Subj: docket # E-01933A-15-0178

I have personally benefited from several energy efficiency programs in the past. I was able to have my home inspected for areas leaking heating. They found my many can lights allowed a large amount of heat to escape. I then bought new, leak-proof cans and installed them myself. The inspection was part of an ACC program. I also have been able to entirely replace my 38 can lights with energy efficient CFL and recently LED lightbulbs at reduced prices due to ACC programs. At the inspectors recommendation I also replaced my HVAC with an efficient heat pump system and now save hundreds of dollars each month in the winter. I also have put in 22 roof top photovoltaic panels and a solar hot water system and was able to due that due to the rebates I received. Many of those rebate programs have been cancelled. Please continue and even increase these programs. All of the world needs to reduce our dependence on fossil fuels and you can be part of the solution.
