Subject: Energy Efficiency Standards

Arizona Corporation Commission
DOCKETED

NOV 20 2014

DOCKETED BY [Signature]

Dear Chairman and Commissioners,

My name is Kevin Jennings and I am a customer of Arizona Public Service. I am watching with some concern the possible revisiting of the already-adopted Arizona Efficiency Standards. While free market mechanisms to establish markets, pricing, and available methodologies are nearly always the best approach to ensure efficiency, we are already dealing with a heavily regulated market when it comes to the provision of power to Arizona residents. As such, it is vital that the commission balance the goals of seeing that energy is provided to the people of the state in the most efficient and cost-effective way while at the same time considering the long term benefits and costs of infrastructure deployments.

As someone who has a stake in your decisions and policies, I urge you to consider all aspects of the issue along with the ramifications of either keeping the current standards or of overturning them in favor of an alternative approach. Our quality of life as citizens of this great state depend in no small part on the actions that you take, so I implore you to choose carefully and wisely.

Thank you,

Kevin M. Jennings

Subject: Email from Public for Utilities Division

To whom it may concern,

My name is Matt Roll. I recently heard about the changes to the efficiency standards for utilities in the state of Arizona. I just want to voice my opinion that I'm against these changes. I understand that the program has been very successful and to save their state a lot of money. I also understand that it is becoming more difficult for this program to be effective. I think that when the program was instituted it should have been noted that at first it would be easy. Even so I believe that changing the program at this point in time is unwise. If we have to pay a little bit extra for our state to become more efficient, I think this is something that is progressive and good for us all.

Thank you,

Matt Roll

Docket: Energy Efficiency/Demand Side Management

DocketNo: E-00000XX13-0214

Utility: Arizona Energy Commission

Position: Con

Emai:

Comments: Mr. Bob Stump, Chairman Arizona Corporation Commission 1200 West Washington Phoenix, AZ 85007 RE: Proposed Change to Arizona Energy Efficiency Requirements Dear Chairman Stump: ASHRAE would like to state its opposition to the proposed change of Arizona requirements for energy efficiency (Docket No. E-00000XX-13-0214). The energy-efficiency programs for the states' utilities, targeted by this proposed change, are projected to conserve 22 percent of electricity sales by 2020. The need for greater energy efficiency is clear. In the United States, residential and commercial buildings account for approximately 40 percent of the total primary energy use, more than either transportation or industry. Specifically, heating, ventilation, air conditioning, and refrigeration (HVAC&R), and water heating are responsible for about 75 percent of residential and 54 percent of commercial building site energy use. They are responsible for 72 percent of the electricity consumption and 39 percent of the total U.S. CO2 emissions. It is ASHRAE's view that states should adopt policies that improve building energy efficiency through equipment standards and performance-oriented building

UTILITY COMPLAINT FORM

codes. Code-adopted standards can save more energy than any other policy tools, and consensus standards (e.g., ANSI/ASHRAE/IES Standard 90.1) help ensure technical accuracy and economic feasibility. ASHRAE also encourages states to adopt policies related to energy efficiency that support innovation, reduce market barriers, and include full environmental considerations. Such policies illustrate that government leads by the example of outstanding design, construction, and operation of its own buildings, whether owned or leased. Making proven technologies and practices mainstream is the key to win-win-win strategies for the owners, the economy and the environment. Cost-effective energy efficiency is critical for the economy, the environment and energy security. Arizona's requirements, which were adopted unanimously by the Arizona Corporation Commission in 2010, are already having a positive effect on energy efficiency in the state. Revoking those standards would turn back the clock on the great progress Arizona has made over the past four years. Therefore, ASHRAE opposes these changes. ASHRAE, founded in 1894, is a global society advancing human well-being through sustainable technology for the built environment. The Society and its more than 50,000 members worldwide focus on building systems, energy efficiency, indoor air quality, refrigeration and sustainability. Through research, standards writing, publishing, certification and continuing education, ASHRAE shapes tomorrow's built environment today. We look forward to working with you to amicably resolve these concerns. For additional info, please contact Dave Palty, ASHRAE Tucson Chapter Grassroots Government Activities Chair, by telephone at _____ or by email at _____ Sincerelv, Thomas H.
