is on its way to 50 companies.<sup>3</sup> In that most pro-investor state, the DSIC surcharge is averaging \$1.04 a month.

<sup>3</sup> Arizona Regulatory Reports, Issue 11-4, August 5, 2011, “Time for Action – Regulatory Leadership Can Create A Better Future”

## ARIZONANS FOR RESPONSIBLE WATER POLICY

**DSICs, like other adjustors for known and measurable costs, are not single issue ratemaking.**

The other criticism is that while DSICs provide for gradualism, they risk “single issue ratemaking.” This is interesting when contrasted with the Commission’s support of APS settlements that include a host of adjustor mechanisms, each largely based on ensuring “that APS’s customers will have the benefit of rate stability...while also providing the Company with adequate revenue to enable it to provide safe and reliable electric service.”<sup>4</sup>

**It is worth highlighting that APS’ non-fuel and non-power related adjustor-based revenues are nearly two and a half times larger than the DSIC proposal offered by Responsible Water.** Arizona Public Service (far and away the largest utility in Arizona) provided Responsible Water with the following information regarding their estimates of bill adjustor amounts (excluding fuel and power costs which we will describe later in the paper.)

APS Adjustors (Excluding Fuel and Power)	% of APS 2011 Revenues [\$2.992 BN]	Estimated Annual Impact
Demand Side Management <sup>5</sup>	2.2%	\$66 MM
Retail Transmission Cost <sup>6</sup> Adjustor <sup>7</sup>	2.5%	\$76 MM
Renewable Energy <sup>8</sup>	2.4%	\$71 MM
Lost Fixed Cost Revenue <sup>9</sup>	0.2%	\$7 MM
<b>Non-fuel/Non-Power Adjustors</b>	<b>7.3%</b>	<b>\$220 MM</b>

In addition to those adjustors, APS was provided with post-test year plant adjustments to rate base in both its 2009 and 2012 Rate Case Settlements. In dollars, and as a percent of rate base, APS saw significant Commission steps to reduce regulatory lag on its investments into plant:

APS Plant Adjustments	% of APS Rate Base [\$8.167 BN]	Rate Base Added
Four Corners <sup>10</sup>	3.4%	\$279 MM
2012 Post-TY Plant <sup>11</sup>	1.4%	\$116.3 MM
Solar Transfer from Renewable Surcharge to Base Rates <sup>12</sup>	2.8%	\$226.7 MM
<b>Total Post-TY Rate Base Adjustments, 2012</b>	<b>7.6%</b>	<b>\$622 MM</b>

<sup>4</sup> Staff’s Opening Brief, APS Rate Case, 11-0224, Page 12, Lines 14-16

<sup>5</sup> Data provided to Responsible Water from APS

<sup>6</sup> Data provided to Responsible Water from APS

<sup>7</sup> Data provided to Responsible Water from APS

<sup>8</sup> Data provided to Responsible Water from APS

<sup>9</sup> These numbers were provided to Responsible Water from APS – however, the 2012 APS Settlement allows APS to flow up to 1% of its revenues thru the LFCR, which would raise its annual impact from APS’ \$7 MM figure, to \$29 MM.

<sup>10</sup> Data provided to Responsible Water from APS.

<sup>11</sup> Data provided to Responsible Water from APS.

<sup>12</sup> APS 2012 Settlement, Docket No. 11-0224, “Renewable Energy Projects Transferred from the Renewable Energy Surcharge (‘RES’) to Base Rates,” Attachment D to Settlement, Page 1 of 1.

# ARIZONANS FOR RESPONSIBLE WATER POLICY

**This of course leaves out the question of the APS power and fuel supply adjustor.** The so-called PSA has been supported by many parties, including Commission Staff, RUCO, and APS as being essential given the size and importance of fuel and power supply costs.

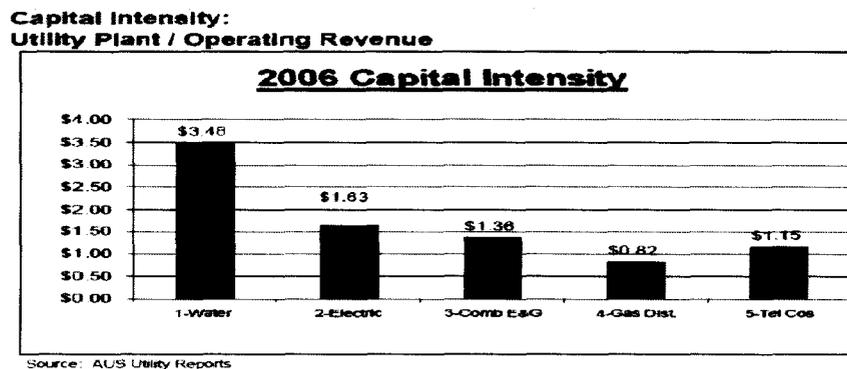

The PSA is provided to APS (and other electric utilities in Arizona) despite the fact that those utilities have abilities that no water company has with regard to power costs: Electric utilities can purchase power in a competitive market, we cannot. And electric utilities can sign long-term contracts with different providers, we cannot. Which entirely raises the question of: Why does the Commission deny power supply adjustor requests from water companies while simultaneously: a) approving double-digit price hikes in water pumping tariffs, *and* b) preventing water companies from having electric choice and competition?<sup>13</sup>

In trying to estimate the “value” of the PSA, there seems to be only one number that is meaningful – APS can pass thru changes in its power and fuel costs of up to \$0.004/kWh.<sup>14</sup> APS’ retail sales were 28,210,326,000 kWh in 2011.<sup>15</sup>

Therefore, APS’ 2012 Settlement provides it with the opportunity to pass thru PSA adjustments of \$112MM per year – based on \$2.992BN of revenues **APS’ PSA alone could add an additional 3.7% per year to customer bills.**<sup>16</sup>

Despite the fact that the DSICs proposed by Responsible Water would be limited to 3% of revenues for normally operating systems, and 7% for systems facing critical infrastructure demands, those who oppose DSICs argue that adjustors that improve investor attitudes are not in the public interest when they apply to water companies. From the bases of consistency and relative impact, opposition to the DSIC cannot be squared with support for the adjustors and post-test year plant adjustments granted to energy companies like APS.

When compared with APS’ Commission-approved adjustors and post-test year plant adjustments, the DSIC is miniscule – but relativity and consistency aren’t the only reasons to implement a DSIC policy. Water and wastewater utilities face a much higher degree of capital intensity than electric utilities:

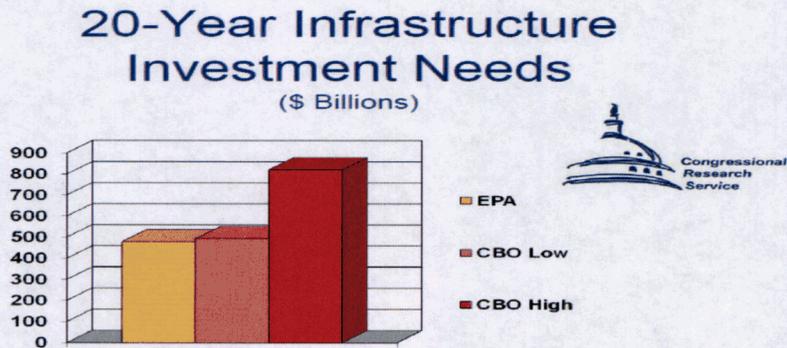

<sup>13</sup> This is a question that will be explored in future studies by Responsible Water.

<sup>14</sup> APS 2012 Settlement, Docket No. 11-0224, “Power Supply Adjustor Plant of Administration,” Attachment C to Settlement, Page 1 of 20, Section 1.

<sup>15</sup> APS’ 2011 Renewable Energy Standard Compliance Report dated March 20, 2012, Page 3, Footnote 10 which says “Based on 2011 retail sales of 28,210,326 MWH.” Our calculation is as follows: 1,000 kWh = 1 MWH. Thus 28,210,326 MWH = 28,210,326,000 kWh. 28,210,326,000 \* \$0.004 = \$112,842,304.

<sup>16</sup> \$112,000,000 / \$2,992,000,000 = 3.74%

That increased capital intensity faces a major challenge: the increasing need for capital to repair and replace infrastructure that has been in the ground for decades. **While we often think of Arizona as a young state, it's worth noting that a water main put in the ground when Ronald Reagan took office is now fully depreciated and is entering old age and facing line break and water loss issues.** In fact, across the U.S. the need for water and wastewater investment has been studied by the EPA and the Congressional Budget Office, with each finding at least \$25 billion a year in capital needs:

**Surcharge mechanisms, like the DSIC, don't guarantee earnings, they encourage investment.**

A primary attack on the DSIC is based on the theory that it “ensures” companies earn their ROE. Claiming that a DSIC would “ensure” ROEs in Arizona is simply incorrect; DSICs reduce the amount of ROE under-recovery by reducing regulatory lag. To do that, a DSIC provides a return on invested capital in the form of used and useful plant – thus while revenues increase under a DSIC, so has investment in used and useful plant and the only return allowed is the rate of return on used and useful plant. It is not mathematically possible to guarantee ROE earnings by allowing rate of return recovery on invested capital.

This opposition to the DSIC stands in contrast to Commission support for APS settlements since 2009 in which the improvement in investor attitudes resulting from adjustors was cited as a public benefit. For example, Commission Staff argued in the APS 2012 rate case that a reason for its support was that “[t]he proposed Settlement Agreement builds on the progress made in APS’s last rate case by including provisions designed to improve the Company’s financial condition so that it can compete in attracting capital for investments to meet the needs of its customers.”<sup>17</sup>

**RUCO supported the series of APS Settlements and the adoption of numerous adjustors by arguing that “a stable rate base with the ability for the Company to remain financially healthy through changes in its adjustors is in the public interest.”<sup>18</sup>** Commission Staff then cited and highlighted that RUCO position as a reason why the Commission should support the APS 2012 Settlement.<sup>19,20</sup>

## ARIZONANS FOR RESPONSIBLE WATER POLICY

**RUCO and Staff's concern should extend to the water industry: For the period, 2006-2010, the average earned ROE of the Class A Responsible Water companies was only 1.96%.<sup>21</sup>**

Finally, this argument misstates the very nature of risk: by reducing regulatory lag for used and useful plant investments, the Commission does not reduce risk compensated for in ROE. According to the text books Commission Staff relies upon, risk is related to *variability* of operating income, not the *level* of operating income.<sup>22</sup>

A DSIC increases revenues by an amount that is directly based on additional fixed costs that are actually incurred. A DSIC does not reduce the variability of operating income, which varies mainly as a result of fluctuating sales (e.g. weather) and variable costs (e.g. power, chemicals). Reducing the amount of regulatory lag (and as a result the level of under-recovery) does not equate to a reduction in the variability of operating earnings. And it certainly doesn't reduce the variability of that portion of operating earnings that Staff would claim is "systematic," or "non-diversifiable," and therefore affects the cost of capital.

**We are not suggesting that the Commission turn a blind eye to earnings; in fact our proposed DSIC schedules provide explicit data on earnings.**

### **The argument that ROEs must be cut in "exchange" for DSICs is one-sided and asymmetrical.**

An ROE is the incentive for an investor to take on risk – the possibility of making a return on her investment impels an investor to put capital at risk. So, it is important to clearly understand what "risk" means from an investment perspective: According to Harry Markowitz, the father of the Efficient Market Hypothesis which led to, among other things, the Capital Asset Pricing Model (CAPM), "Efficient portfolios minimize that 'undesirable thing' called variance while simultaneously maximizing that 'desirable thing' called getting rich... That is what Markowitz meant when he introduced the concept of variance to measure risk, or the uncertainty of return."<sup>23</sup>

But in the past several years, the average return for the class A water companies which comprise Responsible Water has been 1.96% - while allowed ROEs in Arizona over that period averaged 9.60%.<sup>24</sup>

**In Arizona, the variance between what water utilities actually earn and what utilities are authorized to earn is staggering. It is that variance, Markowitz's "risk" that has led several investment analysts to rank the state among the worst in the nation for utility investment.<sup>25</sup>**

Furthermore, regulatory lag, in an environment of rising infrastructure-related costs, will cause a utility to under-recover its cost of service. The Commission has never added a premium to a utility's authorized ROE to account for regulatory lag (i.e. the fact that the utility likely will not earn its cost of capital under the traditional ratemaking framework in Arizona the "historic test year"). **Mechanisms that are designed to reduce regulatory lag, such as the DSIC, do not warrant a downward adjustment to the authorized ROE, as such a reduction would defeat the purpose of the DSIC (reducing regulatory lag) and render it useless.**

<sup>21</sup> Data provided by Desert Mountain Analytical Services

## ARIZONANS FOR RESPONSIBLE WATER POLICY

Behind all these arguments, there seems to be a general attitude among some parties that if water utilities recover their costs of service (including a return on invested capital), the Commission has somehow failed. This is in contrast with the Commission's decisions to allow APS to recover revenues through adjustors, and over half a billion dollars of post-test year plant adjustments in the explicit interest of minimizing APS' earnings variability and making APS better able to serve customers.

### **Reducing the ROE in exchange for DSIC approval eliminates the benefit of DSICs and increases "Rate Shock" challenges.**

Some suggest that if water companies receive DSICs they should be required to accept lower ROEs – this is premised on a) the misunderstanding of what risk is (i.e., variability in returns), and b) the theory that utility ratemaking is a zero-sum game in which anything improving a utility's financial condition has to be tied to something that harms its financial condition. In the end, the zero-sum approach means that the Commission will never improve financial conditions, because the lost revenue resulting from a reduced ROE in a general rate case could be greater than any potential revenues resulting from a subsequent DSIC filing (depending on the utility's rate base and operating revenues).

### **A utility in need of a DSIC is likely riskier.**

To the extent a utility is faced with an infrastructure crisis (i.e. the need to replace large amounts of infrastructure), and is therefore in need of a DSIC, it is *more* risky, and warrants a higher ROE to enable it to attract capital on reasonable terms for the purpose of replacing such infrastructure. Complicating matters is the fact that the interest coverage requirements required by lenders and contained in bond indentures, which can be as high as 2.5 times total interest expense, are remnants of the days before volumetric and tiered rates were in effect. These coverage requirements and other covenants have not been adjusted to accommodate the newer conservation rate structures with declining revenues over time or the increasing burden of infrastructure replacement programs. (See "The Pendulum Swing of Revenue Stability and Conservation" Journal AWWA, Aug. 2010, p. 26) As a result, potential lenders are less likely to loan significant amounts of money to water utilities with low authorized ROEs, historical test years, and conservation-based rates.

### **Proposed DSIC Process - Overview.**

One of the key challenges in implementing a new policy is the question of how to do so – Responsible Water proposes the following process as a proper beginning for the implementation of DSICs. Without question, over time the Commission, the customers, and the regulated utilities will identify opportunities and ways to improve the process. With biennial workshops on water policy, the Commission should include a review of this and other processes.

# ARIZONANS FOR RESPONSIBLE WATER POLICY

## Proposed DSIC and CSIC Process

1. Utilities shall apply for and obtain generic approval of a DSIC or CSIC in the context of a rate case.
2. Once approved generically, DSICs and CSICs shall not have annual adjustments greater than either 3% or 7% of annual revenues. Utilities requesting 7% annual caps must show that the infrastructure replacement needs in the affected utility require an investment of greater than 50% of existing rate base in less than a five-year period; or greater than 100% over a ten-year period.
3. Each utility granted a DSIC shall comply with the following process and requirements:
  - a. To initiate a DSIC or CSIC adjustment, the utility shall file Schedules (See Attached) which show the following:
    - i. DSIC-eligible plant installed through the period for which recovery is sought, by NARUC account type;
    - ii. Proposed surcharge for all DSIC-eligible plant;
    - iii. Prior year DSIC collections and Over/ Under collected amounts;
    - iv. Balance sheet before and after DSIC plant inclusion;
    - v. Income statement before and after DSIC surcharge inclusion;
    - vi. Revenue requirement calculations;
    - vii. Surcharge Calculation;
    - viii. Construction Ledger;
    - ix. Earnings test;
    - x. Typical bill analysis.
  - b. As part of its DSIC adjustor filing, the utility shall make readily available documentation which shows the following:
    - i. Approval Of Construction and Invoices for DSIC-eligible plant installed;
    - ii. DSIC-eligible plant and projects the utility plans to install in the then-current year , by NARUC account type;
    - iii. Actual and estimated in-service dates for said plant.
  - c. Concurrent with its DSIC adjustor filing, the utility shall notify customers of its proposed DSIC adjustment and its potential impact on rates; the notice shall include information on how to contact the Commission's consumer services section and how to contact the utility for more information.
4. The adjustor is automatically effective within 30 days of receipt of the DSIC adjustor filing, unless Staff notifies the utility whether it believes it needs more time to review or issue a report or if a hearing is required to adjudicate the DSIC proposal.
  - a. If a hearing is required, it shall be completed within 45 days, and a ROO shall be issued within 45 days of the conclusion of the hearing(s). The Commission shall issue an order at the next open meeting.

### PURCHASED POWER ADJUSTMENT MECHANISM ("PPAM") TARIFF

Whenever Arizona Water Company's purchased power (electric and/or natural gas) expense in any of its water systems increases or decreases, or will increase or decrease, from the amount adopted by the Arizona Corporation Commission in the Company's last general rate proceeding for that system, the Company may, in accordance with the provisions of this PPAM, file a new schedule with the Commission for that system, setting forth an adjustment per 100 gallons designed to recover such increased or decreased purchased power expense, provided that:

1. The total amount of the increase or decrease in the purchased power expense will be calculated by comparing the Company's normalized cost for power during the test year utilized in its last general rate case with the Company's normalized cost of power for that test year computed at the Company's new increased or decreased cost for power.

2. The total change in power cost will be divided by the total gallonage pumped during the test year to determine the adjusted increase or decrease per 100 gallons.

3. The calculated increase or decrease in rates for the system must amount to at least \$0.001 per 100 gallons (rounded up or down from five) before an adjustment can be made.

4. All revised schedules filed with the Arizona Corporation Commission pursuant to the provisions of this PPAM will be accompanied by workpapers prepared by the Company in a format approved by the Utilities Division Staff of the Commission and will be in sufficient detail to enable the Commission to test the accuracy of the Company's calculations.

5. The new schedules filed by the Company under the provisions of this PPAM will become effective either on the date the schedules are approved for filing, if the purchased power expense has already increased, or decreased, or on the date the increased or decreased purchased power expense becomes effective, if it has not yet changed.

6. Illustration of application of the above PPAM, assuming the following test year data:

- A) 4,000,000 H Gallons Pumped
- B) 3,300,000 H Gallons Sold (82.5%)
- C) 700,000 H Gallons Unaccounted For (17.5%)
- D) \$100,000 Purchased Power Expense
- E) 1,250,000 KWH

Should Purchased Power Rates increase at a future date such that the new Power Rates x (E) = \$125,000, a Purchased Power Expense pass thru calculation would be initiated.

**Pass Thru Calculation Steps:**

- 1)  $\$125,000 - \$100,000 = \$25,000$  Total Purchased Power Increase
- 2)  $\$25,000 \div 4,000,000$  H Gallons Pumped = \$0.00625/H Gallon
- 3) Step (2) Rounded Per Provisions of Tariff = \$0.006/H Gallon
- 4)  $\$0.006/\text{H Gallon} \times \text{Actual Gallons Used Including Gallons In Minimum} = \text{PPAM Charge on Bill}$

**RATE SCHEDULE E-221  
CLASSIFIED SERVICE  
WATER PUMPING SERVICE**

AVAILABILITY

This rate schedule is available in all territory served by the Company at all points where facilities of adequate capacity and the required phase and suitable voltage are adjacent to the sites served.

APPLICATION

This rate schedule is applicable to Standard Offer electric service required for irrigation pumping or for water utilities for pumping potable water to serve the citizens of a city, town, or unincorporated community. Service must be supplied at one point of delivery and measured through one meter. Direct Access customers are not eligible for service under this schedule.

Rate selection is subject to paragraphs 3.2 and 3.3 of the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services.

This schedule is not applicable to breakdown, standby, supplemental, residential or resale service.

TYPE OF SERVICE

The type of service provided under this schedule will be single or three phase, 60 Hertz, at one standard voltage as may be selected by customer subject to availability at the customer's site.

RATES

The bill shall be computed at the following rates or minimum rates, whichever is greater, plus any adjustments incorporated in this schedule:

Basic Service Charge:	\$ 0.588	per day
Demand Charge:	\$ 2.357	per kW
Energy Charge:	\$ 0.11228	per kWh for the first 240 kWh, plus
	\$ 0.07633	per kWh for the next 275 kWh per kW, plus
	\$ 0.06270	per kWh for all additional kWh

MINIMUM

The bill for service under this rate schedule will not be less than \$0.558 per day plus \$2.357 for each kW of the highest kW established during the 12 months ending with the current month, or the minimum kW specified in the Electric Service Agreement, whichever is greater.

POWER FACTOR

The customer deviation from phase balance shall not be greater than ten percent (10%) at any time. Customers receiving service at voltage levels below 69 kV shall maintain a power factor of 90% lagging but in no event leading unless agreed to by Company. Service voltage levels at 69 kV or above shall maintain a power factor of  $\pm 95\%$  at all times. In situations where Company suspects that a customer's load has a non-confirming power factor, Company may install at its cost, the appropriate metering to monitor such loads. If the customer's power factor is found to be non-confirming, the customer will be required to pay the cost of installation and removal of VAR metering and recording equipment.

**RATE SCHEDULE E-221  
CLASSIFIED SERVICE  
WATER PUMPING SERVICE**

---

POWER FACTOR (cont)

Customers found to have a non-conforming power factor, or other detrimental conditions shall be required to remedy problems, or pay for facilities/equipment that Company must install on its system to correct for problems caused by the customer's load. Until such time as the customer remedies the problem to Company satisfaction, kVA may be substituted for kW in determining the applicable charge for billing purposes for each month in which such failure occurs.

DETERMINATION OF KW

For billing purposes, the kW used in this rate schedule shall be based on the average kW supplied during the 15-minute period of maximum use during the month, as determined from readings of the Company's meter, or at the Company's option, by test.

ADJUSTMENTS

1. The bill is subject to the Renewable Energy Standard as set forth in the Company's Adjustment Schedule REAC-1 pursuant to Arizona Corporation Commission Decision No. 70313.
2. The bill is subject to the Power Supply Adjustment factor as set forth in the Company's Adjustment Schedule PSA-1 pursuant to Arizona Corporation Commission Decision No. 67744, Arizona Corporation Commission Decision No. 69663, Arizona Corporation Commission Decision No. 71448, and 73183.
3. The bill is subject to the Transmission Cost Adjustment factor as set forth in the Company's Adjustment Schedule TCA-1 pursuant to Arizona Corporation Commission Decision No. 67744.
4. The bill is subject to the Environmental Improvement Surcharge as set forth in the Company's Adjustment Schedule EIS pursuant to Arizona Corporation Commission Decision No. 69663 and Arizona Corporation Commission Decision No. 73183.
5. Direct Access customers returning to Standard Offer service may be subject to a Returning Customer Direct Access Charge as set forth in the Company's Adjustment Schedule RCDAC-1 pursuant to Arizona Corporation Commission Decision No. 67744.
6. The bill is subject to the Demand Side Management Adjustment Charge as set forth in the Company's Adjustment Schedule DSMAC-1 pursuant to Arizona Corporation Commission Decision No. 67744, and Arizona Corporation Commission Decision No. 71448.
7. The bill is subject to the Lost Fixed Cost Recovery mechanism as set forth in the Company's Adjustment Schedule LFCR pursuant to Arizona Corporation Commission Decision No. 73183.
8. The bill is subject to the applicable proportionate part of any taxes or governmental impositions which are or may in the future be assessed on the basis of gross revenues of APS and/or the price or revenue from the electric energy or service sold and/or the volume of energy generated or purchased for sale and/or sold hereunder.

**RATE SCHEDULE E-221  
CLASSIFIED SERVICE  
WATER PUMPING SERVICE**

---

CONTRACT PERIOD

The contract period for customers receiving service under this rate schedule will be one (1) year or longer. At the Company's option, the contract period will be three (3) years or longer where additional distribution construction is required to serve the customer.

TERMS AND CONDITIONS

Service under this rate schedule is subject to the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services, which contains provisions that may affect the customer's bill. In addition, service may be subject to special terms and conditions as provided for in a customer contract or service agreement.

**RATE SCHEDULE E-32 XS  
EXTRA SMALL GENERAL SERVICE (0 kW - 20 kW)**

AVAILABILITY

This rate schedule is available in all territory served by the Company at all points where facilities of adequate capacity and the required phase and suitable voltage are adjacent to the sites served.

APPLICATION

This rate schedule is applicable to all Standard Offer and Direct Access customers whose Average Monthly Maximum Demand is 20 kW per month or less.

The Company initially will place the Customer on the applicable Rate Schedule E-32 XS, E-32 S, E-32 M, or E-32 L based on the Average Monthly Maximum Demand, as determined by the Company.

The Customer will be billed on Schedule E-32 S or E-32 XS depending on the Monthly Maximum Demand for each billing cycle.

Service must be supplied at one point of delivery and measured through one meter unless otherwise specified by an individual customer contract.

Rate selection is subject to paragraphs 3.2 through 3.5 of the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services.

This schedule is not applicable to breakdown, standby, supplemental, residential or resale service.

TYPE OF SERVICE

The type of service provided under this schedule will be single or three phase, 60 Hertz, at one standard voltage as may be selected by customer subject to availability at the customer's site. Three phase service is furnished under the Company's Schedule 3 (Conditions Governing Extensions of Electric Distribution Lines and Services). Three phase service is not furnished for motors of an individual rated capacity of less than 7-1/2 HP, except for existing facilities or where total aggregate HP of all connected three phase motors exceeds 12 HP. Three phase service is required for motors of an individual rated capacity of more than 7-1/2 HP. Service under this schedule is generally provided at secondary voltage or primary voltage when the customer owns the distribution transformer(s).

RATES

The bill shall be computed at the following rates, plus any adjustments incorporated in this rate schedule:

Bundled Standard Offer Service

Basic Service Charge:

For service through Self-Contained Meters:	\$ 0.672	per day, or
For service through Instrument-Rated Meters:	\$ 1.324	per day, or
For service at Primary Voltage:	\$ 3.415	per day

**RATE SCHEDULE E-32 XS  
EXTRA SMALL GENERAL SERVICE (0 kW - 20 kW)**

RATES (cont)

Bundled Standard Offer Service (cont)

Energy Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
For Secondary Service: \$0.13537 per kWh for the first 5,000 kWh, plus \$0.07427 per kWh for all additional kWh, or	For Secondary Service: \$0.11769 per kWh for the first 5,000 kWh, plus \$0.05658 per kWh for all additional kWh, or
For Primary Service: \$0.13209 per kWh for the first 5,000 kWh, plus \$0.07100 per kWh for all additional kWh	For Primary Service: \$0.11438 per kWh for the first 5,000 kWh, plus \$0.05329 per kWh for all additional kWh

Bundled Standard Offer Service consists of the following Unbundled Components:

Unbundled Standard Offer Service

Customer Accounts Charge:	\$ 0.126	per day
Revenue Cycle Service Charges:		
Metering:		
Self-Contained Meters:	\$ 0.403	per day, or
Instrument-Rated Meters:	\$ 1.055	per day, or
Primary:	\$ 3.146	per day

These daily metering charges apply to typical installations. Customers requiring specialized facilities are subject to additional metering charges that reflect the additional cost of the installation, (for example, a customer taking service at 230 kV). Adjustments to unbundled metering components will result in an adjustment to the bundled Basic Service Charge.

Meter Reading:	\$ 0.068	per day
Billing:	\$ 0.075	per day
System Benefits Charge:	\$ 0.00297	per kWh
Transmission Charge:	\$ 0.00424	per kWh

EXTRA SMALL GENERAL SERVICE (0 kW - 20 kW)**

RATES (cont)

Unbundled Standard Offer Service (cont)

Delivery Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
For Secondary Service: \$0.04175 per kWh for the first 5,000 kWh, plus \$0.01310 per kWh for all additional kWh, or	For Secondary Service: \$0.04168 per kWh for the first 5,000 kWh, plus \$0.01303 per kWh for all additional kWh, or
For Primary Service: \$0.03847 per kWh for the first 5,000 kWh, plus \$0.00983 per kWh for all additional kWh	For Primary Service: \$0.03837 per kWh for the first 5,000 kWh, plus \$0.00974 per kWh for all additional kWh

Generation Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
\$0.08641 per kWh for the first 5,000 kWh, plus \$0.05396 per kWh for all additional kWh	\$0.06880 per kWh for the first 5,000 kWh, plus \$0.03634 per kWh for all additional kWh

DIRECT ACCESS

The bill for Direct Access customers under this rate schedule will consist of the applicable Unbundled Components Customer Accounts Charge, System Benefits Charge, and Delivery Charge, plus any applicable adjustments incorporated in this schedule. Direct Access customers must acquire and pay for generation, transmission, and revenue cycle services from a competitive third party supplier. If any revenue cycle services are not available from a third party supplier and must be obtained from the Company, the applicable Unbundled Components Revenue Cycle Service Charges will be applied to the customer's bill.

POWER FACTOR

The customer deviation from phase balance shall not be greater than ten percent (10%) at any time. Customers receiving service at voltage levels below 69 kV shall maintain a power factor of 90% lagging but in no event leading unless agreed to by Company. Service voltage levels at 69 kV or above shall maintain a power factor of  $\pm 95\%$  at all times. In situations where Company suspects that a customer's load has a non-confirming power factor, Company may install at its cost, the appropriate metering to monitor such loads. If the customer's power factor is found to be non-confirming, the customer will be required to pay the cost of installation and removal of VAR metering and recording equipment. Customers found to have a non-confirming power factor, or other detrimental conditions shall be required to remedy problems, or pay for facilities/equipment that Company must install on its system to correct for problems caused by the customer's load. Until such time as the customer remedies the problem to Company satisfaction, kVA may be substituted for kW in determining the applicable charge for billing purposes for each month in which such failure occurs.

**RATE SCHEDULE E-32 XS  
EXTRA SMALL GENERAL SERVICE (0 kW - 20 kW)**

DETERMINATION OF KW

For billing purposes, including determination of Monthly Maximum Demands, the kW used in this rate schedule shall be based on the average kW supplied during the 15-minute period of maximum use during the month as determined from readings of the Company's meter.

The Average Monthly Maximum Demand shall equal the average of the Monthly Maximum Demands for the May through October billing cycles, as determined by the Company. If the Monthly Maximum Demands are not available for all six May through October billing cycles, the Average Monthly Maximum Demand will be based on the available information. For a new customer, the initial Average Monthly Maximum Demand will be based on the estimated maximum kW provided by the Customer and approved by the Company.

ADJUSTMENTS

- 1 The bill is subject to the Renewable Energy Standard as set forth in the Company's Adjustment Schedule REAC-1 pursuant to Arizona Corporation Commission Decision No. 70313.
- 2 The bill is subject to the Power Supply Adjustment factor as set forth in the Company's Adjustment Schedule PSA-1 pursuant to Arizona Corporation Commission Decision No. 67744, Arizona Corporation Commission Decision No. 69663, Arizona Corporation Commission Decision No. 71448 and 73183.
- 3 The bill is subject to the Transmission Cost Adjustment factor as set forth in the Company's Adjustment Schedule TCA-1 pursuant to Arizona Corporation Commission Decision No. 67744.
4. The bill is subject to the Environmental Improvement Surcharge as set forth in the Company's Adjustment Schedule EIS pursuant to Arizona Corporation Commission Decision No. 69663 and Arizona Corporation Commission Decision No. 73183.
5. Direct Access customers returning to Standard Offer service may be subject to a Returning Customer Direct Access Charge as set forth in the Company's Adjustment Schedule RCDAC-1 pursuant to Arizona Corporation Commission Decision No. 67744.
6. The bill is subject to the Demand Side Management Adjustment charge as set forth in the Company's Adjustment Schedule DSMAC-1 pursuant to Arizona Corporation Commission Decision No. 67744 and Arizona Corporation Commission Decision No. 71448.
7. The bill is subject to the Lost Fixed Cost Recovery mechanism as set forth in the Company's Adjustment Schedule LFCR pursuant to Arizona Corporation Commission Decision No. 73183.
8. The bill is subject to the applicable proportionate part of any taxes or governmental impositions which are or may in the future be assessed on the basis of gross revenues of APS and/or the price or revenue from the electric energy or service sold and/or the volume of energy generated or purchased for sale and/or sold hereunder.

**RATE SCHEDULE E-32 XS  
EXTRA SMALL GENERAL SERVICE (0 kW - 20 kW)**

---

CONTRACT PERIOD

For customers with monthly maximum demands up to 20 kW, any applicable contract period will be set forth in the Company's standard agreement for service. At the Company's option, the contract period will be three (3) years or longer where additional distribution construction is required to serve the customer or, if no additional distribution construction is required, the contract period will be one (1) year or longer.

TERMS AND CONDITIONS

Service under this rate schedule is subject to the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services and the Company's Schedule 10, Terms and Conditions for Direct Access. These schedules have provisions that may affect the customer's bill. In addition, service may be subject to special terms and conditions as provided for in a customer contract or service agreement.

**RATE SCHEDULE E-32 L  
LARGE GENERAL SERVICE (401 kW +)**

AVAILABILITY

This rate schedule is available in all territory served by the Company at all points where facilities of adequate capacity and the required phase and suitable voltage are adjacent to the sites served.

APPLICATION

This rate schedule is applicable to all Standard Offer and Direct Access customers whose Average Monthly Maximum Demand is greater than 400 kW per month.

The Company will place the Customer on the applicable Rate Schedule E-32 XS, E-32 S, E-32 M, or E-32 L based on the Average Monthly Maximum Demand, as determined by the Company each year. Such placement will occur in the February billing cycle following the annual determination. The Company may also place the Customer on the Applicable Rate Schedule during the year, if the Customer has experienced a significant and permanent change in load as determined by the Company. Such placement will be based on available information.

Service must be supplied at one point of delivery and measured through one meter unless otherwise specified by an individual customer contract.

Rate selection is subject to paragraphs 3.2 through 3.5 of the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services.

This schedule is not applicable to breakdown, standby, supplemental, residential or resale service nor to service for which Rate Schedule E-34 is applicable.

TYPE OF SERVICE

The type of service provided under this schedule will be single or three phase, 60 Hertz, at one standard voltage as may be selected by customer subject to availability at the customer's site. Three phase service is furnished under the Company's Schedule 3 (Conditions Governing Extensions of Electric Distribution Lines and Services). Three phase service is not furnished for motors of an individual rated capacity of less than 7-1/2 HP, except for existing facilities or where total aggregate HP of all connected three phase motors exceeds 12 HP. Three phase service is required for motors of an individual rated capacity of more than 7-1/2 HP. Service under this schedule is generally provided at secondary voltage, primary voltage when the customer owns the distribution transformer(s), or transmission voltage.

RATES

The bill shall be computed at the following rates or the minimum rates, whichever is greater, plus any adjustments incorporated in this rate schedule:

Bundled Standard Offer Service

Basic Service Charge:

For service through Self-Contained Meters:	\$ 1.068	per day, or
For service through Instrument-Rated Meters:	\$ 1.627	per day, or

Generation Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
\$4.496 per kW, plus \$0.05209 per kWh	\$4.496 per kW, plus \$0.03496 per kWh

DIRECT ACCESS

The bill for Direct Access customers under this rate schedule will consist of the applicable Unbundled Components Customer Accounts Charge, System Benefits Charge, and Delivery Charge, plus any applicable adjustments incorporated in this schedule. Direct Access customers must acquire and pay for generation, transmission, and revenue cycle services from a competitive third party supplier. If any revenue cycle services are not available from a third party supplier and must be obtained from the Company, the applicable Unbundled Components Revenue Cycle Service Charges will be applied to the customer's bill.

MINIMUM

The bill for service under this rate schedule shall not be less than the applicable Bundled Standard Offer Service Basic Service Charge plus the applicable Bundled Standard Offer Service Demand Charge for each kW as determined herein.

POWER FACTOR

The customer deviation from phase balance shall not be greater than ten percent (10%) at any time. Customers receiving service at voltage levels below 69 kV shall maintain a power factor of 90% lagging but in no event leading unless agreed to by Company. Service voltage levels at 69 kV or above shall maintain a power factor of  $\pm 95\%$  at all times. In situations where Company suspects that a customer's load has a non-confirming power factor, Company may install at its cost, the appropriate metering to monitor such loads. If the customer's power factor is found to be non-confirming, the customer will be required to pay the cost of installation and removal of VAR metering and recording equipment.

**RATE SCHEDULE E-32 L  
LARGE GENERAL SERVICE (401 kW +)**

POWER FACTOR (cont)

Customers found to have a non-conforming power factor, or other detrimental conditions shall be required to remedy problems, or pay for facilities/equipment that Company must install on its system to correct for problems caused by the customer's load. Until such time as the customer remedies the problem to Company satisfaction, kVA may be substituted for kW in determining the applicable charge for billing purposes for each month in which such failure occurs.

DETERMINATION OF KW

For billing purposes, the kW used in this rate schedule shall be the greater of the following:

1. The average kW supplied during the 15-minute period (or other period as specified by an individual customer contract) of maximum use during the month, as determined from readings of the Company's meter.
2. 80% of the highest kW measured during the six (6) summer billing months (May-October) of the twelve (12) months ending with the current month.
3. The minimum kW specified in the agreement for service or individual contract.

For the purpose of placement on this rate, the Average Monthly Maximum Demand shall equal the average of the Monthly Maximum Demands for the May through October billing cycles, as determined by the Company. If the Monthly Maximum Demands are not available for all six May through October billing cycles, the Average Monthly Maximum Demand will be based on the available information. For a new customer, the initial Average Monthly Maximum Demand will be based on the estimated maximum kW provided by the Customer and approved by the Company.

The Monthly Maximum Demand shall be based on the average kW supplied during the 15-minute period of maximum use during the month as determined from readings of the Company's meter.

ADJUSTMENTS

1. The bill is subject to the Renewable Energy Standard as set forth in the Company's Adjustment Schedule REAC-1 pursuant to Arizona Corporation Commission Decision No. 70313.
2. The bill is subject to the Power Supply Adjustment factor as set forth in the Company's Adjustment Schedule PSA-1 pursuant to Arizona Corporation Commission Decision No. 67744, Arizona Corporation Commission Decision No. 69663, Arizona Corporation Commission Decision No. 71448 and 73183.
3. The bill is subject to the Transmission Cost Adjustment factor as set forth in the Company's Adjustment Schedule TCA-1 pursuant to Arizona Corporation Commission Decision No. 67744.
4. The bill is subject to the Environmental Improvement Surcharge as set forth in the Company's Adjustment Schedule EIS pursuant to Arizona Corporation Commission Decision No. 69663 and Arizona Corporation Commission Decision No. 73183.
5. Direct Access customers returning to Standard Offer service may be subject to a Returning Customer Direct Access Charge as set forth in the Company's Adjustment Schedule RCDAC-1 pursuant to Arizona Corporation Commission Decision No. 67744.

**RATE SCHEDULE E-32 L  
LARGE GENERAL SERVICE (401 kW +)**

---

ADJUSTMENTS (cont)

6. The bill is subject to the Demand Side Management Adjustment charge as set forth in the Company's Adjustment Schedule DSMAC-1 pursuant to Arizona Corporation Commission Decision No. 67744 and Arizona Corporation Commission Decision No. 71448.
7. The bill is subject to the applicable proportionate part of any taxes or governmental impositions which are or may in the future be assessed on the basis of gross revenues of APS and/or the price or revenue from the electric energy or service sold and/or the volume of energy generated or purchased for sale and/or sold hereunder.

CONTRACT PERIOD

For customers with monthly maximum demands greater than 400 kW, any applicable contract period will be set forth in the Company's standard agreement for service. At the Company's option, the contract period will be three (3) years or longer where additional distribution construction is required to serve the customer or, if no additional distribution construction is required, the contract period will be one (1) year or longer.

TERMS AND CONDITIONS

Service under this rate schedule is subject to the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services and the Company's Schedule 10, Terms and Conditions for Direct Access. These schedules have provisions that may affect the customer's bill. In addition, service may be subject to special terms and conditions as provided for in a customer contract or service agreement.

**RATE SCHEDULE E-32 M  
MEDIUM GENERAL SERVICE (101 kW - 400 kW)**

AVAILABILITY

This rate schedule is available in all territory served by the Company at all points where facilities of adequate capacity and the required phase and suitable voltage are adjacent to the sites served.

APPLICATION

This rate schedule is applicable to all Standard Offer and Direct Access customers whose Average Monthly Maximum Demand is greater than 100 kW and less than or equal to 400 kW per month.

The Company will place the Customer on the Applicable Rate Schedule E-32 XS, E-32 S, E-32 M, or E-32 L based on the Average Monthly Maximum Demand, as determined by the Company each year. Such placement will occur in the February billing cycle following the annual determination. The Company may also place the Customer on the Applicable Rate Schedule during the year, if the Customer has experienced a significant and permanent change in load as determined by the Company. Such placement will be based on available information.

Service must be supplied at one point of delivery and measured through one meter unless otherwise specified by an individual customer contract.

Rate selection is subject to paragraphs 3.2 through 3.5 of the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services. This schedule is not applicable to breakdown, standby, supplemental, residential or resale service nor to service for which Rate Schedule E-34 is applicable.

TYPE OF SERVICE

The type of service provided under this schedule will be single or three phase, 60 Hertz, at one standard voltage as may be selected by customer subject to availability at the customer's site. Three phase service is furnished under the Company's Schedule 3 (Conditions Governing Extensions of Electric Distribution Lines and Services). Three phase service is not furnished for motors of an individual rated capacity of less than 7-1/2 HP, except for existing facilities or where total aggregate HP of all connected three phase motors exceeds 12 HP. Three phase service is required for motors of an individual rated capacity of more than 7-1/2 HP. Service under this schedule is generally provided at secondary voltage, primary voltage when the customer owns the distribution transformer(s), or transmission voltage.

RATES

The bill shall be computed at the following rates, plus any adjustments incorporated in this rate schedule:

Bundled Standard Offer Service

Basic Service Charge:		
For service through Self-Contained Meters:	\$ 0.672	per day, or
For service through Instrument-Rated Meters:	\$ 1.324	per day, or
For service at Primary Voltage:	\$ 3.415	per day, or
For service at Transmission Voltage:	\$ 26.163	per day

MEDIUM GENERAL SERVICE (101 kW - 400 kW)**

RATES (cont)

Bundled Standard Offer Service (cont)

Demand Charge:

Secondary Service:	\$ 10.235	per kW for the first 100 kW, plus
	\$ 5.385	per kW for all additional kW, or
Primary Service:	\$ 9.488	per kW for the first 100 kW, plus
	\$ 4.695	per kW for all additional kW, or
Transmission Service:	\$ 7.368	per kW for the first 100 kW, plus
	\$ 2.519	per kW for all additional kW

Energy Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
\$0.09884 per kWh for the first 200 kWh per kW, plus \$0.06091 per kWh for all additional kWh	\$0.08378 per kWh for the first 200 kWh per kW, plus \$0.04586 per kWh for all additional kWh

Bundled Standard Offer Service consists of the following Unbundled Components:

Unbundled Standard Offer Service

Customer Accounts Charge:	\$ 0.126	per day
Revenue Cycle Service Charges:		
Metering:		
Self-Contained Meters:	\$ 0.403	per day, or
Instrument-Rated Meters:	\$ 1.055	per day, or
Primary:	\$ 3.146	per day, or
Transmission:	\$ 25.894	per day

These daily metering charges apply to typical installations. Customers requiring specialized facilities are subject to additional metering charges that reflect the additional cost of the installation, (for example, a customer taking service at 230 kV). Adjustments to unbundled metering components will result in an adjustment to the bundled Basic Service Charge.

Meter Reading:	\$ 0.068	per day
Billing:	\$ 0.075	per day
System Benefits Charge:	\$ 0.00297	per kWh
Transmission Charge:	\$ 1.585	per kW

**RATE SCHEDULE E-32 M  
MEDIUM GENERAL SERVICE (101 kW - 400 kW)**

RATES (cont)

Unbundled Standard Offer Service (cont)

Delivery Charge:

Secondary Service:	\$ 8.650	per kW for the first 100 kW, plus
	\$ 3.800	per kW for all additional kW, plus
	\$ 0.00649	per kWh, or
Primary Service:	\$ 7.903	per kW for the first 100 kW, plus
	\$ 3.110	per kW for all additional kW, plus
	\$ 0.00649	per kWh, or
Transmission Service:	\$ 5.783	per kW for the first 100 kW, plus
	\$ 0.934	per kW for all additional kW, plus
	\$ 0.00649	per kWh

Generation Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
\$0.08938 per kWh for the first 200 kWh per kW, plus \$0.05145 per kWh for all additional kWh	\$0.07432 per kWh for the first 200 kWh per kW, plus \$0.03640 per kWh for all additional kWh

DIRECT ACCESS

The bill for Direct Access customers under this rate schedule will consist of the applicable Unbundled Components Customer Accounts Charge, System Benefits Charge, and Delivery Charge, plus any applicable adjustments incorporated in this schedule. Direct Access customers must acquire and pay for generation, transmission, and revenue cycle services from a competitive third party supplier. If any revenue cycle services are not available from a third party supplier and must be obtained from the Company, the applicable Unbundled Components Revenue Cycle Service Charges will be applied to the customer's bill.

POWER FACTOR

The customer deviation from phase balance shall not be greater than ten percent (10%) at any time. Customers receiving service at voltage levels below 69 kV shall maintain a power factor of 90% lagging but in no event leading unless agreed to by Company. Service voltage levels at 69 kV or above shall maintain a power factor of  $\pm 95\%$  at all times. In situations where Company suspects that a customer's load has a non-confirming power factor, Company may install at its cost, the appropriate metering to monitor such loads. If the customer's power factor is found to be non-confirming, the customer will be required to pay the cost of installation and removal of VAR metering and recording equipment. Customers found to have a non-confirming power factor, or other detrimental conditions shall be required to remedy problems, or pay for facilities/equipment that Company must install on its system to correct for problems caused by the customer's load. Until such time as the customer remedies the problem to Company satisfaction, kVA may be substituted for kW in determining the applicable charge for billing purposes for each month in which such failure occurs.

**RATE SCHEDULE E-32 M  
MEDIUM GENERAL SERVICE (101 kW - 400 kW)**

---

DETERMINATION OF KW

For billing purposes, including determination of Monthly Maximum Demands, the kW used in this rate schedule shall be based on the average kW supplied during the 15-minute period of maximum use during the month as determined from readings of the Company's meter.

The Average Monthly Maximum Demand shall equal the average of the Monthly Maximum Demands for the May through October billing cycles, as determined by the Company. If the Monthly Maximum Demands are not available for all six May through October billing cycles, the Average Monthly Maximum Demand will be based on the available information. For a new customer, the initial Average Monthly Maximum Demand will be based on the estimated maximum kW provided by the Customer and approved by the Company.

ADJUSTMENTS

1. The bill is subject to the Renewable Energy Standard as set forth in the Company's Adjustment Schedule REAC-1 pursuant to Arizona Corporation Commission Decision No. 70313.
2. The bill is subject to the Power Supply Adjustment factor as set forth in the Company's Adjustment Schedule PSA-1 pursuant to Arizona Corporation Commission Decision No. 67744, Arizona Corporation Commission Decision No. 69663, Arizona Corporation Commission Decision No. 71448 and 73183.
3. The bill is subject to the Transmission Cost Adjustment factor as set forth in the Company's Adjustment Schedule TCA-1 pursuant to Arizona Corporation Commission Decision No. 67744.
4. The bill is subject to the Environmental Improvement Surcharge as set forth in the Company's Adjustment Schedule EIS pursuant to Arizona Corporation Commission Decision No. 69663 and Arizona Corporation Commission Decision No. 73183.
5. Direct Access customers returning to Standard Offer service may be subject to a Returning Customer Direct Access Charge as set forth in the Company's Adjustment Schedule RCDAC-1 pursuant to Arizona Corporation Commission Decision No. 67744.
6. The bill is subject to the Demand Side Management Adjustment charge as set forth in the Company's Adjustment Schedule DSMAC-1 pursuant to Arizona Corporation Commission Decision No. 67744 and Arizona Corporation Commission Decision No. 71448.
7. The bill is subject to the Lost Fixed Cost Recovery mechanism as set forth in the Company's Adjustment Schedule LFCR pursuant to Arizona Corporation Commission Decision No. 73183.
8. The bill is subject to the applicable proportionate part of any taxes or governmental impositions which are or may in the future be assessed on the basis of gross revenues of APS and/or the price or revenue from the electric energy or service sold and/or the volume of energy generated or purchased for sale and/or sold hereunder.

**RATE SCHEDULE E-32 M  
MEDIUM GENERAL SERVICE (101 kW - 400 kW)**

---

CONTRACT PERIOD

For customers with monthly maximum demands greater than 100 and less than or equal to 400 kW, any applicable contract period will be set forth in the Company's standard agreement for service. At the Company's option, the contract period will be three (3) years or longer where additional distribution construction is required to serve the customer or, if no additional distribution construction is required, the contract period will be one (1) year or longer.

TERMS AND CONDITIONS

Service under this rate schedule is subject to the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services and the Company's Schedule 10, Terms and Conditions for Direct Access. These schedules have provisions that may affect the customer's bill. In addition, service may be subject to special terms and conditions as provided for in a customer contract or service agreement.

**RATE SCHEDULE E-32 S  
SMALL GENERAL SERVICE (21 kW – 100 kW)**

AVAILABILITY

This rate schedule is available in all territory served by the Company at all points where facilities of adequate capacity and the required phase and suitable voltage are adjacent to the sites served.

APPLICATION

This rate schedule is applicable to all Standard Offer and Direct Access customers whose Average Monthly Maximum Demand is greater than 20 kW and less than or equal to 100 kW per month.

The Company will place the Customer on the Applicable Rate Schedule E-32 XS, E-32 S, E-32 M, or E-32 L based on the Average Monthly Maximum Demand, as determined by the Company each year. Such placement will occur in the February billing cycle following the annual determination. The Company may also place the Customer on the Applicable Rate Schedule during the year, if the Customer has experienced a significant and permanent change in load as determined by the Company. Such placement will be based on available information.

The Customer will be billed on Schedule E-32 S or E-32 XS depending on the Monthly Maximum Demand for each billing cycle.

Service must be supplied at one point of delivery and measured through one meter unless otherwise specified by an individual customer contract.

Rate selection is subject to paragraphs 3.2 through 3.5 of the Company's Schedule 1, Terms and Conditions for Standard Offer and Direct Access Services. This schedule is not applicable to breakdown, standby, supplemental, residential or resale service.

TYPE OF SERVICE

The type of service provided under this schedule will be single or three phase, 60 Hertz, at one standard voltage as may be selected by customer subject to availability at the customer's site. Three phase service is furnished under the Company's Schedule 3 (Conditions Governing Extensions of Electric Distribution Lines and Services). Three phase service is not furnished for motors of an individual rated capacity of less than 7-1/2 HP, except for existing facilities or where total aggregate HP of all connected three phase motors exceeds 12 HP. Three phase service is required for motors of an individual rated capacity of more than 7-1/2 HP. Service under this schedule is generally provided at secondary voltage or primary voltage when the customer owns the distribution transformer(s).

RATES

The bill shall be computed at the following rates, plus any adjustments incorporated in this rate schedule:

Bundled Standard Offer Service

Basic Service Charge:

For service through Self-Contained Meters:	\$ 0.672	per day, or
For service through Instrument-Rated Meters:	\$ 1.324	per day, or
For service at Primary Voltage:	\$ 3.415	per day

**RATE SCHEDULE E-32 S  
SMALL GENERAL SERVICE (21 kW – 100 kW)**

RATES (cont)

Bundled Standard Offer Service (cont)

Demand Charge:

Secondary Service:	\$ 9.828	per kW for the first 100 kW, plus
	\$ 5.214	per kW for all additional kW, or
Primary Service:	\$ 9.116	per kW for the first 100 kW, plus
	\$ 4.502	per kW for all additional kW, or

Energy Charge:

May – October Billing Cycles (Summer)	November – April Billing Cycles (Winter)
\$0.10337 per kWh for the first 200 kWh per kW, plus \$0.06257 per kWh for all additional kWh	\$0.08718 per kWh for the first 200 kWh per kW, plus \$0.04638 per kWh for all additional kWh

Bundled Standard Offer Service consists of the following Unbundled Components:

Unbundled Standard Offer Service

Customer Accounts Charge:	\$ 0.126	per day
Revenue Cycle Service Charges:		
Metering:		
Self-Contained Meters:	\$ 0.403	per day, or
Instrument-Rated Meters:	\$ 1.055	per day, or
Primary:	\$ 3.146	per day

These daily metering charges apply to typical installations. Customers requiring specialized facilities are subject to additional metering charges that reflect the additional cost of the installation, (for example, a customer taking service at 230 kV). Adjustments to unbundled metering components will result in an adjustment to the bundled Basic Service Charge.

### Important billing and collection information

Make checks payable to APS and mail to:  
APS, PO Box 2906, Phoenix AZ 85062-2906

Credit and Collections:  
602-371-7607 (Phoenix) or 1-800-253-9409 (Other areas)

All bills for utility services are due and payable no later than 15 days from the date of the bill. Any payments not received within this time-frame shall be considered delinquent and are subject to a late payment charge of 1.5% per month.

If your power is shut off for non-payment, you must pay all the delinquent amounts and a deposit or additional deposit before power is restored.

When you provide a check as payment, you authorize us either to use information from your check to make a one-time electronic funds transfer from your account or to process the payment as a check transaction. When we process your check electronically you will not receive your check back from your financial institution and funds may be withdrawn from your account on the same day we receive your payment.

### New Charge on Your Bill Beginning March 2013

In May 2012, the Arizona Corporation Commission (ACC) approved new rates for APS. Because more customers are installing renewable energy systems such as solar and wind, and energy efficiency measures such as compact fluorescent light bulbs and refrigerator recycling, APS is selling less electricity, but fixed costs remain. APS is allowed to implement a new charge to recover a portion of the fixed costs. Fixed costs are for items that are needed regardless of how much electricity is sold, such as power poles, wires and other delivery infrastructure. As a result, the Lost Fixed Cost Recovery (LFCR) charge will begin appearing on your bill in March 2013. For more information, visit [aps.com/LFCR](http://aps.com/LFCR).

**We will debit your checking or savings account for \$1,661.25 on February 11, 2013.**

Thank you for your consistent and timely payments. We value your business.

8020-0000 ARRAYO - 21.34

## Things you need to know

### Contacting APS

- E-mail us at [aps@aps.com](mailto:aps@aps.com)
- Call us at:  
602-371-6767 (Phoenix) or 800-253-9407 (Other areas)  
Mon-Fri, 7:30 am - 5:00 pm
- Para servicio en español llame al:  
602-371-6861 (Phoenix) o 1-800-252-9410 (Otras areas)
- Hearing impaired:  
Dial 711 - AZ Relay Service
- By mail: APS, Station 3200, PO Box 53933,  
Phoenix AZ 85072-3933
- Blue Stake - Before you dig, call:  
811 or 800-782-5348 from anywhere within Arizona
- Electrical emergencies other than power outages, call:  
602-258-5483 (Phoenix) or 800-253-9408 (Other areas)

### Important billing and collection information

Make checks payable to APS and mail to:  
APS, PO Box 2906, Phoenix AZ 85062-2906

Credit and Collections:  
602-371-7607 (Phoenix) or 1-800-253-9409 (Other areas)

All bills for utility services are due and payable no later than 15 days from the date of the bill. Any payments not received within this time-frame shall be considered delinquent and are subject to a late payment charge of 1.5% per month.

If your power is shut off for non-payment, you must pay all the delinquent amounts and a deposit or additional deposit before power is restored.

When you provide a check as payment, you authorize us either to use information from your check to make a one-time electronic funds transfer from your account or to process the payment as a check transaction. When we process your check electronically you will not receive your check back from your financial institution and funds may be withdrawn from your account on the same day we receive your payment.

### Utility regulations and rates (Not an APS payment site)

Electricity regulations and rates are approved by  
Arizona Corporation Commission,  
1200 W. Washington, Phoenix AZ 85007  
602-542-4251 (Phoenix) or 1-800-222-7000 (Other areas).

**STATEMENT OF CHARGES FOR WATER SERVICE**

**II. TAXES AND ASSESSMENTS**

In addition to all other rates and charges authorized herein, the Company shall collect from its customers all applicable sales, transaction, privilege, franchise, regulatory or other taxes and assessments as may apply now or in the future, per Rule R14-2-409(D)(5).

---

Applies to all **WATER** service areas  
**PART ONE**  
**STATEMENT OF CHARGES FOR WATER SERVICE**

**III. PERMITTED COSTS**

- A. Costs shall be verified by invoice.
- B. For services that are provided by the Company at cost, costs shall include labor, materials, other charges incurred, and overhead not to exceed 10%. However, prior to any such service being provided, the estimated cost of such service will be provided by the Company to the customer. After review of the cost estimate, the customer will pay the amount of the estimated cost to the Company.
- C. In the event that the actual cost is less than the estimated cost, the Company will refund the excess to the customer within 30 days after completion of the provision of the service or after Company's receipt of invoices, timesheets or other related documents, whichever is later.
- D. In the event the actual cost is more than the estimated cost, the Company will bill the customer for the amount due within 30 days after completion of the provision of the service or after the Company's receipt of invoices, timesheets or other related documents, whichever is later. The amount so billed will be due and payable 30 days after the invoice date. However, if the actual cost is more than five percent (5%) greater than the total amount paid, the customer will only be required to pay five percent (5%) more than the total amount paid, unless the Company can demonstrate that the increased costs were beyond its control and could not be foreseen at the time the estimate for the total amount paid was made.
- E. At the customer's request, the Company shall make available to the customer all invoices, timesheets or related documents that support the cost for providing such service.
- F. Permitted costs shall include any Federal, State or local taxes that are or may be payable by the Company as a result of any tariff or contract for water facilities under which the Customer advances or contributes funds or facilities to the Company.

---

Applies to all WATER service areas  
**PART TWO**  
**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

**CROSS-CONNECTION OR BACKFLOW TARIFF**

**PURPOSE:**

The purpose of this tariff is to protect Litchfield Park Service Company (the "Company") water from the possibility of contamination caused by backflow of contaminants that may be present on the customer's premises by requiring the installation and periodic testing of backflow-prevention assemblies pursuant to the provisions of the Arizona Administrative Code ("A.A.C.") R14-2-405.B.6. and A.A.C. R18-4-215.

**REQUIREMENTS:**

In compliance with the Rules and Regulations of the Arizona Corporation Commission ("Commission") and the Arizona Department of Environmental Quality ("ADEQ"), specifically A.A.C. R14-2-405.B.6 and A.A.C. R18-4-215 relating to backflow prevention:

1. The Company may require a customer to pay for and have installed, and to maintain, test and repair a backflow-prevention assembly if A.A.C. R18-4-215.B or C applies.
2. A backflow-prevention assembly required to be installed by the customer under Paragraph 1 of this tariff shall comply with the requirements set forth in A.A.C. R18-4-215.D and E.
3. Subject to the provisions of A.A.C. R14-2-407 and 410, and in accordance with Paragraphs 1 and 7 of this tariff, the Company may terminate service or deny service to a customer who fails to install a backflow-prevention assembly as required by this tariff.
4. The Company shall give any existing customer who is required to install a backflow-prevention assembly written notice of said requirement. If A.A.C. R14-2-410.B.1.a is **not** applicable, the customer shall be given thirty (30) days from the time such written notice is received in which to comply with this notice. If the customer can show good cause as to why he cannot install the backflow-prevention assembly within thirty (30) days, the Company or Commission Staff may suspend this requirement for a reasonable period of time.

---

Applies to all **WATER** service areas  
**PART TWO**  
**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

5. Testing shall be in conformance with the requirements of A.A.C. R18-4-215.F. The Company ~~may~~ will require the customer to pay to have the backflow-prevention assembly tested as long as the Company does not require an unreasonable number of tests.
6. The customer shall provide the Company with records of installation and testing. For each backflow-prevention assembly, these records shall include:
  - a. assembly identification number and description;
  - b. location;
  - c. date(s) of test(s);
  - d. description of repairs and recommendations for repairs made by tester;
  - e. tester's name and certificate number; and
  - f. tester's field test kit certification documentation.
7. In the event the backflow-prevention assembly does not function properly or fails any test, and an obvious hazard as contemplated under A.A.C. R14-2-410.B.1.a. exists, the Company may terminate service immediately and without notice. The backflow-prevention assembly shall be repaired or replaced by the customer and retested.
8. In the event the backflow-prevention assembly does not function properly or fails any test, or in the event that a customer fails to comply with the testing requirement, and A.A.C. R14-2-410.B.1.a. is **not** applicable, the backflow-prevention assembly shall be repaired or replaced within fourteen (14) days of the initial discovery of the deficiency in the assembly or its function. Failure to remedy the deficiency of dysfunction of the assembly, or failure to retest, shall be grounds for termination of water service in accordance with A.A.C. R14-2-410.

---

Applies to all **WATER** service areas

**PART TWO**

**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

**I. INTERRUPTIBLE SERVICE; COMPANY'S LIABILITY LIMITATIONS**

The Company will supply only such water at such pressures as may be available from time to time as a result of the normal operation of its water system. The Company will maintain a minimum water pressure of 20 p.s.i., at point of connection and will not guarantee a specific gallons per minute flow rate at any public fire hydrants or fire sprinkler service. In the event service is interrupted, irregular or defective, or fails from causes beyond the Company's control or through ordinary negligence of its employees or agents, the Company will not be liable for any injuries or damages arising therefrom.

Applies to all **WATER** service areas

**PART TWO**

**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

**II. RULES AND REGULATIONS**

The Company has adopted the Rules and Regulations established by the Commission as the basis for its operating procedures. A.A.C. R14-2-401 through A.A.C. R14-2-411 will be controlling of Company procedures, unless specific Commission Order(s) provide otherwise.

---

Applies to all **WATER** service areas  
**PART TWO**  
**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

**III. CURTAILMENT PLAN**

ADEQ Public Water System Number: 07-046

Litchfield Park Service Company ("Company") is authorized to curtail water service to all customers, residential and commercial, within its certified area under the following terms and conditions:

**Stage 1 Exists When:**

Company is able to maintain water storage in the system at 100 percent of demand and there are no known problems with its well production or water storage in the system.

Restrictions: Under Stage 1, Company is deemed to be operating normally and no curtailment is necessary.

Notice Requirements: Under Stage 1, no notice is necessary.

**Stage 2 Exists When:**

- a. Company's water storage or well production has been less than 80 percent of demand for at least 48 consecutive hours, and
- b. Company has identified issues such as steadily declining water table, an increased draw-down threatening pump operations, poor water production, or electrical/ mechanical equipment failures, etc., creating a reasonable belief the Company will be unable to meet anticipated water demands in the system.

Restrictions: Under Stage 2, the Company may request the customers to voluntarily employ water conservation measures to reduce water consumption by approximately 50 percent. Outside watering should be limited to essential water, dividing outside watering on some uniform basis (such as even and odd days) and eliminating outside watering on weekends and holidays.

Notice Requirements: Under Stage 2, the Company is required to notify customers by delivering written notice door to door at each service address, or by United States first class mail to the billing address or, at the Company's option both. Such notice shall notify the customers of the general nature of the problem and the need to conserve water.

---

Applies to all **WATER** service areas

**PART TWO**

**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

**Stage 3 Exists When:**

- a. Company's total water storage or well production has been less than 50 percent of demand for at least 24 consecutive hours, and
- b. Company has identified issues such as a steadily declining water table, increased draw down threatening pump operations, poor water production, or electrical/ mechanical equipment failure, etc., creating a reasonable belief the Company will be unable to meet anticipated water demand on a sustained basis.

Restrictions: Under Stage 3, the Company shall request the customer to voluntarily employ water conservation measures to reduce daily consumption by approximately 50 percent. All outside watering should be eliminated, except livestock and indoor water conservation techniques should be employed whenever possible.

Notice Requirements:

1. Company is required to notify customers by delivering written notice to each service address, or by United States first class mail to the billing address or, at the Company's option both. Such notice shall notify the customers of the general nature of the problem and the need to conserve water.
2. Beginning with Stage 3, Company shall post at least two (2) signs showing the curtailment stage. Signs shall be posted at noticeable locations, like at the well sites and at the entrance to the major subdivision served by the Company.
3. Company shall notify the Consumer Services Section of the Utilities Division of the Corporation Commission at least 12 hours prior to entering Stage 3.

Once Stage 3 has been reached, the Company must begin to augment the supply of water by either hauling or through an emergency interconnect with an approved water supply in an attempt to maintain the curtailment at a level no higher than stage three until a permanent solution has been implemented.

---

Applies to all **WATER** service areas

**PART TWO**

**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

**Stage 4 Exists When:**

- a. Company's total water storage or well production has been less than 25 percent of demand for at least 12 consecutive hours, and
- b. Company has identified issues such as a steadily declining water table, increased draw down threatening pump operations, poor water production, or electrical/ mechanical equipment failure, etc., creating a reasonable belief the Company will be unable to meet anticipated water demand on a sustained basis.

Restrictions: Under Stage 4, Company shall inform the customers of a mandatory restriction to employee water conservation measures to reduce daily consumption. Failure to comply will result in customer disconnection. The following uses of water shall be prohibited:

- Irrigation of outdoor lawns, trees, shrubs, or any plant life is prohibited
- Washing of any vehicle is prohibited
- The use of water for dust control or any outdoor cleaning uses is prohibited
- The use of drip or misting systems of any kind is prohibited
- The filling of any swimming pool, spas, fountains or ornamental pools is prohibited
- Restaurant patrons shall be served water only upon request
- Any other water intensive activity is prohibited

Notice Requirements:

1. Company is required to notify customers by delivering written notice to each service address, or by United States first class mail to the billing address or, at the Company's option both. Such notice shall notify the customers of the general nature of the problem and the need to conserve water.
2. Company shall post at least two (2) signs showing curtailment stage. Signs shall be posted at noticeable locations like at the well sites and at the entrance to the major subdivision served by the Company.
3. Company shall notify the Consumer Services Section of the Utilities Division of the Corporation Commission at least 12 hours prior to entering Stage 4.

---

Applies to all **WATER** service areas

**PART TWO**

**STATEMENT OF TERMS AND CONDITIONS FOR WATER SERVICE**

Customers who fail to comply with cessation of the above Restrictions will be given a written notice to end all outdoor use. Failure to comply within two (2) working days of receipt of the notice will result in temporary loss of service until an agreement can be made to end unauthorized use of outdoor water. To restore service, the customer shall be required to pay all authorized reconnection fees. If a customer believes he/she has been disconnected in error, the customer may contact the Commission's Consumer Services Section at 1-800-222-7000 to initiate an investigation.

Once Stage 4 has been reached, the Company must augment the supply of water by hauling or through an emergency interconnect from an approved supply in an attempt to maintain the supply until a permanent solution has been implemented.

Note: If the Company loses all production and has no storage facilities, the Company must rely on emergency hauling or must otherwise provide emergency drinking water for its customers.

Applies to all WASTEWATER service areas

**PART THREE**

**STATEMENT OF CHARGES FOR WASTEWATER SERVICE**

**I. RATES**

Originally in Decision No. 72026, dated December 10, 2010, and again in Decision No. 72682, dated November 17, 2011, the Commission authorized the following rates and charges to become effective December 1, 2011:

**A. Monthly Usage Charge – 100 Percent Phase In (Phase 3)**

<u>Meter Size</u> Inches	<u>Minimum Charge</u> Per Month
Residential – Per Unit / Per Month	\$38.99
Multiple Unit Service – Per Unit / Month	36.19
Small Commercial <sup>1</sup>	65.93
Regular Domestic <sup>2</sup>	36.91
Restaurants, Motels, Grocery, DC	36.91
Wigwam Resort / Room	36.91
Wigwam Resort / Main	1,433.30
Elementary School	974.64
Middle & High School	1,146.64
Community College	1,777.29
Effluent Sales <sup>3</sup>	Market

<sup>1</sup> Small Commercial is a wastewater commercial customer that averages a maximum of 10,000 gallons of water usage per month.

<sup>2</sup> Regular Domestic is a wastewater commercial customer that averages a minimum of 10,000 gallons of water usage per month.

<sup>3</sup> Market Rate – maximum effluent rate shall not exceed \$430 per acre foot based on a potable water rate of \$1.32 per thousand gallons and shall not be less than \$0.17 per thousand gallons.

---

Applies to all **WASTEWATER** service areas  
**PART THREE**

Applies to all WASTEWATER service areas  
**PART THREE**  
**STATEMENT OF CHARGES FOR WASTEWATER SERVICE**

**II. TAXES AND ASSESSMENTS**

In addition to all other rates and charges authorized herein, the Company shall collect from its customers all applicable sales, transaction, privilege, franchise, regulatory or other taxes and assessments as may apply now or in the future, per Rule R14-2-608(D)(5).

---

Applies to all **WASTEWATER** service areas  
**PART THREE**  
**STATEMENT OF CHARGES FOR WASTEWATER SERVICE**

**III. PERMITTED COSTS**

- A. Costs shall be verified by invoice.
- B. For services that are provided by the Company at cost, costs shall include labor, materials, other charges incurred, and overhead. However, prior to any such service being provided, the estimated cost of such service will be provided by the Company to the customer. After review of the cost estimate, the customer will pay the amount of the estimated cost to the Company.
- C. In the event that the actual cost is less than the estimated cost, the Company will refund the excess to the customer within 30 days after completion of the provision of the service or after Company's receipt of invoices, timesheets or other related documents, whichever is later.
- D. In the event the actual cost is more than the estimated cost, the Company will bill the customer for the amount due within 30 days after completion of the invoices, timesheets or other related documents, whichever is later. The amount so billed will be due and payable 30 days after the invoice date.
- E. At the customer's request, the Company shall make available to the customer all invoices, timesheets or related documents that support the cost for providing such service.
- F. Permitted costs shall include any Federal, State or local taxes that are or may be payable by the Company as a result of any tariff or contract for wastewater facilities under which the Customer advances or contributes funds or facilities to the Company.

Applies to all WASTEWATER service areas  
**PART FOUR**

**STATEMENT OF TERMS AND CONDITIONS FOR WASTEWATER SERVICE**

**I. CUSTOMER DISCHARGE TO SYSTEM**

**A. Service Subject to Regulation**

The Company provides wastewater service using treatment and collection facilities that are regulated by numerous county, state and federal Statutes and Regulations. Those Regulations include limitations as to domestic strength wastewater and the type of wastewater that may be discharged into the system by any person directly or indirectly connected to the plant.

**B. Waste Limitations**

The Company has established the permissible limits of concentration as domestic strength wastewater and will limit concentration for various specific substances, materials, waters, or wastes that can be accepted in the sewer system, and to specify those substances, materials, waters, or wastes that are prohibited from entering the sewer system. Each permissible limit so established shall be placed on file in the business office of the Company, with a copy filed with the Commission. No person shall discharge, or cause to be discharged, any new sources of inflow including, but not limited to, storm water, surface water, groundwater, roof runoffs, subsurface drainage, cooling water, or polluted industrial process waters into the sanitary sewer. The Company will require an affidavit from all commercial and industrial customers, and their professional engineer, stating that the wastewater discharged to the system does not exceed domestic strength.

**C. Inspection and Right of Entry**

Every facility that is involved directly or indirectly with the discharge of wastewater to the Treatment Plant may be inspected by the Company as it deems necessary. These facilities shall include but not be limited to sewer; sewage pumping plants; all processes; devices and connection sewer; and all similar sewerage facilities. Inspections may be made to determine that such facilities are maintained and operated properly and are adequate to meet the provisions of these rules. Inspections may include the collection of samples. Authorized personnel of the Company shall be provided immediate access to all of the above facilities or to other facilities directly or indirectly connected to the Treatment Plant at all reasonable times including those occasioned by emergency conditions. Any permanent or temporary obstruction to easy access to the user's facility to be inspected shall promptly be removed by the facility user or owner at

---

Applies to all **WASTEWATER** service areas

**PART FOUR**

**STATEMENT OF TERMS AND CONDITIONS FOR WASTEWATER SERVICE**

the written or verbal request of the Company and shall not be replaced. No person shall interfere with, delay, resist or refuse entrance to an authorized Company representative attempting to inspect any facility involved directly or indirectly with a discharge of wastewater to the Treatment Plant. Adequate identification shall be provided by the Company for all inspectors and other authorized personnel and these persons shall identify themselves when entering any property for inspection purposes or when inspecting the work of any contractor.

All transient motor homes, travel trailers and other units containing holding tanks must arrive at the Company's service area in an empty condition. Inspection will be required of said units prior to their being allowed to hookup to the wastewater system.

**D. Termination of Water Service for Violation of Wastewater Rules and Regulations**

The Company is authorized to discontinue water service to any person connected to both its water and sewer systems who violates the Company's wastewater terms and conditions as set forth in this PART FOUR or in any way creates a public health hazard or the likelihood of such a public health hazard. This termination authority does not apply to non-payment for water or wastewater services.

Applies to all **WASTEWATER** service areas

**PART FOUR**

**STATEMENT OF TERMS AND CONDITIONS FOR WASTEWATER SERVICE**

**II. RULES AND REGULATIONS**

The Company has adopted the Rules and Regulations established by the Commission as the basis for its operating procedures. A.A.C. R14-2-601 through A.A.C. R14-2-609 will be controlling of Company procedures, unless specifically approved tariffs or Commission Order(s) provide otherwise.

-

---

Applies to all **WATER** and **WASTEWATER** service areas  
**PART FIVE**  
**ALTERNATE RATES FOR WATER AND WASTEWATER (ARWW)**  
**DOMESTIC SERVICE – SINGLE FAMILY ACCOMMODATION**

**APPLICABILITY**

Applicable to residential water and wastewater service for domestic use rendered to low-income households where the customer meets all the program qualifications and special conditions of this rate schedule.

**TERRITORY**

Within all customer service areas served by Litchfield Park Service Company (“LPSCO”).

**RATES**

Fifteen percent (15%) discount applied to the regular filed tariff.

**PROGRAM QUALIFICATIONS**

1. The LPSCO bill must be in your name and the address must be your primary residence or you must be a tenant receiving water service by a sub-metered system.
2. You may not be claimed as a dependent on another person’s tax return.
3. You must reapply each time you move residences.
4. You must renew your application once every two (2) years, or sooner, if requested.
5. You must recertify each year by submitting a declaration attesting to your continuing eligibility, and provide one of the following items as proof of eligibility: 1) copy of tax return from prior year; or 2) copy of W2 form from prior year; or 3) copy of welfare / food stamp cards.
6. You must notify LPSCO within thirty (30) days if you become ineligible for ARWW.
7. Your total gross annual income of all persons living in your household cannot exceed the income levels below:

Applies to all **WATER** and **WASTEWATER** service areas  
**PART FIVE**  
**ALTERNATE RATES FOR WATER AND WASTEWATER (ARWW)**  
**DOMESTIC SERVICE – SINGLE FAMILY ACCOMMODATION**

**Effective December 1, 2010**

<u>No. of Person in Household</u>	<u>Total Gross Annual Income</u>
1	\$16,245
2	\$21,855
3	\$27,465
4	\$33,075
5	\$38,685
6	\$44,295

For each additional person residing in the household, add \$5,610

For the purpose of the program the “gross household income” means all money and non cash benefits, available for living expenses, from all sources, both taxable and non taxable, before deductions for all people who live in your home. This includes, but is not limited to:

Wages or salaries	Social Security, SSI, SSP	Rental or royalty income
Interest or dividends from:	Scholarships, grants, or other aid	Profit from self-employment
Savings account, stocks or bonds	used for living expenses	(IRS form Schedule C, Line 29)
Unemployment benefits	Disability payments	Worker’s Compensation
TANF (AFDC)	Food Stamps	Child Support
Pensions	Insurance settlements	Spousal Support
Gifts		

---

Applies to all **WATER** and **WASTEWATER** service areas  
**PART FIVE**  
**ALTERNATE RATES FOR WATER AND WASTEWATER (ARWW)**  
**DOMESTIC SERVICE – SINGLE FAMILY ACCOMMODATION**

SPECIAL CONDITIONS

1. **Application:** An application on a form authorized by the Commission is required for each request for service under this schedule. A customer must reapply every two (2) years.
2. **Recertification:** A customer enrolled in the ARWW program must, each year, recertify by submitting a declaration attesting to continuing eligibility, and provide one of the following items as proof of eligibility: 1) copy of tax return from prior year; or 2) copy of W2 form from prior year; or 3) copy of welfare / food stamp cards.
3. **Commencement of Rate:** Eligible customers whose applications have been approved shall be billed on this schedule commencing with the next regularly scheduled billing period that follows receipt of application by LPSCO.
4. **Verification:** Information provided by the applicant is subject to verification by LPSCO. Refusal or failure of a customer to provide documentation of eligibility acceptable to LPSCO, upon request by LPSCO, shall result in removal from this rate schedule.
5. **Notice from Customer:** It is the customer's responsibility to notify LPSCO if there is a change of eligibility status.
6. **Rebilling:** Customers may be re-billed retroactively for periods of ineligibility under the applicable rate schedule.
7. **Master-metered:** A reduction will be calculated in the bill of master-metered customers, who have sub-metered tenants that meet the income eligibility criteria, so an equivalent discount (15%) can be passed through to eligible customer(s).
8. **Participation Cap:** The ARWW program is limited to 5,000 water division customers and 5,000 wastewater division customers. Applications will be reviewed and approved on a first come, first served basis. Applicants will be placed on a waiting list if the participation cap has been met.

**Application for  
Alternate Rates for Water and Wastewater (ARWW)**

To qualify for Liberty Water ARWW please check (✓) all that apply:

- I am a Liberty Water residential customer and the Liberty Water account is in my name.
- I am a sub-metered tenant within the Liberty Water service area.
- My household income is at or below the income level in the listing below.

Household Size	Total Gross Annual Income from All Sources
1	\$16,245
2	\$21,855
3	\$27,465
4	\$33,075
5	\$38,685
6	\$44,295

For each additional person residing in the household, add \$5,610.

The definition of "gross household income" (before taxes) is all money and non cash benefits available for living expenses from all sources, both taxable and non taxable, before deductions, including expenses, for all people who live in your home. **This includes, but is not limited to the following (please check (✓) all that apply):**

- Wages, salaries or profit from self-employment
- Disability and/or Workers' Compensation payments
- Insurance and/or legal settlements
- Pensions
- Spousal and/or child support
- Scholarships, grants, or other aid used for living
- Interest/dividends from: savings, stocks, bonds, or retirement accounts
- Social Security, SSI or SSP
- Food Stamps
- TANF (AFDC)
- Veterans Affairs benefits
- Unemployment benefits
- Rental and/or royalty income
- Cash, gifts and/or other income

### Liberty Water Alternate Rates for Water and Wastewater (ARWW)

**Applicability**

Applicable to residential water and wastewater service for domestic use rendered to low-income households where the customer meets all the Program Qualifications and Special Conditions of this rate schedule.

**Territory**

Within all customer service areas served by Litchfield Park Service Company dba Liberty Water.

**Discount**

Fifteen percent (15%) discount applied to the regular filed tariff. The discount will be applied to the customer's total bill before any adjustments and application of any other taxes, credit, penalties or fees.

**Program Qualifications**

- The Liberty Water account must be in your name and the address must be your primary residence in our service area or you must be a tenant receiving water service by a sub-metered system.
- You may not be claimed as a dependent on another person's tax return.
- You must reapply each time you move residences.
- You must renew your application once every two (2) years or sooner if requested.
- You must recertify each year by submitting a declaration attesting to your continuing eligibility, and provide one of the following items as proof of eligibility: 1) copy of tax return from prior year; or 2) copy of W2 form from prior year; or 3) copy of welfare/food stamp cards.
- You must notify Liberty Water within thirty (30) days if you become ineligible for ARWW.
- Your total gross annual income of all persons living in your household cannot exceed the income levels provided on the application.

**Special Conditions**

- You must fill out and sign the ARWW Application completely. Incomplete information will delay your discount. You must reapply every two (2) years.
- You must recertify your enrollment in the ARWW annually by submitting a Declaration of Eligibility and providing one of the following items as proof of eligibility: 1) copy of tax return from prior year; or 2) copy of W2 form from prior year; or 3) copy of welfare/food stamp cards.
- Customers shall be billed on this schedule commencing with the next regularly scheduled billing period that follows the receipt and approval of the application by Liberty Water.
- Documentation of your gross annual income must be provided to Liberty Water for verification of eligibility for ARWW. Refusal or failure to provide documentation of acceptable eligibility to Liberty Water shall result in removal from this rate schedule.
- It is the customer's responsibility to notify Liberty Water if there is a change in eligibility status.
- You may be re-billed for any periods of ineligibility under the applicable rate schedule.
- Master-metered customers who have sub-metered tenants will receive a reduction in the billing. Sub-metered tenants must qualify and meet the income eligibility criteria so an equivalent discount (15%) can be passed through to eligible customer(s).
- The ARWW program is limited to 5,000 water division customers and 5,000 wastewater division customers.

**How to Submit Completed ARWW Application and/or Declaration of Eligibility**

Mail, Fax or Email your ARWW Application and Declaration of Eligibility to:

**PART SIX**  
**HOOK-UP FEE TARIFF**

**WATER HOOK-UP FEE**

**I. Purpose and Applicability**

The purpose of the off-site hook-up fees payable to Litchfield Park Service Company - Water Division (the "Company") pursuant to this tariff is to equitably apportion the costs of constructing additional off-site facilities necessary to provide water production, delivery, storage and pressure among all new service connections. These charges are applicable to all new service connections undertaken via Main Extension Agreements or requests for service not requiring a Main Extension Agreement entered into after the effective date of this tariff. The charges are one-time charges and are payable as a condition to Company's establishment of service, as more particularly provided below.

**II. Definitions**

Unless the context otherwise requires, the definitions set forth in R-14-2-401 of the Arizona Corporation Commission's ("Commission") rules and regulations governing water utilities shall apply in interpreting this tariff schedule.

"Applicant" means any party entering into an agreement with Company for the installation of water facilities to serve new service connections, and may include Developers and/or Builders of new residential subdivisions and/or commercial and industrial properties.

"Company" means Litchfield Park Service Company – Water Division.

"Main Extension Agreement" means any agreement whereby an Applicant, Developer and/or Builder agrees to advance the costs of the installation of water facilities necessary to the Company to serve new service connections within a development, or installs such water facilities necessary to serve new service connections and transfers ownership of such water facilities to the Company, which agreement shall require the approval of the Commission pursuant to A.A.C. R-14-2-406, and shall have the same meaning as "Water Facilities Agreement" or "Line Extension Agreement."

"Off-site Facilities" means wells, storage tanks and related appurtenances necessary for proper operation, including engineering and design costs. Off-site facilities may also include booster pumps, pressure tanks, transmission mains and related appurtenances necessary for proper operation if these facilities are not for the exclusive use of the applicant and will benefit the entire water system.

"Service Connection" means and includes all service connections for single-family residential, commercial, industrial or other uses, regardless of meter size.

**III. Water Hook-up Fee**

For each new service connection, the Company shall collect an off-site hook-up fee derived from the following table:

OFF-SITE WATER HOOK-UP FEE TABLE		
Meter Size	Size Factor	Total Fee(a)
5/8" x 3/4"	1	\$1,800
3/4"	1.5	\$2,700
1"	2.5	\$4,500
1-1/2"	5	\$9,000
2"	8	\$14,400
3"	16	\$28,800
4"	25	\$45,000
6" or larger	50	\$90,000
<u>8"</u>	<u>X-80</u>	<u>\$144,000</u>
<u>10"</u>	<u>X-115</u>	<u>\$310,500</u>
<u>12"</u>	<u>X-215</u>	<u>\$967,500</u>
<u>Larger than 12" Applicable Rate With Corresponding Size Factor</u>		

(A) For "Active Adult" communities with demonstrated age-restricted zoning and/or CCRs providing for age-restricted living, the Total Fee shall be Two-Thirds (2/3) of the Total Fee shown above, based on an ERU factor of 190 gallons per day, domestic only

**IV. Terms and Conditions**

(A) Assessment of One Time Off-Site Hook-up Fee: The off-site hook-up fee may be assessed only once per parcel, service connection, or lot within a subdivision (similar to meter and service line installation charge) except non-residential use.

(B) Use of Off-Site Hook-up Fee: Off-site hook-up fees may only be used to pay for capital items of Off-site Facilities, or for repayment of loans obtained to fund the cost of installation of off-site facilities. Off-site hook-up fees shall not be used to cover repairs, maintenance, or operational costs. The Company shall record amounts collected under the tariff as CIAC; however, such amounts shall not be deducted from rate base until such amounts have been expended for plant.

(C) Time of Payment:

1) For those requiring a Main Extension Agreement: In the event that the person or entity that will be constructing improvements ("Applicant", "Developer" or "Builder") is otherwise required to enter into a Main Extension Agreement, whereby the Applicant, Developer or Builder agrees to advance the costs of installing mains, valves, fittings, hydrants and other on-site improvements in order to extend service in accordance with R-14-2-406(B), payment of the Hook-Up Fees required hereunder shall be made by the Applicant, Developer or Builder ~~no later than within 15~~

~~calendar days after receipt of notification from the Company that the Utilities Division of the Arizona Corporation Commission has approved the Main Extension Agreement in accordance with R-14-2-406(M) at the time of execution of the agreement, at the time of execution of the agreement, but no later than 15 calendar days after receipt of notification from the Company that the Utilities Division of the Arizona Corporation Commission has approved the Main Extension Agreement in accordance with R-14-2-406(M). In no event will service be established without full payment of the Hook-Up Fees (see E. below).~~

For those connecting to an existing main: In the event that the Applicant, Developer or Builder for service is not required to enter into a Main Extension Agreement, the Hook-Up Fee charges hereunder shall be due and payable at the time the meter and service line installation fee is due and payable.

(D) Off-Site Facilities Construction By Developer: Company and Applicant, Developer, or Builder may agree to construction of off-site facilities necessary to serve a particular development by Applicant, Developer or Builder, which facilities are then conveyed to Company. In that event, Company shall credit the total cost of such off-site facilities as an offset to off-site hook-up fees due under this Tariff. If the total cost of the off-site facilities constructed by Applicant, Developer or Builder and conveyed to Company is less than the applicable off-site hook-up fees under this Tariff, Applicant, Developer or Builder shall pay the remaining amount of off-site hook-up fees owed hereunder. If the total cost of the off-site facilities contributed by Applicant, Developer or Builder and conveyed to Company is more than the applicable off-site hook-up fees under this Tariff, Applicant, Developer or Builder shall be refunded the difference upon acceptance of the off-site facilities by the Company.

(E) Failure to Pay Charges; Delinquent Payments: The Company will not be obligated to make an advance commitment to provide or actually provide water service to any Developer, Builder or other applicant for service in the event that the Developer, Builder or other applicant for service has not paid in full all charges hereunder. Under no circumstances will the Company set a meter or otherwise allow service to be established if the entire amount of any payment due hereunder has not been paid.

(F) Large Subdivision/Development Projects: In the event that the Applicant, Developer or Builder is engaged in the development of a residential subdivision and/or development containing more than 150 lots, the Company may, in its reasonable discretion, agree to payment of off-site hook-up fees in installments. Such installments may be based on the residential subdivision and/or development's phasing, and should attempt to equitably apportion the payment of charges hereunder based on the Applicant's, Developer's or Builder's construction schedule and water service requirements. In the alternative, the Applicant, Developer, or Builder shall post an irrevocable letter of credit in favor of the Company in a commercially reasonable form, which may be drawn by the Company consistent with the actual or planned construction and hook up schedule for the subdivision and/or development.

(G) Off-Site Hook-Up Fees Non-refundable: The amounts collected by the Company as Hook-Up Fees pursuant to the off-site hook-up fee tariff shall be non-refundable contributions in aid of construction.

---

(H) Use of Off-Site Hook-Up Fees Received: All funds collected by the Company as off-site hook-up fees shall be deposited into a separate interest bearing trust account and used solely for the purposes of paying for the costs of installation of off-site facilities, including repayment of loans obtained for the installation of off-site facilities that will benefit the entire water system.

(I) Off-Site Hook-up Fee in Addition to On-site Facilities: The off-site hook-up fee shall be in addition to any costs associated with the construction of on-site facilities under a Main Extension Agreement.

(J) Disposition of Excess Funds: After all necessary and desirable off-site facilities are constructed utilizing funds collected pursuant to the off-site hook-up fees, or if the off-site hook-up fee has been terminated by order of the Arizona Corporation Commission, any funds remaining in the trust shall be refunded. The manner of the refund shall be determined by the Commission at the time a refund becomes necessary.

(K) Fire Flow Requirements: In the event the applicant for service has fire flow requirements that require additional facilities beyond those facilities whose costs were included in the off-site hook-up fee, and which are contemplated to be constructed using the proceeds of the off-site hook-up Fee, the Company may require the applicant to install such additional facilities as are required to meet those additional fire flow requirements, as a non-refundable contribution, in addition to the off-site hook-up fee.

(L) Status Reporting Requirements to the Commission: The Company shall submit a calendar year Off-Site Hook-Up Fee status report each January to Docket Control for the prior twelve (12) month period, beginning January 2012, until the hook-up fee tariff is no longer in effect. This status report shall contain a list of all customers that have paid the hook-up fee tariff, the amount each has paid, the physical location/address of the property in respect of which such fee was paid, the amount of money spent from the account, the amount of interest earned on the funds within the tariff account, and a list of all facilities that have been installed with the tariff funds during the 12 month period.

---

**PART SIX**  
**HOOK-UP FEE TARIFF**

**WASTEWATER HOOK-UP FEE**

**I. Purpose and Applicability**

The purpose of the off-site facilities hook-up fees payable to Litchfield Park Service Company – Wastewater Division (the “Company”) pursuant to this tariff is to equitably apportion the costs of constructing additional off-site facilities to provide wastewater treatment and disposal facilities among all new service laterals. These charges are applicable to all new service laterals undertaken via Collection Main Extension Agreements, or requests for service not requiring a Collection Main Extension Agreement, entered into after the effective date of this tariff. The charges are one-time charges and are payable as a condition to Company’s establishment of service, as more particularly provided below.

**II. Definitions**

Unless the context otherwise requires, the definitions set forth in R-14-2-601 of the Arizona Corporation Commission’s (“Commission”) rules and regulations governing sewer utilities shall apply interpreting this tariff schedule.

“Applicant” means any party entering into an agreement with Company for the installation of wastewater facilities to serve new service laterals, and may include Developers and/or Builders of new residential subdivisions, and industrial or commercial properties.

“Company” means Litchfield Park Service Company – Wastewater Division.

“Collection Main Extension Agreement” means an agreement whereby an Applicant, Developer and/or Builder agrees to advance the costs of the installation of wastewater facilities necessary to serve new service laterals, or install wastewater facilities to serve new service laterals and transfer ownership of such wastewater facilities to the Company, which agreement does not require the approval of the Commission pursuant to A.A.C. R-14-2-606, and shall have the same meaning as “Wastewater Facilities Agreement.”

“Off-site Facilities” means the wastewater treatment plant, sludge disposal facilities, effluent disposal facilities and related appurtenances necessary for proper operation, including engineering and design costs. Offsite facilities may also include lift stations, force mains, transportation mains and related appurtenances necessary for proper operation if these facilities are not for the exclusive use of the applicant and benefit the entire wastewater system.

“Service Lateral” means and includes all service laterals for single-family residential, commercial, industrial or other uses.

---

### III. Wastewater Hook-up Fee

For each new residential service lateral, the Company shall collect a Hook-Up Fee of \$1,800 based on the Equivalent Residential Unit ("ERU") of 320 gallons per day. Commercial and industrial applicants shall pay based on the total ERUs of their development calculated by dividing the estimated total daily wastewater capacity usage needed for service using standard engineering standards and criteria by the ERU factor of 320 gallons per day. For "Active Adult" communities with demonstrated age-restricted zoning and/or CCRs providing for age-restricted living, the Hook-Up Fee shall be \$1,070, based on an ERU factor of 190 gallons per day.

### IV. Terms and Conditions

(A) Assessment of One Time Off-Site Facilities Hook-up Fee: The off-site facilities hook-up fee may be assessed only once per parcel, service lateral, or lot within a subdivision (similar to a service lateral installation charge).

(B) Use of Off-Site Facilities Hook-up Fee: Off-site facilities hook-up fees may only be used to pay for capital items of Off-site Facilities, or for repayment of loans obtained to fund the cost of installation of off-site facilities. Off-site hook-up fees shall not be used to cover repairs, maintenance, or operational costs. The Company shall record amounts collected under the tariff as CIAC; however, such amounts shall not be deducted from rate base until such amounts have been expended for plant.

(C) Time of Payment:

(1) In the event that the person or entity that will be constructing improvements ("Applicant", "Developer" or "Builder") is otherwise required to enter into a Collection Main Extension Agreement, payment of the fees required hereunder shall be made by the Applicant, Developer or Builder at time of execution of the Main Extension Agreement. ~~within 15 days of execution of a Main Extension Agreement at the time of execution of the agreement.~~

(2) In the event that the Applicant, Developer or Builder for service is not required to enter into a Collection Main Extension Agreement, the Hook-Up Fee charges hereunder shall be due and payable at the time wastewater service is requested for the property.

(D) Off-Site Facilities Construction by Developer: Company and Applicant, Developer, or Builder may agree to construction of off-site facilities necessary to serve a particular development by Applicant, Developer or Builder, which facilities are then conveyed to Company. In that event, Company shall credit the total cost of such off-site facilities as an offset to off-site hook-up fees due under this Tariff. If the total cost of the off-site facilities constructed by Applicant, Developer or Builder and conveyed to Company is less than the applicable off-site hook-up fees under this Tariff, Applicant, Developer or Builder shall pay the remaining amount of off-site hook-up fees owed hereunder. If the total cost of the off-site facilities contributed by Applicant, Developer or Builder and conveyed to Company is more than the applicable off-site hook-up fees under this Tariff,

---

Developer or Builder shall be refunded the difference upon acceptance of the off-site facilities by the Company.

(E) Failure to Pay Charges; Delinquent Payments: The Company will not be obligated to make an advance commitment to provide or actually provide wastewater service to any Developer, Builder or other applicant for service in the event that the Developer, Builder or other applicant for service has not paid in full all charges hereunder. Under no circumstances will the Company connect service or otherwise allow service to be established if the entire amount of any payment has not been paid.

(F) Large Subdivision and/or Development Projects: In the event that the Applicant, Developer or Builder is engaged in the development of a residential subdivision and/or development containing more than 150 lots, the Company may, in its reasonable discretion, agree to payment of off-site hook-up fees in installments. Such installments may be based on the residential subdivision and/or development's phasing, and should attempt to equitably apportion the payment of charges hereunder based on the Applicant's, Developer's or Builder's construction schedule and water service requirements. In the alternative, the Applicant, Developer, or Builder shall post an irrevocable letter of credit in favor of the Company in a commercially reasonable form, which may be drawn by the Company consistent with the actual or planned construction and hook up schedule for the subdivision and/or development.

(G) Off-Site Hook-Up Fees Non-refundable: The amounts collected by the Company pursuant to the off-site facilities hook-up fee tariff shall be non-refundable contributions in aid of construction.

(H) Use of Off-Site Hook-Up Fees Received: All funds collected by the Company as off-site facilities hook-up fees shall be deposited into a separate account and bear interest and shall be used solely for the purposes of paying for the costs of installation of off-site facilities, including repayment of loans obtained for the installation of off-site facilities.

(I) Off-Site Facilities Hook-up Fee in Addition to On-site Facilities: The off-site facilities hook-up fee shall be in addition to any costs associated with the construction of on-site facilities under a Collection Main Extension Agreement.

(J) Disposition of Excess Funds: After all necessary and desirable off-site facilities are constructed utilizing funds collected pursuant to the off-site facilities hook-up fees, or if the off-site facilities hook-up fee has been terminated by order of the Arizona Corporation Commission, any funds remaining in the trust shall be refunded. The manner of the refund shall be determined by the Commission at the time a refund becomes necessary.

(K) Status Reporting Requirements to the Commission: The Company shall submit a calendar year Off-Site Facilities Hook-Up Fee status report each January to Docket Control for the prior twelve (12) month period, beginning January 2012, until the hook-up fee tariff is no longer in effect. This status report shall contain a list of all customers that have paid the hook-up fee tariff, the amount each has paid, the physical location/address of the property in respect of which such fee was paid, the amount of money spent from the account, the amount of interest earned on the funds within the tariff account, and an itemization of all facilities that have been installed using the tariff funds during the 12 month period.
