Good Morning ...

Here are a couple articles that should be of interest to you.
You've probably already seen them. This just serves to let
you know that 'the public' sees/reads them also.

Forgive my errant printer. Their sources are at the tops of
the pages.

Major US Utility Firm Blasts Smart Meters As “Irrational” And “Security Risk”

Activist Post

Halt MA Smart Meters, Massachusetts' largest electric utility NSTAR has submitted scathing comments to the Department of Public Utilities (DPU) regarding its customer - there is no legal mandate for individual utility customers to accept “smart” meters on private property anywhere in the US or abroad that we are aware of - that

NSTAR states in its official submission to the DPU:

-
-
-
- “Smart meters introduce a brand new portal into (our) information systems, significantly increasing the cyber-security risk.”
- “mandated implementation of (smart meters) is *not* a prerogative within the [DPU]’s discretion”
- links them to the ‘grid’ in a way that they perceive as an invasion of their privacy and/ or detrimental to their health”

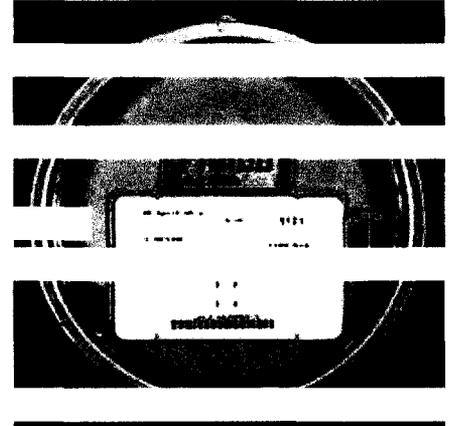

It is worth noting how far the “smart grid” has fallen in terms of public acceptance that now a major US utility has courageously come out even as with the smart grid industry- continue to blindly push “smart” meter programs that have shown themselves to be a waste of public funds, a waste of energy, and a threat to our health, safety and privacy.

In California, the Public Utilities Commission was responsible for pushing the smart grid on initially reluctant investor owned utilities. While companies like GE, Landis & Gyr, and Silver Spring Networks continue to profit handsomely from the smart meter gravy train, it’s clear that this train is stalling on an uphill grade without brakes, and we know how that story ends.....

For more information, see Halt MA Smart Meters Newsletter

Utilities Desperate to Quash Dissent, Shut Off Activist Leader's Electricity

Northeast Utilities admitting that smart meters are "irrational", we're seeing the wheels of reason and logic further come off the centralized energy cart(ell).

operation) attempting to stem the rising tide of awareness of the massive rights violations associated with their 'smart' meter deployments, Plumas Sierra Rural Electric Cooperative (PSREC) actually disconnected the electricity from the home of Joshua Hart, a leader in the movement and director of StopSmartMeters.org.

, so-called 'smart' meter deployments are beleaguered on many levels, extortive "opt-out" practices/fees, home and appliance hackability, health symptoms (from pulsed microwave radiation and high-frequency voltage transients), and a rather long list of home fires.

have a 'smart' meter installed, preferring to not to have his living quarters be surveilled, irradiated or easily hackable. And like many, he is *not* contributing to his utility's Punitive Opt-Out Fund for the insolence of exercising constitutional and human right. (There are many ways to retain your right and not pay a fee or penalty for doing so — we have written about one such method . Under no circumstances are you obligated to pay a fee to keep your analog meter, though writing a well-written notice via registered mail is often required.)

Joshua Hart said on his : "This is the first disconnect by PSREC for failure to pay 'opt out' fees. No one in PG&E/ SCE/ SDG&E areas of California have been disconnected solely for refusal to pay 'opt out' fees, and thousands have been ignoring toothless disconnect warnings and deducting the fees from their bill every month. Why are utilities going to such lengths to silence critics of their smart meter policies?"

So-called 'smart' meters are not UL approved and *have never been safety-tested*. But according to grid engineering firms such as Raab Associates they *are* part of a technology roadmap which includes . What's perhaps even more troubling is the connection between 'smart' meters and military R&D funding.

Thank goodness that huge numbers of people are realizing that, yes, *would actually do deploy such technology upon their own people*. Nipping the cognitive dissonance squarely in the bud is the starting point for things to change for the better.

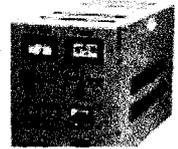

Of government/corporatist/utility desire to maintain domination over their awakening customers, when pondering the latest PR stunts, the word "desperation" doth cometh to mind.

fighting with his conscience, you have to wonder *how much he got paid off to disconnect, photograph and stalk Joshua Hart and his family*. In an demonstration of doublespeak-cronyism, Marshall actually accuses the individual whose electricity he illegally disconnected of being the bully. See for yourself:
