ARIZONA CORPORATION COMMISSION
DOCKET CONTROL

DOCKETED BY *ALG*

7 IN THE MATTER OF THE APPLICATION OF
8 UNS ELECTRIC, INC. FOR THE
9 ESTABLISHMENT OF JUST AND
10 REASONABLE RATES AND CHARGES
11 DESIGNED TO REALIZE A REASONABLE
12 RATE OF RETURN OF THE FAIR VALUE OF
13 THE PROPERTIES OF UNS ELECTRIC, INC.
14 DEVOTED TO ITS OPERATIONS
15 THROUGHOUT THE STATE OF ARIZONA,
16 AND FOR RELATED APPROVALS.

DOCKET NO. E-04204A-15-0142

STAFF'S REPLY BRIEF

13 **I. INTRODUCTION.**

14 The Utilities Division ("Staff") of the Arizona Corporation Commission ("ACC" or
15 "Commission") hereby files its reply to the initial briefs filed on April 25, 2016. To the extent that
16 Staff does not address a specific issue herein, Staff relies upon the arguments set forth in its Opening
17 Brief, its pre-filed testimony, and the testimony of its witnesses at the hearing.

18 **II. RATE DESIGN.**

19 Staff continues to believe that a mandatory three-part rate design with a monthly customer
20 charge, a demand component, and a volumetric energy charge is a viable and reasonable solution to
21 the recovery of fixed costs and mitigation of cross subsidies. However, Staff acknowledges that the
22 adoption of mandatory three-part rates would necessitate the full cooperation and support of UNS
23 Electric, Inc. ("UNSE" or "Company"). Moreover, Staff conditioned its recommendation of three-
24 part rates on the Company's development of a transition plan, including education and information
25 programs for residential and small general services ("SGS") customers.¹ In light of the Company's
26 withdrawal of its support for mandatory three-part rates, Staff does not believe that the
27 implementation of mandatory three-part rates would be successful for UNSE at this time. As a result,
28

¹ Exhibit S-6 (Solganick Surrebuttal) at 6.

1 Staff recommends that the Commission consider adopting one of several alternative rate designs
2 intended to enable UNSE to recover its fixed costs, address existing subsidies, and afford the
3 Company an opportunity to realize its revenue requirement.

4 **III. RATE DESIGN OPTIONS.**

5 **A. UNSE Recommendations.**

6 In its Initial Post-Hearing Brief, the Company re-asserts that its current rate design does not
7 provide for adequate fixed cost recovery.² UNSE claims that this deficiency is due to the fact that
8 most of its fixed costs are recovered volumetrically on a per-kWh basis. Although UNSE may still
9 support Staff's proposed three-part rate design in theory, the Company has determined that it will
10 take much longer than originally anticipated to educate its customers about three-part rates. As a
11 result, UNSE requests that the Commission adopt a rate structure for non-distributed generation
12 ("DG") residential and SGS customers similar to that proposed in its application in this case.³

13 UNSE proposes the following options for residential customers: (1) a basic two-part rate; (2)
14 a two-part time-of-use ("TOU") rate; (3) a two-part super-peak TOU rate for residential customers;
15 (4) a three-part rate that includes a monthly basic service charge, a demand charge, and a volumetric
16 energy charge; and (5) a three-part TOU rate that includes a monthly basic service charge, a demand
17 charge, and on- and off-peak energy charges.⁴ Under all of the Company's options for residential and
18 SGS customers, the basic service charges would increase to \$15 and \$25, respectively, as proposed
19 by Staff.⁵ The Company's now proposed two-part residential options would have a two-tiered
20 volumetric energy rate of 0-400 kWh and over 400 kWh; its three-part options would have a single
21 tier for all energy used.⁶ SGS customers would have similar rate options with the exception of the
22 super-peak TOU rate.⁷ In addition, for those low income customers who qualify, UNSE would
23 continue to offer a CARES discount.⁸

24
25
26 ² UNSE Brief at 3.

27 ³ *Id.* at 4.

28 ⁴ *Id.* at 5, 20.

⁵ *Id.* at 20.

⁶ *Id.* at 5.

⁷ *Id.* at 20.

⁸ *Id.* at 22.

1 The Company also reasserts the position that DG customers are distinguishable from non-DG
2 customers due to their different and more burdensome use of the grid. These differences justify the
3 development of a different rate design. As a result, UNSE proposes that residential and SGS DG
4 customers be limited to either of the two three-part rate designs, unless they qualify for
5 grandfathering.⁹

6 At this time, Staff does not feel it appropriate to distinguish between DG and non-DG
7 customers and would submit that any rate design adopted by the Commission be applicable to all
8 residential and SGS customers.

9 **B. Staff Recommendations.**

10 Staff believes that the Commission should consider the suggested alternatives to three-part
11 rates. The record contains support for consideration of a two-part rate for residential and SGS
12 customers that would increase the customer charge and eliminate the third volumetric tier. This
13 option would improve revenue stability by the greater recovery of fixed costs through the proposed
14 larger customer charges.¹⁰ As noted above, the Company has agreed to Staff's recommended \$15
15 and \$25 customer charges for residential and SGS customers, respectively.

16 The continuation of a two-part rate design would enable the Commission to ascertain the
17 outcome of the Value and Cost of Distributed Generation ("Value of DG") generic docket (Docket
18 No. E-00000J-14-0023). This interim period would also provide UNSE with an opportunity to create
19 education and information programs for its customers to better prepare them for a transition to three-
20 part rates in the future. To that end, it may be helpful to include a *voluntary* three-part rate that
21 includes a demand charge in UNSE's rate design in this proceeding. These rates may include a basic
22 service charge that would be less than the basic service charge with the two-part rate to provide an
23 incentive for voluntary customer migration. The Company could also develop a customer
24 information and education program to help customers determine whether they could benefit from
25 voluntarily subscribing to a demand rate. Finally, the Company would develop a bill format to
26 illustrate each customer's monthly (and twelve months') demand (both On-Peak and Off-Peak) as a

27
28 ⁹ *Id.* at 20, 24.

¹⁰ UNSE Brief at 22-24; TR at 3713.

1 means of educating all customers about demand rates, even if a customer has not selected a demand
2 rate. Though mandatory three-part rates may not be ideal for UNSE at this time, it would be wise to
3 prepare customers for such an eventual transition in the future.

4 Staff would also support having multiple voluntary rate options, including TOU and demand
5 charges. As an example, Staff would refer to the rate design proposed by Staff in the Sulphur Springs
6 Valley Electric Cooperative (“SSVEC”) rate case (Docket No. E-01575A-15-0312).¹¹ In that case,
7 Staff has agreed to SSVEC’s implementation of a revenue neutral, increasing customer charge phased
8 in over a four year period. Under this plan, a customer’s “service availability charge” (customer
9 service charge) would increase each year contemporaneously with a decrease in the energy charge,
10 thereby minimizing the overall bill impact. This rate plan is designed not only to more accurately
11 recover fixed costs through the service availability charge, but also to lessen rate shock by the
12 reduction in the volumetric charge.

13 SSVEC’s proposed residential rate plan distinguishes between DG and non-DG customers
14 and sets forth a cut-off date that determines whether the new rate schedule applies. Staff, however,
15 does not support a separate rate schedule for customers with DG, irrespective of the date of
16 installation. SSVEC’s plan also calls for a change in net metering. Staff opposes any change in net
17 metering until a decision is issued in the pending Value of DG docket (Docket No. E-00000J-14-
18 0023).

19 As another option, Staff would propose continuing with the Company’s existing two-part rate
20 design with three tiers. Although Staff would prefer elimination of the third volumetric tier, such
21 design has previously been approved by the Commission, and has been operating for some time.

22 **C. RUCO Recommendations.**

23 In its Pre-filed Testimony, RUCO proposed a Minimum Bill option,¹² although it does not
24 address this option in its brief. Such a rate would make recovery of fixed costs more certain, but
25 would eliminate the customers’ options to adapt their usage to respond to price signals. In addition, it
26 would not encourage conservation.

27
28 ¹¹ TR (Broderick) at 3597.

¹² Exhibit RUCO-6 at 28.

1 In its initial brief, RUCO proposes a separate rate design for DG customers with several
2 options from which to choose:¹³

- 3 • The non-export option under which DG customers could select from any of
4 the Company's standard rates, but would not be permitted to export any power
5 to the grid;
- 6 • The Advanced DG TOU Option where customers would pay 3 part rates (a
7 minimum bill, a flat base energy rate and a demand charge) and would be
8 allowed to export power to the grid, at either 8.5 cents per kWh (the self-
9 consumption rate for customers who exchange renewable energy credits, or
10 RECs) or the Market Cost of Comparable Generation rate; and
- 11 • The Renewable Portfolio Standard ("RPS") bill credit option which also
12 allows the customer to select from any of the Company's offered rates and to
13 export power to the grid and receive a credit which is based on the Company's
14 renewable energy portfolio. The credit rate would start at 11 cents per kWh
15 and decrease over time as the Company's portfolio of renewable energy is
16 increased.

17 In its brief, RUCO also introduces four new solutions as options should the Commission not
18 adopt mandatory three-part rates or RUCO's previously discussed options.¹⁴

- 19 • Traditional Two Part Rates with a Market Based Export Option, available to
20 any residential customer, under which full net metering would be preserved
21 for DG customers who export less than 25 percent of their annual load, while
22 those who produce more than 25 percent of their annual load would be
23 compensated for export at a market based rate;
- 24 • Three Part Rate Option, available to any residential customer, which retains
25 full net metering with a tiered TOU demand charge with a 4 kW break-over
26 point and which takes seasonality into account;

27
28 ¹³ RUCO Closing Brief at 11.

¹⁴ RUCO Closing Brief at 13-15.

- 1 • Volumetric TOU Option, available to all residential customers, which
2 includes a \$19 fixed charge and preserves net metering; and
- 3 • Full Requirement Customer TOU Option, available only to full requirements
4 customers, which includes a \$12.50 fixed charge and TOU rates with
5 narrower windows for on-peak hours and seasonality components.

6 Many of RUCO's proposals would require changes to net metering. But noted above, due to
7 the pending Value of DG docket, Staff is not prepared to recommend any change to net metering at
8 this time.

9 **D. TASC/Vote Solar Recommendations.**

10 In their respective post-hearing briefs, The Alliance for Solar Choice ("TASC") and Vote
11 Solar posit that there are better alternative rate designs than the Company's three-part rates and that
12 options should be provided to customers. TASC suggests that a two-part rate with appropriately
13 designed TOU options together with a minimum bill would ease UNSE's concerns about revenue
14 collection while sending price signals to customers about when to conserve.¹⁵ TASC further argues
15 that TOU rates are easier to understand than demand charges and can be as or more effective in
16 recovering costs and assisting customers in lessening demand.¹⁶ Vote Solar essentially mirrors
17 TASC's proposals.¹⁷

18 TASC and Vote Solar are also of the opinion that a minimum bill would be a more effective
19 mechanism to help the Company recoup lost fixed costs that it incurs from serving low-load
20 customers. In contrast, Staff witness Solganick dismisses the minimum bill as a "public relations
21 challenge" and an "artifact of the '60s."¹⁸ He explained that, included in such device is a certain
22 amount of demand capability or a certain amount of energy and customers thought:

23 [T]hey were paying for something they didn't want, and other people thought that
24 they didn't get enough. And some people thought that [the utility was] encouraging
people to use something that they didn't have to use.

25 Mr. Solganick does not recommend minimum bills because of those negative perceptions.¹⁹

1 **IV. CLASS REVENUE ALLOCATIONS.**

2 None of the parties in this case disputes the assertion that the residential class of customers is
3 currently being subsidized by the commercial classes, nor have there been significant challenges to
4 the Company's CCoSS in that respect. Among the intervenors, the large non-residential customers
5 generally support the Company's initial proposal for allocation among customer classes: 91 percent
6 of its requested \$22.5 million increase to the Residential class, 11.8 percent to the SGS class, small
7 amounts to the Medium/Large General Service classes, and a reduction to the Large Power Service
8 class. After reviewing Staff's proposed allocation, the Company revised its proposal to reflect the
9 reduced revenue increase of \$15.9 million (ultimately reduced to \$15.1 million), with 86 percent of
10 the proposed increase allocated to the Residential class. The large non-residential customers oppose
11 this allocation.

12 Staff witness Solganick testified that the Company's initial proposal resulted in the
13 Residential class bearing 91.2 percent and the SGS class 11.8 percent of the revenue increase.²⁰ To
14 promote concepts of gradualism, Staff continues to recommend that the revenue requirement be
15 allocated by increasing the Residential and SGS classes by 50 percent of the amount needed to reach
16 parity and increasing all other classes by an equal 10.1 percent. Under this recommended revenue
17 allocation, the Residential and SGS classes receive 58.3 percent and 7.3 percent, respectively.

18 In the Post-Hearing Opening Brief of Freeport Minerals Corporation, Arizonans for Electric
19 Choice and Competition, and Noble Americas Energy Solutions, LLC (collectively "Freeport"), those
20 entities take a different approach to rate class allocations by factoring in fuel cost reductions, which
21 result in additional cross-subsidies.²¹ While this is a valid analysis, Staff would note that the price of
22 fuel is variable, with rates changing year to year, which renders it uncertain. Rates, on the other
23 hand, are certain and will remain fixed until the next rate case, making Staff's reliance on rates alone
24 more reliable and appropriate.

25 Freeport further suggests a creative approach for funding a buy-though program. Rather than
26 simply allocating the \$15.1 million revenue increase among the classes, Freeport suggests that the
27

28 ²⁰ Exhibit S-4 at 24; Exhibit HS-4.

²¹ Freeport Post-Hearing Opening Brief at 15-18.

1 allocation be made based on the Company's initial \$22.6 million revenue increase. The \$7.5 million
2 reduction in the revenue increase (from \$22.6 to \$15.1 million) would be allocated one-half to the
3 subsidy-paying classes and one-half to the subsidy-receiving classes, using the rate spread proposed
4 by the Company as part of its previously proposed \$22.6 million revenue increase. As part of this
5 proposal, Freeport suggests that the subsidy-paying classes would forgo \$908,000 of their decrease in
6 order to fund a buy-through program.

7 While Staff does not generally oppose this funding proposal, Staff disagrees with the
8 allocation methodology. By allocating based on the proposed \$22.6 million increase, and then
9 reducing the amount by one-half of the \$7.5 million difference from \$15.1 million, this proposal
10 merely changes the bottom line allocation percentages. The traditional methodology, as proposed by
11 Staff and the Company, is simpler, more direct, and accomplishes the same goal. The final allocation
12 should reflect Staff's proposed increase of the Residential and SGS classes by 50 percent of the
13 amount needed to reach parity and should increase all other classes by an equal 10.1 percent.

14 **V. GRANDFATHERING.**

15 The Company and solar industry intervenors all propose that existing DG solar customers as
16 of a specified date be "grandfathered."²² During this case, Staff offered a number of proposals
17 intended to mitigate the impact on existing solar customers, many of which are now moot given the
18 Company's withdrawal of support for three-part rates. Staff is not necessarily opposed to some form
19 of grandfathering as a mitigating factor, but is concerned that any form of grandfathering must clearly
20 define the elements of the current rate design that are included in grandfathering (such as basic
21 service and energy charges which change after each rate case), establish a fair and reasonable date for
22 delineating which DG customers are grandfathered, define how long a facility is grandfathered based
23 on lifespan or other factors such as return on investment, and not impede the Commission's ability to
24 address rates for these customers in the future.

25 **VI. NET METERING.**

26 Staff continues to oppose UNSE's reliance on a single Purchased Power Agreement ("PPA")
27 to establish the Renewable Credit Rate ("RCR") and also opposes any change in net metering absent
28

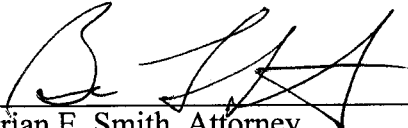

²² See, e.g., TR (Hutchens) at 387; (Kobor) 2126; (Huber) 2276-78; and TASC Post-Hearing Brief at 4.

1 the adoption of three-part rates. In addition, as previously noted, potential changes to the net
2 metering rules are among the issues under consideration in the Commission's Value of DG docket.
3 Staff recommends no changes to net metering at this time.

4 **VII. CONCLUSION.**

5 Staff respectfully requests that the Commission adopt Staff's recommendations on the
6 disputed issues for the reasons stated above and the testimony and evidence provided in this matter.

7 RESPECTFULLY SUBMITTED this 11th day of May, 2016.
