Hello,
We write to you to ask that you stop the installation of smart meters in the City of Sedona. The studies of these meters on the health and welfare of the community has not been completed and therefore the installations should not proceed. A person should not have to forego their health to have the electricity which they pay dearly for and then be asked to pay any additional fees.

The installation should be stopped. There is enough information available at this point that leaves the health issue in question. There is much at stake and many in opposition. Please do not let APS move forward with these installations. At the least, do not allow them to charge those who want to opt-out. Thank you,

Carol and John Rizzi
