DOCKETED

NOV 26 2014

DOCKETED BY 

Dear Commissioners:

It seems as if we are now inundated with news about what the Corporation Commission might or might not do about rooftop solar issues, and I'm the first to admit that I don't understand it completely even after reading many news articles about it.

It all sounds so reasonable that we should be able to use the abundance of sun we have to power our homes and for the many commercial industries that use so much power at a price that makes sense, but I am not convinced that we've developed it to the point to make it a replacement for the traditional energy means.

We've given so many tax subsidies to solar companies that have failed, yet the news seems to indicate that we need to continue on that path. People are led to believe that installing solar panels on their homes will save lots of money on their energy costs, but that hasn't been the case because the cost of the panels and installation is astronomical and leasing them leaves you with nothing.

What I'd really like is one of simple explanation from the Corporation Commission that isn't trying to sell us either on the idea of solar or how important it is to use subsidies as a method of creating jobs in the solar industry.

Like everyone else I want safe and inexpensive energy supplied to the public, but after reading all these articles I end up believing that once again, the middle class is subsidizing the huge Solar companies with tax dollars and the poorer class is led to believe they will get their energy cheaper. None of this is good. It sounds to me like a good idea that went horribly wrong and now needs to be taken apart piece by piece and start over with an honest evaluation.

Thank you for your efforts.

Eric Sloan
