Regarding UNS Electric Rate Case Docket #E-04204A-15-0142

Thank your for your time and energy to address the matter of how UNS, TEP and APS are seeking to change the costs of using Solar Energy on residential homes.

It is a grievous concern to watch electric companies, now turning their charges to areas where they stand little to profit from and wanting to gain by changing the fee rates

I recently read the article "Solar Under Siege Alert: Three Arizona Electric Utilities Trying to Stop Solar Energy Rooftop Installations", by Russell Lowes in the Rincon Group Newsletter.

I am for the continued benefits of installing solar energy to the Arizona residents to maintain lower basic fees and other creatively intrusive fees, that may defeat the economic purpose of using solar energy on homes / rooftops.

There comes a time with the sense of cooperation and community, that companies (utility) get on board to constructively affect our renewable energies resources, particularly solar, in Arizona. On board, meaning adding to the well being of ALL in the state, instead of the plumping up the pockets of systems that are becoming obsolete (coal, gas and nuclear energies.)

Rather than find new means to protect the revenues of old systems, it is more important to begin collective initiatives to benefit our planet, primarily and the affordable means to support this for the habitants of it. We have a stewardship of this wonderful planet Earth and to one and other. Shortchanging those for the profit of a few, hurts us all.

I employ you to continue rallying that Docket #E-04204A-15-0142, submitted for the advantage of UNS Electric, be defeated. This is the time to refuse greed at the expense of the whole. Short sighted greed, makes for long term damage even to the greedy. No longer is it healthy to see the separateness, in accumulating prosperity on the backs of others.

Please count me in *for* continued affordability, honest information and the transparency of how important it is that utility companies refrain from deceptive policies to strike fear in the people of our state with half truths. In this case, projecting non-solar are receiving enormous fees as a byproduct of solar energy users.

Feel free to share this to any agencies that are involved with the safe keeping of our pocketbooks and planet.

Thank you so much for your dedication.
