Subject: Please Reject UNS Energy's proposal

Dear Chairman Little,

I strongly urge you to reject UNS Energy's recent proposal to impose demand charges and eliminate net metering.

Demand charges are an anti-consumer billing mechanism designed to confuse ratepayers and disincentivize conservation and energy efficiency. Demand charges ambush ratepayers. You only know when your peak demand has been set after the fact. Ratepayers should be charged for the energy they use, not ambushed with exorbitant charges based on a single 15 minute period within a month.

In addition, net metering is vital to preserving the ability of ratepayers to go solar and protecting thousands of jobs. Net metering is a fair policy that creates jobs and gives consumers energy choice.

We know what happens when you eliminate fundamental solar policies. Do not let what happened in Nevada happen in Arizona.

Reject UNS Energy's proposal. It is a power grab that erodes consumer choice and control over bills in order to ensure captive ratepayers for their monopoly.

Sincerely,

Terey Lynne

Subject: Docket# E-04204A-15-0142. Please Reject UNS Energy's proposal

Dear Chairman Little,

Utility power usage is a public service and should be based on what power is being used. Demand billing is imposed only on solar customers and is not based on their usage. This is a directed, penalized charge on solar DG customers. Solar is a benefit for the state and every one in the state. I strongly urge you to reject UNS Energy's recent proposal to impose demand charges and eliminate net metering.

Demand charges are an anti-consumer billing mechanism designed to confuse ratepayers and disincentivize conservation and energy efficiency. Demand charges ambush ratepayers. You only know when your peak demand has been set after the fact. Ratepayers should be charged for the energy they use, not ambushed with exorbitant charges based on a single 15 minute period within a month.

Dear Chairman Little,

I strongly urge you to reject UNS Energy's recent proposal to impose demand charges and eliminate net metering.

Demand charges are an anti-consumer billing mechanism designed to confuse ratepayers and disincentivize conservation and energy efficiency. Demand charges ambush ratepayers. You only know when your peak demand has been set after the fact. Ratepayers should be charged for the energy they use, not ambushed with exorbitant charges based on a single 15 minute period within a month.

In addition, net metering is vital to preserving the ability of ratepayers to go solar and protecting thousands of jobs. Net metering is a fair policy that creates jobs and gives consumers energy choice.

We know what happens when you eliminate fundamental solar policies. Do not let what happened in Nevada happen in Arizona.

Reject UNS Energy's proposal. It is a power grab that erodes consumer choice and control over bills in order to ensure captive ratepayers for their monopoly.

Reject obamas foney climate change pigchit lies and EPA ILLEGAL POWERGRAB KILLING COAL FIRED POWER PLANTS

Sincerely,

Jack White

I have been on solar power for over four years. It has been a life saver for me. I am retired on fixed income and being able to lower any of my daily expenses is a huge benefit not only now but in the future. Costs of living will go up but by maintaining a lower electric bill I can foresee a more secure future. Do let this future be sacrificed by this new tactic.

I strongly urge you to reject UNS Energy's recent proposal to impose demand charges and eliminate net metering.

Demand charges are an anti-consumer billing mechanism designed to confuse ratepayers and disincentivize conservation and energy efficiency. Demand charges ambush ratepayers. You only know when your peak demand has been set after the fact. Ratepayers should be charged for the energy they use, not ambushed with exorbitant charges based on a single 15 minute period within a month.

In addition, net metering is vital to preserving the ability of ratepayers to go solar and protecting thousands of jobs. Net metering is a fair policy that creates jobs and gives consumers energy choice.

We know what happens when you eliminate fundamental solar policies. Do not let what happened in Nevada happen in Arizona.

Reject UNS Energy's proposal. It is a power grab that erodes consumer choice and control over bills in order to ensure captive ratepayers for their monopoly.

Sincerely,

Raymond Freyer

Dear Chairman Little,

SRP is an example of inefficiency and corruption. They are using their power to set bizarre and confusing rates to compensate for their massive losses from their water sales company. They made over 200M in excess revenue in 2013 but chose to support their water and irrigation company rather than make improvements to their electric grid or cut prices. One more ridiculous rate hike and I'm going off-grid using Tesla energy batteries and my 15kW solar panels. Let's see how long SRP or APS can last as their richest customers drop like flies and they are left selling to the poorest customers in the valley. Good luck with that.

Sincerely,

Phillip Stafford

Dear Chairman Little,

In case you haven't noticed many folks are no longer installing home solar systems. Myself being one of them. Please eliminate grid tie solar fee's as they are preventing new solar systems being installed.

Yes, Unisource has to pay for maintaining the grid, but the income from the excess power produced by home solar systems more than pay for grid maintenance. It is clear that they view residential solar power as a competitor that are reducing their profits. If you look at the Canadian solar power system you will see why this Canadian company has come south to make bigger profits.

I strongly urge you to reject UNS Energy's recent proposal to impose demand charges and eliminate net metering.

You only know when your peak demand has been set after the fact. Ratepayers should be charged for the energy they use, not ambushed with exorbitant charges based on a single 15 minute period within a month.

In addition, net metering is vital to preserving the ability of ratepayers to go solar and protecting thousands of jobs. Net metering is a fair policy that creates jobs and gives consumers energy choice.

We know what happens when you eliminate fundamental solar policies. Do not let what happened in Nevada happen in Arizona.

Reject UNS Energy's proposal. It is a power grab that erodes consumer choice and control over bills in order to ensure captive ratepayers for their monopoly.

WE in southern Arizona have a local resource the sun and our vote. Deals have been made, but this does not present the truth. That at this time we can harvest the sun. Net billing allows an individual to provide energy locally. It is 220 volts it does not tax the system. It only forces a new business and money palindrome. Thank god I can vote again and again and some day win a corporation commission that works as much for the consumer at the corporation.

rodney

Sincerely,

Rodney Smith

Subject: Please Reject UNS Energy's proposal

Dear Chairman Little,

I strongly urge you to reject UNS Energy's recent proposal to impose demand charges, eliminate net metering and excessively hike the customer charge.

The customer charge must remain low enough so that ratepayers who are struggling to make ends can continue to pay their bills. Energy conservation should be incentivized by making this revenue stream in proportion to usage (kWh), rather than disproportionately burdening those who conserve.

Demand charges are unfair, unreasonable and anti-consumer. They confuse ratepayers and disincentivize conservation, efficiency and, in some cases, distributed generation. Household peak demand is not related directly enough to utility-wide peak demand to merit the imposition of this burdensome charge. Ratepayers should be charged for the energy they use, not ambushed with exorbitant charges based on a single short period within a month that may or may not affect peak demand vis-a-vis the utility.

Net metering is a fair policy that gives consumers energy choice, preserves ratepayers' ability to become solar energy harvesters, advances the state's economy, protects its ecology, gives thousands of Arizonans dignified, important work and forestalls the worst outcomes of climate change.

Do not let what happened in Nevada happen in Arizona.

Reject UNS Energy's proposal. It is a power grab that erodes consumer choice and control over bills in order to ensure captive ratepayers for their monopoly.

Reject UNS Energy's proposal. It is a power grab that erodes consumer choice and control over bills in order to ensure captive ratepayers for their monopoly.

Sincerely,

Mike McIver
