1 The Alliance for Solar Choice (“TASC”), through its undersigned counsel, hereby submits its
2 Post-Hearing Reply Brief.

3 **MEMORANDUM OF POINTS AND AUTHORITIES**

4 **I. INTRODUCTION.**

5 In what is becoming all too commonplace in this proceeding, UNS Electric, Inc. (“UNSE” or
6 “Company”) has once again completely altered its position with regard to residential rate design
7 impacting all customers including those with distributed generation (“DG”) solar. It is readily
8 apparent that even UNSE knows it has failed to make its case to support its radical rate design changes
9 to customers with and without solar. The Commission must reject UNSE’s attempts to introduce yet
10 another new rate proposal into this docket; this time after the conclusion of the evidentiary hearing.
11 UNSE has changed its proposal at every possible step. The Company’s Rebuttal Testimony reflected
12 a substantial departure from its Application. UNSE’s position at hearing included alterations to its
13 already modified proposal representing a third version of its tender. Finally, in its Post-Hearing Brief,
14 UNSE again made substantial modifications to its aggressive proposals resulting in an all new fourth
15 iteration and a substantial flip-flop on the issues.

16 While the exact proposals have differed, one constant has been the Company’s hyper-focus on
17 making proposals that would render DG solar uneconomical for its customers. Despite the fact that it
18 was conclusively demonstrated that only 6% of the Company’s lost kWh sales resulted from DG
19 customers,¹ UNSE’s newest new proposal again singles out DG customers for discriminatory rate
20 treatment rendering DG uneconomical. In fact, UNSE now expressly proposes that its DG customers
21 be subject to a rate that it admits it cannot impose on its other customers because it has not properly
22 educated them about it. If it was not clear before just how much UNSE is attempting to dissuade DG
23 adoption it should now be obvious; UNSE’s position is now that demand rates are too complicated
24 and that it has not adequately prepared its residential customers to understand and respond to these
25 rates yet it is perfectly fine subjecting DG customers to those very same rates.

26 Under UNSE’s fourth revised proposal contained for the first time its Post-Hearing Brief, DG
27 customers would only be able to receive service from the two mandatory proposed three-part demand
28

¹ See, e.g., Kobor Direct Test., Vote Solar, 11:2-4.

1 charge rates. These two new demand rates would also have higher per kW demand charges than the
2 proposal for mandatory three-part demand rates the company supported at the recently concluded
3 hearing² and a second tier higher demand charge if demand exceeds 7 kW.³

4 The Company has also decided in its newest iteration of its proposal to change positions with
5 respect to net energy metering (“NEM”). At the Hearing, the Company supported withdrawing its
6 proposal to end NEM and substitute the Renewable Credit Rate (the “RCR”) in its place,⁴ but now the
7 Company again proposes combining mandatory demand charges for DG customers with the
8 elimination of NEM and replacement with the RCR.

9 The sum total of this whiplash inducing series of changes is that TASC and other intervenors
10 cannot now, or ever, formally examine; any evidence regarding new projected bill impacts; any new
11 cost of service information justifying the newest proposal; any proposed educational programs for the
12 new demand rates - which are conspicuously absent; any justifications for new demand charge rate
13 designs; or anything else about UNSE’s newest proposal. UNSE continues to fail to meet its burden
14 to present the necessary cost of service studies, cost/benefit analysis, and additional requisite support
15 required to justify adoption of its proposed discriminatory rate design. As a result, UNSE’s rate design
16 that discriminatorily targets DG customers must be rejected.

17 **II. A SIMPLE PROPOSAL.**

18 For the reasons set forth in its Post-Hearing Brief and below, TASC believes that UNSE has
19 failed to meet its burden in this case. As a result, the most reasonable approach is to implement
20 increased revenue recovery for the Company to the extent the Commission believes the Company
21 sufficiently has made its case for some level of increase and to deny the Company’s requested rate
22 design alterations to residential, small commercial, and DG customers.⁵ There is clearly no emergency
23 or even any urgency that requires the Commission to adopt any one of the numerous hastily prepared
24

25 ² See Jones Tr. Vol. IX, at 2088:3-20.

26 ³ Compare Jones Rejoinder Test., Ex. 33, Ex. CAJ-RJ-2, Schedule H-3 thereto, at 1; and Post-Closing Brief Ex.1, at 1.

27 ⁴ See Tilghman Rebuttal Ex. UNSE-26, at 3:16-18; Tilghman Tr. Vol. VI, at l266:14-l267:20.

28 ⁵ *State ex rel. Corbin v. Arizona Corp. Comm’n*, 143 Ariz. 219, 227, 693 P.2d 362, 370 (App. 1984) (“Under appropriate circumstances [the Commission] may fashion remedies less drastic than dismissal, which will accord to all parties the fairness essential to fundamental notions of due process, while at the same time preserving the integrity of the adjudicative body, considering the interests of that body and the duties imposed upon it.”).

1 and ever changing proposals the Company has thrown out and continues to throw out in the case.

2 Certainly, there is insufficient evidence to support the proposed residential, small commercial,
3 and DG rate designs and changes to NEM. However, if the Commission desires to explore new rate
4 designs it should Order the Company to propose pilot rates for testing throughout the service territory.
5 This testing will allow the Company to experiment with rates, educational materials, and customer
6 support needed to seek potential implementation of new rate designs on solar and non-solar customers
7 in its next rate case.

8 **III. UNSE'S RATE DESIGN CLEARLY DISCRIMINATES AGAINST DG IN**
9 **VIOLATION OF THE COMMISSION'S RULES.**

10 It is exceedingly apparent that UNSE is singling out DG customers for unjust treatment it
11 readily concedes would be inappropriate for the rest of its customers. In order to carry its burden and
12 permit adoption of rates that single out DG customers and treat them differently than similarly-situated
13 non-DG customers, UNSE has the burden of proof and *must* (1) demonstrate that such differential
14 treatment is just, reasonable, and nondiscriminatory; and (2) introduce solar specific cost of service
15 studies and benefit/cost analyses proving the disparate treatment is warranted.⁶ Further, because the
16 proposed rate for DG customers represents a marked departure from prior rates for DG customers and
17 from the rates proposed for non-DG customers, the studies and analyses needed to support adoption
18 of such rates must be substantive and well-supported with actual data.⁷ UNSE has utterly failed to
19 meet its burden to support its claims that the proposed DG rate is nondiscriminatory, just and
20 reasonable.

21 **A. UNSE Concedes Demand Rates are Not Ready for Residential**
22 **Customers Yet Proposes DG Customers be Forced to Adopt Them.**

23 UNSE itself now acknowledges that "it will take much longer than the Company had originally
24 anticipated to inform and educate customers about how three-part rates work and how they can manage
25 their demand in addition to other ways to save on their electric rates."⁸ Oddly, UNSE uses this
26

27 ⁶ A.R.S. §§ 40-250(A), and (C); A.A.C. R14-2-2305; *see also* Ariz. Const. art. XV, § 3; *Tucson Elec. Power Co. v. Ariz.*
28 *Corp. Comm'n*, 132 Ariz. 240, 243, 645 P.2d 231, 234 (1982).

⁷ Corporation Decision # 72253, at 11:3-22.

⁸ *See* UNSE Post-Hearing Brief, at 4:19-23; Kobor Direct Test., Vote Solar Ex. 6.

1 statement as justification for not imposing three-part rates on non-DG customers while simultaneously
2 proposing to stick DG customers with these same demand charges. Three-part rates with mandatory
3 demand charges have never been imposed on DG customers, and DG customers have no greater
4 understanding of three-part rates or ability to control their demand than their non-DG counterparts.⁹
5 In fact, the future DG customers that the mandatory demand rates would apply to, are the exact same
6 customers (standard residential customers) that UNSE freely admits it will take “much longer” to
7 inform and educate about demand rates. Thus, in light of UNSE’s own statements that its customers
8 are not yet ready to adapt to a three-part rate with demand charges, it would be discriminatory, unjust
9 and unreasonable to adopt them for DG customers.

10 Further, the Commission recognized the growth of emerging technologies when it adopted the
11 Renewable Energy Standard Tariff (REST).¹⁰ Punishing DG customers by forcing them to be
12 subjected to demand charges will be bad public policy and ill-conceived ratemaking. The REST was
13 not intended to be manipulated in order to serve the motives of investor-owned utilities.¹¹

14 Demand charge volatility stems from the fact the demand charges will be based on brief
15 snapshots of time for each ratepayer’s monthly usage.¹² Residential usage, by its nature, is
16 unpredictable and subject to whims of lifestyles and behavior. DG customers will need to manage
17 demand between 120-138 hours per month in the summer and approximately 152 – 184 hours per
18 month in the winter. It is unfair and unjust to adopt a rate design that could see a residential customer’s
19 diligent electricity usage wiped out by one hour that would constitute just .005% (one-half of one-
20 percent) of the total on peak hours for an entire month. A DG customer will have to be constantly
21 conscious of simultaneous use of appliances and how to best use those appliances.¹³ Unfortunately,
22 DG customers will not have access to real-time information to aid them in this Herculean effort.¹⁴ It
23 will be virtually impossible for any DG customer to monitor or control load and demand behavior.

24 The Company understands that demand charges are too problematic to continue advocating for

25 _____
26 ⁹ Hutchens Tr. Vol. II, at 361:4-14; Jones Tr. Vol. IX, at 2043:2-23.

27 ¹⁰ A.A.C. R14-2-1801.

28 ¹¹ See TASC Ex. 8.

¹² See generally, Wilson Tr. Vol XI, at 2494 - 2495, 2509; Jones Tr. Vol XI, at 2686 – 87.

¹³ Faruqui Tr. Vol. XIII, at 3072.

¹⁴ Smith Tr. Vol. III, at 644:6-13.

1 them in this rate case. The biggest reason why is that demand charges are sure to create unintended
2 consequences.¹⁵ The Company conceded that even one-hour with higher than usual demand could
3 result in much higher bills.¹⁶ Monitoring peak demand periods, in the mornings and evenings, would
4 frankly be unconscionable to expect of residential ratepayers. Yet the proposed demand charges would
5 provide *an even direr situation* for DG customers.¹⁷ In addition to the volatility and burdensome
6 nature of demand charges, a DG customer must also take into account the unpredictability of the
7 weather on a daily basis. These factors present an impossible challenge for DG customers to manage
8 their loads.

9 The Company recognized that it will be particularly difficult for non-grandfathered solar
10 customers to respond to demand charges and control their bills as they simply lack the ability to do
11 so.¹⁸ UNSE's CEO David Hutchens highlighted that solar customers have a particular difficulty in
12 handling demand charges because of weather issues. When asked if it would be more difficult for solar
13 customers to estimate what their future bill would look like if they were subject to demand charges,
14 Hutchens replied, "I would say yes, because they can't predict the weather."¹⁹

15 UNSE's witness Craig Jones alluded to a plan for a "temporary relief mechanism to limit
16 demand charge impacts for low load factor customers," a desirable safeguard against unintended
17 consequences because "there was some concern ... the demand charge would affect them potentially
18 disproportionately to the overall class as a whole."²⁰ Further, UNSE witness Denise Smith
19 acknowledged the "variability" issue as a strong reason why solar customers would have specific
20 issues reacting to demand charges.²¹ The evidence makes it clear that the problems of adapting to and
21 dealing with demand charges are significant for all customers but even more so for solar customers.
22 As a result it would be unjust to saddle DG customers with a rate that the Company even admits is not
23 ready for the rest of its customers.

24
25 ¹⁵ Jones Tr. Vol. XI, at 2546:24-13.

26 ¹⁶ Overcast Tr. Vol. VII, at 1466:2-12.

27 ¹⁷ Hutchens Tr. Vol. II, at 361:4-14.

28 ¹⁸ Hutchens Tr. Vol. II, at 361:4-14.

¹⁹ *Id.*

²⁰ Jones Tr. Vol. IX, at 2043:2-23.

²¹ Smith Tr. Vol. III, at 663:7-21; Kobor Tr. Vol. X, at 2118:23 – 2119:9.

1 **B. UNSE’s Proposed Treatment of DG Customers is Discriminatory without**
2 **Submission of the Legally Required Cost of Service Studies and Benefit/Cost**
3 **Analysis.**

4 State law expressly prohibits discriminatory treatment of DG customers, specifically stating
5 that “[Net Metering] charges *shall be assessed on a nondiscriminatory basis.*”²² Only under very
6 limited circumstances may a utility impose higher charges on DG customers than all other “customers
7 with similar load characteristics or customers in the same rate class that the [DG] Customer would
8 qualify for if not participating in [net metering].”²³ To do so, UNSE *must* support any differential
9 treatment with “cost of service studies and benefit/cost analyses” and also carries “the burden of proof
10 on any proposed charge.”²⁴

11 **C. UNSE has Spectacularly Failed to Meet its Burden to Justify Imposition of its**
12 **Proposed DG Mandatory Demand Rates.**

13 UNSE still fails to present the requisite studies or analyses needed to support differential
14 treatment of DG customers. Prior to submission of its Post-Hearing Brief, UNSE did not provide any
15 DG-specific cost of service study and failed to undertake a benefit/cost analysis.²⁵ Nor has it provided
16 any such study or analyses in its Post-Hearing Brief. Instead, the Company only offers a chart of
17 projected bill impacts for all newly-proposed rates and a rate-design comparison chart.²⁶ Neither of
18 these documents constitute a DG cost of service study or benefit/cost analysis. Even if such chart
19 could somehow constitute the requisite study or analyses, such charts are woefully inadequate.
20 Further, to the extent the charts are based on the rates proposed for the very first time in the Company’s
21 Brief, this documentation has not been subject to any type of examination to determine its adequacy.

22 The Company maintains that DG causes considerable challenges to the grid but it provided no
23 evidence to back up that claim.²⁷ The Company has still not identified even a single cost the Company
24

25 _____
26 ²² A.A.C. R14-2-2305.

27 ²³ *Id.*

28 ²⁴ *Id.*

²⁵ Tilghman Tr. Vol. VI, at 1272:7 – 1275:16.

²⁶ UNSE Post-Hearing Brief, Exs. 1 and 2.

²⁷ Tilghman Direct, UNSE Ex. 25, at 4:12-6:23.

1 has incurred as a result of the implementation of DG systems in its territory.²⁸ And notably, UNSE
2 cannot document even one single instance of the Company incurring additional operations and
3 maintenance costs due to excess energy flows from DG.²⁹ UNSE has been unable to produce any
4 evidence that counters the various studies that have shown that DG geographic diversity provide a
5 smoother load profile.³⁰ The Company is unable to highlight even one expense that is attributable to
6 handle impacts to the grid.³¹

7 **D. UNSE Discriminatory Treatment of DG Customers is Neither Just**
8 **Nor Reasonable.**

9 Despite the claims of serious DG caused “cost shifts,” the undisputed facts plainly demonstrate
10 that of all low use residential customers, which UNSE identified as the type of customers that
11 necessitated the adoption of a three-part rate with demand charges, *only 5% are even DG customers.*³²
12 In fixating on DG customers, the Company ignores the actual causes of its declining revenue that can
13 be attributed to the recent loss of its largest commercial customers, a high number of “snowbirds” that
14 seasonally visit the service territory, the growing number of vacant homes, and the service territory’s
15 laggard economy.³³

16 It is curious that the Company has spent such a disproportionate amount of time targeting DG
17 customers, who have invested in DG systems upon the prompting of the Commission to help fulfill
18 the REST guidelines, but has not shown the same motivation to address its more pressing cost recovery
19 problems. Even UNSE witness Craig Jones conceded that, “there are more vacant homes and
20 snowbirds than distributed generation owners right now”³⁴ yet the Company has failed to embrace the
21 concept of a minimum bill which would directly deal with those problems and has support from the
22 solar industry.

23
24 ²⁸ Tilghman Tr. Vol. VI, at 1310:1 – 1313:8 (admitting that UNSE cannot quantify any cost resulting from providing
25 ancillary services to DG customers, cannot quantify any cost resulting from excess backflow, cannot quantify any cost
borne due to alleged phase imbalance).

26 ²⁹ *Id.* at 1246:24-1247:19; 1252:4-1253:10

27 ³⁰ Tilghman Tr. Vol. VI, 1247:20 – 1249:9.

28 ³¹ *Id.* at 1246:4 – 1247:19.

³² Hutchens Tr. Vol. II, at 307:5 – 308:1; Dukes Tr. Vol. VIII, 1787:6 - 1788:11.

³³ Dukes Direct Test., UNSE Ex. 28, at 12:10 – 14:18.

³⁴ Jones Tr. Vol. XI, at 2576:22 – 2577:1.

1 UNSE claims that rate design changes must be implemented against DG customers because of
2 a reduction in sales.³⁵ They asserted in testimony that DG and energy efficiency are to “blame.”³⁶ In
3 fact, the loss of industrial and mining customers accounted for 75% of the Company’s decline in retail
4 sales.³⁷ The sluggish economic conditions plus energy efficiency are 19% of the sales reductions.³⁸
5 Incredibly, despite the Company’s obsessive efforts to sideline DG customers, they only account for
6 6% of the total sales decline.³⁹

7 UNSE does not refute the evidence cited above in which DG customers account for only a tiny
8 fraction of the real issues UNSE is facing. As the data shows, by subjecting only DG customers to a
9 mandatory three-part rate with demand charges, UNSE will not actually redress the issues it claims to
10 be suffering from. Singling out DG customers from similarly-situated non-DG customers is not just
11 or reasonable.

12 **IV. NET METERING MUST REMAIN AT THE RETAIL RATE AND THE**
13 **COMMISSION SHOULD NOT APPROVE THE COMPANY’S PROPOSED**
14 **MODIFICATIONS TO THE NET METERING TARIFFS.**

15 **A. The Proposed RCR Rate is Discriminatory and Significantly Flawed.**

16 *1. The RCR Undercompensates for the Exported Power.*

17 As shown in TASC’s Post-Hearing Brief,⁴⁰ the value of solar is 10-14 cents per kWh – double
18 the RCR. This evidence was the only complete benefit/cost analysis submitted on this point and
19 demonstrates unequivocally that Net Metering is a cost effective program at the retail rate. As a result,
20 compensation below the retail rate would undercompensate ratepayers for their valuable exported
21 power. Further, UNSE is selling the exported power back to other non-DG customers at the retail rate
22 and would indeed be making money off of DG exports at a 100 percent markup if the RCR rate was
23 adopted.

24 //

25
26 ³⁵ Hutchens Direct Test., UNSE Ex. 3, at 5:16-17.

27 ³⁶ *Id.* at 13:1-2.

28 ³⁷ Kobor Direct Test., Vote Solar Ex. 6, at 10:4-7.

³⁸ *Id.* at 11:7-9.

³⁹ *Id.* at 11:2-4.

⁴⁰ TASC Post-Hearing Brief, at 6; Fulmer Surrebuttal Test., TASC Ex. 21, at 30-47.

1 2. *The RCR would Create Substantial Uncertainty, Subjecting Ratepayers*
2 *to Terms to which no Utility Scale Developer would Agree.*

3 The RCR deprives the solar customer of certainty. The Company has proposed to base the
4 RCR on the single most recent contract between a third-party utility and a third-party project
5 developer.⁴¹ UNSE also proposes to periodically update the rate, possibly every year.⁴² How and
6 when that rate will be updated are complex questions that neither the Company nor its ratepayers can
7 answer. Utility power purchase agreements (“PPAs”) from utility-scale suppliers are entered into for
8 long term fixed prices⁴³ yet UNSE seeks to subject its own customers to constantly adjusting prices
9 that no renewable project developer would ever agree to.

10 UNSE has indicated that even the Company itself cannot predict future RCR adjustments or
11 levels.⁴⁴ By setting the RCR based on a single PPA, UNSE has also made the rate subject to large
12 annual fluctuations. This can be seen through examination of utility-scale solar prices from recent
13 Tucson Electric Power PPAs. The PPA used as the basis for UNSE’s proposal has a rate of 5.84
14 cents/kWh, while another contract signed by TEP has a rate as high as 10.875 cents/kWh.⁴⁵

15 Utilities have every incentive to game the system to create uncertainty, discourage the DG
16 customer and disincentive DG, while increasing their own utility-scale projects and having the
17 ratepayers pay for them. RCR fluctuations would subject DG customers to significant uncertainty and
18 volatility, making investments difficult and expensive. Once a DG customer was locked into a
19 purchase or lease agreement, a new adjusted RCR could make the investment untenable and a DG
20 customer may have to breach their respective agreement (remove the solar) to stop the financial harm
21 caused by the new compensation rate. No rational investor would implement DG in such an
22 environment.

23 //

24
25
26
27 ⁴¹ Tilghman Direct Test., UNSE Ex. 25, at 7:14-20.

⁴² *Id.* at 8:4-9.

⁴³ Tilghman Tr. Vol. VI, at 1286:5 - 1287:18.

⁴⁴ *Id.* at 1279:4 -1282:17.

⁴⁵ *Id.* at 1278:19 - 25.

1 3. *Utility Scale Solar is Not the Same as DG Solar and Should Not Set*
2 *the Proxy Price of DG Solar.*

3 Comparing solar DG and utility-scale solar is an “apples to oranges” comparison. The
4 Commission and several other states have already recognized that solar DG and utility-scale solar are
5 not interchangeable resources. The REST includes a DG “carve out,” which requires utilities to meet
6 30% of the overall renewables requirements with DG solar or other distributed resources.⁴⁶ UNSE’s
7 suggested parallels must also be rejected for several reasons.

8 a) *The Market for Utility-Scale and DG are Significantly Different.*

9 A utility-scale developer can choose to develop projects in various locations and can bid into
10 several utility requests for proposals and even sell the power to any interconnecting utility.⁴⁷ In
11 contrast, the DG customer can only export power to his utility and only has one possible buyer for that
12 power – UNSE.⁴⁸ The Company has a monopoly and there is no market to price DG exports.⁴⁹ The
13 lack of a competitive market for net metering customers’ DG exports is illustrated by the fact that
14 UNSE proposes to adjust the rate it pays net metering customers every year, and to do so in a manner
15 that would be difficult for customers to accurately predict. Utility-scale solar developers are not forced
16 to accept such uncertain and variable prices for the electricity they generate over long term PPAs. Yet
17 DG customers would have no choice but to be subject to this highly variable pricing regime under
18 UNSE’s proposal. Thus, the only fair rate to use for NEM is the full value the utilities receive from
19 the DG customer.

20 b) *DG Solar has Added Value Not Found in Utility Scale Solar.*

21 When a generation facility is located behind a residential customer’s meter, at the point of
22 consumption, it has added benefits that a utility-scale solar facility simply cannot provide. These
23 added benefits include: avoided energy, avoided generation capacity, avoided transmission costs, and
24 avoided distribution costs.⁵⁰ In addition, solar DG offers the same emissions savings as central solar
25

26 ⁴⁶ A.A.C. R14-2-1805 (B).

⁴⁹ *Id.*

⁵⁰ Fulmer Surrebuttal Test., Ex. 21, at 31:18 – 32:19.

1 PV, “but without the potential habitat, visual and cultural impacts associated with utility-scale solar
2 plants.”⁵¹ The DG system also avoids line losses when compared to the utility generation that must
3 travel across the service territory on transmission and/or distribution lines. The geographic diversity
4 of dispersed DG provides added reliability and offsets issues of intermittency that utility-scale solar
5 cannot otherwise mitigate.⁵² Also, DG solar, as a whole, enables an electric utility to defer or avoid
6 the need to invest in capital projects for plant while utility-scale solar, when owned by the utility, is
7 itself an investment in plant that must be rate based and paid back with a rate of return, thereby
8 increasing rates for all customers.⁵³ Clearly, customer sited DG solar is worth more to a utility and its
9 ratepayers than utility scale solar.

10 **B. The Value of Solar Docket is the Only Appropriate Venue to Determine**
11 **Methodology for Accounting for Cost and Benefits of DG and Any**
12 **Changes to Net Metering.**

13 Currently, the Commission is engaged in the “Value of Solar” docket.⁵⁴ That docket is
14 expressly designed to create a methodology to be implemented to value DG exports in utility rate
15 cases. This methodology is then to be applied in rate cases in a manner to be set forth by the
16 Commission. UNSE is asking that the Commission ignore that ongoing process and authorize an end
17 to NEM without proper supporting analysis. There is no urgency that cannot wait for the Commission
18 to complete the process it has set out for this precise purpose.

19 **V. IT IS ESSENTIAL THAT THE COMMISSION FULLY GRANDFATHER**
20 **EXISTING NET METERING CUSTOMERS AND THE JUNE 15, 2015**
21 **PROPOSED EFFECTIVE DATE MUST NOT BE ADOPTED.**

22 If any changes impacting DG customers are implemented, all current DG customers should be
23 grandfathered from their existing rates and must be implemented on a going forward basis from the
24 date of the Decision.

25
26
27 ⁵¹ *Id.* at 4:14 – 16.

⁵² *Id.* at 21:3 – 22:13.

⁵³ *Id.* at 37:9 – 38:12.

28 ⁵⁴ *See* Commission Docket No. 14-0023.

1 In 2013, Staff recommended to the Commission that “any consideration of grandfathering
2 existing net metering situations to existing net metering customers should view the grandfathering as
3 pertaining to the DG system and premises where the DG system is sited (in other words, ‘runs with
4 the land’), versus a ‘right’ that resides with a specific customer.”⁵⁵ Consequently, the Commission
5 decided that, “[r]esidential customers who either have a DG system installed on their homes now, or
6 who submit an application and a signed contract with a solar installer to APS by December 31, 2013,
7 shall have their system grandfathered under the current net metering policies”⁵⁶

8 The Company’s proposals, while flawed in many ways, would create a significant negative
9 impact if they are applied to the existing DG customers who have adopted solar since June 1, 2015.
10 For instance, mandatory demand charges imposed on DG customers who installed solar at the
11 beginning of this year would undermine the investment that was contemplated and executed at a
12 different rate and rate design. The Commission should reject the Company’s proposed cut-off date and
13 should adhere to precedent of mandating charges against ratepayers upon or after the effective date of
14 the Decision.

15 The Company’s proposed cut-off date serves as a retroactive ratemaking. The Company has
16 claimed that it has undertaken “significant efforts to fully inform post June 1, 2015 customers” that
17 they could be subjected to an unprecedented form of rate design.⁵⁷ However, earlier in its brief the
18 Company acknowledged the pronounced opposition to demand charges and three-part rate design
19 expressed by the public to the Commission.⁵⁸ By positing that all customers have not been sufficiently
20 educated about demand charges but then attempting to subject certain customers to these demand
21 charges in any case, the Company has contradicted itself on the importance of communicating key
22 information to its ratepayers.

23 Chairman Doug Little and Commissioner Bob Burns have already expressed their support, and
24 their rationale, for why grandfathering should be honored for DG customers who have already made
25

26 _____
27 ⁵⁵ Corporation Decision # 74202, at 11:23-26.

28 ⁵⁶ *Id.* at 24:17-19.

⁵⁷ UNSE Post-Hearing Brief, at 35:21-23.

⁵⁸ *Id.* at 4:16-23.

1 solar investments.⁵⁹ Chairman Little compared the current cut-off date proposal to “an ex-post facto
2 situation” and Commissioner Burns expressed concerns about a “retroactive rate increase.”⁶⁰
3 Chairman Little continued to say that “putting out grandfather dates” is “probably inappropriate.”⁶¹

4 As outlined above, the total amount of DG customers comprise about 2% of the Company’s
5 service territory. The Company’s continued advocacy for the arbitrary June 1, 2015 cutoff date, despite
6 backing off its attempt to subject all ratepayers to mandatory three-part rate design, would only serve
7 to punish a handful of DG customers. Further, even if a “cost shift” does exist, the subjugation of post
8 June 1, 2015, customers to these unprecedented rates would barely make a dent in the Company’s
9 revenue recovery efforts.

10 RUCO’s witness Huber acknowledged that the post June 1, 2015, customers could be severely
11 affected by the Company’s proposal when he testified that “customers may not fully understand the
12 magnitude of the negative impact to this value proposition that may come from rate design.”⁶² The
13 Company has already exposed itself as being woefully unprepared when it comes to planning an
14 entirely new rate design. These post June 1, 2015, customers should not serve as ratemaking lab
15 experiments in order to better understand how these rates might be adversely applied.

16 The proposed cutoff date is ill-conceived and only serves to further the Company’s antipathy
17 towards DG customers and does nothing to address its endemic problems affecting revenue that have
18 nothing at all to do with DG. The June 1, 2015, date also stands diametrically opposed to the policy
19 pronouncements of at least two commissioners. The Company itself has stated that ratepayers are
20 united in opposition against demand charges and three-part rate design. The Company has failed to
21 justify why implementing retroactive rates on a small number of DG customers is sound or just and
22 reasonable ratemaking. The Commission should continue to follow and advance precedent by
23 implementing any new rates with an effective date that takes place after the Commission’s ultimate
24 vote.

25
26

28 ⁶⁰ *Id.*

⁶¹ *Id.*

⁶² Huber Direct Test., RUCO Ex. 5, at 16:21-22.

1 **VI. IN CHANGING ITS RATE PROPOSALS AND PROPOSING FOUR DIFFERENT**
2 **PROPOSALS OVER THE COURSE OF THIS HEARING, UNSE HAS VIOLATED**
3 **THE GENERAL PUBLIC AND INTERVENORS' DUE PROCESS RIGHTS AND**
4 **ITS APPLICATION SHOULD BE REJECTED.**

5 Individuals and entities are constitutionally entitled to due process of the law.⁶³ “Procedural
6 due process means that a party had the opportunity to be heard at a meaningful time and in a
7 meaningful manner.”⁶⁴ “The elements of procedural due process are notice and an opportunity to be
8 heard.”⁶⁵

9 These procedural safeguards apply in ratemaking contexts wherein the Commission is
10 considering adoption of new rates. State law requires that the Commission give “reasonable notice”
11 when conducting a hearing concerning changes to rates.⁶⁶ Upon receiving such notice, parties may
12 apply for intervenor status and once granted, are entitled to meaningful participation in the ensuing
13 hearing concerning such rate proposals.⁶⁷ Arizona Courts have recognized as much, concluding that
14 “[a] public utility is entitled to due process when a ratemaking body undertakes to calculate a
15 reasonable return for the use of its property and services by the public. Conversely, *the public is*
16 *entitled to the same level of protection when the government seeks to increase the utility rates that the*
17 *public is obligated to pay.*⁶⁸

18 Additionally, the general public has a substantive due process right to ensure that any rates or
19 charges adopted are just and reasonable.⁶⁹ This right is borne out of the Constitutional mandate that
20

1174 (App. 2001) (citing Op. Ariz. Att’y Gen. 71-15); *see also Phelps Dodge Corp. v. Ariz. Elec. Power Co-op., Inc.*,
207 Ariz. 95, 103-04, ¶ 18, 83 P.3d 574, 581-82 (App. 2004) (“Our constitution requires the [ACC] to prescribe . . . just
and reasonable rates and charges to be made and collected, by public service corporations for services rendered in the
state.”.)

1 the Commission *only* prescribe “just and reasonable rates and charges.”⁷⁰ This prerogative is also
2 recognized by State statute, stating that “[n]o public service corporation shall raise any rate, fare, toll,
3 rental or charge, or alter any classification, contract, practice, rule or regulation to result in any increase
4 thereof, except upon a showing before the commission and a finding by the commission that an
5 increase is justified.”⁷¹ Recognizing the public’s due process right to obtain the enactment of just and
6 reasonable rates, the Commission expressly mandates that “[e]very public service corporation [] *give*
7 *notice* to customers affected *of any hearing at which* the fair value of that corporation’s property is to
8 be determined and *just and reasonable rates and charges are to be established.*”⁷² “Due process is not
9 a static concept; it must account for the practicalities and peculiarities of the case.”⁷³

10 UNSE’s actions have deprived the public and all intervenors (including and especially TASC)
11 of their right to due process. Upon filing, the Company sought adoption of only a two-part rate
12 structure similar to the currently existing structure. Only upon the filing of rebuttal testimony did the
13 Company suddenly seek to adopt a mandatory three-part rate with demand charges. This caused all
14 intervenors to scramble and struggle to identify, prepare and disclose appropriate witnesses and issue
15 appropriate discovery. Now, after the hearing is concluded, UNSE has again proposed adoption of
16 wholly new rates in its Post-Hearing Brief – a mandatory three-part rate with demand charges and the
17 RCR for solar customers and multiple newly-devised rate options for residential and small general
18 service users. As the hearing is now concluded, the timing of this proposal deprives all intervenors
19 from having had reasonable notice of this new rate proposal, opportunity to present witnesses and
20 evidence bearing on the proposals, or even a substantive amount of time to assess the proposal.

21 A review of the transitory nature of UNSE’s proposals is illustrative of the deficiency of the
22 process. The following looks only at one of the ever-changing rate design elements and tracks it
23 through the four iterations of UNSE’s proposal. That element is the proposed demand charge to be
24 leveled on DG customers:

25
26 ⁷⁰ Ariz. Const. Art. XV, § 3.

27 ⁷¹ A.R.S. § 40-250(A) and (C).

28 ⁷² A.A.C. R14-2-105(A).

⁷³ *Comeau v. Arizona State Bd. of Dental Examiners*, 196 Ariz. 102, 106-07, ¶ 20, 993 P.2d 1066, 1070-71 (App. 1999)
(internal quotation omitted).

	UNSE's Application Position ⁷⁴	UNSE's Surrebuttal Position ⁷⁵	UNSE's Hearing Position ⁷⁶	UNSE's Post Hearing Brief Position ⁷⁷
Demand Charge Amount on DG Customers	0-7 kW \$6.00 >7 kW \$9.95	\$5.15	\$5.00	0-7 kW \$5.50 >7 kW \$7.50

At every step of the proceedings, UNSE has introduced drastically differing rate proposals. Even now, after the close of evidence, it once again seeks adoption of an entirely new, untested, unsupported, and now non-vetted rate structure without reasonable notice. In so doing, UNSE has violated all intervenors' and the general public's due process rights. In this case, by seeking to adopt a multitude of different rates throughout the pendency of the proceedings and in failing to provide the requisite studies and analyses to support any of the rate changes, the Company has infringed upon the general public's substantive and procedural due process rights to the adoption of only just and reasonable rates and charges. The data presented cannot possibly support a conclusion that the proposed rates, especially the rates proposed for the first time in the Post-Hearing Brief, are just and reasonable. In adopting any rate other than that initially proposed in the Company's application, the Commission would violate due process rights affording intervenors and the public a fair hearing process. The State Constitution itself therefore demands that the Application and the gamesmanship of UNSE be rejected.⁷⁸

VII. THE COMMISSION SHOULD NOT JUST ADOPT UNSE'S RETURN ON EQUITY FROM ITS LAST RATE CASE AND SHOULD RECOGNIZE THAT FINANCIAL IMPROVEMENTS WARRANT A LOWER RETURN ON EQUITY.

Critically, since the conclusion of its last rate case in 2013,⁷⁹ UNSE has benefited from a significant improvements in its financial position warranting a change of the ROE granted in the last

⁷⁴ Application, at Ex. CAJ 3.

⁷⁵ Jones Surrebuttal, at Ex. CAJ-R-4, Schedule H-3, 4 of 8.

⁷⁶ Jones Tr. Vol. IX, 2088:3-20.

⁷⁷ UNSE Initial Post-Hearing Brief, at Ex. 1, 1 of 4.

⁷⁸ This same objection applies to all parties that continue to file new rate proposals after the close of evidence including RUCO among others. None of these new proposals can be subject to scrutiny in a rate case as required by law.

⁷⁹ See Commission Decision # 74235.

1 rate.⁸⁰ The lower investment risk of UNSE as indicated by the Moody's ratings would indicate a lower
2 ROE is warranted. Mr. Woolridge has empirically supported his calculations through exhaustive
3 research into the Company's weighted cost of capital and capital structure based on these changed
4 conditions.⁸¹ Discounted Cash Flow analysis revealed ROEs of 8.70 percent and 9.00 percent.⁸²
5 Capital Asset Pricing Modeling demonstrated ROE results of 8.1 percent and 8.3 percent.⁸³ These
6 results further reveal that Mr. Woolridge's 8.75 percent ROE is in fact on the conservative side. The
7 Commission should step in and recognize the tremendous improvements in UNSE's financial position
8 that should lead to a lower ROE of 8.75 percent.

9 Ms. Bulkley presentation of "ROE Decisions For Integrated Electric Utilities"⁸⁴ is another
10 example of the Company trying to pull a fast one. Ms. Bulkley lumps all of the ROE returns for 2012-
11 2016 into one chart, but the recent trend, however, has been toward lower authorized rates of return
12 since 2012.⁸⁵ In addition, the authorized rate of returns often lag current conditions based simply of
13 the duration of time for a state utility commission to implement a decision. As can be seen in Ms.
14 Bulkley's supporting spreadsheet for chart 1,⁸⁶ the authorized ROEs for electric utility companies have
15 actually decreased in recent years such that the trend for authorized ROEs is lower than 9.5 percent.
16 For example, in 2010, Interstate Power and Light Company was awarded an authorized return on
17 equity of 10.44 percent, while Ameren Illinois Electric was awarded an authorized return on equity of
18 9.14 percent in 2015.⁸⁷ In addition, certain utilities including in her spreadsheet are conspicuously
19 absent from Ms. Bulkley's chart 1. For instance, she did not include Orange & Rockland Utilities
20 2015 authorized rates of return of 9.0% or Consolidated Edison Company of New York's 2015
21

⁸⁷ *Id.*

1 authorized rate of return of 9.0%.⁸⁸

2 Further, forecasting prices and rates that are determined in the financial markets, such as
3 interest rates, is impossible to accurately do, and why an ROE based on the “possibility of increased
4 interest rates” should not be the foundational basis for UNSE’s authorized rate on return.⁸⁹

5 UNSE also relies on general statements that Mr. Woolridge’s ROE is far outside the norm and
6 must be rejected. Apart from the statement being spurious, a utility needs to be looked at on its *own*
7 individual basis to determine its authorized return on Equity.⁹⁰ In 2014, the Company was acquired⁹¹
8 by Fortis Inc., which assumed its debt and injected \$220 million in equity into both UNSE and TEP’s
9 operations.⁹² UNSE’s bond rating has also increased from Baa3 to A3 since 2013⁹³ and on March 2,
10 2015, the Company has raised over \$100 million in capital this year.⁹⁴ Reduced investor risk is key
11 to the authorized rate of return calculation of a utility and has been the bases for a downward
12 adjustment of a utilities’ return on equity by the Commission previously.⁹⁵ Mr. Woolridge’s 8.75
13 percent ROE is appropriate based on the Company’s fiscal improvements⁹⁶ and should be adopted. In
14 any event, the evidence entirely fails to support maintaining the previous ROE in the face of so many
15 positive improvements for the Company.

1 **VIII. CONCLUSION.**

2 TASC recognizes the difficulty that the Commission is likely to have sorting through the
3 numerous and ever-changing proposals that have been made in this docket. TASC has outlined the
4 numerous legal, procedural, and policy shortfalls of the various proposals that have been made. TASC
5 reminds the Commission that the Company, not the Commission or any intervenor, has the burden of
6 clearly setting out a proposal for just and reasonable rates in accordance with Arizona law.

7 For the reasons stated above, the following actions should be taken:

8 (1) Recognize that UNSE has failed to carry its burden to provide the proper evidence to
9 support (a) waiver of the NEM Rules to permit an alternative compensation for exported DG power,
10 including the RCR; and (b) adoption of its unprecedented proposal for a mandatory three-part rate
11 with demand charge as applied to all residential customers or solar customers alone. Accordingly,
12 these proposals should be rejected;

13 (2) Recognize that Commission Staff, RUCO and the Company have all also failed to carry
14 their burden to justify the adoption of the alternative rate proposals proposed by Commission Staff
15 and RUCO and reject the same;

16 (3) Recognize that the evidence only supports the use and exploration of an optional two-
17 part rate with a minimum bill and TOU component through pilot programs moving forward before the
18 next rate case;

19 (4) Regardless of the rate adopted, all DG customers that have contracted for DG systems
20 prior to the final order issued in this docket should be grandfathered and continue to utilize currently-
21 implemented rate structures and NEM;

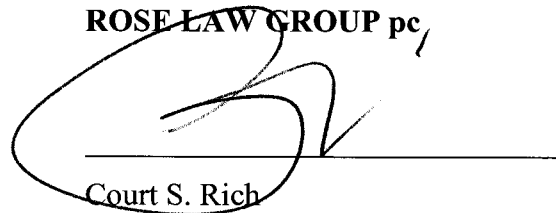

22 (5) Regardless of the rate adopted, reject UNSE's proposal to include an LFCR in its new
23 rate design; and

24 (6) Set a ROE of 8.75%.
