2015 MAY 15 P 2:52

AZ CORP COMMISS.  
DOCKET CONTROL

DOCKETED BY 

IN THE MATTER OF TUCSON ELECTRIC  
POWER COMPANY, INC. FOR (1)  
APPROVAL OF A NET METERING TARIFF  
AND (2) PARTIAL WAIVER OF THE NET  
METERING RULES.

DOCKET NO. E-01933A-15-0100

STAFF'S MOTION TO DISMISS

**ORIGINAL**

The Utilities Division ("Staff") of the Arizona Corporation Commission ("Commission") moves to dismiss the application filed by Tucson Electric Power Company ("TEP" or "Company") on March 25, 2015. Staff believes that this matter should be addressed in a rate case. The Administrative Law Judge ("ALJ") directed the parties to file initial briefs by May 15, 2015, on the issue of whether TEP's application should be dismissed.

**I. BACKGROUND.**

On March 25, 2015, TEP filed an application (the "Application") seeking approval of a new net-metering tariff for future distributed generation customers ("DG Customers"). The new tariff would lower the rate used to calculate the monthly bill credits for excess energy, thereby reducing customer incentives for solar installations. TEP also seeks approval of a partial waiver of the Commission's Net-Metering Rules. On April 1, 2015, TEP filed a Supplement to its Application that included additional proposed revisions to its current net-metering tariff that would also apply to future DG Customers.

On April 14, 2015, Staff filed a request for a procedural order ("Request"). In the Request, Staff recommended that TEP withdraw its pending Application and pursue these issues in a future rate case.<sup>1</sup> If the Company is not inclined to withdraw its application, Staff recommended that the Commission should establish a briefing schedule so that the parties may file briefs addressing

<sup>1</sup> Staff Req. for Procedural Order at 2:3-7.

1 whether this case should be dismissed.<sup>2</sup> On April 20, 2015, TEP filed a response to Staff's Request.  
2 In its response, TEP declined to withdraw its Application, and indicated that it does not plan on filing  
3 a rate case in the near future.<sup>3</sup>

4 On April 27, 2015, the ALJ held a procedural conference to discuss a briefing schedule for  
5 motions to dismiss. On April 28, 2015, the ALJ issued a Procedural Order requesting the parties to  
6 file initial briefs by May 15, 2015, on the issue of whether TEP's Application should be dismissed  
7 and responsive briefs by May 29, 2015. The ALJ scheduled oral argument for June 10, 2015.

## 8 **II. THE ISSUES.**

9 In its Application, TEP asserts that it is experiencing exponential growth in the number of  
10 distributed solar rooftop systems in its service territory.<sup>4</sup> The Company claims that this growth is due  
11 to recent reductions in solar system costs and significant subsidies that DG Customers receive  
12 through a combination of rate design and net metering.<sup>5</sup> TEP asserts that its DG Customers avoid  
13 paying some of the fixed costs associated with operating and maintaining the grid, even though they  
14 remain connected to the grid and benefit from that connection.<sup>6</sup> According to TEP, this results in an  
15 increasing amount of utility costs that are shifted to other customers, and this cost shift will continue  
16 to increase for the foreseeable future absent some fundamental change in rate design, net-metering, or  
17 both.<sup>7</sup> Ultimately, TEP acknowledges that its proposal is only a partial fix.<sup>8</sup>

18 The Company raises three issues as the basis for seeking a change to its net metering tariff.  
19 First, the Company claims that its net metering tariff does not reflect the realities of today's  
20 distributed generation market. Second, the Company asserts that it has suffered a substantial rise in  
21 unrecovered fixed costs due to net metering. Third, the Company claims that its current rate design  
22 and net metering tariff operate to shift significant amounts of fixed costs to non-DG customers.

1           **A.     In 2013, The Commission Granted TEP A Lost Fixed Cost Recovery Mechanism,**  
2           **Which Was Specifically Designed To Address The Under-Recovery Of Fixed**  
3           **Costs Due To DG Systems.**

4           In its Application, the Company asserts that the DG landscape has changed significantly since  
5           the Commission adopted the Renewable Energy Standard (“RES”) Rules in 2006 and the Net  
6           Metering Rules in 2008.<sup>9</sup> The Company claims that RES funds have provided significant customer-  
7           funded incentives for the installation of DG systems, and that net metering tariffs adopted in  
8           conformity with the Net Metering Rules have provided substantial ongoing subsidies for DG  
9           Customers.<sup>10</sup> In addition, tax credits have further supported the installation of DG systems.<sup>11</sup>

10           Due to the evolution of photovoltaic technology and manufacturing efficiencies, the price of  
11           solar rooftop systems has declined from \$8.00 per watt in 2008 to \$3.00 per watt today.<sup>12</sup> TEP notes  
12           that the Commission has mostly eliminated upfront incentives for solar DG systems, and argues that  
13           it is unnecessary and inequitable to maintain additional subsidies.<sup>13</sup> TEP ultimately concludes that it  
14           is time to make further reductions to the various subsidies incentivizing DG installations.<sup>14</sup>

15           Although TEP’s Application discusses the changes that have occurred in the DG market since  
16           the adoption of the RES Rules and the Net Metering Rules, TEP minimizes the significance of its  
17           LFCR Mechanism, which was adopted by the Commission in 2013.<sup>15</sup> The LFCR was designed to  
18           mitigate the impact of any under-recovery of fixed costs attributable to the rising number of DG  
19           Customers in TEP’s service territory.<sup>16</sup> The issues raised in TEP’s Application are not new, and the  
20           Commission took steps to address them in TEP’s last rate case.

21           In its 2012 rate case, the Company indicated that its rate structure is designed to recover its  
22           revenue requirement, including fixed costs, primarily through usage-based kWh sales.<sup>17</sup> If kWh sales  
23           were to decline as a result of DG systems, TEP would be unable to recover the fixed distribution and

<sup>17</sup> Docket No. E-01933A-12-0291 Direct Testimony of David G. Hutchens at 14.

1 transmission costs that are embedded in those kWh rates.<sup>18</sup> Ultimately, without a mechanism in place  
2 to capture and recover lost revenues, TEP would not have a reasonable opportunity to recover its  
3 fixed costs. The Commission responded to these concerns by implementing TEP's LFCR.<sup>19</sup>

4 If the Company is now claiming that its LFCR does not adequately address the lost-fixed-cost  
5 issue, there are a variety of possible regulatory solutions. For example, it may be possible to alter the  
6 Company's rate design to both promote the recovery of fixed costs and leave incentives for solar  
7 installations largely unchanged. The Application, which is presented as a simple tariff filing, is too  
8 confining, and does not lend itself to the type of comprehensive analysis that this case requires.  
9 Because a variety of ratemaking remedies may be applicable to these issues, Staff believes that it  
10 would be prudent to dismiss TEP's present Application without prejudice so that these issues may be  
11 considered in a rate case.

12 **III. ADDRESSING THESE ISSUES IN A RATE CASE WILL PLACE MORE**  
13 **ANALYTICAL TOOLS AT THE COMMISSION'S DISPOSAL, AND WILL**  
14 **THEREBY MAXIMIZE THE CHANCES OF ARRIVING AT AN OPTIMAL**  
15 **OUTCOME.**

16 Staff recognizes that the proliferation of solar installations may lead to under-recovery of  
17 fixed costs. The net metering rules and the current tariffs provide an incentive for customers to  
18 install rooftop solar panels. This increasing installation of rooftop solar leads to the sale of fewer  
19 kWhs and therefore to the under-recovery of the portion of fixed costs that would ordinarily be  
20 recovered through kWh charges. These issues, however, are fundamentally rate design issues that are  
21 best addressed in a rate case.

22 By contrast, TEP proposes to address these issues through a tariff filing. In its Application,  
23 TEP is requesting that the Commission approve a new net metering tariff for customers that  
24 interconnect to TEP's grid facilities after June 1, 2015.<sup>20</sup> Under this proposed change, new DG  
25 Customers would be compensated for excess energy at a reduced rate (the "Renewable Credit Rate").  
26 Existing DG Customers would continue to be compensated at the retail rate, which is higher than

---

27 <sup>18</sup> *Id.*

28 <sup>19</sup> Decision No. 73912 at 22:18-21.

<sup>20</sup> TEP App. at 10:4-7.

1 TEP's proposed "Renewable Credit Rate."<sup>21</sup> Since TEP is proposing to "grandfather" existing DG  
2 Customers, this solution appears to hold constant any current under-recovery of fixed costs as it  
3 relates to existing DG Customers, and merely slows the increase in any under-recovery related to new  
4 DG Customers.<sup>22</sup>

5 The Company acknowledges that this proposed change will not fully mitigate the DG cost  
6 shift, but asserts that its proposal meets the public interest by mitigating the amount of unrecovered  
7 fixed costs and the related cost shift.<sup>23</sup> Staff is concerned that a partial solution may be equivalent to  
8 no solution. Staff believes that, in order to address the under-recovery of fixed costs and any  
9 associated cost shifts, it will be necessary to examine TEP's LFCR and/or its rate design. Possible  
10 solutions could include changing the application of the LFCR, increasing monthly minimums,  
11 applying a demand charge, or introducing new rate schedules, among other possibilities. The  
12 solution could combine these various elements in a way that addresses all customers, not just DG  
13 Customers as proposed by TEP. The important point is that under-recovery of fixed costs, cost shifts,  
14 and rate design are complex issues that are best addressed in rate cases where there are more tools at  
15 the Commission's disposal.

16 **IV. CONCLUSION.**

17 The Company claims that its proposal meets the public interest by mitigating the amount of  
18 unrecovered fixed costs and the related cost shift, while still continuing to provide an incentive for all  
19 DG Customers.<sup>24</sup> Staff, however, does not believe that TEP's proposed solution will directly address  
20 the issues raised in TEP's Application. Staff believes that the broader public interest requires a  
21 comprehensive solution to address these issues, and that these issues should be addressed in a rate
