TARIFF FORMAT

A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the ACC. For example, the 4th revised Sheet 14 cancels the third revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the ACC follows in their tariff approval process, the most current sheet number on file with the Commission is not always the tariff page in effect. Consult the Check Sheet for the sheet currently in effect.

C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.
- 2.1.1.A.1.(a).I.(i).
- 2.1.1.A.1.(a).I.(i).(1).

D. Check Sheets - When a tariff filing is made with the ACC, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the ACC.

SECTION 3 - DESCRIPTION OF SERVICE**3.1 Timing of Calls****3.1.1 Chargeable Time**

The Customer's long distance usage charge is based on the actual usage of Stratus Networks, Inc.'s network. Usage begins when the called party picks up the receiver. When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. When software answer supervision is employed, up to 60 seconds of ringing is allowed before it is billed as usage of the network. A call is terminated when the calling party hangs up thereby releasing the network connection. If the called party hangs up but the calling party does not, chargeable time ends when the network connection is released or by automatic timing equipment in the network. There will be no charges for incomplete calls.

3.1.2 Billing Increments

The minimum call duration and initial billing period is 60 seconds for all intrastate direct dialed calls unless otherwise specified by this tariff. Any additional period is measured and rounded to the next higher 60 second increment unless otherwise specified by this tariff.

3. DESCRIPTION OF SERVICE (continued)

3.2 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communications Research in their NPA-NXX V & H Coordinates Tape and Bell's NECA Tariff No. 4

FORMULA:
$$2 \sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

EXAMPLE: Distance between Miami and New York City -

<u>VH</u>	
Miami	8,351 529
New York	<u>4,997</u> <u>1,406</u>
Difference	3,354 -879

Square and add: 11,249,316 + 772,641 = 12,021,96

Divide by 10 and round: 12,021,597 / 10 = 1,202,195.70
= 1,202,196

Take square root and round: 1,202,196 = 1,096.4
= 1,097 miles
