ARIZONA CORPORATION COMMISSION
DOCKET CONTROL

DOCKETED BY

Dear Commissioners,

The following video interview of Dr. Barry Trower by Dr. Henning Witte, was found on the **International Center Against Abuse of Covert Technologies** (ICAAC) website: www.icaact.org.¹

The issues discussed are extremely pertinent to **our biological safety issues** on this APS APPLICATION docket. It is best for you to view the interview as I have only transcribed segments I consider particularly pertinent. The insertion of headings and bold sections in the document are my own.

Dangerous Radiation Everywhere

Former MI5 Agent Dr. Barrie Trower

Interviewed by Mind Control expert Dr. Henning Witte,²

Former MI5 agent Barrie Trower is a physicist and microwave expert who worked for British intelligence. He is aware of secret knowledge about the huge danger of electro-smog, scalar waves and microwave radiation in our cell phone and Wi-Fi technology. **He reveals how intelligence agencies misuse microwaves to influence people's bodies, even the brain. They can induce pain everywhere in the body and illness, even heart attacks and every form of cancer. They can control your mind by reading your thoughts, changing them, spying on your memory, change or erase it. They can remote control a human totally without the targeted individual knowing about it. Cell phone and wireless Internet radiation**

² <http://vimeo.com/50208624>

damages not only us, our children and nature but even future generations in a so horrible way, that in three generations a lot of women will have lost their fertility.

Stealth Weapons

Because microwaves during the Cold War were used, as they are today, as stealth weapons, they are perfect weapons because people do not know they are being targeted. Any government can, and has, targeted individuals, groups of people, whole streets of people. You can target people, low level, and you can cause serious neurological damage, serious physical damage, cancers, easily change their mind. All countries have and are experimenting. Hundreds of thousands of people have been affected over the last 30 to 40 years.

Microwaves React with Water

(31:46)

Trower: You know as a scientist, microwaves react with water, and we are made of water, our brains are made of water. **So any microwaves going in the body must react with the waters.** When you react with the water, the water goes around the cells, **you change the surface of the cell. When you change the surface of the cell, you change the signal transduction and the cell cycle timing. And it goes on to the DNA and you can change everything by microwaves.**

Witte: And therefore people get cancer problems when they live close to broadcasting devices on roofs and houses and so on. In your speech yesterday you came with compelling evidence that it is connected to that.

Trower: "There are 14 epidemiological studies, one even carried out by the industry itself, and they said this causes cancer." There are 5 High Court Cases that prove this: 3 in Austria and 1 in Italy; and 19 other legal judgments, where proof wasn't required scientifically: where a magistrate, court judge or a mayor, listened to the evidence and said, "*Turn it off, take it down!*"

Witte: It was also extremely disgusting for me to hear yesterday, that especially women are targeted. They suffer more because of their follicles are deformed.

Trower: They do know this because experiments were carried out and I've read the papers. **Experiments were carried out in the Cold War on pregnant women, with different levels of microwave radiation, to see how many genetically deformed children could be born (and) how many miscarriages.** I know the miscarriages were: **57.7% of women had miscarriages from low level radiation.**

And so, when they started putting Wi-Fi in schools and you have got little girls in schools, with all of the eggs in ovaries that are going to be the future generation... I contacted the authorities and said, "You can't do this because you are going to produce genetically deformed children and miscarriages. They totally ignored me, and they are still putting Wi-Fi in schools.

The evidence is there, that the girls when they get married and have children, there is a very high risk of a genetically deformed girl. **The DNA in the eggs, in the follicles, they suffer ten times more than all of the rest of the DNA in the body. So even if they use a safety level, it is a factor of 10 out anyway. It is irreparable: it can never be repaired – that part of the mitochondrial DNA. Which means, that if you have a girl, with DNA damage her child will get the damage and her child, and her child, all the way down the female line until there are no more females left in that line.**

Witte: Horrible.

Trower: And this is what they are doing. And they KNOW, with Wi-Fi in schools, a girl can be irradiating her ovaries from the age of 5 to 24, if she goes on to University: 19 years she will be sitting in front of Wi-Fi and its transmitting straight through the ovaries, if you look at how they sit.

Witte: How about boys? Their sperm?"

Trower: Boys are slightly different, because girls are born with their eggs, and they can be irradiated from birth! Boys will not

produce sperms until puberty. But in saying that, there are several papers that now show, that with Wi-Fi the sperms are also damaged. You have sperms and eggs. So of course, if you have damaged sperms and a damaged egg: its **horrific**.

Witte: Yes.

Trower: They **know** this! The only reason the are putting Wi-Fi in schools, is it is cheaper to use Wi-Fi than get workmen to drill holes to put fiber optic cables or phone cables through (walls). It is cheaper now to save maybe a million pounds, to have genetically damaged children in 35 years time.

Witte: I also herd more than ten years ago, "Don't give a cell phone to children."

Trower: That's true, yes.

Witte: Why is that especially dangerous?

Trower: Children are growing. Their nervous system is growing. Their bones are growing. Their immune system is growing. Everything in a child is growing! If you put microwaves though growing parts of the body you can affect growth. You can deform the bones and alter the chemistry of the bone marrow: that means the immune system. You can affect the way the brain works. If you change it, it is going to be changed for life, unless it can repair itself. So what you are doing is you are effectively changing the growth of the child.

A child isn't fully grown until they are 28! The last thing to form is the clavicle, the shoulder blade. So really, if you want to be strict there, a child should not be exposed to microwaves until they are 28. (43:13)

Microwave Mind Control

Witte: I have heard that in every cell phone signal there is a kind of noise. They can modulate that noise, and put in information to influence your mind or also get back information. (46.55)

Trower: Oh yes, they are using that in shops! A shop was taken to court in the United States with this system and using **auditory hallucination** or **synthetic hallucination**. A shop was targeting people coming in. The inventor was told it would only be used to stop people shoplifting, by saying, "don't steal that!" But, as soon as the inventor finished, the shops and maybe the government, *somebody*, said, if we change the message to "Buy This" we will make a profit! A shop made, I think, \$600,000. in 9 months, using this. They were taken to court. The government, from the transcript that I had, argued that the system was "harmless" and no laws were being broken. It is not against the law to send somebody a message.

Witte: It was not a subliminal message?

Trower: **Auditory Synthetic Telepathy**. They are arguing that *it is like music*. The message goes in to the brain. The lawyers couldn't find a charge. It wasn't against the law.

The government scientist said, "as far as we are concerned all of this is safe!" Since, it has spread to other big chain stores, a number of different chain stores. Fast Food outlets are targeting certain people to encourage them spend more money.

(50:00)

And, you think, well, we are back to where we started. What else can you ask them to do? Supposing, the owner of a shop, gets one of these devices and takes it home... However the message is sent, maybe from a tape, *or electronic voice these days*; supposing the owner sends the message through the wall to his next door neighbor, saying "I admire you, come and sleep with me?" Or "move because you are not wanted here!" Or you can send this across the street. Somebody's only got to buy one of these and start using it for their own devices. Then we are back to where we started where we have got people hearing voices and they are getting confused.

Witte: When they modulate this information on the carrier wave, do they modulate the amplitude of the frequency? (51:16)

Trower: They can do either. If you modulate the amplitudes you get more energy. If you modulate the frequency you will get

more vibration. You can do either. It depends on the energy. You will probably end up doing both. **But with the noise, you can also put in anything from 1 to 600 pulse frequencies, as well.** So you could make somebody feel incredibly happy and indecisive or decisive, so they will buy something or do something. **You can also put in pulse frequencies.** (52:04)

Microwaving Ministers and the Olympics

Witte: Shortly before the Olympics in London you gave a fantastic interview with Lars Drudgaard from Denmark and you touched on the Olympic games and said it would be perfectly easy to support a sportsman.

Trower: It is so easy I could do it! Because of the known frequencies, if you target somebody, and this comes from, I would say an intelligence case... (52:45)

There was a researcher, who was murdered, (I will say murder but it wasn't proven). Everyone knows he was murdered. He discovered something and for what he discovered, he was murdered. Somebody from this country contacted me to say, do you know what he was working on, do you know the pulse frequencies, and do you know everything? I said, yes, it happens I do, because I have been reading about that recently. And they said, would you make a statement, because he is dead and can't appear in court. So I wrote an enormous statement, with the evidence, and sent it to the country. It was to do with targeting ministers of the government with pulse frequencies. If you have a minister that is going to make a crucial decision, and you can target them, you can probably make them change their minds. It is very easy.

Witte: Yes.

Trower: And at this time, the Olympics were on, and somebody asked, "Could Olympics athletes be targeted? I said, "Easily, from any transmitter straight through the wall to their bed when they are sleeping. All you have to do is target them, with a, specific pulse frequency that will make them lethargic, disinterested. It is easily done. Maybe feeling a little bit fluey. All you have to do is take away the ability... To slow them down

by a second or two. You can even do it whilst they are running. You can do it from a block of flats whilst they are running. You can just target the brain. Or the muscles, depending on the frequency. Or the heart! You can actually make the heart not beat properly! (Lars Drudgaard), when he was at my house, said, is it possible? I said, it is easy. All you need is a transmitter that will transmit into a beam, so you only get the one person, not the rest. You want a microwave beam, you can put it on a carrier wave, to help the beam. You can use a high power lens like they use in high power sniper rifles, for the beam, and all you have to do is target. All you need is not even a clear view of the athlete, because it will go through walls. You can target somebody and you can slow them down. Not only can you slow them down, but you can speed them up! Speeding them up is easier.

If you target the adrenal glands, you will get adrenaline, produced in the body. That has the effect of seeding up the heart - speeding up the reactions. It would not come out in a drug test because adrenaline is a natural substance. So you can slow one person down, maybe your biggest rival, and you can speed somebody else up! It is easily done! Whether they are doing it, I don't know. You would need a detector, somewhere near the grounds, to detect it. You can get them when they are asleep. Yes it is possible to manipulate the Olympics. It is so easy I could do it.

Witte: Because I was so amazed: Britain was on the third level with the medals...

Trower: I wondered that. I wondered, how come we've run so well? I wondered, we have beaten Australia, and we have never beaten Australia. And we have beaten Germany! We've beaten Russia! I thought, we have never been this good. In my own childish mind I wondered if somebody has beamed these athletes while they've been working. And of course, you can't prove it. It is the perfect sport's drug. It induces a natural body substance: adrenaline, cortisol. You can give somebody a good second or two: that's all you need.

Witte: I first thought it could be the advantage that they are at *home*. But then I looked at the statistics. The last London Olympics, they were also at home but they were very lousy.

Trower: I had a childish thought, when I saw we have only been beaten by the United States and China. There is something *wrong* with that.

Witte: Would you like, finally to address something to the audience?

Trower statement excerpts:

"Stop the murders. Stop the genetically damaged children. It is the only way. If we don't do it, we are going to loose our countries, I we are going to loose our people, we are going to loose our human race. We are going to loose everything.

I think we need to find, honest people with enormous power... people that the world will stand up and listen to...

- Prepared to stand up for the children of a country.
- Prepared to stand up for the victims of illegal experimentation.

"Lying in government is now endemic. All senior government officials lie all the time. Lying is so commonplace it is now "normal." It is normal to lie. They wouldn't know the truth if it jumped up and bit them in the backside. Everybody lies all of the time."

"Governments no longer govern. They do not respect the people. They represent industry. They will murder people: children, embryos, fetuses, and infants. They will murder anyone to please industry."

Respectfully submitted,

Patricia Christensen Ferre
